Notes of the Week.

A Question of Exiles.

In showing what a simple matter it can be for a royal exile to return to the country from which he has been banished, King Carol II of Roumania has set a precedent which it is not a matter of surprise to find that others are anxious to imitate. The restoration of the Hapsburg Dynasty in the person of the Archduke Otto, who comes of age in November, is now being more openly canvassed than at any previous time. There is much in common between the situation in Hungary and that in Roumania, and as the Roumanians satisfied themselves that there was no way of salvation for them apart from Prince Carol's return, they cannot cavil at the Hungarians' adopting the same view. In Roumania's case, however, it was nobody's concern outside the country how the question of the occupancy of the Throne was settled. In the case of Hungary, quite a number of people claim to have a say in the matter. The possibility of the return of ex-King Charles to Hungary led to a formal declaration of the Conference of Ambassadors that a Hapsburg restoration in Hungary could not be regarded as a mere internal affair of the Hungarian State and that it would be neither recognised nor tolerated by the Principal Allied Powers. The formation of the Little Entente followed for the express purpose of preventing the restoration of the Hapsburg Dynasty in Austria and Hungary. At the time the fear was that ex-King Charles, who made two abortive attempts to regain the Hungarian Throne, might succeed and convert Hungary into a storm centre of Europe. There can be no doubt that the Powers of the Little Entente are as anxious to prevent the Archduke Otto from ascending the Throne as they were to keep his father from regaining it. Whether they would find the Big Four among the Allied Powers equally strong on this point or could convince the League of Nations that what is efficacious as a Roumanian remedy has no chance of succeeding in identical circumstances in Hungary is another matter. Certain it is that both Hungary and the young Archduke Otto will be well advised to attempt no *coup d'état*. If the Hungarians, like the Roumanians, are unable to live, still less to prosper, without having among them the favourite scion of their Royal House, they must make out a case and urge it before the competent tribunal, unless they are prepared to face complications or worse. Among other royal exiles of the day are ex-King Ferdinand, who may wish to live once more in Bulgaria, but has not been accused of desiring to oust King Boris, and ex-King George of Greece, who is more likely to wait on events than to attempt to precipitate them. Like Roumania, both Greece and Bulgaria have only themselves to consider in dealing with the question of their royal exiles, unless indeed the Yugoslav Government were to regard ex-King Ferdinand's return to his modest palace on the Black Sea as an unfriendly act, to be protested against as was the proposal to amnesty M. Radoslavoff.

The Fait Accompli in Roumania.

If King Carol II. had had any lingering doubts as to the complete success of his accession to the Throne, they will have been dissipated by the efforts of the Liberal Party to modify the policy that was laid down over-hastily by its leader on the day of Prince Carol's return. A restatement of the Party's attitude has now been issued, and not the least striking feature in it is that it contains no mention of the name of Bratianu, whether the First, the Second, or the Third. The Party's attitude, it is declared, remains as it has always been, dictated by constant and vigilant care for the defence of the interests of the country. It is in those interests that it requires the glorious dynasty founded by King Carol to be, as it has been in the past, the symbol of the nation, the expression of its sense of dignity, and the vigilant guardian of its democratic institutions. A more explicit acceptance of the new order is contained in a statement made by M. Duca, M. Vintila Bratianu's chief lieutenant, who has declared that the Party desires to contribute and will contribute, as it has in the past, to the progress of Roumania "under the new reign." Roumania is not the only country in the East where political parties are apt to act first and to think afterwards. A class of politician has been evolved that makes co-operation between parties almost impossible, and parliamentary government is reduced to a species of trench warfare in which only after underground mining and violent explosions can any progress be recorded. The value of any discomfiture that the Roumanian Liberal Party may experience will lie in the warning that it affords against the extreme lengths to which party animosity is carried in most Eastern countries. This evil has been responsible for the interruption of parliamentary institutions in Greece.

The Wailing Wall.

It is a matter for congratulation that the Commission sanctioned by the League of Nations to decide upon the merits of the dispute in connexion with the Wailing Wall should have decided to allow the fullest publicity to beat upon their conduct in Jerusalem. The President of the Commission, Judge Löfgren, announced that the Commission would hear fully authorised bodies pleading on either Arab or Jewish side, would give permission for the cross-examination of witnesses, and would admit the Press and public. Unquestionably this is a wise decision, for no such delicate problem as this of the Wailing Wall can have too much "air." That orthodox Jews are eagerly awaiting the findings of the Commission goes without saying, for to many of them the Wailing Wall may be a more precious thing than the "Jewish National Home" itself. But it is curious to notice a reaction, in certain sections of Jewry, to the view that the Jews have, in this matter, allowed themselves to be manœuvred into a false position. The ordinary Zionist, whose motto is "work" rather than "wail," is apt now to feel that the problem has got out of focus, that the world, through this Wailing Wall dispute, may have a wrong impression of Jewish endeavours and hopes in Palestine—as the *Jewish Chronicle* of June 22 puts it, "Any colony planted in *Eretz Israel* for the building of the new *Yishub* should be, at least, as sacred to the Jew as any stones and mortar round which legend has intertwined itself."

"Home" and "State."

Much ink has been spilt over the recent explanation by Dr. Drummond Shiels before the Permanent Mandates Commission at Geneva that what the British Government was obliged to facilitate in Palestine was, not a Jewish State, but a Jewish National Home. The distinction was usefully made, and though in certain extremist Jewish quarters it has received unkindly welcome, there appears to be little doubt that the more moderate and reasonable Zionists are damping down their political ambitions in Palestine and are concentrating on the work in hand. In other words, their activities now tend to be mainly economic, not political, and are, therefore, in the direction rather of a "Home" than of a "State." A "Home," still less a "National Home," is not susceptible of precise definition, but the word is sufficiently understood for the Jews, by harmoniously striving towards the establishment of it, to gain very considerable sympathy. So long as the impression obtained that what the Jews in Palestine were striving for was dominance, absolute superiority to the Arab inhabitants, it was certain that doubt would be widely held upon the justice of their intentions. If, however, they now start afresh, quietly and without high words, to build up the land of Palestine, it is not too much to expect that, in the long run, they may have with them the sympathy of practically the whole world, in which should be included, most notably, the Palestinian Arab. The future of Palestine really depends upon the policy of the Jews. By their energy and devotion the country may be made prosperous, but by continuance in ill-advised ways its progress might suffer self-inflicted death.

INDIAN NOTES

The Arrest of Pandit Motilal Nehru.

The outstanding event of a week which has otherwise witnessed a great improvement in the internal situation in India, is the proscription of the Working Committee of the All-India Congress and the arrest of Pandit Motilal Nehru, its president, and other officials. The Government's action, which was by no means unexpected, is, as the official *communiqué* states, "the inevitable result of the course consistently pursued by the Congress Committee for more than a month past." Although the significance of the step, which virtually amounts to the declaration of war on the Congress organisation, is obvious, no responsible person, either in India or in this country, can for a moment suggest that it has come a day too soon. The recent activities of the Working Committee, as the President frankly admitted on his recent visit to Bombay, "have now reached the stage," to quote the official statement again, "of endeavouring to promote revolution through the overthrow of the Government. It is impossible any longer, consistently with the obligations which the Government owes to the vast majority of peaceful, law-abiding citizens of India, to overlook . . . a movement which is tending more and more to organised violence." What the immediate effect of the Government's action will be remains to be seen. It is understood that the present step does not necessarily imply that similar measures will be taken to curtail the hardly less dangerous activities of the Provincial Congress Committees. As the decision in their case, of course, rests largely with the Committees themselves, it may nevertheless be presumed that the same policy will be pursued.

The Report and After.

"If the Commission could change the present goal of all-Indian political agitation from that of wresting fresh concessions from the British Parliament into that better goal of constitutional advance by the reconciliation of all parties within the province, it would have performed a great work. It would be the first step towards transforming the Indian politician into the Indian statesman." In an illuminating passage in "India To-morrow," its able but anonymous author thus sums up concisely and cogently the essence of the Simon Commission's task. By ensuring that within a constitutional framework laid down by statute the provinces shall be enabled to develop along their own lines and in keeping with their individual needs and circumstances, without the necessity of perpetual reference to the British Parliament for fresh instalments of self-government, the Commission has gone a long way to provide the answer. For the moment, however, all communities in India are apparently much more anxious to demonstrate the futility of the hope that their leaders can ever become statesmen than to admit the greatness of the opportunity now open to them. Until the first excitement has died down it will be impossible to gauge real opinion towards even the plan as a whole, much less the details of the recommendations, but one thing is already plain. Politically-minded India cannot or will not understand the real purport of the Commission's findings any more than it was willing or able to recognise the essential truth of the facts on which they are so firmly and inevitably based. Meanwhile we need make no apology for reverting in another column to one of the most far-reaching recommendations. The range and interest of the Report made it impossible last week to devote more than a few words of comment to the brief but important chapter on the proposed separation of Burma. The Commissioners have clearly gauged Burman sentiment too well to suppose that it can be satisfied by anything less complete than a complete divorce from a self-governing India. The question, as they have rightly averred, is no longer one of principle but of expediency, and they have properly decided that both alike demand that the decisive step should be taken as early as possible.

CROSS-PURPOSES IN EGYPT.

The stage is set in Egypt for a domestic crisis of the first order, and, as usually happens on such occasions, there is going to be a considerable amount of loose thinking and still looser talking. In taking stock of the position, therefore, it will be well for the onlooker not to allow the issues involved to become confused in his own mind. For the present all that has happened is that the Government of Nahas Pasha submitted to the King a draft Bill, the introduction of which to Parliament his Majesty in the exercise of his constitutional prerogative refused to sanction. Thereupon the Nahas Cabinet handed in its resignation, which was accepted. King Fuad, after consulting with various political leaders, entrusted the formation of a new Government to Ismail Sidky Pasha. So far, therefore, everything has happened strictly in accordance with constitutional usage, and in the different stages of the crisis it is impossible to discover up to the present any threat to or departure from the Constitution. Parliament has been prorogued for one month, and it remains to be seen what steps the new Government intend to take on the expiry of that period. Under normal conditions the Chamber would rise in the second week of July for its summer recess, which lasts until November. It may be a question for constitutional lawyers to decide whether a recess, taken in the interests of the members, should be regarded as, so to speak, *diei non*, so that prorogation for one month automatically extends over the close period for parliamentary activities, or whether a strict reckoning by the calendar has to be enforced. In the latter case Parliament would have to meet in the third week of July. It would then rest with the Wafdist majority to decide whether it would record an adverse vote against the Sidky Pasha Ministry, with a view to bringing about its resignation, or whether it would be content to leave the Ministry in power over the summer recess. In a country normally constituted there would be no question as to the course of events. Resignation was not forced on the Nahas Government. As it preferred to go out of office of its own volition, its first concern should be to do nothing to interrupt the normal course of government, but, if it holds that constitutional issues are involved, to seek peaceful means of solving them.

Constitutionalism, unfortunately, finds no very clear interpretation in Egypt. One of the reasons why constitutional government is apt to break down so frequently in the East is that political parties regard it as governed by the rules of civil war, instead of realizing that the very essence of its successful application is a spirit of give-and-take between parties. In Egypt the dominant factor in the minds of all politicians at a time of crisis should be that the King's government must be carried on at all costs. As things are, it would seem that the main consideration in some quarters is to interrupt and impede as much as possible the administration. If the interests of the country were paramount with all the political leaders, a meeting between the Prime Minister and Nahas Pasha would decide that no one desired a prolongation of the crisis through the summer months, and that constitutional procedure would be satisfied by the summoning of the Chamber in July, at which no speeches would be made and no business transacted beyond the passing of a formal motion for adjournment over the summer. Egypt would thus be assured a peaceful interval in which to consider the real points at issue in all their bearings. It is not denied that grave issues are behind the present crisis; but the graver they are, the more cogent the reason for solving them without heat and with careful deliberation. The attitude of the Wafd is that parliamentary government is sacrosanct; it may be in actual practice a travesty of all that is generally understood by parliamentary government, as, for instance, when the electorate is largely illiterate, when even some of the deputies elected are illiterate, when Parliament is elected for a particular purpose, as in the case of the draft proposals for an Anglo-Egyptian treaty, and by the mere fact of a caucus those proposals are not allowed to be submitted to the electorate, or when parliamentary institutions are so manipulated as to become the negation of democracy. Yet in spite of all these drawbacks, in spite of a parliament's being reduced to the absurdity that it was in Yugoslavia two years ago, the Wafd contends that it is better for the country to sink deeper and deeper into ruin or an administrative morass, than that parliamentary government should be interrupted. It is certainly a point of view. Whether it can be supported by sound reasoning is another matter. In Egypt the attempt so to support it is not made. In its place tempers gain the upper hand; resignations are handed in on alleged constitutional grounds, when no constitutional issue is involved, and intemperate speech becomes too often the prelude to intemperate acts.

What the world is witnessing in Egypt may be regarded as the growing pains of a country in the infant stages of independence. Two years ago, for reasons that appeared adequate to the King and to many Egyptians, parliamentary institutions were suspended. No attempt has been made to prove that Egypt suffered any harm under the Mahmoud Pasha régime, or that the impartial exercise of administrative power by duly appointed authorities, as enforced under the Dictatorship, is not to be preferred to the abuse of parliamentary institutions which gave deputies authority over local officials; and the whole spirit of the régime was to be judged by the fact that, having secured conditions for an Anglo-Egyptian treaty unexpectedly favourable to Egypt, the unconstitutional Government terminated its own existence by the holding of parliamentary elections, and in due course the Wafd was returned to power. The claim that it is worth while to interrupt the administration of the country and to hold up economic measures of pressing importance, in order that vindictive legislation should be passed against Egyptians who have tried according to their lights to promote the interests of their country, is one that will command no support among any practically-minded people. Non-co-operation, which has now been imposed by the taking of an oath on all Wafdists, is an admission of a weak case, which no people with any constitutional experience would adopt in support of a measure that cannot be justified by the canons of ordinary intelligence. No party in Egypt has a monopoly of the brains of the nation, and what is needed is the widest measure of co-operation among the wisest of the people, working in harmony with the Throne.

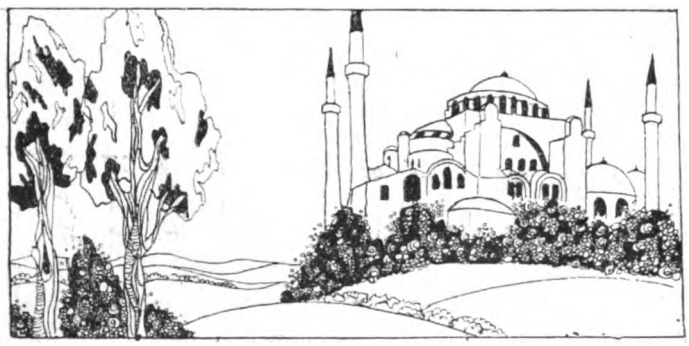
*The Near and Middle East

From Our Own Correspondents.



TURKEY.

Istanbul, June 12.

Greco-Turkish Relations.

As forecast in an earlier letter, an agreement has been reached at long last between the Cabinets of Ankara and Athens in respect of the scheme for the Exchange of Populations, a Convention having been signed in Ankara on the forenoon of June 10 by Dr. Tewfik Rushdi Bey and the Greek Minister to Turkey. By the terms of this arrangement, the Greek Government will place at the disposal of the Turkish Treasury a sum of £425,000, which amount, although relatively negligible, if measured in terms of State finances, must be, nevertheless, as the equivalent of four and a quarter million Turkish pounds and in present circumstances, a welcome adjunct to the revenue side of Turkey's next Budget.

In addition to the financial terms of the compact, however, provision is made for the settlement of any further differences which may arise between the two parties over the interpretation of the clauses of the Agreement and the liquidation in general of the properties of exchangeable Greeks and Turks. Both Governments agree to abide, without appeal to any higher authority, by the decisions of the neutral members of the Commission for the Exchange of Populations sitting as a Court of Arbitrators. Both parties to the Agreement are to be congratulated on this happy consummation of their patient and year-long negotiations, and on the spirit of give and take which alone has made possible a Covenant between two peoples who, as history is measured, were only yesterday at each other's throats on the battlefields of Anatolia.

The Visit of General Gouraud.

The solemn consecration of the French military cemetery on the Gallipoli Peninsula has offered an opportunity of visiting Turkey to General Gouraud, that distinguished one-armed hero of Rheims and Sedd-ul-Bahr, and to about 200 French ex-combatants who participated in the Gallipoli campaign. General Gouraud arrived some few days before the rest of the party and proceeded to Ankara, where he was received in audience by the President at Chankaya and was entertained to luncheon and dinner by the Ministers of Foreign Affairs and Defence.

The ceremonies at the Dardanelles were scheduled to take place with that careful regard for "staging," in which our French friends are such masters. Wreaths were laid on the last resting-places of French, Turkish and British soldiers alike, after which the whole party embarked in Turkish vessels and cast wreaths on the waters over the charted positions in which sank the ill-fated French battleships Bouvet and Gaulois and the British Irresistible.

Captain O'Leary, British Military Attaché, and a member of the British Legion were present at the ceremonies, at the principal one of which the Comte de Chambrun, French Ambassador to Turkey, delivered an arresting oration, in which he embodied part of the preamble to the recently concluded Franco-Turkish Pact of Amity, which runs as follows: "Is it not a grandiose spectacle to see two peoples whom a system of alliances had thrown into opposite camps, loyally grasping each other's hand on territory consecrated by their blood-stained laurels? These peoples have now renewed those century-old ties of friendship which constitute both a historical tradition and a pledge for the future."

General d'Amade, Admiral Guepratte, who commanded the French squadron operating at the Dardanelles under the orders of the late Admiral de Roebeck, and M. Claude Farrère, the French novelist who is idolised in Turkey, formed part of the Ambassadorial party.

The Galata Bridge Tolls.

In the systematic disappearance of so many vestiges of a picturesque past not the least interesting to fall a prey to the consuming passion for modernisation and renovation are the cassock-garbed bridge-toll collectors who, from generation to generation, for nearly a century, day in, day out, throughout the night, fine weather or foul, have levied from the patient population of Istanbul the old *asper*, or the modern piastre, as a tax for permission to cross the two bridges which span the Golden Horn. These unkempt and hirsute Prefectorial myrmidons were as impossible to elude as Death, the great leveller. To them, side by side with the human flotsam and jetsam of this ancient city, even such historical figures and Commanders of Legions as Lord Raglan, Lord Kitchener and Lord Allenby have paid their mite, the only exception granted being in favour of the halt, the maimed and the blind. A year or two ago, a leading Istanbul daily—when newspapers were printed still in the old Arabic script—published a spirited leader entitled "*Haivan-oglou Haivan*," i.e., "Beast, Son of a Beast." The writer, after graphically describing the characteristics of many a wild animal in its native haunts, and stressing particularly the protective instincts displayed by even the blood-thirsty King of Beasts towards his mate, told his readers that there was no need for them to go to Zoological Gardens in European Capitals, or to waste money and substance in trekking down the beasts of the field and forest in their Asiatic and African lairs. It would suffice for them to pay 20 paras (then less than a farthing) to a Galata bridge-toll collector and they would then have the privilege of beholding as unmatchable a collection of wild beasts as the open spaces of this world could afford. The leader-writer, it transpired, before setting pen to paper, had witnessed a lubberly toll-collector vigorously pummelling a miserable old Turkish woman who, without the wherewithal to discharge her small duty to the Prefect of the City, had vainly pleaded for exemption *in forma pauperis*. The article made the whole of Constantinople rock with delight. Collecting dimes as a means of a livelihood, for hours on end and on foot, very often in blazing

heat or blinding blizzard, may not have been exactly conducive to equanimity of temper, but the Prefecture of the City unquestionably had a "flair" for selecting for this service some of the most degraded types of humanity to be found in the underworld of this town.

King George's Birthday.

The official celebration in this country of King George's birthday, has now, through the dual existence of Embassies both in Istanbul and at Ankara, become a duplicated function. Sir George Clerk being temporarily absent from Turkey owing to the regretted illness of Lady Clerk in Paris, Mr. Edmunds, Chargé d'Affaires, on June 3, received the official and Diplomatic world in Ankara, while Mr. Morgan, Consul-General, was simultaneously dispensing hospitality in the British Embassy gardens in Istanbul to the British Colony and to members of the foreign Diplomatic Missions to Turkey. In accordance with age-long custom, a Turkish Marine band enlivened the proceedings in Istanbul by giving a selection of music, including one or two British airs—and one item, in particular, which was a very fair imitation of a soulful pibroch.

PALESTINE.

Jerusalem, June 14.

The Simpson Mission.

The past fortnight has been uneventful. The succession of shocks in the realm of higher Palestinian Jewish politics has ceased for the time being. For a few days attention was concentrated on the cabled summaries of the talking at Geneva before the Permanent Mandates Commission, and a little comfort was squeezed out of the fact that the Shaw Commission's findings and the later phases of Government policy in Palestine were apparently made the target of a certain measure of criticism. The well-meant declarations of Dr. Shiels have had but the effect of tinkling cymbals on both local Jewish and Arab minds. The future still seems to be entirely in Sir John Simpson's pocket. He is scarcely to be envied. He is touring the country thoroughly and submitting with lamb-like patience to innumerable and long expositions from all who have ideas on the subject of Palestine's "absorptive capacity." This week-end he is visiting Trans-Jordan, but whether to scrutinize it as a model or as a warning or as a field for Palestinian Arab or Jewish surplus, remains still for the local Press to decide.

Arab Delegation's Return.

In the meantime the Arab Delegation is returning piecemeal. At the moment the Arab Executive's energies are being directed to the question of the fate of the three Arabs whose death-sentences for their share in the August disturbances still remain unremitted. To press their point that on all grounds of logic and mercy these must also be revoked, we are to be called upon to demonstrate by yet another "strike"

Suspension of Newspapers.

A week ago three newspapers were temporarily suppressed: the Jerusalem Arab paper *Jamia al-Arabiya*, the alleged though disavowed organ of the Arab Executive and the Muslim Supreme Council; the Jaffa Arab paper *Falastin*, and the Jerusalem Jewish paper *Doar ha-Yom*, noted for its full-blooded "revisionism." The reasons for their suppression are not officially stated. There is the inevitable outcry against this "abuse of the freedom of the Press" by the Administration the local theory that holds the field being that the only party with a right to abuse it is the Press itself.

Such suppression, however, does not seem to be effective whether as a material punishment or as a moral warning. The *Doar ha-Yom*, for example, has appeared throughout the week with two exceptions, with nothing changed but its title. Twice it has appeared as the "thrice-weekly" journal *Jerushalayim*, once as the weekly *Yishuv* and once as *Shalom*, the organ of peace. All that is necessary in such circumstances of suppression is to dig out some old permit granted by the local Government for a paper since defunct and use its registered title instead of the title of the paper suppressed.

Some careful new Press legislation together with wise (and effective) supervision of the Palestine Press is certainly most desirable and immediately called for. It is obvious that with so many papers current among a tiny population of which the majority is illiterate, the financial security of any particular paper is too much (in some cases altogether) dependent on violent expression of violent partisanship—which, of course, means abuse of the other fellow. The task of providing news comes mostly only as an afterthought, and most of the papers are too poor to subscribe to the ordinary agencies.

Sir Stewart Davis.

The knighthood awarded in the last Birthday Honours to Mr. S. S. Davis, Palestine's Treasurer, is heartily approved locally on all sides. It is recognized that Sir Stewart has by his skilful, inconspicuous labours played the part of benevolent uncle to Palestine's finances, without any fuss or limelight. He is even highly spoken of in Tel-Aviv, where his treatment of the gossamer-like foundations of its municipal finance was not light-handed.

The Chief Secretary.

The rumours, current during the past month, of Mr. H. C. Luke's transfer to Malta as Lieutenant-Governor were yesterday officially confirmed. It was, perhaps, inevitable after his experiences of last August and his ordeal before the Shaw Commission that his affection for things Palestinian would not continue such as to make him prefer Jerusalem above all other places under the Colonial Office. None the less it is greatly to be regretted that his particular gifts could not be longer harnessed to Palestine's particular points of interest. Something of Palestine's *odium theologicum* certainly seems to linger in Malta too, but in Mr. Luke's eyes it must be a very dull reflexion of the richness of "cross-currents" which make up the Palestine political pattern.

ABYSSINIA.

Addis Ababa, June 4.

The New Reign.

King Taffari Makonnen's accession as Emperor Haili Sallassie I is being taken very calmly on the whole. Ras Guksa, one of the former husbands of the late Empress, was always a potential source of trouble, and his death, at the hands of the Government troops, has probably made the Emperor's path somewhat smoother. Ras Hailu, of Gojjam, also having declared for the new Emperor, the latter's position has been thereby consolidated considerably. It seems reasonable to suppose, therefore, that there will be more stability in the Government and steady and progressive development of the country in all directions under the sole control of the Emperor.

Preparations are already in hand for the Coronation, which has been tentatively fixed for early in November. Invitations have been sent out to a large number of nations to send their representatives and a considerable influx of visitors is expected. An energetic programme has already been begun for the roads to be put in order, and already an improvement can be seen. The authorities seem to have at last realized that it is better and cheaper

CENTRAL ASIAN SOCIETY
(in which is incorporated The Persia Society.)
Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published.
The subscription of £1 per annum entitles members to a copy of each issue of the Journal, tickets for all meetings, and the loan of books from the library.
Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W.1

Digitized by Google

for reputable firms, who know their job, to undertake the work than to let the contracts out to individuals who are "amateurs" and whose sole aim is to make as much money out of the contract rather than give value. "Sheil Mex" are preparing some of the main roads—and chaos reigns on the roads, as the authorities will insist on doing two or three roads at a time, thus closing them to traffic.

Social Life in the Capital.

Sir Sidney Barton, the British Minister, has recently returned from British Somaliland.

The Belgian Military Mission has arrived and settled down to work. The effect is already evident in the "smartening-up" of the bearing and drill of the troops. There is sufficient time for a quite creditable show to be made at the Coronation.

The troops taking part in the recent rebellion in the north have now returned to their quarters and a Grand Review and Victory March were held by the Emperor on May 21. It was rather an impressive spectacle.

The birthday of our King was duly kept by the British Legation on June 3. The Minister received his various Indian and Arab protégés during the day and the other Legations paid their formal visits of congratulation. In the evening a dinner was given by Sir Sidney Barton to the British community and 28 were present. Not a bad number for the small community! Commander Jackson, of H.M.S. Dahlia, and Capt. Erskine, H.M. Consul at Gore, were among the guests. The King's health was drunk with appropriate honours and a most enjoyable evening was spent. Miss Marian Barton acted as hostess in the absence of Lady Barton, who has proceeded home on a short and sorrowful visit.

There have been many changes recently in the British Legation. Mr. Dunbar, First Secretary, was invalided home and his place has been taken by Mr. Troutbeck from Constantinople. Mr. Bullard, Consul, has also proceeded on leave—not to return to Addis Ababa. Mrs. Bullard's health was seriously affected by the altitude and she went home under doctor's orders. Mr. Bullard anticipated the leave due to him and accompanied her.

Mr. E. A. Chapman-Andrews from Cairo is an addition to the Legation in the capacity of Vice-Consul.

Mr. Zaphiro, Oriental Secretary, has been seriously ill, but one is glad to note the decided improvement in his health due to adherence to "Doctor's Orders."

Dr. and Frau Pruffer, of the German Legation, are leaving Addis Ababa, Dr. Pruffer having been appointed to the Foreign Office in Berlin. They will be missed in our small circle. His successor, a bachelor, comes to us from New York.

The most serious fire that has occurred in Addis Ababa took place on April 28, when one of the leading Greek wholesale and retail stores was burned to the ground. The stores, we understand, were adequately insured. It was fortunate that the fire did not spread and cause considerably more damage. There is a complete absence of fire-fighting appliances and organisation, and with the growth of Addis Ababa town it is imperative that this state of affairs be remedied as speedily as possible. Another greatly desired improvement should be the storage of benzine outside the town area. Should another fire of the same magnitude take place and the wind be in the right direction, nothing would save the town, as there are a number of petrol dumps spread indiscriminately about.

The Races held on May 23 were a great success, in every sense of the word. The Emperor lunched with the members in the Club House. There is a considerable amount of interest now being taken in the races, as a result of Sir Sidney and Lady Barton's unflagging enthusiasm. Lady Barton has roused the Imperial Club, who are responsible for the races, from its lethargic state, and it will not be her fault if the Club does not become a social success—but, perhaps, the true club spirit is lacking in the small international community.

The tenure of the Club in its charming surroundings is somewhat uncertain. The Emperor desires the racecourse for his aerodrome and has offered the Club another site, about three miles out on the British Legation road, and has offered to bear all expense in adapting the site for the purposes of the Club. Preliminary surveys, however, have proved that it would take an enormous sum of money to meet the requirements of the Club and the matter is, therefore, in abeyance. The Club has no valid title to the racecourse and the Emperor may at any time appropriate it. The Club would be well advised to accept the Emperor's offer, which is a generous one.

The rains are with us again, somewhat earlier this year.

THE HIJAZ.

Jidda, June 1.

The Asia Disaster.

A Government committee, appointed to inquire into the circumstances of the Asia tragedy, and presided over by the Qadhi of Jidda, has during the past week taken the depositions of various pilgrims and Government officials and also of the Captain, Chief Engineer and first officer of the Asia. It completed its report for dispatch to Mecca yesterday. The cause of the fire was, naturally enough, impossible to ascertain, as the ship itself is too much of a charnel house to offer any useful evidence. I understand that the officers concerned have been tacitly exonerated in respect of the more serious charges levelled at them by pilgrims too panic-stricken at the time to form an accurate idea of what was happening and probably unable in the circumstances to distinguish between the ship's officers and the charterers, who appear to have made their escape at an early stage of the fire and who left Jidda very soon after the incident to avoid such consequences as might ensue to themselves and others. Their conduct has certainly created a bad impression, but in no way involves the officers; and it should, perhaps, be stated that they are not French, one being an Algerian and another a Greek. The Court's report, however, contains severe criticism of certain aspects of the actual handling of the situation, and blames the Captain, officers and crew for (1) their failure to distribute lifebelts at an early stage of the proceedings and to lower all the ship's boats; (2) for their failure to control the panic of passengers; and (3) for the abandonment of the ship by the Captain when, on his own admission (tempered by his statement that at the time, about 12.15 a.m., he was cut off by fire on both sides from the remainder of the passengers), there still remained some 200 pilgrims on board. An official *communiqué* will probably be issued in due course, when the Government's opinion and any decisions it may arrive at will be known. The composition of the Court itself is, perhaps, open to criticism on the ground that it was too large and unwieldy for so complicated a task, and that it came into being too late to take the evidence of the Captains of various other ships in port at the time, who should have been detained for the purpose, whereas the ships left in the ordinary course during the two or three days following the incident with their complements of pilgrims. But the Court, handicapped in this way, appears to have done its best in the circumstances, and its criticisms seem to be reasonable enough and

Digitized by Google

calculated to secure for the future attention to the interests of pilgrim-passengers, who must inevitably be the worst sufferers in such cases. Some 1,000 odd of the rescued pilgrims left Jidda by another boat for Hudaida and Jibouti a few days ago, and the remainder, who have been all the time guests of the Government, are expected to leave to-morrow.

Meanwhile, on May 30, the ninth day after the tragedy, the Asia, still smoking and smouldering like a volcano, was successfully beached on a coral-bank of the outer harbour to obviate the risk of its sinking and thus becoming an obstruction to other ships using the port. And, apart from the official *communiqué* yet to be published, the incident of the burning of the Asia may be considered closed.

Cholera Scare.

Some days ago advices from the quarantine station at Tor stated that a single case of cholera (or rather of a cholera-germ-carrying patient) had been detected among the pilgrims who had been in quarantine there from Jidda. It also appears that on the arrival of an Italian ship with pilgrims at Massawa a death on board from cholera was reported. It is not known whether any other cases have occurred, and there is no reason to suppose that they have, but the full stringency of the terrible quarantine law has been put into operation by the international authorities at Alexandria; and that seems to mean that for the next six or eight months or until the authorities think better of their severity all passengers arriving from Jidda in Egypt and the Sudan (i.e., all except favoured persons!) must do eight days in quarantine or will be refused admission. Whether these restrictions apply elsewhere is not known, though presumably the long voyage to India and the Dutch East Indies will obviate any inconvenience there to arriving pilgrims.

It is at least strange that here in the Hijaz there is no sign of cholera whatever. At least none has yet been discovered in spite of very careful search, and the general health of the pilgrims seems to be better than has been recorded for many years past, while May 30 had the unusual distinction of being a day without a single death of any kind in the area controlled by the Hijaz medical authorities. The latter regard the quarantine restrictions now imposed by inexorable authority as scarcely justified by any fact ascertained in connexion with the pilgrimage of this year. It is, therefore, at least possible that the source of the disease is in Egypt itself, and that its germs are travelling about in vegetables or fruit carried by boats from that country. But for the time being all residents of Jidda, proposing to proceed to Egypt or Europe on business or pleasure, must face the unpleasant prospect of an enforced though probably delightful sojourn at Tor.

General News.

It is pleasant to be able to record that the Dutch Consulate has been promoted to the rank of a Legation with effect from May 22, and that Mr. Van der Meulen remains in charge as Chargé d'Affaires. This development has already been anticipated in a previous letter of mine and causes no surprise. Italy appears to be trembling on the brink of following suit, while many delays and disappointments do not deter me from expecting an Egyptian Legation here in the near future; if I say it regularly enough I shall be right some day!

The Amir Saoud, Heir-Apparent to the Throne, paid a short visit to Jidda last week, his first visit here since 1926, when he also visited Egypt. The strenuous exertions of the last three years in Najd, where he has long borne the brunt both of work and responsibility, seem to have done him much good and to have developed those qualities of easy and unassuming leadership which are essential in the governance of desert countries. During his stay here he made an exhaustive inspection of all Government Departments and institutions, and rumour is consequently active with the suggestion that he may for the time being assume the functions of Viceroy in the Hijaz *vice* the Amir Faisal, who may perhaps be called on to make a third visit to Europe on behalf of his father. But nothing can be said on this point for certain, though it is recognised in political circles here that, with the failure of the Egyptian and Palestinian negotiations and the new and little-liked development in Syria, the time is ripe for King Ibn Saoud to take the lead in Arab affairs which circumstances impose on him, however little he may crave after intervention in the politics of further Arabia.

The Amir Saoud entertained all the representatives of foreign Powers at dinner in his palace on the first night of his sojourn; and on the second night, before he left on his return to Mecca, he was entertained at a municipal banquet, which was attended by all the local notables and various representatives of the unofficial European community. Both functions were successful, and it is evident that the Amir, who is about 27, has a way with him, which portends a fair future for his country.

The tangle of diplomatic precedence has for all practical purposes been settled for good by the initiative of Sir Andrew Ryan, who has recognised the Soviet Minister as the *doyen* of the Corps, and has thus early made both his own personality and British influence felt in the international sphere of Jidda, where hitherto British counsels have been but halting and negative.

The King is expected here on a week's visit in the very near future, but the actual day of his arrival has not been announced, as His Majesty has retained his Najdi custom of sudden decision and immediate action thereon, as well as that of perpetual readiness to move at a moment's notice.

ALBANIA.

Tirana, June 25.

Italians in Albania.

Several mistakes crept into the letter from Tirana published in THE NEAR EAST AND INDIA of June 19, which, it is important, should be corrected without delay. The number of Italians given as 245, should, of course, refer to the Italians in Albanian Government services, inasmuch as the total number of Italians in Albania, including engineers and others employed by private firms, probably exceeds 2,000. Accurate detailed returns from the recent census are not yet available. The reference to Italians attached to the Albanian Army should read: "One hundred Italian officers are attached to the Albanian Army, including General Pariani and his staff (5), 8 attached to Albanian G.H.Q., 67 instructors in the military schools or attached to various units, and 20 medical and veterinary officers. Only four officers hold command. . . ." etc. The words: . . . medical and veterinary officers. Only four. . . ." were omitted. Incidentally, the name of the Albanian Permanent Delegate to the League of Nations is Lek Kurti.

Roads and Bridges.

A series of violent thunderstorms, accompanied by torrential rain, have broken over Tirana during the last few days; and had the author of a recent book on Albania been in Albania to see the torrents into which even the smallest streams were transformed, he might regret his assertions that the replacement of wooden by stronger and more permanent bridges—to which part of the Italian loan for public works is being devoted—is being carried out for purely military purposes. It is only since the completion of the very fine Zogu Bridge over the Mati in 1927 that land communication with Shkodra in all weathers has been assured; and the Durrës-Elbasan-Lin-Korça road, which crosses the Shkumbi several times and lesser streams in many places, and is still the only direct communication between the coast and eastern Albania (Korça may also be reached *via* Perati, *on the Greek frontier*) was frequently impassable until a few months ago owing to the absence of bridges. Two other

east and west roads are under construction—one through Puka to join the Yugoslav road to Prizren and the Albanian frontier, and the other through Mati to join the Yugoslav road to Dibra. At present the only land communications with Yugoslavia are *via* Shkodra or Korça. If Albania is to be developed, roads in all parts of the country—capable of bearing heavy commercial vehicles in all weathers—are indispensable; and those who exclaim that such roads are strategic—of course, any road may be used for military purposes in the event of war—would do well to remember that roads to the Albanian frontier already exist in Yugoslavia, and that their extension through Albania would probably be of greater advantage to Yugoslavia than to Albania in time of war.

EGYPT.

Alexandria, June 27.

Meeting of the Deputies.

The past week in Egypt has proved one of the most exciting for a long time. On June 21 there was the historic meeting of the Chamber of Deputies which took place only after chains had been smashed from off the gates of Parliament. When King Fuad availed himself of Article No. 39 of the Law of the Constitution to adjourn Parliament for a month, by which time the present session would be at an end, and, therefore, an immediate clash between the Sidky Cabinet and the Wafd Parliament would have been avoided, it was felt that the Wafd would have some answer hidden up their sleeves. It was not long in being revealed, and the two Chambers announced their intention of meeting on Monday to discuss the Decree of Adjournment. Sidky Pasha then wrote to the Presidents of each Chamber asking for a written undertaking that nothing more than the reading of the Decree would take place. Adly Yeghen Pasha, President of the Senate, gave that undertaking, but Wissa Bey Wassef, President of the Chamber of Deputies, refused. Sidky Pasha, therefore, forbade the meeting of the Chamber. When the Deputies made their way to Parliament on Monday afternoon they found forces of policemen in steel helmets and steel armlets stretched across the road leading to Parliament. They managed to pass these policemen, but were then confronted by locked gates. When Nahas Pasha arrived he instructed Wissa Bey Wassef in his capacity as President of the Chamber to order the officer in charge to break the chains. After some hesitation this was done, and the Deputies made a triumphant entry into the Chamber, where several anti-Government speeches were made.

The next day Adly Yeghen Pasha sent a formal letter of protest to the Prime Minister, who replied upholding his position. The Deputies protested most strongly against the presence of policemen in the Chamber, as they stated that, according to the Constitution, the onus of maintaining order in the precincts of the Chamber falls upon the President, who has a force of parliamentary police at his command. Arguments are still going on on that point.

The Wafdists' Oath.

The next affair of any importance was the large Wafdist meeting on June 24. Nahas Pasha addressed over 400 Provincial Councillors and all the Wafdist Senators and Deputies. He made a stirring speech in which he referred to the unconstitutional Cabinet and stated that unless they "remembered that they had consciences and appeared before the Chamber to reveal their programme, they must resign." He included many dark hints about intriguers working in Egypt while the Delegation was in London striving for Anglo-Egyptian friendship, and wound up with a terrific peroration in which he called upon all present to take an oath of allegiance to the Wafd and to the Constitution. (The word Constitution is being slightly overworked in Egypt at present.) This oath called upon all to join the Wafd in a campaign of non-co-operation with the Government and to be prepared to make any sacrifice to resist attacks upon the Constitution. The oath was repeated sentence by sentence by the assembled multitude, standing with arms out-stretched in front of them, admist the highest excitement.

To-day Nahas Pasha and Makram Bey Ebeid travelled down to Alexandria, and at each station *en route* the train was held up while mobs of Wafdists crowded upon the platforms and repeated the oath after their leader. The oath is worth giving in full. It is:—

"I swear by the name of the Almighty God to defend the Constitution, to resist any attacks upon it with all my power, and to make any sacrifice I can in its defence; to participate actively in a campaign of non-co-operation to be drawn up by the Committee to be appointed by the Wafd, and to preach this in my constituency."

An Obscure Position.

The position is still as obscure as ever. Nahas Pasha and Sidky Pasha are watching each other's every move and are each waiting for the other to make a slip. I understand that Sidky Pasha is disappointed in not receiving the support which he expected from the British Press. The Wafdists are quietly elated and imagine that Sidky Pasha will have to resign at the end of next month, when another meeting of Parliament will be held at the expiration of the month of adjournment.

In the meantime the new Cabinet is occupying itself with financial affairs, and the Minister of Finance, who is also the Prime Minister and the Minister of the Interior, issued a *communiqué* on June 24 to the effect that the Government were selling their cotton at 28 dollars for Sakel and 19.80 dollars for Ashmouni. That price is about 5 dollars higher than the prevailing market price, and it is not thought that much will be purchased, but it is a move in the right direction. Orders for the strictest economy have been issued to all Government Departments, and projects such as the rebuilding of Kasr-el-Nil Bridge and the widening of the Pyramids road have been postponed.

THE PATRIARCH OF ALEXANDRIA.

His Beatitude Meletios II., Metaxakis, Patriarch of Alexandria, who is visiting England for the Lambeth Conference, attended the Nikaean Lecture at King's College, Strand, on June 30, at which Canon W. A. Wigram, D.D., lectured on "Anglicanism and Orthodoxy." The following day his Beatitude preached at the twenty-fifth anniversary of the Society of the Faith in the Church at St. Mary-le-Strand, and later in the same day he laid the foundation-stone of children's chapel in St. Luke's, Rosemary Road, Peckham.

Kurds are reported to have raided across the frontier from Persia into Turkey, where they have been joined by local Kurds. Reinforcements of Turkish troops have been sent to quell the disorders.

Lieutenant Giuseppi Chesti, one of the Italian instructors to the Albanian Army, was murdered during the week-end while riding a motor-cycle near Shkodra (Scutari). As soon as the crime was discovered the local Albanian authorities went to the Italian Consulate at Shkodra to express their horror and similarly the Minister for Foreign Affairs at once went to the Italian Legation in Tirana to express the grief of the whole Albanian nation.

EGYPTIAN GOVERNMENT.

EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are invited for ASSISTANT MISTRESSSHIPS for teaching English in Egyptian Government Schools.

Applicants must be between the ages of 25 and 34, and must have some teaching experience, and possess University qualifications with a Diploma in Teaching or the Higher Froebel Certificate.

The initial salary offered is £E25 a month (about £307 a year) and the appointments will be on contract for a period of five years, and renewable at the end of that time.

Full particulars and Form of Application may be obtained from the Director, Egyptian Education Office, 39, Victoria Street, London, S.W.1.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, June 12.

Volume One.

The one thing that I might have looked for myself in the first volume of the Report of the Statutory Commission —an acknowledgment that some, the more serious, of the mistakes of the past must be undone, if India is to have peace from the bitter kinds of political strife—is not in that historic State document. It was hardly to be expected, however. It is true, as the Commissioners say, that the Declaration of August ,1917, must stand, and that the Preamble to the Government of India Act and the Instrument of Instruction to the Governors-General are binding; but what was the intention of those who framed the Declaration? It was to endow India with a government that some of the people could take a pride in working, while the rest lived under it with the feeling that it was well founded and benign. The assumption that there was no alternative to "applying parliamentary institutions to India" was unsound. That assumption is as unsound to-day. But if the die has been cast; if the parliamentary course has been irrevocably decided on, it is no use a solitary man's crying in the wilderness.

Opinion in India.

There has not yet been time for anyone to collect many opinions on the Report. One curiously worded opinion—it comes from Simla—is that it "goes very near to being all things to all men." An opinion that I have actually listened to, is that the Report is a "see-saw" thing; that the end of each paragraph or part may be counted on largely to qualify the beginning. What, I should say, opinion in India will fasten on is the view expressed in these words: "In the development of this purpose the decision as to the immediate future must largely depend upon a just estimate of the results and consequences of the steps already taken," the purpose in question being the carrying out of the policy defined by Mr. Montagu on behalf of the British Cabinet in 1917. There will never be any getting Mr. Gandhi to take part in the Round Table Conference, if, after all the talk there has been about Dominion Status "at the earliest possible date," "the substance of independence," and the rest of it, there is no advance to be made now that cannot be justified by a pointing to India's achievement in the recent past. Mr. Gandhi and all his followers will say that the record of the British-controlled bureaucracy is no concern of theirs; that the record of the Ministers who have worked under the Dyarchy Constitution does not concern them either, nor does the record of the various legislative bodies. What is good in that record concerns them no more than what is bad. They want to begin a new order. India's right to be a Dominion rests, they will argue, not on any record of successful administration, but on India's being India; that is, a separate "nation."

The North-West Frontier.

Time was when one would say that the rocks that the British-Indian political ship would split on were the questions of finance and the relations between British-India and the Indian States. A question that has been in many minds here during the past few weeks is whether there are not still more dangerous rocks on the North-West Frontier. There has been some unrest among the tribesmen. We know, that is, of the thoughts of the tribesmen that have already been translated into action. But what do we know of the thoughts of the tribesmen that have not yet been translated into action. We know little or nothing of them. We knew of the trouble that has brewed, but little or nothing of the trouble that is brewing. Another thing that is still obscure and dark is whether there are Muslims in British-India who are counting on support from beyond the North-West Frontier in the struggle with Hindu India that they foresee there will be, if India is made a Dominion. That is still one of the dark matters.

A Muslim View.

The great bulk of the Muslims, as you have been told in Parliament, have held aloof from the civil disobedience movement. A few have thrown in their lot with the Congressmen. They make, or some of them make, very strange bedfellows for Mr. Gandhi and the pandits. One of them has been questioned, and his answer reported. "Do you really believe in this independence creed?" That was the question put to him. "Can you really believe in it?" "I can and I do," was the reply. Now listen to the explanation. In India as a Dominion, he explained, the Muslims would suffer an inevitable defeat at the hands of the Hindus. England would be pledged not to interfere in that as in any other of the internal affairs of this self-governing Dominion. But England would be guarding the North-West Frontier—England, that is, would be keeping the gates shut through which would come the only recruits that the Muslims could count on. In an independent India, an India whose connexion with Great Britain had been completely severed, those gates would be open, and Muslim India could count on allies in Persia, Arabia; they might receive recruits from as far away as Morocco. "At the worst," this man put it tersely, "we Muslims would suffer a less worse defeat, if India is made independent than if she is made a Dominion." So that man is now actively engaged in preaching the independence creed on the Congress side.

The North-West Frontier Province.

Just when that man and others like-minded were revolving such thoughts it fell to the Government of India to receive a deputation from an association of zemindars in the Punjab. One thing that they urged upon the consideration of the Government was the desire of their co-religionists in the Frontier Province that the reforms might be extended to that part of India. What does that concern the Muslim zemindars of the Punjab? It does not concern them. Why should they care whether the reforms are extended to the North-West Frontier Province or are not? They do not really care. The forming of political associations, and the sending of deputations with memorials to the Government headquarters, are part of that basically unreal thing for which the English have misguidedly built a stage in unhappy India. Deputations must say things, and at this time it is stereotype that a deputation of Muslims should press upon the Government that the desire of their co-religionists in the Frontier Province should be considered sympathically.

The Answer Given.

The deputation of Punjab landowners might have been reminded that "reforms" (parliamentary institutions) have proved no blessing to most of the countries to which they have been transplanted from England, and that across that North-West Frontier have come all those who in the past have dispossessed those in possession in India. Of land or what it might be. Delhi, far as Delhi is from the frontier, has been sacked by strong men from the other side of that border. Or if that is too plain speaking for any Government, to that question with no reality behind it might have been given an answer with no reality behind it. But with that pathetic persistence in the belief that parliaments are made in heaven, and are the boon that earth craves for, as a thirsty field does for rain, the answer that the Government decided to give was: ". . . when making recommendations on this subject to His Majesty's Government, the natural claims of the province will be viewed with sympathy." One does not know whether the British Cabinet was consulted about that answer, or at least the Secretary of State for India: but this is a comment I have seen, and it shows how much the writer thought that the answer committed the Government to a new thing: "The expression of this sentiment

Digitized by Google

will hardly come as a surprise since it is in consonance with the oft-declared attitude towards each and all of India's constitutional problems, but it is the more important at this juncture in that it is the first time . . . that the Government of India have officially made known their sympathetic intentions towards such aspirations in the Frontier Province. . . ."

The Dread Reality.

It grows more and more plain, as one listens to what men say, and still more as one pieces out their unspoken thoughts, that the dread fact is that we have a strong party straining every nerve to establish a Hindu *raj* in India (once again after so many centuries of alien rule), with the bulk of the Muslims holding aloof, until the battle —one of cannon or of laws—begins, while a few, more long-sighted, they think, are preparing for allies. Meanwhile seven Commissioners write a volume of 407 pages, within no one of them any sufficiently plain word of any of that.

THE SEPARATION OF BURMA.

Among the many important proposals to be found in the Simon Commission Report, the one that is likely to meet with the widest acceptance is that for the separation of Burma from India. If there is any sentimental regret over the divorce between the two partners, the sentiment will not be found in Burma, where the demand for separation is universal among the Burmans themselves and among the important immigrant races, with the possible exception of recently arrived Indians. The demand is not surprising in view of the entirely different culture and customs of Burma, where caste is unknown and literacy is comparatively widespread. The feeling has been strengthened by more practical reasons, such as the heavy protective duties levied in India, which raise the cost of living in Burma without assisting local industries, the influence of Calcutta and Bombay in mercantile matters, and above all the uselessness of the Legislative Assembly and the Council of State to Burma. Anyone who has seen the supremely bored representatives of Burma at Delhi, a week's journey from their native land, will appreciate the anxiety of the leaders, whether political or mercantile, in Burma, to be relieved from this useless labour.

There are other considerations which are not noticed even in the Commissioners' comprehensive report. There is the fact that Singapore and the Straits Settlements were once under the Government of India, whose control was withdrawn with great advantage to local conditions. There is the further fact that the Burmans can see their neighbours of Siam enjoying self-government, though with the help of foreign advisers, and the Burmans, who regard themselves as inferior to no other Oriental race, naturally wish to have a similar voice in their own affairs. There is thus an overwhelming desire for self-determination, which neither the Commission nor the British Parliament could well refuse to recognise, unless the practical objections were much stronger than there is any reason to believe them to be.

The military objection is certainly not sufficient to justify the refusal of the demand for separation. It is true that there is a conterminous boundary against invasion from the North-East, and that such invasion, however unlikely it may appear at present, has occurred in the past and might occur again with a rejuvenated and over-populous China. It is also true that the Burmans will never submit to the monotony of discipline, and will, therefore, never have an adequate army of their own. They can, however, as they have done in the past, recruit soldiers and military police for local service in the Province, or they can obtain on payment the services of units of the Indian Army, as has been the custom of the Straits Settlements. In the event of serious warfare, operations must in any case be conducted with the help of the Imperial General Staff.

Nor is the financial objection more serious. The examination of the position by Sir Walter Layton seems to show that both India and Burma will be better off financially after separation. Whether this is likely to be the case in practice, it is clear that Burma is in a very strong position as regards its trade with India. The latter country must take the rice, the mineral oils, and the timber of Burma without the imposition of any considerable duty, since other countries are anxious to take these products. As regards the Indian exports to Burma, however, the latter can obtain them all, with the possible exception of gunnies, as cheap, or, if slightly dearer, of better quality, from other countries. There is, of course, the import of Indian labour, which is vitally necessary for Burmese industry. The relief, however, to the south and east of India afforded by this lucrative outlet for its superfluous labour is so great that there is little fear of the supply being cut off by India as a weapon of economics.

On these grounds, therefore, there is little doubt that Burma can stand alone. A more serious objection, though it is barely alluded to in the Report, is the character of the Burmans themselves. To many charming qualities they add a dislike of hard work, and a belief in their own superiority which amounts to bumptiousness. Their attitude, moreover, towards what a harsh Western world regards as corrupt practices is even more complaisant than is the rule in India. It is obvious that Burma needs British guidance and assistance even more than India, though, as the Report shows, the need in India is great enough. There is also the fact brought out by the Commissioners that nearly half of the area of Burma consists of the backward tracts, between whose inhabitants and the Burmans proper there exists mutual contempt, and which certainly cannot be handed over to the administration of Burmans. These circumstances indicate that the Constitution granted to Burma should be on somewhat different lines from that decided upon for India.

The recommendation of the Commission that the Governor of Burma should be entirely distinct from and independent of the Viceroy of India seems indubitably sound, as is the further view that the *nexus* between the two should be found in London. It is indeed essential that the Governor of Burma should be a first-class man: but that is also a postulate for the Viceroyship, and we may hope that the supply in England of such men is not so deficient that men adequate for both posts cannot be found.

OPENING OF INDIA HOUSE.

The arrangements for the opening of India House, Aldwych, by the King at noon on Tuesday, July 8, have now been completed. His Majesty who, as announced in THE NEAR EAST AND INDIA of May 22, will be accompanied by the Queen, will be received at the entrance by Sir Atul Chatterjee, High Commissioner for India, who will present the architect, Sir Herbert Baker. Mr. Wedgwood Benn, Secretary of State for India, will be in waiting upon their Majesties and a detachment of Indian cadets from Sandhurst will be on duty within the entrance.

Their Majesties, who will be accompanied by H.R.H. the Duke of Connaught, will be conducted to the library, where the King's Indian Orderly Officers will be in attendance. The High Commissioner will read an address, to which the King will reply. His Majesty's speech will be relayed to all B.B.C. stations in this country, as well as to the experimental short-wave station at Chelmsford, which will be opened specially in order that listeners abroad, and particularly those in India, may hear the speech. Sir Atul Chatterjee will afterwards present Dr. Oscar Faber, the consulting engineer, and others prominently associated with the design and construction of India House. The King and Queen will then leave the library and inspect various parts of the building.

As the seating accommodation in the library is limited, the High Commissioner regrets that he has been compelled severely to restrict the list of guests, all of whom must be in their places by 11.30 a.m. The Duke of Connaught will arrive at 11.55 a.m. and the main doors will be closed from 11.30 a.m. until his Majesty unlocks them.

THE UNITED STATES AND INDIA.

That comment in the American Press on the first volume of the Simon Commission's Report indicated a growing appreciation in the United States of the sincerity of Great Britain's efforts to arrive at a just and equitable solution of the Indian problem was suggested by Professor Rushbrook Williams in a paper read to the East India Association on "Indian Unrest and American Opinion."

The lecturer, who has recently returned from a month's lecturing tour on India in the United States, said that, if so vague a generalisation were permissible, he was inclined to say that those classes of the American people who were most interested, at least from a detached and intellectual point of view, in foreign affairs, often professed a sentimental predisposition in favour of the Indian revolutionary movement. The men of affairs, the business men and the professional classes, on the other hand, whose interest in India, though keen, was of recent growth, tended on the whole to sympathise with Britain's difficulties and to deprecate the active sympathy displayed by the radical intellectuals towards subversive opinion in India. After emphasising his belief that "the average American knows no more of the realities of the Indian situation to-day than does the average Englishman of conditions in the Philippines," Professor Rushbrook Williams said that there were, nevertheless, distinct symptoms that the general failure to recognise the true perspective of the present Indian unrest was being remedied. In particular he believed that the great gain during the last month or so from Britain's point of view had been the tendency on the part of even those quarters which originally condemned this country to suspend judgment until after the Round Table Conference in October. In other words, this country was being watched to see if she rises to what are regarded as the requirements of the Indian situation. Further, those solid and influential sections of American opinion which realise with increasing force the difficulties in India with which Great Britain is confronted, found themselves confirmed in their judgment that Britain's great experience was likely to make the Indian problem just one more of those many world problems which she has overcome in the course of her long history.

But he also left the United States with the definite feeling that in many quarters, some of which were very influential, Britain was being regarded as at present on her trial so far as India is concerned. If, as they all hoped and prayed, the trial was successfully surmounted, the friends of Britain in America would be augmented and the ranks of her opponents diminished. But if by any failure of British statesmanship the Indian problem were allowed to become aggravated, he discerned a real risk lest India should gradually assume that unfortunate position of prominence as a dividing force between Great Britain and America which was for so long unhappily occupied by Ireland herself.

Lord Burnham, who presided, said that on the previous night the eminent Chairman of the Statutory Commission gave a broadcast talk on the first part of the Report which was distinguished by Sir John Simon's usual power of exposition and analysis and that lucidity, not only of mind, but also of soul, which he possessed to such an extraordinary extent. As one who had worked for many years to foster good understanding between the United States and this country, he hoped it would be increased and multiplied by Americans gaining a real understanding of the Indian problem with all its complexities, which to some extent at least had been revealed to the world in general by the first volume of the Report.

The Secretary of State for India has appointed Sir (Samuel) Findlater Stewart, K.C.I.E., C.S.I., Assistant Under-Secretary of State, to be Permanent Under-Secretary of State for India in succession to Sir Arthur Hirtzel, K.C.B., whose impending retirement was announced in a recent issue of THE NEAR EAST AND INDIA.

THE PROBLEM OF INDIA.*

The reaction which is now being widely felt in England against the nerveless manner in which the Indian problem has been handled, since the date when Mr. Montagu became Secretary of State, finds expression in many recent publications. Issued before the Simon Commission's Report, Capt. J. E. Ellam's "Swaraj: The Problem of India" contains many home truths which are useful to recall to everyone's memory, even when stated with the crudity occasionally to be found in the author's pronouncements. The historical account is adequate though in many small points it would not satisfy the stickler for accuracy; but the author correctly sets out for the English reader the real condition of India when the English, very reluctantly in the first place, began to take over the government, the improvements which they have affected, the corruption that has already occurred where British control has been slackened as in Municipal affairs, and the chaos that would ensue should that control be withdrawn altogether. It is well that such points should be made clear.

The value of the book seems to be lessened by two obsessions of the author. The first is that the British are Aryans, and by right of that fact have some justification for ruling India. Leaving aside the point that the Germanic branch of the Indo-Aryan family should not properly be termed Aryans, it is perilously near nonsense to write that, "by right of our Aryan caste and ancestry we do rule and will rule in India." Neither the Moguls, whom we nominally succeeded, nor the Marathas whom we in fact supplanted, were Aryan by race. The author's other obsession is against the Brahmans. It is doubtless true that Brahminism is responsible for the evils of caste, and that Brahmans cannot be expected to welcome the substitution of Britons in the bureaucracy. But it must be remembered that only in the southern part of Bombay and in Madras do the Brahmans stand out from the remainder of the intelligentsia either in brains or in opposition to British rule. Gandhi himself, though in many respects an exponent of Brahminism, is not a Brahman. It would be well for the author and his readers to recognise that the "placid contentment" of all classes, and not merely of the intelligentsia, has been disturbed to an extent which should have satisfied Mr. Montagu, and that all are equally greedy for the loaves and fishes which they believe will accompany Swaraj.

It is useless at this stage to call for a reversal of the policy, the consequences of which were foreseen more than a century ago by Munro and Elphinstone; a policy, moreover, which is in accordance with the sentiments of the British nation. It is quite possible, as the author states, that the policy which the French and Dutch have followed in their Asiatic possessions would have led to less disturbance and less ultimate unhappiness. But it is too late, even if it were certainly desirable, to go back upon past pledges. What can be done is to ensure that progress towards democratic institutions is not faster than prudence and efficiency permit, and that the British Parliament should be the ultimate judge on this point.

* "Swaraj: The Problem of India." By Capt. J. E. Ellam. (London: Hutchinson. 12s. 6d.)

The sixth Indian Empire Garden Party for Officers (including members of the Nursing Service) and civilians who have served on the East Indies and China stations, and their wives and daughters, will be held at the Hurlingham Club to-day, from 2 to 6.30 p.m.

PERSONAL AND GENERAL

TO-DAY

July 3, 1930 (New Style).
June 20, 1930 (Old Style).
Saphar 6, 1349 A.H., of the Muslim Calendar.
Tammuz 7, 5690, of the Jewish Calendar.
Tir 15, 1309, of the Persian Calendar.

Sir James Crerar will join the P. and O. s.s. Kaisar-i-Hind at Marseilles on July 11, on his return to India.

Lord and Lady Dickenson will return to England shortly from Geneva and Bagnolloe de l'Orne.

Dr. Hamed Bey Mahmoud, Egyptian Chargé d'Affaires in London, resigned his post at the Legation on June 21.

Sir Arthur Crosfield, Bt., and Sir Norman Bolton had the honour of being received by the King at Buckingham Palace on June 27.

The King received the Chief of Bhor and his son the Yuvraj and the Maharaja of Tripura at Buckingham Palace on June 28.

Judge Booth, Judicial Adviser to the Egyptian Government, left Egypt for England, accompanied by Mrs. Booth, on July 2, on leave.

The annual exhibition at the British Museum of objects from the expedition to Ur was opened to the public yesterday (Wednesday).

Lieutenant-Colonel the Hon. Sir Stanley and Lady Jackson, who arrived in London last week from India, are staying at the Hyde Park Hotel. They expect to return to India early in September.

M. Victor Goloubev will lecture to the Royal Asiatic Society, 74, Grosvenor Street, W.1., on July 4, at 4.30 p.m., upon "The Archæological Work of the Ecole Française d' Extrême Orient in Indo-China." The lecture will be illustrated.

Captain and Mrs. Duncan McCallum have left Cairo and are spending the month of July in Italy. They hope to be in England for a week or two at the end of August, or early in September. They expect to be back in their Cairo flat by the end of September.

Dr. V. Tilea, member of the Roumanian Parliament and Head of the Roumanian delegation which has been negotiating the trade agreement between Roumania and Great Britain, arrived in London at the end of last week for the completion and signing of the agreement. The other members of the delegation, M. A. Ottulesco, M. Miclescu-Prajescu, Dr. Nonu, and Mr. Hillard, are arriving shortly.

Mrs. R. W. Frazer has resigned the Secretaryship of the Royal Asiatic Society after many years' service, first as Assistant Secretary and later as Secretary. She will leave for a prolonged tour in India, Burma, Ceylon, Siam, China, and Japan early in September. Colonel D. M. F. Hoysted, D.S.O., late Chief Technical Examiner of R.E. Works, has been appointed her successor. In the Great War he held Royal Engineer commands on the Western Front and in Serbia.

The Roumanian newspapers state that the Coronation of King Carol will take place at Alba Julia on September 21.

BISHOP LEONTIOS.

The Most Reverend Leontios, Bishop-elect of Papho, who is now in London as a delegate of the Cyprus Autocephalous Greek Church to the Lambeth Conference, was given a warm welcome by the students of the Cyprus School, at the Pulteney Institute, Peter Street, on the afternoon of June 28. All the prominent members of the Cyprus community in London were present. Dr. A. Zemenides, President of the London Cyprus Brotherhood, congratulated, on behalf of all Cypriots in London, Bishop Leontios, on his election and his great success at his finals at Columbia University. Dr. Zemenides explained the motives which made him found the Cyprus School three years ago, its origin and objects, and he laid emphasis on the very satisfactory results obtained during the short period of its existence. "All students, indeed, derive a considerable benefit and are thus able to improve their situation generally." In conclusion the Founder of the School expressed the unbounded gratitude of all Cypriots to the Board of Education and the London Education Authority for their great generosity and broadmindedness in granting so many educational and other facilities to his fellow-countrymen in the Metropolis.

Bishop Leontios spoke of his pleasure in and admiration for this achievement and characterised Dr. Zemenides as a great benefactor and a true patriot; and gave to him and to all his assistants and students the blessings of the Cyprus Church, wishing them still further success and prosperity.

The Principal of the Pulteney Institute, Mr. W. Lenègre, thanked the Bishop of Cyprus for his presence that day and his interest in the Brotherhood.

Before embarking at Alexandria on June 26 for Italy, where he intends to spend ten days, King Faisal of Iraq said that he was pleased at the progress of the negotiations with the British Government, which he hoped would be completed within a few days. Only one point remained to be solved, and that concerned the employment of British advisers and officials.

The annual festival of the Jerusalem and the East Mission was held yesterday (July 2), including a celebration of Holy Communion at St. Andrew's, Westminster, followed by a breakfast, and the annual meeting at the Church House was held in the afternoon, when the Bishop of the Church of England in Jerusalem (Dr. R. MacInnes), and the Bishop of Calcutta (Dr. Foss Westcott), Metropolitan in India (Hon. Canon of Tabor in St. George's Cathedral, Jerusalem), were the speakers.

After a three-day debate the Greek Chamber on June 26 voted for the ratification of the Greco-Turk Convention, 191 Deputies voting for ratification and 19 against. The chief dissenters were M. Kaphandaris and General Kandylis, of the Popular Party, and one Refugee Deputy. All the other Refugee Deputies who had hitherto declared their opposition to the ratification of the Convention voted in favour of it, after the statement of M. Venizelos that he would consider all those opposing it as having left the Liberal Party.

A Greek religious service was held for the first time in Westminster Abbey on June 27 on the occasion of the arrival in London of His All Holiness, His Beatitude Meletios II., Pope and Patriarch of Alexandria, and the third prelate in Christendom, who is to head the delegation of the Easter Orthodox Churches to the Lambeth and Anglo-Catholic conferences. A salutation in Greek by the choir welcomed His Holiness at the Abbey. He offered a prayer in Greek at the Unknown Warrior's Grave. The party then made their way to the Shrine of Edward the Confessor, where a short service was held. The Patriarch chanted the Nicene Creed and gave the blessing.

THE WEEK AT HOME

London, Tuesday Morning.

Labour and Protection.

Those stout Conservatives who always asserted, often without much evidence, that the British working-man was a Protectionist at heart, will certainly find some confirmation in the report on world economics which was issued last week by the Trade Union Congress General Council. For unquestionably this report leans towards Protection; already it has vastly disturbed the academic Free Traders, who are most numerous, of course, in the Liberal Party but also overflow plentifully into the Labour Party.

This is a most interesting report, which shows the Trade Unionist at his shrewdest. It says categorically that "in particular circumstances, where it is desired to help a specific trade, a tariff may be justifiable. It is a matter for investigation in each case, in order to estimate whether there is or is not a net advantage in imposing a duty." What "scientific Safeguarder," such as Mr. Stanley Baldwin claims to be, would go further?

But as for the Empire Crusaders' anticipation that the T.U.C. would support their particular panacea—that was a vain hope. For though the report does approve, with a few reservations, of an Empire unit, there is no indication that it would impose duties wholesale on foreign competitive goods. This General Council is well aware that "economic theory condemns a general policy of tariffs"; and for it the whole matter is one of expediency.

This analysis may and probably will disappoint the purists of either Free Trade or Protectionist school, but it undoubtedly reflects what a mass of public opinion is thinking. It has been most gratefully received by the orthodox Conservatives.

Mr. Baldwin and the Conservatives.

Although the vast majority of decent men rallied round Mr. Baldwin in the triumphant first round which he fought last week with the newspaper Peers, Lord Rothermere and Lord Beaverbrook, there seems to be a subterranean fear that he is not yet out of the wood. Nobody, apparently, not even his staunchest supporters, loves the Referendum, which he stipulated practically as a *sine qua non*, and it is quite generally held that before long this particular device will be quietly jettisoned. And what will the position of the Conservative Party towards food-taxes then be? Nobody seems to know, least of all, perhaps, Mr. Baldwin, but the chances are that they will come out for full-blooded Protection, which includes, of course, taxes on food.

One thing in this controversy, however, should be noted: that whereas Lord Rothermere shows himself at all times as the implacable enemy of Mr. Baldwin, Lord Beaverbrook has contrived to avoid the acrid personal note. It was obvious that this exponent of Empire Free Trade really admired the "punch" of Mr. Baldwin's references to his detractors, and it is not quite impossible, I think, that this mercurial enthusiast may abate his attacks on the Conservative Party. Certainly his conduct since the remarkable meeting last week in favour of Mr. Baldwin has been notably restrained—a great contrast with that of Lord Rothermere, in whom a vein of vulgarity swells ominously on the least provocation.

As for the so-called "constitutional issue" which arose between Mr. Baldwin and the newpaper Press, viz., their right to demand from Mr. Baldwin, before they extended support to him, the names of the holders of the "key-positions" in his Cabinet—that has shocked the country, and the ex-Premier has had members both of the Labour Party and of the Liberal Party congratulating him on the stand he made. The truth is this: that no party which depends on the support of any one of our money-making newspapers is in a safe position. What the Labour Party did without newspaper support is historic; and it may well be that the polished comments in the *Daily Mail* upon the "old gang" in the Conservative Party will do that Party little but good.

The Government's Position.

Much is being made of the Government's defeat in recent by-elections, and in particular the reduction last week at Shettleston of a majority of 7,000 to one of a mere 300 has fluttered the Labour dovecots. Undoubtedly the Government has lost ground through the continuance of unemployment, and undoubtedly there is among the electorate a kind of despair at the problem's ever being cured by the process of doing-nothing. It is in these circumstances that people turn to the Protectionists.

Yet it is still extremely difficult to judge how far this anti-Government pendulum is swinging. And if it is away from the Government, it can scarcely be said to be in the direction of the Conservative Party. There are, one knows, those who think that if a General Election were held this year (though the recent talk of an election in November is not being taken very seriously) the Conservatives would be returned to power; but I am not yet of them. Of course, if the increase in unemployment goes on it will certainly sweep away this Government—it would sweep away any Government. What the Labour Party must hope for is to hang on until the figures drop.

The Season of Flowers.

June goes down into July in a glory of flowers, for the past week has been one of peerless summer. I have seldom seen gardens, whether in country or suburbs, looking gayer or—what is perhaps the most important English characteristic—more homely.

Almost everywhere you may find a green sward, with beds of sweet william and snapdragon, foxglove and marigold, roses, pinks, and pansies, catmint and candy-tuft, Canterbury bell, lupin, and cornflower, and many other delectable and fragrant things. There is scarcely a sight more intimate than that of a well-kept garden containing such old English flowers as these: it consoles, cheers, convinces. T. E. Brown, who, by the way, is just coming into his own, expressed the thought of our whole race in his famous lines on the Garden.

Nor is the loveliness of the time confined to gardens. In the fields almost all the grass has been cut, and in many places carried and stacked—strong, sapful, sweet-smelling hay. The whole countryside is fragrant with it. The hedges are decked with wild roses and honeysuckle, and, because it has not become too hot, the birds are ceaseless in their singing. With but a little help from Nature does England become the most beautiful country in the world.

THE MESOPOTAMIAN AND PERSIAN FORCES.

Lieut.-General Sir George F. MacMunn presided over the third annual dinner of the Mesopotamian and Persian Forces, which was held at the Hotel Victoria on June 27, and the principal guests were Lord Lloyd of Dolobran and Field-Marshal Sir Claud Jacob. In proposing the toast of "Mespot and Persian Forces," Lord Lloyd said that in some ways the Mesopotamian campaign had a more triumphant issue than any other campaign in the War. He was not one of those who desired that we should keep Mesopotamia or that the campaign should result in territorial acquisition. Everything indicated at the time that the results of a great victory should be strategic only. He believed that as a result of the War we should have made Basrah British. That would have been a far more satisfactory solution than a Mandate. If the Government of the day had followed his advice they would have built up a bulwark which would have stopped the flow of Bolshevist propaganda into India.

Referring to the present position in India and Egypt, Lord Lloyd said that wherever the attempt was made to stifle clamour by mere concession there was always the same result—the stridency of the clamour was increased and the difficulties were added to in every respect. Concession was no solution, but firm, just, and liberal government was.

Field-Marshal Sir Claud Jacob, in supporting the toast, expressed his happiness at being amongst soldiers once more. He cordially agreed with every word of Lord Lloyd, and was very much perturbed at the air of surrender which appeared to be prevalent now, not only in this country but in others too. Yet he believed that the young men of the Empire would not fail us.

The Nawab Umar Hayat Khan spoke of the affection for Great Britain on the part of all that was best in India. The fighting forces of India were with the British *raj* to a man, and it would be a woeful day should Indian troops ever come comprehensively to be commanded by Indian officers, whose prejudices, whether Hindu or Muslim, would inevitably make themselves felt. He begged the British people not to be misled by the clamour of the noisy ones in India (Bengali babus and the rest), but to feel assured that the heart of India, the martial races, was solidly behind the British. For only since the Indian Army had been commanded by British officers had India been free from invasion.

The Chairman gave the toast of "The Memory of Sir Stanley Maude and those who Fell," and the company drank it in silence.

Afterwards, General Sir William Marshall spoke of the dangerous lengths to which the Army in India had been reduced. Lord Rawlinson's hand had been overpressed. Turning to Mesopotamia, he expressed agreement with the view that Imperial purposes would have been better served by having an enclave round Basrah rather than a vague Kingdom of Iraq, but from the military point of view the Mesopotamian campaign had been an excellent show.

Sir Arnold Wilson was then called upon. He said:—

"I do not know why you honour me thus. You have already listened to good speeches by better men, and the presence here this evening of distinguished guests impresses on me an exceptional burden of discretion.

"I cannot speak at any length, nor would you wish me to do so, but may I remind you of some of the unique and unparalleled achievements of the Mesopotamian Expeditionary Force? No organized campaign has ever lasted so long. Never has so large a force been sent so great a distance from these shores; never has so great a force been employed except during the Great War in France. Never has a British force sustained so many casualties outside Europe; never was any army cursed with lines of communications so long—our main lines ran from Basrah, to Baku, from Baghdad to Amadia, to Dair az Zor and Rowanduz, each line completely separate from the other. Never before has a country so extensive been brought within so short a time under military occupation and at the same time provided with a fully organized government. These facts justify to the full my claim that the campaign was unique.

"The campaign will long be remembered for another reason. The mismanagement which marked the first two years was unfortunately not unique; but never has mismanagement caused great or more needless suffering to the troops. It was not primarily the fault of the officers concerned, nor of the Government of India, nor even of His Majesty's Ministers at home. The responsibility is that of the nation as a whole. In this connexion I cannot do better than quote the historian of the Peninsular War, Sir William Napier, who wrote just one hundred years ago, as follows: –

> And why was all this striving in blood against insurmountable difficulties? Why were men sent thus to slaughter when the application of a just science would have rendered the operation comparatively easy? Because the English Ministers, so ready to plunge into war, were quite ignorant of its exigencies; because the English people are warlike without being military, and under the pretence of maintaining a liberty which they do not possess oppose in peace all useful martial establishments. Expatiating in their schools and colleges upon Roman discipline and Roman valour, they are heedless of Roman institutions; they desire like that ancient republic to be free at home and conquerors abroad, but start at perfecting their military system as a thing incompatible with a constitution which they yet suffer to be violated by every Minister who trembles at the exposure of corruption. In the beginning of each war England has to seek in blood the knowledge necessary to insure success, and, like the fiend's progress towards Eden, her conquering course is through chaos followed by death!

"The story of the campaign is a tale of great deeds by land and river, sea and air, of suffering and endurance and of faithfulness unto death on both sides, in pursuit of objects dimly seen, and of aims but darkly understood. The numerous records of the campaign in Mesopotamia that have seen the light convey no adequate picture of the courage and perseverance of the brave and noble spirits, British and Indian, Arab, Persian and African, on whom fell the agony of those unhappy days. Nor have the voluminous official publications of our times revealed a tithe of the technical skill and professional devotion of the thousands of men of every race and age and of all walks of life who devoted their whole energies not only to the prosecution of the War, but to the rehabilitation of a region that had been as surely devastated by the supine folly of its former rulers, as the stricken fields of Flanders by the colossal machinery of modern war. We would not have future generations know the whole agony of those unhappy days. We, who know what those sufferings were and how great were those efforts, hope that what will strike our children, happy and unknowing, is not the glory of victory nor of achievement, but the spirit in which it was sought.

"And what have been the fruits of our labours? I am convinced that if they had fallen short of expectations in the mandated territories of Iraq and Palestine, it is due not to the innate turpitude of the inhabitants, nor to the ineptitudes of successive Governments nor even to war weariness and national lassitude—it is due solely to the mandatory system imposed on the Allies and accepted by us almost without consideration.

"Had we been permitted to organize and incorporate these new States as independent nations within the framework of the British Commonwealth of Nations, we could have endowed them with fresh life and stability. We could have provided capital of which they stand in such urgent need. Our responsibility would have been no greater than at present—their independence no less real than that of the Dominions.

Tantum est hoc regnum in regibus imperat ipsis.

"Of the fifty thousand British subjects that perished in Mesopotamia, less than 11,000 lie in identified graves; our thoughts to-night are with them, and with their comrades who lie in forgotten graves in Persia and the Persian Gulf. It is for the new Arab State that is rising from the ashes of the old Ottoman Government to prove to the world that they did not die in vain."

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

A CYPRUS PRESS LAW.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—With reference to the comments which appeared in THE NEAR EAST AND INDIA of June 12, on the Press Laws in Cyprus and the protest lodged, may I point out that not only has there been in the island no "practice of dismissed Government officials carrying out a vendetta against the Government in their own newspapers" as inferred in your article, but there is also not even a single instance of such an occurrence; in fact, none of the proprietors or editors is a dismissed Government official, nor have any of them so far failed to pay any imposed penalty.

The inferences, therefore, drawn in your article from those assumptions in justification of the law automatically fall to the ground.

As to the latter part of your article, which suggests that the object of the Government was to raise the standard of the newspapers in Cyprus, I should like to say that oppressive measures do not raise but rather tend to lower the standard of the people upon whom they are imposed and to create political deformities. This muzzling of the Press, I am afraid, has no redeeming feature. If the Government were sincerely desirous of improvement and wanted to discourage libel, it would have introduced the only appropriate measure (as exists in all civilised countries) namely, legislation making libel a cause of civil action for damages as well; this, however, the Cyprus Government has failed to do, and the law enacted would appear to serve no useful purpose and to be only calculated to make, by way of permits and sureties, newspaper proprietorship in Cyprus dependent on the good graces of the Government, thereby checking any criticism of the Administration and its methods.

I cannot suppose that such an unwarrantable attempt at eliminating criticism and such an uncalled-for interference with the right of expressing independent political views and interpreting public opinion may be considered as setting an enviable standard of journalism or as being conducive to anything but a defeat of the primary objects of newspapers, and indirectly to a deterioration of citizenship.

This Press Law is very similar to those measures which are temporarily resorted to by the Government in India at times of serious riots and disturbances, as the present, and only for the period during which they are absolutely necessary, in order to meet the grave situation (this being the reason given for their temporary imposition there, without, of course, any attempt to present them under the guise of supposed benefit to the Press (*vide* Indian Press Ord. Cmd. 3578). That they should be permanently imposed without any such justification in a peaceful and law-abiding country like Cyprus, where no seditious matter ever appears in the Press, is evidence of an oppressive policy harmful to the people and at the same time damaging to the prestige of British administration.—I am, etc.,

ZENON ROSSIDES.
London, June 16. Cyprian Delegate.

THE JEWISH "HOME" IN PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—For all those who are closely interested in the Palestine question, the announcement which Dr. Drummond Shiels made at Geneva on June 9 is of the utmost importance.

Efforts must also be made to see that Jews throughout the world knew that it was a Jewish Home in Palestine, and not a Jewish State, that the Mandatory Power had undertaken to advance.

The actual interpretation of the Mandate so far has led the Arabs to believe (quite justly, in my opinion), that it was the establishment of a Jewish National Home which was the aim of the Mandatory Power as well as that of the Zionists. The word "National" signifies a State and a political domination.

Dr. Shiels has now emphatically stated that such a Jewish State is out of the question.

All reasonable Arabs and Jews must sigh with relief. To establish a Jewish Home in Palestine can bring no harm but only benefit to the Arabs. But both the Mandatory Power and the Zionist must do their utmost to erase the evil impression of the past, caused not only by the conduct of the Zionist leaders, but also by the original error made by England in not consulting the Arabs at the commencement and thus ensuring their goodwill and co-operation in the scheme.

The Jewish population which was in Palestine before the War must be more closely associated in the direction of this policy, and the present control by Jews living in Europe and America, understanding little of Palestine and Arabia, should be altogether eradicated.

As a firm friend of the Arabs, I believe that their leaders in Palestine should immediately approach the representative of the Mandatory Power and accept this statement of Dr. Shiels as the basis of the future policy for Palestine.—I am, etc., ROBERT GORDON CANNING.

23, Cork Street, W.1. June 10.

THE PALESTINE PROBLEM.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The subjoined appeal has been sent to the Prime Minister, having been signed by the Rt. Hon. Lord Strathspey, Sir Michael F. O'Dwyer, the Dowager Lady Jardine (widow of Sir John Jardine, M.P., late Judge of the High Court, Bombay), Miss Estelle Blyth (daughter of the late Anglican Bishop in Jerusalem), C. B. McConaghy, Lt.-Col. I.M.S. (late Residency Surgeon, Baghdad), Miss Margarent Milne Farquharson, Percy d'E. Wheeler, M.D. (27 years resident in Palestine), the Ven. Algernon Ward (sometime Archdeacon in Egypt), Miss K. M. Moore (late District Nurse in Damascus among Arabs and Jews), the Rt. Hon. the Earl Howe, Lord Ernest Hamilton, and myself.—I am, etc.,

BERESFORD POTTER.
(Sometime Archdeacon in Cyprus and Syria).
18, Addison Road, W. 14.

THE PALESTINE TROUBLE.

We desire to draw attention to the very serious position in Palestine, resulting from the widespread dissatisfaction of the Arab population with the administration of the Balfour Declaration. This document only promised to make a Home for Jews in Palestine, but not to make Palestine a Home for Jews; and it declared that the rights of all other nationalities would be conserved. The serious danger now, which is intensified by the growing desire everywhere for self-determination, is that a large political movement among the Arab peoples throughout the world may render the position of Great Britain an excessively difficult one.

We therefore entreat the Government to consider carefully whether they cannot now at once adopt the line of taking no further action with regard to carrying out the Balfour Declaration to meet either Arab or Zionist aspirations, without the consent of the representatives of both nationalities.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Egyptian Cotton Policy.

It was only to be expected that the cotton situation would be one of the first matters to engage the Egyptian Government's attention, and Sidky Pasha has lost no time in making known the broad outlines of his policy. Briefly, the view is taken that the late Administration pursued a mistaken course in continuing to intervene in the market, and it is not at all probable, unless a critical situation should arise, that the Government will make any additions to the purchases. The real problem, of course, is to know how best to deal with the enormous stocks of cotton which have been accumulated since last November. The Government evidently thinks that it is possible to dispose of part of them in the next month or two, and has announced that it is prepared to sell Sakellarides at 28 dollars and Uppers at 19.80 dollars until the new crop comes in, it being stipulated that the cotton purchased must be exported before then. It must remain to be seen what effect this has on stocks and prices. The disposal of the stocks is, of course, only one part of the problem with which the Government is faced. It is also necessary to take steps to prevent, if possible, the recurrence of the present situation. As I have pointed out previously, there is no question that the artificial maintenance of prices has had the effect of making purchasers look elsewhere for supplies, a development which is bound to happen in any similar case. It is necessary for one thing to restore the confidence of purchasers and for another to do everything possible to maintain and develop the standard of Egyptian cotton.

The Roumanian Road Contract.

Great satisfaction will be felt at the news of the award, after negotiations lasting some eighteen months, of an important contract for the construction of roads in Roumania to Messrs Stewart and Partners, the public works contractors. The contract, which was obtained in the face of strong foreign competition, provides for the construction of about 220 miles of roads, and will entail an expenditure of over £2,000,000. The works are to be completed in two years, and all the machinery required will be obtained from Great Britain. In a statement to the Press last week M. Manoilescu, Minister of Communications and Public Works, dealt in considerable detail with the contract, and explained that the actual details of the works that will be carried out have not yet been fixed. The works projected include the remaking of 108 kilometres of the road from Bucharest to Brasov, half of which will be constructed in granite and basalt paving and half in butuminous concrete. The roads out of Bucharest are to be completed, and it is proposed also to deal with the roads out of Jassy, Cluj, and Timishoara, while among other roads to be dealt with is the Bucharest-Piteshti route. The present contract may be said to constitute the first part of the programme of the reorganisation of roads in Roumania, and will no doubt be followed as the resources of the country permit by further and more comprehensive schemes.

Russia and Tea.

Before the War Russia was one of the most important markets for tea, and the fact that this country has not been in a position to resume her normal purchases of this commodity is one of the important factors responsible for the present depression in the industry. If the efforts now being made to develop tea growing in the Caucasus are successful, it is regarded as possible by the Soviet authorities that in the course of a little over a decade Russia may be able to supply herself with all the tea she requires. Even in pre-War days a little tea was produced in the Caucasus, the area under the plants being 1,850 acres. Details given in a bank report show a large increase in tea planting in the last few years. The area for 1925 was 3,274 acres, by 1928 it had increased to 7,440 acres, while for 1929 the total was 17,290 acres. As in regard to other commodities the Soviet authorities have instituted a five years' plan in regard to the development of tea plantations, providing for an increase to 98,840 acres in three years' time. For 1928-29 Russia's tea production amounted to less than one per cent. of the normal consumption of the country, but it is estimated that by 1940 it will amount to between 70 and 80 per cent. As we know, however, Soviet expectations are not in-

frequently disappointed, and it has yet to be demonstrated that large areas in the Caucasus are suitable for tea planting. It may indeed happen that the plants will be as intransigent on the question of production as the rabbit "circuses" who seem to have been giving the Soviet authorities so much trouble!

Roumania's Tobacco Production.

When reference is made to the tobacco-producing countries in the Balkans, it is, perhaps, natural to think of Greece, Yugoslavia, and Bulgaria, but as a matter of fact Roumania is now also a tobacco grower of some importance. In pre-War days Roumania devoted about 25,000 acres to the crop, and the annual yield was approximately round about 8,000 tons. The War added certain tobacco growing districts to Roumania, with the result that the area under the crop is now about three times what it was, while the crop has averaged in recent years about 20,000 tons, about one quarter of which is available for export. As a tobacco producer Roumania, of course, cannot hope to rank with the other three countries mentioned, but from the figures I have given it will be clear that tobacco is now a far from negligible branch of the country's agricultural production.

COMMENTATOR.

NOTES FROM ABYSSINIA.

(From Our Own Correspondent.)

Addis Ababa, June 4.

The Question of Monopolies.

There are various rumours abroad as to monopolies being granted. It is stated that the French Salt Works at Jibouti have been granted the sole monopoly for the import of salt in Abyssinia, and have paid 400,000 dollars for this right. It is proposed that half of this amount shall be utilized for the making and improvement of roads, and that with the balance, 200,000 dollars, a Casino shall be built for the entertainment of visitors for the Coronation. After the Coronation it is suggested that the Casino be run by a syndicate of business men as a business concern!

There is also considerable talk of a benzine monopoly's being granted—but there is a virtual monopoly already, as the Shell Co., have most of the business. If a monopoly be granted for benzine to an individual, it would simply mean that he would "hawk" his concession round the various oil companies. The only effect would be that the Government would obtain a certain amount of money, the concessionaires an "easy profit," and the public would suffer, as the price of the spirit would certainly be raised.

The granting of monopolies in a new country like Abyssinia is a very dubious policy to pursue. It does not, like open competition, tend to assist in the development of the country. There are, however, exceptions like matches and tobacco, which do not harm the country. The Government would be well advised to look elsewhere than to monopolies for raising revenue.

The Question of Customs Dues.

There have been flutterings in the dove-cotes of the Legations. As a matter of courtesy the French authorities have, in the past, allowed all goods for the Legations, whether for the Ministers themselves or for the Legation staffs, to pass through Jibouti without dues. The privilege was about to be withdrawn, except for Ministers and their families, but representations were made and the privilege has been allowed to continue.

In addition to this privilege, members of all the Legations have all their personal goods brought into Abyssinia at reduced rates on the railway and exempt from the Abyssinian Customs. This is certainly of value to those concerned, but reacts harshly on the rest of the community, insomuch as with all these privileges conceded, there can be no amelioration in the rail freights nor in the Customs duties imposed.

Business has been very difficult this season owing to the oscillations of the dollar. The price of the dollar may depend to a large extent upon the price of silver, but the hectic fluctuations we have witnessed, and are witnessing, have not been due to the price of silver alone. Interests other than those of the country and trading have been studied.

The Bank of Abyssinia.

Pourparlers are still continuing for the Bank of Abyssinia to be taken over as a State Bank, presumably under French management and direction. This is hardly a compliment to English banking, considering that English institutions lead the world and have never been "ousted" once they have gained a footing.

ROAD CONSTRUCTION IN ABYSSINIA.

Little progress was made during 1929 in the development of Abyssinian roads (says the United States Vice-Consul at Addis Ababa, Mr. James L. Park, in a recent report). The 500 miles of Franco-Abyssinian railway between the French port of Jibouti and Addis Ababa, the centre of Abyssinian foreign trade, continues to exercise a virtual monopoly of mechanical transport. Little of the limited new roads serves either to feed or to compete with the one rail route.

Three specific road developments are reported for the year 1929. Private Belgian promoters completed nearly 100 miles of 16-foot dirt road from the railway station of Arba to Minneh (Arussi Province) at a reported cost of £8,000. The Gambella-Gore modern road, undertaken in the west by Greeks under a Government concession, has progressed from Gambella to a station called Baro-Kella, or about 44 of the total 75 miles to Gore. Completion of this road is expected early in 1931. Fifteen cars and lorries, of which seven are American, are reported in use there. This section of road has been acclaimed with considerable enthusiasm. The fever-stricken country covered is semi-officially reported to take an annual toll of 1,000 human porters and 20,000 mules and donkeys. Traders of the rich western territory foresee increased profits. Automotive stimulation, eventually of real importance, is expected. Extension of this road to the Sudan frontier is being contemplated. Although a private enterprise, the Central Government, it is announced, has taken shares.

A road, purely governmental, from Addis Ababa northward to Dessie, began and progressed irregularly in 1929. The directing engineers report having graded the first 96 miles out of Addis Ababa. Further progress is said to be delayed by the great Ahiafedj ravine, the bridging of

Digitized by Google

which awaits funds. The remaining section to Dessie is expected to be quite easy. The Addis Ababa-Dessie road is planned to join with another proposed road from Dessie to Assab on the Eritrea (Italian) Red Sea coast. Work has not yet started on the Dessie-Assab road, an estimated distance of 360 miles. This road was contemplated by the Italo-Ethiopian treaty and convention of August 2, 1928. Many minor bridges are understood to be wanted for the Addis Ababa-Dessie road.

The year was productive in projects for road construction. Action in most cases may be delayed up to 10 years, but the projects alone reflected increasing roadmindedness. The Governor of Wollega Province announced his intention of building a road from Sayo to Gambella, an estimated distance of 60 miles, that is considered by observers commercially more important than the Gambella-Gore enterprise. Another project, ambitious but possible and important if and when begun, was considered by a wealthy local firm. They plan to built five roads, totalling 565 miles, strategically radiating from Jigjiga in the rich Harrar Province, Ethiopia's prime coffee source. The important Addis Ababa-Jimma road did not progress beyond the first relatively few miles. The still more needed road from Dire Daoua to Harrar gives no promise of an early beginning.

Motor trail blazing was unprecedented in early 1929. This was undertaken by (1) a car from Addis Ababa to Jimma (180 miles); (2) two cars from Addis Ababa to Nekempte (240 miles); (3) two six-wheeled Renaults, Cairo to Addis Ababa via Roseires; and (4) the report of 1,000-mile caravan traveller on the feasibility of roads at £30 per mile without including bridges, through the western districts represented by Jimma, Kaffa, Wollega, Sayo, Golisso, and Nekempte.

In northern Eritrea good Italian roads to the frontier await extension. Further extension is said to have been made on the Eritrea railway beyond Agordat, nearer the frontier and towards Kassala, eventually to tap rich north-western Abyssinia, the heart of which may be called Godjam. The total Abyssinian road mileage of all kinds is estimated to be approximately 2,050 miles, made up of 50 miles of macadamized streets, 1,000 miles of miscellaneous prepared roads, and 1,000 miles of caravan tracks, and passages over grass fields.

The Central Government officially declared its interest in roads on several public occasions during the year. Its activity, limited by income, has been indicated. The leading merchants of Addis Ababa were formally received by the King on November 18 for the express purpose of requesting road extension. Road education articles constantly recurred during the year in the Government's Official Gazette and in the one local French weekly newspaper. Progress in preparing for future construction was greater than actual mileage figures indicate. Road propaganda is unmistakably accumulating pressure, but may require several more years to show important results.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates :—

†*CASTALIA ... July 11 †*ELYSIA ... ... Sept. 12
*CIRCASSIA .. Aug. 29 ‡§BRITANNIA .. Sept. 24

*First class passengers only. Specially low fares. †Calls Port Sudan
‡ First Class and Third Cabin passengers. § Leaves Marseilles Oct. 1.

SPECIAL NOTICE. New T.S.S. CALIFORNIA, 17,000 Tons, carrying FIRST CLASS and THIRD CABIN passengers, sails from LIVERPOOL Oct. 21, MARSEILLES Oct. 27. All 1st Class state rooms are fitted with Punkah Louvres and with fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

ENGLAND—EGYPT—INDIA AIR ROUTE.

Imperial Airways Ltd. have made arrangements for the operation of the section between Skoplye and Salonika on the England—India route by air in the place of the night train. With the exception of the short section between Alexandria and Cairo the whole of this service is now operated by air, and on the whole of the route aircraft fitted with three engines are in use, on the trans-Mediterranean section three-engined flying boats of the latest design being utilised. It is interesting to note that by the service India is reached in seven days, Iraq in four days, Egypt in three days, and Greece in two days. The fares are inclusive of all car transport between aerodromes and towns, meals and hotel accommodation. Letter air mail is carried by the service, and although there is no parcel post despatch, parcels are accepted as freight, and onward transmission can be arranged from any air port to other towns.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, July 11); s.s. Tarantia for Bombay (Glasgow, July 10; Manchester, July 24; Birkenhead, August 2). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malakand for Calcutta (Birkenhead, July 10); s.s. Malancha for Calcutta (Glasgow, July 16; Birkenhead, July 22).

Bibby Line.—S.s. Oxfordshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, July 9).

British India Line.—S.s. Mandala for Colombo, Madras, and Calcutta (London, July 12); s.s. Burdwan for Bombay, Port Okha, and/or Bedi Bunder (Jamnagar), and Karachi (London, July 18).

Cunard Line.—S.s. Bantria, closing in Glasgow July 19 for Casablanca, Gibraltar, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement. Closing in Liverpool July 19 and in Swansea July 22 for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if inducement; s.s. Bactria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if inducement (Glasgow, July 31; Liverpool and Swansea, August 2).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 17).

P. and O. Line.—S.s. Macedonia for Bombay (London, July 18); s.s. Burdwan for Calcutta (London, July 18).

Prince Line.—S.s. Cyprian Prince for Tunis Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, July 9); s.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, July 30).

Ellerman and Papayanni Lines.—S.s. Manchurian for Gibraltar*, Algiers,*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 5; Swansea*, July 5); s.s. Kelso for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 5); s.s. Algerian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, July 5; Swansea, July 10); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, July 18); s.s. Maronian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 23); s.s. Lisbon for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 26; Swansea*, July 26); s.s. Malatian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 30); s.s. Mardinian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, August 2; Swansea, August 7). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Messageries Maritimes.—(From Marseilles).—S.s. Lotus for Alexandria, Jaffa, and Beyrout (July 8); s.s. Theophile Gautier for Piræus, Istanbul, Izmir, Larnaca, and Beyrout (July 15); s.s. Mariette Pacha for Alexandria, Jaffa, and Beyrout (July 15); s.s. Angkor for Alexandria, Jaffa, and Beyrout (July 22); s.s. Pierre Loti for Naples, Piræus, Istanbul, Izmir, Larnaca, and Beyrout (July 29).

The Egyptian Railways Administration will shortly invite tenders for the supply and erection of an electric power station near Cairo.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 1.

The new fortnightly account which opened in the Stock Exchange this week did not commence under very good auspices, the further slump in Wall Street over the week-end producing a state of nervous tension which was only partially dissipated by the more favourable news which came later in the week. The gilt-edged market, however, remained very firm, and prices were mostly higher, owing to easier conditions in the money market and a fall in discount rates. India stocks were unaffected by the publication of the second part of the Simon Report. Home Rails weakened further and the industrial section was disturbed by New York selling, and although "internationals" became firmer later on, the general tone was one of caution. The announcement that the Royal Mail Co. would have to meet its guarantee of White Star preference dividends caused a slump in the preference stocks of the group. Oil shares were inclined to show some improvement, but other speculative sections were dull, with prices showing a downward tendency.

Rubber Share Prospects.

The price of raw rubber which for some time has been between 6d. and 7d. per lb., is very low indeed, and at this price very few companies can make a profit, nor can the number of those who just cover their cost at this price be very large. Rubber shares are accordingly at a low quotation, the more so as next year's profits are generally expected to be lower than for last year. The price of rubber has often fluctuated considerably. In the pre-War boom it touched 12s. a lb., fell to 6¾d. after the War, rose to 4s. 5d. in 1925 and has since fallen to 6d. This has been due on the one hand to altering factors of demand, such as more economical methods of tyre manufacture restricting demand and the advent of the cheap car increasing the demand; and on the other hand to altering factors of supply such as a heavy flow of European capital into the East just before the War. It is only natural to expect that another fluctuation will send up the price of rubber. When is that likely to occur? Not for some time, and in any case only on a moderate scale, because it will depend mainly not on the much-mooted restriction schemes, but on the steady increase of demand for rubber, chiefly by the expanding motor car industry. When the present world depression of trade passes, this demand is likely to leap forward. For investors who can wait, now is an excellent time to buy shares of first-class rubber companies such as Allied Sumatra Plantations, or United Serdang.

Electrical Development.

The recent speech of Sir Hugo Hirst, Bt., the chairman at the annual general meeting of the General Electric Co., Ltd., the largest electrical concern in Great Britain, shed much interesting light on the activities taking place in the section of industry with perhaps the greatest immediate possibilities, viz., the electrical industry. In view of the standing of his company its experiences may be said to reflect the conditions in the trade as a whole. Attention was drawn to the rapid development of electricity which has taken place in a multiplicity of fields ranging from large turbo-alternators, various kinds of switchgear, and land and water propulsion to heating and cooking in the home, in several of which added impetus has been given by the actual practical development of the national "grid" system. Sir Hugo Hirst, however, laid considerable stress on two very important points. The first was that: "The electrical industry in all its branches is still in a state of evolution. Whatever we make or sell to-day may be supplanted by something new to-morrow," and, secondly, the vital part played by research work in all electrical development which was well summed up in the statement, "while our publicity, sales and distributing departments are busy filling our works with orders for what may be to-day standard material, hundreds of minds are constantly busy preparing for to-morrow." The general tone of the speech of this leader in the electrical industry gave an indication of a belief that the trade has an exceptional future and with this possibility in mind such shares as General Electric Ordinaries, yielding about £5 19s. per cent., form good investments capable of steady appreciation.

Banks' Half-Year Dividends.

British banks, as was admirably proved by the test imposed last year by the world-wide financial fluctuations, always seem to succeed in steering an even course, despite trade ups and downs, and to maintain their dividends at fairly constant levels. For this reason, therefore, little, if any, changes are likely to occur in the rates declared by the Big Five for the half-year. In view of the fact that last year increased rather than decreased profits were announced, striking progress should have been made during the first half of the current year when conditions have been decidedly easier. Of first-class importance to a bank is the difference which it can secure between the rate at which it can borrow and the rate at which it can lend and during the past six months this has generally been abnormally wide. With the reduction of the Bank of England official discount rate by stages to 3 per cent., the rate paid by banks on deposits has fallen correspondingly to 1 per cent. On the other hand, with the banks as a rule adhering to their policy of not lending at less than 5 per cent. the margin of profit has widened considerably. Such considerations as a falling off in deposits might be expected to have a somewhat adverse influence but in this respect it is interesting to note that the clearing figures show little falling off from last year's level. To the safety-first investor bank shares are specially attractive. The most convenient are the £1 fully paid shares such as those of the Midland, yielding about £4 14s. per cent. or Lloyds "B" 5 per cent. yielding £4 11s. per cent.

Yugoslavia's imports in April amounted to 137,149 tons, of the value of 624.5 million dinars, as against 132,501 tons, of the value of 535.4 millions in April, 1929. For the first four months of the current year the value of the imports was 2,365 million dinars, and that of the exports 2,311.8 millions, so that the trade balance was unfavourable to the extent of 53.2 millions.

Motors and Motoring.

(By Our Motoring Correspondent)

Success of British Cars.

The results of the Le Mans event showed beyond doubt the supremacy of the British car. I say results because, although few seem to know it, there are actually two results to be taken into consideration. One of these is the actual winner of the race, the other is the winner of the Rudge-Whitworth Cup for the best performance on formula. This was won by a Talbot car, the second being one of the Bentleys and the third being the other Talbot. The Talbots came out very well so far as speed was concerned, being placed third and fourth respectively, beating all other cars except three in the 6½ litre class, The Le Mans victory was not all that could have been desired; the other entries were not fully representative. For instance, France was not adequately championed and only one Mercedes was entered. The real, smashing victory was over the American cars, not one of whom finished.

Touring in Turkey.

The Automobile Association is turning its attention to the Near East, and is at the moment doing all it can to (a) induce tourists to visit Turkey, and (b) assist those who have already been induced to visit that country. Their delegate at the recent meeting of the General Assembly of the International Touring Alliance in Istanbul advanced a proposal that an arterial road might be developed across Europe to link us up with Turkey and the East. I hope that if ever a big trunk road is built across Europe, through the Balkans to Turkey and through Arabia and Persia to India, it will be built of concrete with a fine tar-macadam or bitumen surface, made "of the best possible materials in the best possible style." If we are going to have a trans-European, trans-Arabian road, let us have as good a road as possible. I could take travellers to parts of Roumania to-day where they would find quite wild conditions and I know of one or two parts of what used to be called Montenegro where the average visitor would call for help the moment he got there! There are still wild parts of the Near East, just as there are wild parts of this country. Parts of Bulgaria, for instance, are quite as wild and unspoiled as the foothills of the Grampians, the district round Wastwater, or the perfectly charming and unspoiled piece of marsh between Reculvers and Birchington.

High Standard of Driving.

During the past week-end, in the Isle of Thanet, I have been impressed with the generally high standard of driving and the road courtesy shown. Only one case of inconsiderate behaviour—the offending driver was a youth apparently only just out of his teens who obviously was certain that he knew all about motoring. His particular offence was opening up to pass a motor bus, overtaking it, and then, when just in front of it, putting on all his brakes for no ascertainable reason. A friend who was driving the car in which, for once, I was a passenger, turned to me quietly and said: "You see their names and addresses in the papers every Monday morning." I do not like to think the Isle of Thanet is other than representative of British motoring generally, but I am rather afraid it is.

I note that complaints are being made about the misuse, by some drivers, of white lines, and truth compels me to say that I have myself frequently seen instances where they have, apparently, been wilfully ignored. Many seem to think that they are painted for the use of other drivers, but that people so highly skilled in the art of driving as they themselves are need not trouble about them. The great majority of municipal and rural authorities are careful not to put white lines on curves unless they are absolutely needed, and the motorist who wilfully ignores them ought to have his driving licence taken away for a year or so in order to teach, or try to teach, him a little common sense. The same remark applies to those drivers who ignore or partially ignore the transverse lines and the "Slow" or "Stop" signals painted on side roads or in certain places on main roads. The great majority of motorists to-day are doing everything in their power to make our roads safer, and it is galling to find their efforts stultified to any extent by the careless, thoughtless actions of the minority of drivers.

Sokol festivities, which began on June 6 in Belgrade, ended on June 29.

In consequence of the recent Yugoslav-Hungarian frontier traffic agreement the bridge over the Drava near Barco, which had been closed to traffic since the Armistice, was reopened last week.

A Sofia message states that there has been much activity of late on the tobacco markets in Bulgaria. The inferior grades of previous harvests are being bought as well as those of the 1929 harvest. The weather and temperature are very favourable this year for tobacco growing and a normal harvest of good quality is expected.

It is reported that the Yugoslav harvest promises to be a good one this year. The grain crops, especially wheat and maize, are in excellent condition, while peas, beans, hemp, and sugarbeet all promise more than average yields. The vineyards, too, are in capital condition, but plums and nuts will be comparative failures.

Engineering Topics

(By An Engineering Correspondent)

The Billingham Steam and Power Plant.

Of the greatest interest is a recent paper by H. A. Humphrey, D. M. Buist, and J. W. Bansall, read before the Institution of Electrical Engineers in London, which gives full details of the remarkable new steam and power plant of Synthetic Ammonia and Nitrates, Ltd. (Imperial Chemical Industries, Ltd.), at Billingham-on-Tees. One of the chief points emphasised by this installation is the great value to all industries requiring low pressure heating steam of the generation of electricity by means of pass-out or back pressure engines or turbines, using the exhaust steam for the heating and general process work, with consequently high overall thermal efficiency.

It cannot be too often emphasised that with condensing engines or turbines approximately 60 per cent. of the heat in the coal burnt is thrown away in the cooling water, due to the loss of the latent heat of steam. In this connexion it should be pointed out that in more than one country of the world the sale of electricity from central power stations is being enthusiastically advocated, and since on present knowledge it is not practical to adopt back pressure working for steam-driven electricity stations, no reference is made to the merits of this system, so that the above paper is particularly important.

The boiler plant at Billingham comprises eight very large forged drum water-tube boilers operating under maximum conditions of 810 lb. pressure and 856 deg. F. superheated steam temperature, and each evaporating 270,000 lb. of water per hour. The normal evaporation of the plant is 11,700 metric tons (25,786,800 lb.) per 24 hours, and a battery of five turbo-generators is included, each of 12,500 k.w. normal capacity. Three of these are of the back-pressure type, and under average running conditions about 60 per cent. of the total steam generated, that is 6,930 metric tons (15,273,720 lb.) is exhausted at 290 lb. pressure and 650 deg. F. to the process mains, whilst 23,800 k.w. is generated by the fall in the steam pressure without condensation and latent heat of steam loss. The other two 12,500 k.w. units are of the ordinary condensing variety, to make up any extra power that may be required. No costs of any kind are given in the paper, but the authors state that the figure for the production of electricity is far below that of any power station using condensing steam turbines. This, of course, must be the case as the overall thermal efficiency of an ordinary back-pressure station is about 50-65 per cent., whereas that of a condensing station is only 15-20 per cent., 450-500 tons of cooling water being required for every ton of coal burnt. Ample data are of course available concerning the savings being made by combined power and heating, and Belliss and Morcom, Ltd., of Birmingham, for example, have erected over 1,450 back-pressure and pass-out plants aggregating more than 300,000 h.p. in about 70 different industries. Also the principle is all the more valuable because it is equally suitable for the largest and smallest plants, many installations of less than 100 h.p. being in operation with great success.

Research Work.

The Institution of Gas Engineers has consistently supported the research laboratories in the University of Leeds, and has done all possible to further research work in every way. It was in 1907 that the Gas Research Fellowship was endowed, and past holders of this are in many responsible positions in leading gas undertakings. Another direction in which a good deal of useful work has been done is in investigating the character of effluents from gas works, their effect on fish and vegetable life and the means whereby they can be, where necessary, rendered innocuous. As a result, there is probably no stream in this country which is polluted with gas works' effluent, a result which is due wholly to the experimental and advisory work which has been done by those engaged in research generally. We know a good deal more about the working of gas processes and appliances than we did a few years ago, and at the same rate of progress a good deal of what is more or less obscure to us to-day, will be perfectly plain and clear to the gas engineer of to-morrow.

Steel Sleepers.

Inquiries made at the various engineering centres of our railway systems show that a big programme of work is being engaged upon, and when analysing the various proposals and weighing their relative merits from the point of view of real benefit and not merely that of providing a certain amount of work for the unemployed, the proposed increased use of steel sleepers struck me as being one of the most useful innovations. These are already largely in use: in fact, the experimental use of steel sleepers is being largely extended by all the British companies. During the last twelve months over 24,000 tons of these have been ordered, and about 150 miles of track, or thereabouts, have already been fitted with steel sleepers. Their life and behaviour is perfectly satisfactory and there is no doubt that, in this country at any rate, the day of the wooden sleeper is slowly but surely passing.

MARKET FOR REPLACEMENT SPRINGS IN NORTHERN GREECE.

The Salonika consular district, which includes Greek Macedonia and Thrace, offers a good market for automobile replacement springs, aided to no small extent by the lack of improved highways and the hard usage that lorries and cars are given in that region (says an American report). The requirements of this market, estimated at 14,000 to 16,000 springs annually, are met largely by imports from foreign countries, the United States furnishing approximately 60 per cent., Germany 35 per cent., and France a limited amount. Up to the middle of last year, fully 80 per cent. of the imported springs were of American manufacture. Since then the German producers have increased their sales, largely on account of the lower prices quoted and the easy terms of payment offered to the trade. A few springs are made locally in the small blacksmith shops where repairs are undertaken. Operators of 1 and 2 ton lorries absorb 70 per cent. of the total demand, and the remaining 30 per cent. is taken for five-passenger automobiles.

COMPANY NOTES AND REPORTS.

EGYPTIAN HOTELS.

The report of the Egyptian Hotels, Ltd., for the year ended April 30 last states that after providing for the charges payable in London and Cairo, the accounts show a profit of £54,044 15s. 6d. The balance of undivided profit brought forward from last account is £5,720 15s. 6d.—£59,765 11s. From this has to be deducted depreciation of plant, fixtures and fittings at hotels, £5,810 15s. 6d., leaving an available balance of £53,954 15s. 6d. The Directors recommend: (1 The payment of a dividend of 5 per cent. on the Preference shares for the year to April 30, 1930, absorbing £5,750; (2) the payment of a dividend on the Ordinary shares of 17½ per cent. for the year, £43,636 1s. 6d., which will absorb £49,386 1s. 6d., leaving a balance to be carried forward of £4,568 14s.

Near East Markets

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended June 21 :—

Grain markets continue very weak and in spite of grain-holders reducing their prices to a parity with those ruling abroad, business is nevertheless very difficult owing to the paucity of buyers. In view of the approaching new crops and the favourable prospects regarding maize, peasants are now disposing of their old stocks more freely; arrivals of grain are, therefore, increasing daily. English markets continued to buy chiefly maize, whilst the demand from Antwerp and Rotterdam fell off considerably. German markets were almost completely neglected. Italian markets were also quieter. Chartering was fairly active this week and several steamers were fixed at rates between 13s. 3d. to 13s. 9d. basis Antwerp Hamburg range with British options at a corresponding higher rate. Spot freights were maintained at about 10s. to 10s. 3d. for Antwerp/Rotterdam, and 10s. 6d., 11s. for Mediterranean. At Constantza the position remained unchanged.

The stagnation on the timber market is aggravated by the setting in of the dead season, usual at this time of the year. No fresh freight engagements are reported, but some shipments are taking place in execution of previous contracts. An important Roumanian timber producing firm, however, has succeeded in closing a contract for South America for the delivery of a few thousand wagon loads over a period of three years.

Abundant to moderate rain fell throughout the country on Sunday last, but apart from some local showers, usually light, the weather during the rest of the week has been generally fine. The temperature has been changeable, seasonably high during the day but cool at nights. An official report gives the areas sown with straw crops and preliminary estimates of production as follows:—

	Hectares.	Production in Quintals.	
		1930	1929
Wheat ...	2,882,000 ...	33,600,000 ...	27,500,000
Rye ...	356,000 ...	4,500,000 ...	3,400,000
Barley ...	1,831,000 ...	24,700,000 ...	27,400,000
Oats ...	1,117,000 ...	13,200,000 ...	13,600,000

Sulina.—Bar depth 24 feet. The laying of foundation mattresses in the north pier extension has continued to advance during the past week and the construction of the staging necessary for the formation of the mound is progressing. It is hoped that the suction dredgers at present working in the outside channel will be able to maintain the depth of 24 feet. River minimum 24 feet.

Constantza.—This week about 2,700 tons of grain arrived from the interior and exports amounted to about 5,000 tons of which over half went to the Mediterranean and the rest to Antwerp Hamburg range. Eighteen vessels loaded over 65,000 tons petroleum products and seven took oil fuel for bunkers.

Bulgarian Report.

Bourgas, June 14.—Our market has been quiet and no fresh transactions appear to have been effected apart from those mentioned in our last weekly report. The weather was dry until yesterday afternoon, since when frequent and heavy rainshowers have been falling. Reaping of barley has started in most parts of South Bulgaria.

The prohibition on the export from Roumania of certain fish, including Danube and white herring, *Luciopesca sandra*, sturgeon, turbot, and other sea fish, and also carp, is removed for the period July 1 to October 1. Such fish may be exported during this period on payment of the export duty of 5 lei per kilog.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows for the month ended May 31 :—

Arrivals in Kordofan Stations and Tendelti amounted during May to 1,480 tons, which is a fall against the preceding month but an improvement as against May 1929 and 1928. The markets were only open twenty days during the month, as beside the usual Friday closing on the 2nd, 16th, 23rd, and 30th, the markets were also closed owing to holidays on the 6th, 8th to 12th (Kourban Bairam) and May 29. The Kourban Bairam holidays which in 1929 were also in May fell in other years at a later date and their effects on arrivals in those years were only felt after May.

Prices at El Obeid.—The price paid on May 1 was 1s. 8d. down as against the closing price of April 30, and from the 3rd to the 5th prices fell a further 1s. 10d. They were, however, pushed up to 1s. 10d. on the 7th before the markets closed for five days on the occasion of the Kourban Bairam holidays. When the markets re-opened on the 13th prices went down 9d. and continued gradually to fall till the 20th, when they were down 5s. 6d. On the 27th, 28th, and 31st prices rose 3s. 2d. The net fall during the month was 3s. 9d. per cwt.

Demand on the whole has been slack. The high prices which have generally prevailed for gum arabic this year, as well as the wild fluctuations and uncertainties of price-levels have undoubtedly restricted demand. It was noticeable throughout the month that whenever the market here was allowed to take its natural course in accordance with demand from overseas prices fell to lower levels.

Talha prices declined 3s. on the Khartoum Market, overseas demand being insignificant.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Measures.—The Director-General, Physical Department, Sharia El Inhsa, No. 1, Dawawin Post Office, Cairo, invites tenders for the supply of steel and linen measures of length. August 18.

Surgical Instruments, etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of surgical instruments, sundries, and appliances required for the year 1930-1931. August 26.

Cotton Duck.—The Egyptian Ministry of Agriculture invites tenders for the supply of 85,000 yards of cotton duck. July 20. (D.O.T.)

Chemicals.—The Egyptian Ministry of Agriculture invites tenders for the supply of:—10 tons calcium arsenate, 300 tons sulphuric acid, and 100 tons sodium cyanide. July 20. (D.O.T.)

Sewage Ejectors, etc.—The Egyptian Ministry of Public Works invites tenders for the supply and delivery of two duplicate pneumatic sewage ejectors, 2-100 gallons liquid capacity each, to work by compressed air at a pressure of 25 lb. per square inch for one to be delivered at El Arish and 25 lb. per square inch for one to be delivered at Mankabad, together with accessories and spare parts. October 24. (D.O.T.)

Steam Roller.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of a 15-ton steam roller to be run with coal. August 5.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended June 25:—

Egyptian Futures.

Sakel Contract.—Rather more activity has been witnessed in this market during the past week, but price movements have been very erratic, spasmodic advances being succeeded by equally rapid declines. The only factor that really stands out is that definite resistance is encountered whenever new crops approach the 11d. level; on the other hand, reactions, carrying values twenty or thirty points over this figure, so far have failed to be consolidated owing to the prevailing low levels of most commodity markets and to the depressed conditions ruling in the world's textile centres. The demand for cotton out of the local stock continues to show improvement, and, as mentioned in our recent reports, we are heading for a very tight position between now and the advent of new crop supplies. There appears little chance of any Government cotton being released below the 28.00 dollars limit for some considerable time; with ruling values here so far below this figure, it is hardly surprising that the floating supply of contracts is restricted, and on this account we again draw attention to the risk of running "short" of near positions. The Alexandria market has acted in a corresponding manner to the uncertain tendency displayed at this side, the extreme range in the week there being from 21.98 dollars to 23.15 dollars for the November contract. Manchester trade reports show generally unsettled conditions ruling in the yarn markets; considerable headway appears to have been made with the scheme to stabilise margins in the fine section, and if later developments are equally favourable, the measure should have far-reaching results on the future prospects of this particular branch of the industry.

Upper Contract.—Only a moderate amount of business has been transacted in this market during the past week. New crop positions at times have been subjected to pressure, short selling and straddle operations against purchases of American effectively checking any advancing tendency that has sometimes been displayed. In view of the very moderate amount of tenderable cotton now held in stock and the consistent spot demand, near positions have shown considerable strength, appreciating on the week approximately 30 points in comparison with the more distant deliveries. The new crop reports continue favourable, and unless something detrimental develops in this respect, or the trade outlook becomes more promising, it appears useless to look for any permanent upturn in values.

Egyptian Spot.

The improved inquiry noticeable at the time of our last report has, on the whole, been maintained during recent sessions. The Upper varieties have again led the way and constitute a good proportion of the offtake. Continental buyers have again shown relatively more activity than home consumers, and the basis of all the Egyptian varieties here has had a hardening tendency during the week.

Sakel.—Sakels have attracted a moderate but consistent offtake, especially cottons grading from Good to Fine, which have been offered at a comparatively more attractive price than the intermediate qualities. Little business has again to be reported in the inferior qualities.

Uppers.—A good business has again been done in this cotton at prices ranging from 40 to 70 on. A material hardening in the basis has taken place, and, as stocks of good spinning cotton in this section are now much reduced, further appreciation in values appears probable during the coming weeks.

Pilion.—Only isolated sales of this variety have been reported, and the local stocks are now reduced to such an extent that very little desirable cotton is now offering.

Nahda.—Rather more inquiry for this cotton has come in during the past week, probably owing to the fact that Sakels are now in such poor supply. However, it appears probable that some buyers will be forced on to this cotton in the near future, in which case the present reasonable prices asked would probably alter materially.

White Cotton and Maarad.—Very little business in these has been reported.

Sudan Sakels.—An improved inquiry for the finer grades has been experienced, prices up to 400 on having been paid during the week.

C.i.f. business.—As in recent weeks, trading in old crop shipment cotton has been at a standstil. A very moderate amount of new crop inquiries has come in, but results have been disappointing as, except in one or two cases where buyers have placed contracts for Uppers, little actual business has occurred. Forwardings have been returned at 2,583 bales Egyptian and 1,172 bales Sudan.

Spot Sales.—The estimated sales for the past week amount to 2,400 bales Egyptian and 650 bales Sudan Sakel. Quotations of Sakel show a reduction of 10 points. Upper and Pilion quotations are advanced 35 points and 25 points respectively. F.G.F. Sakel to-day, 12.35d. F.G.F. Upper to-day, 9.33d. F.G.F. Pilion to-day, 10.10d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended June 19:—

Our market has been very active during the period under review, earlier sharp declines being followed by a rapid recovery in the last three sessions. The week's summary of price movements is as follows:—Sakellaridis: July, 28.00 dollars, unchanged; November N.C., 22.93 dollars, 0.18 dollars down; January N.C., 23.20 dollars, 0.14 dollars down; March N.C., 23.55 dollars, 0.17 dollars down. Ashmouni: August, 16.15 dollars, 0.70 dollars down; October N.C., 15.52 dollars, 0.56 dollars down; December N.C., 15.78 dollars, 0.61 dollars down; February N.C., 16.11 dollars, 0.61 dollars down; April N.C., 16.43 dollars, 0.59 dollars down; June N.C., 16.71 dollars, 0.62 dollars down.

Barclays Bank (Dominion, Colonial, and Overseas) announce that they have received the following cable from their Cairo office:—The Statistical Department of the Ministry of Finance announces that the total imports for Egypt for the month ended March 31 are £E2,386,118, against £E4,262,958 for the corresponding month last year and exports £E2,712,874, against £E5,249,709 for March, 1929. Cotton exports amounted to £E1,979,943, against £E4,080,386 last year.

NEWS FROM ALL SOURCES.

Ratifications of the permanent Treaty of Friendship between Persia and the Hijaz were exchanged at Najd on June 14.

Egypt and Belgium have concluded a provisional commercial agreement based on the most-favoured-nation treatment.

The Hellenic Minister in Vienna was last week authorised to sign the Treaty of Friendship and Arbitration between Greece and Austria.

The Turkish Grand National Assembly in Angora on June 17 ratified the Turco-Greek Agreement by 185 votes against 15 and then adjourned until November 1.

Sir John Chancellor, High Commissioner in Palestine, laid the first stone of the new Palestine Archæological Museum in Jerusalem on June 19.

The Permanent Mandates Commission in Geneva ended its special session on Palestine on June 21. The report will be published as soon as the British representative has made whatever comments he considers necessary and the minutes of the session have been printed.

At a meeting of the Senate of London University held on June 18 it was announced that the Laura Soames Prize for Phonetics in 1930 had been awarded to Mr. Guy S. Lowman, of University College, for his essay on "The Phonetics of the Albanian."

It is officially announced that His Highness the Maharaja of Bikaner will be the leader of the Indian delegation at the Assembly of the League of Nations this autumn. His Highness will also be a member of the Indian Delegation at the Imperial Conference to be held in London.

For the purpose of covering part of the extraordinary expenses incurred in coping with the invasion of locusts which have been afflicting the Amirate for several week the Government of Trans-Jordan put on sale postage stamps over-printed "Locust Campaign" in English and Arabic. A large sum has been realised in this way.

The Directors of the Burma Corporation, Ltd., have declared a final dividend (No. 15) of 4 annas per share, together with a bonus of 2 annas per share, free of Indian and British income tax, payable August 15, to shareholders registered July 15. This makes a total distribution of 13 annas, free of tax, for the twelve months ending June 30, 1930, as compared with 16 annas for the previous year.

H.M.S. Endeavour, Captain J. A. Edgell, O.B.E., arrived at Malta recently from Haifa, on the conclusion of her hydrographic duties off the Palestine coast and in certain harbours in the Levant. The Endeavour was until recently at work in the southern approaches to Kamaran, Red Sea. During 1922 she carried out special examinations in the vicinity of Jebel Teir Island and the Straits of Bab-el-Mandeb. The Endeavour is to leave Malta on June 30, and, after a call at Gibraltar on July 6, should arrive at Sheerness on July 15.

Notes of the Week.

The Little Entente and Hungary.

The fact that a meeting of the Foreign Ministers of the States comprising the Little Entente coincided with a revival of the rumours regarding Hungarian intentions to place the Archduke Otto on the throne of Hungary inevitably provided the three Governments concerned with an opportunity of re-stating their solidarity of opposing a Hapsburg restoration in Hungary. Still more pertinent to the intentions with which the Magyars are being credited is the publicity given to meetings between Czechoslovak military authorities and the Yugoslav General Staff on the occasion of the visit of the former to Belgrade in connexion with a great rally of Sokols. Whether all this rattling of the sabre is quite in harmony with the League of Nations spirit to which Europe is being invited to accustom itself may be left out of consideration for the time being. It will be the less to be regretted, if it induces as, no doubt, it is intended to, circumspection among Hungarian hotheads. The return of Prince Carol to Roumania was bound to flutter the dovecotes of Budapest, but the former Roumanian Crown Prince arrived as master of the situation, whereas the inexperience of Archduke Otto would compel him to be subservient to the advisers under whose pressure he would have acted. It is to be hoped, therefore, that the resolve with which his family is credited, to send the Archduke to an English University, will be carried out in order that he may not be tempted to engage in an enterprise which might not be successful and might well embroil Central and South-Eastern Europe. There is no reason why the embargo of a dozen years ago on the restoration of ex-King Karl should not in time be reconsidered in the light of subsequent developments, but it would make for the peace of the Continent, if the occasion could be utilized for the establishment of better relations between Hungary and her neighbours. The very emphatic statement made by Count Bethlen on Sunday, when he declared the rumours unfounded and pointed out that the question of a restoration could not be solved incidentally, but only in a constitutional and parliamentary way, will, it is to be hoped, remove all misgivings in the countries of the Little Entente.

The Yugoslav Experiment.

The formal announcement by the Yugoslav Government that the present system of administration has come to stay is of interest not only in Yugoslavia, but also in other countries where difficulty is being or has been experienced in making a real success of parliamentary government. A few days previously the Minister of the Interior had announced the nomination to the Councils of the nine Banats, and this step, taken in conjunction with a remark made in the course of the farewell speech of the Czech Minister of War, who had been paying an official visit to Belgrade, to the effect that the settlement of its own domestic problems by each of the three States of the Little Entente would allow for stronger action to be taken by the Little Entente as a whole, had given rise to rumours that the Government was preparing for a return to constitutionalism. The statement now issued is calculated to dispel illusions on this point. If there is to be co-operation between the people and the Government, it is to be on the basis of explicit and whole-hearted acceptance of the existing régime as an integral and permanent factor in the Yugoslav State. Thus the 512 nominations to the Banat Councils appear to have been restricted to those, whether ex-politicians or not, who have accepted the new order. The Councils, moreover, have only advisory duties, and their deliberations are restricted for the present to a single annual session of not more than fifteen days. It is to be inferred that King Alexander has decided that the process of training the country for parliamentary government will require more time than was anticipated when the Dictatorship was introduced, and the new announcement has clearly been inspired by the same sincerity and devotion to straightforward speech that characterized his first utterances as Dictator.

The Political Struggle in Egypt.

By the adjournment of the Egyptian Parliament for a month Sidky Pasha has secured for his Government time within which to consider from all points of view the bearings of the policy which he must decide to adopt. The Prime Minister's reputation and the steps taken to maintain law and order since the initial vacillation over the

Digitized by Google

closing of the Parliament House afford little encouragement to the Wafd to attempt a trial of physical strength before, at least, July 21, when the Government is due to meet the Chamber, unless the session has previously been declared closed. If then the constitutional issue is fairly and squarely joined, the Egyptian people alone become the ultimate arbiters of the situation. During the Mahmoud Pasha régime it must have been possible for the majority of Egyptian politicians to arrive at an opinion of the extent to which the people as a whole take any real interest in forms of government, or are merely prepared to support authority for the sake of a quiet existence and freedom from persecution. There can be no question as to the people's endorsement of the Wafd, as soon as it regained power in the country; but if there is the same readiness to acquiesce in any type of strong government, the position will be simplified for Sidky Pasha and those associated with him. Not the least disservice that the Nahas Cabinet did to Egypt by its premature resignation was to deprive the Egyptian people of an adequate opportunity of forming a real decision on the merits of a Wafd Government. So much of the short period during which the Nahas Cabinet was in office was taken up with the negotiations in London, that it can claim to have had no time to prove its administrative capacity. Such a claim, however, exposes it to the retort that it ought to have realized the importance of convincing the country of its worth as a practical Government, by pressing on the other Bills promised in the King's Speech, instead of selecting the one academic measure on which to hinge its abandonment of a Government's function. As things are, the Wafd has done nothing to meet the charge of those of its fellow-countrymen who point out that, while it declared a settlement with Great Britain to be its *raison d'être*, the only possible settlement was reached by others, and, while it claims to be the only party that can govern Egypt, all the most useful administrative measures have been introduced by its political rivals.

Kurdish Unrest.

Some time must probably elapse before the real inwardness of the fresh outbreak among the Kurds in Turkey can be known. A Turkish report speaks of armed brigands from Persia crossing the frontier to attack and pillage Turkish villages, and forcing the villagers to join them in "a reactionary movement." If this complicated explanation is intended to imply that the Kurds in the north-eastern part of Turkish Kurdistan would not have made any attempt to kick over the traces, unless there had been encouragement from without, it may not be far from the truth. On the other hand, it may be urged that, if the primary object of the invaders had been pillage and murder, very little difficulty ought to have been experienced in dealing with them. It has, therefore, to be inferred that the effect of the drastic measures taken to deal with the last Kurdish revolt has begun to fade, or that a section of the Kurds that did not feel the full force of those measures at the time has indulged in the restlessness that is second nature to the majority of the Kurdish tribes. In any case, the outbreak is to be deprecated and regretted. The Kurds stand to gain nothing from it, and there is some reason to suppose that the Turkish Government, after having administered its lesson at the last revolt, had tried to help the Kurds to a certain extent to acquiesce in their lot. The local administration was not likely to err in the direction of leniency; but the Ankara Government does appreciate the value of peace and order, and according to its lights appears to have aimed at administering Kurdish territory with as little friction as possible. In these circumstances it will have justification for resentment, if it can show that the incitement to unrest in the present instance has been deliberately fostered by Persian subjects.

An Arab Conference.

A useful and definite contribution to *Pax Britannica* in the mandated territories would seem to have been made in the summoning at Beersheba on June 20 of an Arab conference of representatives from Palestine, Trans-Jordan and Sinai. The meeting served the purposes of celebrating the joint efforts of these lands to combat the recent plague of locusts and of a friendly court of arbitration at which, under the stimulating influence of a firework display and a cinema performance a novelty to many of the Badawin—the tribes represented drew up a balance-sheet of differences of opinion that had found expression in raids and counter-raids and proceeded to square accounts in cash or kind according to recognised rates of exchange. A picturesque touch is given by the correspondent of *The Times*, who records that all the well-known fighting tribes who served under Colonel T. E. Lawrence during the War were represented, and peace was proclaimed between many tribes that have been at open warfare for the last decade. If, as is hoped, such a conference can be held annually, a very practical step will have been taken for the peaceful development of a wide stretch of territory already in a transition stage between the nomadic and the settled life. The Palestine Badawin are already set on cultivating the land; among their Arabian brethren farming is still despised, but King Ibn Saoud has started his system of colonies, and the working of the leaven thus introduced is to be seen in the tendency of an ever widening fringe between the "sown" and the desert, where first mat huts and then stone or mud buildings take the place of tents.

INDIAN NOTES

The Princes and the Simon Report.

No apology is needed for dealing in three succeeding issues with particular aspects of the Simon Commission's Report. The manner of its presentation, no less than the cogency of the argument, will give the Report a practical importance for many weeks to come, whatever attitude towards the document politically-minded India may affect. No part of the Commission's scheme is likely to arouse more interest than the relatively short section devoted to the future of the Indian States in the ultimate federal union of All-India which the Commissioners from the beginning have envisaged as the final objective. The Report, as Professor Rushbrook Williams points out elsewhere in this issue, is the first official document which assigns to the Indian States their due place in the picture

THURSDAY, JULY 10, 1930.

GREAT BRITAIN AND IRAQ.

Sunshine, if we may use the word in its metaphorical sense, has come into the land of Iraq. For no sooner had Sir Hilton Young reached London with his financial mission successfully accomplished, than the announcement made that the longed-for Treaty between Great Britain and Iraq which is to govern the young Arab State's entry into the League of Nations in 1932 had been signed by British and Iraqi authorities in Baghdad. This is, indeed, excellent news. Not that it was unexpected; for it was generally understood that, with the appointment of a Cabinet under General Nouri Pasha al Said—a Cabinet composed almost entirely of King Faisal's personal friends—the penultimate stage in that interregnum leading to complete independence had been reached. If the present Iraqi Cabinet, in other words, had failed to arrive at a satisfactory understanding with the British, the position might have been very serious indeed. Happily, however, undue fears are proved to have been ill-founded, and the oft-maligned good faith of Great Britain has stood the final test. Great Britain is, despite past words of Baghdad lawyers, as good as her word. The Treaty has, of course, yet to be ratified, and it will not come into force until Iraq is admitted into the League; but it seems scarcely probable, so liberal are its terms, that any ultra-Nationalist Majlis would reject it. It is a result upon which the British and Iraqi authorities stand to be congratulated, and it is to be hoped that, with the publication of the full text of the Treaty, the suspicion and mistrust which have for some time characterised unofficial Anglo-Iraq relations—a suspicion very notably reflected in the Baghdad Press—will give place to sentiments deriving from a sense of the famous "gratitude and obligation" of which so much has been heard in recent years.

What are the main bases of this new Treaty? First, of course, is the recognition by Great Britain of the complete independence of Iraq. Iraq is to assume, as she ought, according to former Treaties, in 1928 to have assumed, the sole responsibility for the administration of her own affairs and for maintaining internal security, and also (subject to the terms of the alliance) for the defence of the country against foreign aggression. This last condition should be noted; without the full text of the alliance it is impossible to estimate the extent to which Iraq is officially held to fall short of being responsible for her own defence. Obviously her limitations in this respect have been recognised, as, indeed, they had to be, for the integrity of Iraq and her security are not only a British, but also a world interest, and had Great Britain wished—what is unthinkable—to divest herself wholly of her responsibilities in Iraq in 1932, the League of Nations might well have insisted on further guarantees for the safety of a section of Asia in which the rest of the world is, and will become more and more, vitally interested. The agreement to remove, before 1937, all British forces from Hinaidi and from Mosul, and the decision to lease to Great Britain three air bases to the west of the Euphrates and the Shatt-al-Arab—these bases to be protected by Iraqi troops at British expense—may cause some surprise; but it is probable that only by some such compromise could there be found a *via media* between Iraqi *amour propre* and Imperial interests. Apparently the Egyptian model has served in this connexion. The duration of the Treaty is to be twenty-five years, but at any time after the expiry of twenty years either contracting party may open negotiations for the conclusion of a new Treaty for the safety of the main air routes and British Imperial communications. This last proviso is manifestly necessary, in view of the practical certainty that in Iraq there will be in the future what amounts to a Suez Canal in Imperial air communication. No reference, it will be noted, has been made in the details regarding the Treaty so far published to a subject that is certain to engage the attention of the League of Nations. The Commission appointed under the latter's auspices in 1924 to investigate the situation in the Mosul Vilayet laid special stress on the relation between the attitude of the Kurds and the retention of the Mandate by Great Britain. The economic and other advantages which Mosul would derive from union with Iraq, the Commissioners stated in their Report, would be exchanged for very serious political difficulties, if the Mandate should expire before Iraq could be regarded as ripe for self-government without League support. Again the Commissioners were convinced that if League of Nations control were to terminate on the expiry of the four years' Treaty then in force between Great Britain and Iraq, and if certain guarantees of local administration were not to be given to the Kurds, the majority of the people would have preferred Turkish to Arab sovereignty. It may be that in the interval since 1925 Kurdish misgivings have been removed; but it will certainly be to Iraq's interests and it will simplify the future government of the country, if steps are taken to satisfy the League of Nations that this all-important question has not been overlooked by the High Contracting Parties.

In welcoming this latest development one should not suppose that a key has been suddenly found which will unlock all difficulties between Great Britain and Iraq. It is well known, for instance, that a considerable divergence of opinion exists between the British and the Iraqi authorities on the subject of the continued employment of British officials in Iraq. It may be that the forthcoming visit to London of King Faisal and General Nouri Pasha al Said will result in a solution of this difficulty. We profoundly hope that it will, because nothing could be more unfortunate than that the comparatively few months which are to elapse before Iraq's admission into the League of Nations should be marred by the presence of friction over the matter of British officials. On this matter the High Commissioner, Sir Francis Humphrys, who throughout his régime has displayed farsighted statesmanship, has been absolutely definite, and one may presume that his generosity in other matters may itself reveal to Iraqis the danger of too rapidly scrapping the scaffolding of the edifice of which they are rightly so proud. Many concessions, indeed, have been made to Iraqis in this Treaty, so that one can scarcely suppose that they will be ungrateful. The Treaty is in effect the coping-stone of the fair building which the late Sir Gilbert Clayton foresaw, and it is a notable tribute to his memory. Nor will those who, slightly marvelling at the thought of Iraq as a modern, civilised State, be inclined to express more hope than faith in its future, forget the earlier pioneers, including, most notably of all, perhaps, those British soldiers who freed the country from the Turk and made the present development possible. May the future of Iraq be worthy of their great endeavours!

*The Near and Middle East

From Our Own Correspondents.

Belgrade, June 20.

The Sokol Slet.

The public display given by the reformed Sokols of Yugoslavia have been in progress in Belgrade from June 6. Preparations for the festivities were on a big scale. The schools received orders to begin their summer holidays earlier than usual, so as to allow the pupils in the School Sokols to take part in the display, and to leave the school buildings free to accommodate some of the 40,000 Sokols and guests, for whom every available building in Belgrade has had to be used. On June 25 the Sokol festivities resolve themselves into a Pan-Sokol *Slet* (meeting), with international competitions between the Sokols of many Slav peoples: Czechs, Poles, Lauzit Serbs (from Germany) and the pick of the Yugoslav Sokols. Representatives of France and Roumania have also been invited, so that it will be an assembly not only of Slav States, but also of the States of the Little Entente.

The Czechoslovakian delegations will be especially numerous and representative. In addition to the regular Sokol organizations there will be a special delegation of 83 pupils of the Czech Military High School, at the head of which will be 17 sergeants, the Minister of National Defence, General Karel Vishkovsky, and the Chief of the General Staff, General Syrovy, as well as ten other high officers of the Czechoslovakian Army.

The Little Entente.

The visit of these distinguished officers will provide a suitable opportunity for the discussion with the Yugoslav authorities of many questions of common interest to both States. The need is felt for the adjustment of some of the existing conventions between the two States in the sense of a closer technical mutual support. Personal contact between the Czechs and the military and other authorities in Belgrade would certainly supplement the activities of the new Yugoslav Minister in Prague, General Peter Peshitch, former Minister of War and recently head of the Yugoslav General Staff.

Precisely for the same days has been fixed the annual meeting of the Foreign Ministers of the States of the Little Entente, which takes place this year in Czechoslovakia. The alleged movement in favour of replacing the Hapsburgs on the Hungarian throne is a question which affects all three States of the Little Entente; but it concerns primarily Czechoslovakia, while for Yugoslavia the burning question remains her policy towards Bulgaria and the activities there of the Macedonian Committee. Therefore, if an extension of mutual liabilities and help is discussed with the Czechoslovaks, it could hardly be limited to Hungary alone, and from the Yugoslav point of view should certainly also extend to the protection of the Eastern frontier of Yugoslavia. Hitherto the Czechs have always been rather reluctant to assume greater liabilities so far to the East and outside Central Europe, the main centre of their interest.

Bomb Explosions.

Recently, a serious outrage occurred at Nish, where three bombs exploded in the course of one night, and a fourth was found ready to explode. Nish stands outside the frontier zone, for the guarding of which the Sofia Conventions made provision, and although the view is expressed in Bulgaria that the Nish bombs do not come within the purview of the Conventions, the Yugoslavs take the view that it is indifferent to them where the Macedonian outrages occur, so long as it is the Macedonian Committee that is responsible for them. It remains to be seen how far the presumption that the bombs are of Bulgaro-Macedonian origin will hold water, but if the Yugoslav inquiry which is being conducted into the matter should confirm this view, and especially if there is a recurrent of the outrages, the position may become serious.

The Croat Trial.

The trial which happily ended in the acquittal of the leader of the Croat Peasant Party, M. Matchek, and of some eight other defendants certainly proved that when matters having a political background come into the hands of judges from the hands of the police, they are dealt with more fairly. But this trial unveiled horrors which hardly could be supposed to exist even in the Balkans. Moreover, it showed that there is in Yugoslavia a very dangerous thing, a power within the power, and that the police seem to be standing outside the general provisions existing for all other State organs. This belief is likely to subsist, unless prompt and effective measures are taken against the authors of the lawless methods of the police, condemned by the verdict of the Belgrade Court. Much to the general regret the very opposite may result. Immediately after the acquittal there was a dinner party of the liberated defendants and their counsel; the band began to play a Croat national song, which under present conditions is considered to be against the existing form of rule, but which actually concerns the struggle for the liberty of Croatia. This same song had been sung in Court by the defendants after the pronouncing of the sentence; the judges had listened to it in quiet amusement, and the defendants themselves seemed a little ashamed of their musical revolutionary display. When the same tune was played at the dinner, the police broke in and began to disperse the gathering, and made arrests. The arrested lawyers, Boshkivitch, Kostitch and Zhanitch, were precisely those who had most strongly denounced the police in Court. The re-arrested defendant Gashparatz is the one against whom the police tried to put up a special case during the trial itself, but were prevented from doing so by the Court. This impression of personal revenge of the police against those who have denounced their methods in Court is strengthened by the fact that the prominent Serb Lawyer M. Dukanatz, Counsel for M. Matchek, one of the leading Counsel of Belgrade, a prominent member of the Democratic party of Serbia proper, was arrested three days after these dinner developments on the same charge. If the police are allowed to take revenge for proceedings in Court, it will certainly not serve the cause of order and respect of authorities.

BULGARIA.

Sofia, June 24.

The Macedonian Problem.

The recent explosions at Nish, where four bombs that had been placed in different spots in or near the station exploded one after the other, were attributed at first to the Macedonian Revolutionary Organization, and threatened to react seriously on the relations between Yugoslavia and Bulgaria. The inquiry instituted by the Yugoslav Government, however, produced no evidence for any charge against Bulgaria and the incident has given rise to no action nor complaint against the Republican Government. The latter, however, inspired by keen anxiety to maintain peace on the Bulgaro-Yugoslav frontier, has undertaken of its own accord repressive measures against Macedonian elements connected with the Revolutionary Organization. A number of persons, between seventy and eighty, have been arrested either in Sofia or in provincial towns, particularly in the Departments of Kustendil and Petritch, where martial law is still enforced. These arrests, preceded by very thorough searches, have been carried out independently of the inquiry into the Nish explosions, and must be regarded as proof of the good will of the Bulgarian Government, and of its determination to do all that it can to secure peace in the frontier regions. The Government's attitude is, naturally, not calculated to please the Macedonians; a delegation, presided over by M. Stanicheff, President of the National Committee of Macedonian Emigration in Bulgaria, waited upon M. Bouroff, acting Prime Minister, in the absence of M. Liaptcheff, who is undergoing a cure at Carlsbad, and protested vehemently against the arrests.

Friction with Roumania.

A serious difference of opinion has arisen between Roumania and Bulgaria which threatens to embitter the relations between the two countries. The Hague Conference that regulated the question of Bulgarian reparations also settled, in the form of an annexed agreement, a dispute of long standing by raising the sequestration of Bulgarian property in Roumanian territory. Article 1 of this agreement between the Roumanian and Bulgarian Governments stipulates that: "the property of Bulgarian Nationals that has been sequestered in Roumania will be restored against payment of 110 million lei payable by Bulgaria, one half three months after the ratification of the agreement between Bulgaria and the creditor Powers in regard to Reparations, and the other half within the period of one year from the date of the first payment. Restitution shall take place after the first payment. This sum constitutes a payment over and above Reparations: it will not be reckoned in Roumania's quota of Bulgaria's annual payments."

Excluded from this rule are liquid sums, shares of the National Bank of Roumania and shares of the Roumanian shipping companies, the proceeds of goods liquidated before November 1, 1929, the revenues from all Bulgarian property up to the moment of restitution and a series of immoveable property enumerated in a special Annexe, the Roumanian Government reserving to itself, in virtue of Article 2, the right to retain these without charge of any kind. Finally, the concluding Article declares that this Agreement must be ratified at the same time as the agreement regarding the regulation of Bulgarian Reparations.

In spite of this formal stipulation the Roumanian Government has called upon the Bucharest Parliament to ratify the general Agreement for the Regulation of Bulgarian Reparations and the other Conventions signed at The Hague, but did not include the Roumano-Bulgarian agreement regarding Bulgarian property sequestrated in Roumania. The first impression in Sofia was that there had been an oversight; but when the Bulgarian Minister notified M. Mironescu of the fact, the latter stated that the Roumanian Government could not proceed to the ratification of the agreement in question, because the Bulgarian Government had not fulfilled the obligations that it had assumed with a view to the ratification. To emphasize his point, M. Mironescu on the following day conveyed to the Bulgarian Ministry for Foreign Affairs through the Roumanian Minister in Sofia a Verbal Note declaring that the agreement on Bulgarian sequestrated property would not be presented for ratification to the Roumanian Parliament so long as the Bulgarian Government had not carried out the promises made by M. Bouroff and M. Molloff, its delegates to The Hague, to M. Titulescu outside the text of the Agreement.

M. Mironescu's action has created a sensation, and no one is more surprised than the two Ministers named. A categorical reply has been given emphatically denying the existence of any obligations outside the text of the Agreement, and insisting upon the immediate ratification of the Agreement which has already been ratified by Bulgaria. It is true that by Article 3 of the Agreement the Bulgarian Government undertakes "to regulate by the means at its disposal certain matters which are not in accordance with the application of the Peace Treaty of Neuilly and which are specified in the Protocol of the Mixed Roumano-Bulgarian Commission, No. 74." But this obligation remains and is moreover in process of being carried out. M. Bouroff and M. Molloff declare formally that there are no other obligations. As M. Mironescu persists in his desire to bring pressure on the Bulgarian Government to compel it to pay sums that it does not owe, M. Bouroff has notified the Roumanian Minister in Sofia that if the Bulgaro-Roumanian Agreement on sequestrated property is not shortly presented by the Roumanian Government for parliamentary ratification and ratified, Bulgaria will be obliged to inform the Powers that summoned The Hague Conference and will annul her own ratification of the agreements regarding the regulation of Reparations.

To avoid an international scandal, the Roumanian Government has just had the Agreement ratified by the Bucharest Parliament; but M. Mironescu has declared that the ratified Agreement will not be carried into practical effect until after the Bulgarian Government has fulfilled its complementary obligations—a declaration that has not helped to liquidate the matter.

PALESTINE.

Jerusalem, June 21.

Execution of Arabs.

Last Sunday, June 15, the Arabs in the larger towns "struck" as a protest against the High Commissioner's decision not to revoke the sentences on the three Arabs still under sentence of death for their share in the murders at Hebron and Safad. It is an impossible subject to discuss, yet it may be said that no opposition would have been forthcoming from any quarter of importance if the sentences had not been carried out. The three men were executed on Tuesday at Acre. It is certain that the feelings of the Arabs were, for the day at least, keyed up to a tension which might have resulted in trouble. The "strike" that day was more spontaneous than anything of the kind seen here before. Actually there were no

Digitized by Google

troubles of any consequence. A slight episode in Jaffa, resulting in the wounding of a British Police Superintendent, is now explained as an act of private reprisal by a dismissed Arab policeman. The Jaffa Arab political leaders were (perhaps inevitably) prompt in expressing their regrets and dissociating themselves from any conduct of that sort. And what is slightly more noteworthy (and not anything like so inevitable) the Arab Executive in Jerusalem was quite as prompt in disclaiming any connexion with the various "strikes" of school children which marked the day—as they mark all our political "strikes"—and in one case where an attempt to foment a school-strike by the usual body of outside "hired roughs" was fairly squashed by the Headmaster (who was too recent in the country to see anything but the ludicrous side of such things), the Arab Executive at once explained that those concerned were no creatures of theirs. To any who have watched the activities of the Arab political leaders during the past ten years, it is clear that they have accumulated wisdom; and it may be that they have realised that turning school-children into political demonstrators is a sight that invites ridicule from the outside world rather than wondering fear.

The "Wailing Wall" Commission.

Life has now quickly become normal again; and if only the "Wailing Wall" Commission will be wise enough to take all their evidence *in camera*, instead of helping to stuff the local Press with unlimited supplies of the most inflammatory and the most controversial matter, it looks as though we may have a few weeks of peace. The Commission, which arrived two days ago, begins work on June 23. It is expected that it will finish its labours in four or five weeks. It is, of course, too much to expect that it can publish its final decision in time for the danger period—the beginning of the Jewish New Year and the Day of Atonement; but perhaps the knowledge that the two sides have stated their cases in full to the highest possible Court of Appeal, will in itself—plus a goodly array of police precautions—serve as the necessary sedative. There has been, to say the least, an absence of dignity about the latest reported "Wailing Wall" episodes. It was quite within the competence of the Muslim authorities to bedeck the Haram side of the "Wailing Wall" with carpets and lamps as a mark of its sanctity as "Al-Buraq"; but somebody's activity at the other side, the Wailing side, in attempting to wipe out the mass of Hebrew inscriptions—whether out of a feeling that such Jewish marks were a desecration of a Muslim shrine, or out of a "patriotic" desire to remove patent evidence of a century or more of Jewish devotional use of the Wall before it should catch the eye of the visiting Commission—seems amazingly childish and perverse.

The Palestine Museum.

Two and a half years after Mr. Rockefeller's generous gift of £40,000, the "foundation stone" (actually the front-door step) of the Palestine Archæological Museum was laid on June 19 by the High Commissioner. The architect is Mr. Harrison, of the Public Works Department. A model of the finished structure was on view, and it provides a most interesting study of the attempt to devise a style of building that shall satisfy the needs of a thoroughly modern Museum, a Government Department, a great Library, public lecture theatre, and adequate student accommodation, while at the same time keeping within the bounds of the simple, low-lying "cube and blob" architecture motif which alone seems to avoid being an offence against the Palestinian landscape and the typical, older styles of local architecture. The new building, so far as it is possible to judge from the model, seems to promise success. It has an enviable position opposite the north-east corner of the Old City, face to face with an impressive stretch of Sultan Sulaiman's wall.

The Locust Campaign.

The locust campaign has now definitely ended with the locusts routed or exterminated. The Government marked

its appreciation of the help given by the Badawin of the Beersheba district in defending the most important section of "the front," which was exposed to attack by the main forces both from the Hijaz and Sinai—by inviting all their shaikhs last night to a great feast on a thoroughly traditional and Oriental scale.

THE HIJAZ.

King Ibn Saoud at Jidda.

Jidda, June 14.

King Ibn Saoud arrived at Jidda from Mecca on June 7, and left again on the 11th, after a busy sojourn. Some days before his arrival H.M.S. Clematis had reached Jidda with Mr. M. S. MacDonnell, formerly High Commissioner at Dantzig, on board, to discuss with the King and his Government the course of action to be pursued in connexion with the settlement of tribal claims in respect of raids during several years past on both sides of the Najd-Trans-Jordan frontier. At the instance of the Najd and Trans-Jordan Governments the British Government has undertaken the somewhat thankless task of arbitration in this matter, and it is understood that Mr. MacDonnell is to act as arbitrator on the understanding that his award is to be accepted as final and binding by both parties. Much of the King's time was thus naturally devoted to discussions of this subject with Mr. MacDonnell and the British Minister, and on the 9th Mr. MacDonnell departed on board the Clematis for Trans-Jordan, where after similar discussions with the Amir Abdullah's Government he will embark upon the work of arbitration. The final closure of this long-outstanding business of claims and recriminations is certainly much to be desired in the interests of peace on a troublesome border, and it is to be hoped that nothing will occur to make Mr. MacDonnell's task more difficult than it must inevitably be.

The King entertained the British Minister and his staff with Mr. MacDonnell and the Commander and some officers of the Clematis at dinner on Sunday last.

The Netherlands Chargé d'Affaires, Mr. Van der Meulen, had the honour of presenting his credentials to His Majesty on the occasion of the raising of the status of the Dutch Consulate to a Legation; while on the following day the Chargé d'Affaires and several members of the Dutch community were entertained to dinner by the Foreign Minister in celebration of the occasion.

For the rest, King Ibn Saoud's time was fully occupied in dealing with the many and various matters of local administration which have long awaited the opportunity of his personal attention. Great progress has already been made in this direction, while the King has reserved for further consideration a number of the major problems which he will deal with in the greater peace and cooler climate of Taif, whither he will shortly be proceeding now that he is free of the pre-occupations of the Pilgrimage.

The Pilgrimage.

The final figures of the overseas visitation show that the total number of pilgrims was 84,821, of whom 35,871 were Javanese, 17,136 from Egypt and 11,457 from India. Persia, Bukhara and Afghanistan between them accounted for rather more than 6,000; the Yaman for 2,000; and the Sudan for nearly 5,000. Other contributing countries were negligible, though quite numerous enough to suggest that the *Hajj* still retains a wide appeal and probably only requires better organisation at the various points of departure to attract more visitors. Most of the pilgrims have now left for their own countries, and the Hijaz is beginning to settle down to the usual torpor of the off-season. The King has, however, in mind to divert the surplus human energies of his people into the profitable channels of agriculture so that they shall not depend entirely on the always precarious element of the Pilgrimage. In this connexion great schemes are under his consideration for the extension of irrigation facilities by means of modern well-machinery.

The Cholera Scare.

By degree of the International Quarantine Board the Hijaz is deemed unclean! By declaration of the medical authorities of the Hijaz the country is clean with an unusually healthy *Hajj* to its credit. The evidence of the eyes and insides of those residing in this country supports the Hijaz medical authorities. The fact is that there is no cholera in the country. Yet those proceeding from here to destinations within the jurisdiction of the Quarantine Board sitting at Alexandria must, unless specially favoured by certificates (quite absurd on the face of them) of non-contact with pilgrim society, spend five or eight days, as the case may be, in quarantine. And yet pilgrims themselves have been allowed to proceed without let or hindrance during the past weeks from Jidda to Jibouti, Hudaida and Aden. Is it that the Board's right hand knows not or cares not what its left hand is doing? The position is merely ludicrous besides being annoying, and it would be a good thing for the Board to let the world into the wonderful secret of its mysteries if it does not wish to bring discredit on the whole business of International Quarantine administration. There is certainly no earthly reason why one should be allowed to go freely to Aden and thence board Europe-bound P. and O. steamers but not be allowed to go and do likewise at Suez. The two points, as a reference to the map will show, are equidistant from Jidda. In this case it looks as if the Quarantine authorities are merely playing into the hands of their critics, whose numbers must increase so long as unnecessary obstacles are placed in the way of the travelling public and so long as the practical effect of such obstacles is to deter, as they must do, people from performing the religious duty of pilgrimage to the Cradle of Islam.

Diplomatic News.

Mr. W. L. Bond left Jidda on the 9th after rather more than a year, first in the capacity of Agent and Consul and later in that of Chargé d'Affaires. His consular functions devolve on Mr. C. G. Hope Gill, who arrived here on transfer from Tangier on June 3. The Legation staff is thus presumably complete with a Minister, two Vice-Consuls and one Indian Vice-Consul.

Ratifications having now been exchanged, the Treaty of friendship between Persia and the dual kingdom of Hijaz-Najd has been published. The Persian Chargé d'Affaires, Ain al Mulk Huwaida, has unfortunately not been in very good health of late, though it is understood that he is now distinctly better.

There seems to be good ground for believing that in the near future the Egyptian Government will be sending a deputation to the Hijaz for the purpose of negotiations, leading, as one may hope, to a treaty of friendship between Egypt and the Hijaz.

General News.

The past week has reminded us that the summer is well advanced, but the thermometer, having suddenly leaped one fine morning from a previous average of 88 degrees (Fahr.) to 102, was unable to maintain such a standard for more than two days, and we are back again to below 90. Nevertheless, people, more by conservatism of instinct than from any immediate climatic necessity, seem to be thinking more of leaving than remaining, though only the boldest have so far been able to bring themselves to the point of actual departure. Some of them by all human calculations we are unlikely to see here again. Others, for good or but temporarily, will be going in

CENTRAL ASIAN SOCIETY

(in which is incorporated The Persia Society.)

Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published.

The subscription of £1 per annum entitles members to a copy of each issue of the Journal, tickets for all meetings, and the loan of books from the library.

Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W.1

the next few weeks.

On the occasion of the King's Birthday, Sir Andrew Ryan, the British Minister, received the congratulations of the Diplomatic Corps and the leading officials of the Hijaz, during the morning and entertained the British community to dinner in the evening.

On the 7th Commander Ratsey, of the Clematis, whose period of service in the Red Sea is nearly at an end, entertained the Governor of Jidda and some of the local officials and the British Minister to lunch on board. The Governor, for the first time, was duly received with a salute of 13 guns on arrival aboard. On such an occasion it should perhaps be placed on record that, in recent times at all events, no sloop-commander of the Red Sea Patrol has done as much as Commander Ratsey to extend the hand of good-fellowship to the local officials and notables of this port. His conduct of the regatta during the Pilgrimage of last year will long be remembered to his credit, and there will be many here who will gratefully remember him perhaps long after he himself may have forgotten Jidda.

ALBANIA.

Tirana, June 25.

Miscellaneous News.

M. Redjeb Jella, Prefect of Tirana, is to be congratulated on admirable regulations which have been put into effect with regard to the preservation of foodstuffs and sanitary conditions generally. For example, all food in shops must be covered, cups and dishes must be thoroughly clean and may not be used if cracked, and so forth. He is also to be congratulated, and equally M. Teki Selenica and all those who co-operated with them, on the admirably organised ball which was given at the Tirana Club on the 15th in aid of the Sports Club. It was incredibly well done; and the public garden in front of the Club, boarded in for the occasion, was most tastefully decorated and illuminated with coloured lights. In view of the excellence of the buffet it is surprising that better food is not obtainable in the hotels and restaurants in Tirana. A dance by a number of small girls in Albanian costumes was a very pretty scene. The Princesses Nafie (widow of Cena Kryeziu), Seni, Myzejen, Ruhie and Maxhide attended for a short time and received a number of those present. Tickets were sold at 20 gold francs each, including lottery tickets for a magnificent gold plate presented by the King, and to judge by the large number of people present, among them most of the Diplomatic Corps, the Sports Club must have benefited considerably.

There is a Sports Club in every Prefecture. Football is played, and watched, with greatest enthusiasm, an enthusiasm which so infects even the smallest children that no opportunity for an impromptu game is lost. On June 22 the final inter-town match (between Tirana and Korça) was played at Tirana. The result was a draw, but Korça won the toss for the cup. One hopes now to see Albania play her neighbours—more sport and less politics might well be taken as the motto of every Balkan country. There is an admirable tennis club, and a court at the Carnarvon Library, in Tirana; and although tennis is still more popular among the foreigners than among the Albanians, quite a number of the latter play. Baseball is being introduced successfully into the schools.

With reference to my remarks in my last letter on the subject of brewing beer in Albania, it is interesting to note that a concession was given a few days ago to Messrs. Umberto Uberti and Selim Mborja for the exclusive right to brew beer in the prefecture of Korça.

The Reis ul Ulema Chaushevitch Effendi, head of the Muslim community in Yugoslavia, has retired on a pension. His successor will be elected according to a new law jointly by the Muslims of Bosnia and the Muslims of Kossovo. Hitherto the prerogative of electing the Reis ul Ulema has belonged to the Muslims of Serayevo only.

THE ROYAL EMPIRE SOCIETY.

The Council of the Royal Empire Society have appointed a committee of persons experienced in Indian administration, or with first-hand knowledge of Indian commercial conditions, whose primary object will be to examine the findings of the Simon Commission in relation to their probable effects in actual operation. The personnel of the committee is as follows:—Sir John Kerr, Chairman (formerly Governor of Assam); General Sir George Barrow, Sir William P. Hayter (Police), Professor J. Coatman (formerly Director of Public Information, Government of India), Sir Charles C. McLeod (Commerce, Calcutta), Sir Hubert W. Carr (Commerce, Cawnpore), Mr. Barton (formerly Resident at Hyderabad), Sir John Cumming (Bengal), Sir Henry S. Lawrence (Bombay), Sir Arthur Knapp (Madras), Sir Patrick Fagan (Punjab), Sir Benjamin Robertson (Central Provinces), Sir Selwyn H. Freemantle (United Provinces), Sir James Mackenna (Burma), Mr. J. A. Richey (Education), Lieut.-Colonel W. G. Hamilton (Medical Service and Gaols), Mr. O. C. G. C. H. Goodall (Commerce, Bombay), Mr. A. H. E. Molson (hon. secretary).

In view of the situation created by recent events the next ordinary Zionist Congress will be held before the end of this year instead of in the summer of 1931.

King Carol of Roumania has appointed General Cihosky, until recently Minister for War, to be Commander-in-Chief of the Roumanian Army, and General Proirov to command the garrison of Bucharest.

The July issue of the *International Review of Reviews* contains articles upon "The Indian Doctrine of Grace, and the Christian," "Education in India," and, most notably, upon "The Arab of the Middle Euphrates." This last article, which is by Dr. E. H. Hudson, contains a very interesting description of the life of Dair-az-Zur.

The first Correctional Court in Ankara last week sentenced Haidar Rifat Bey, a lawyer, of Istanbul, to two years' imprisonment and a fine of £T360 (£36) for having defamed the character of the Turkish Minister of Justice, Mahmoud Essad Bey in letters to Ghazi Mustapha Kemal Pasha, President of the Republic. Haidar Rifat Bey, who is at present in prison for another offence, will appeal against the sentence.

Boghos Nubar Pasha, only son of Nubar Pasha, died last week in Paris at the age of 70. At one period he served as the Egyptian Director of the Egyptian Railway Administration, when it was under international control; and he was the founder, with the late Sultan Hussein, of the Royal Agricultural Society of Egypt. He was responsible also, with the help of Baron Empain, the Belgian financier, for the founding of the town of Heliopolis. For a long time, both before and after the Great War, Boghos Nubar Pasha exerted himself on behalf of the Armenians. He was entrusted by the Catholicos with a mission with a view to persuading the Great Powers to compel Turkey to introduce into the Armenian provinces a number of reforms, some of which had been promised under the Treaty of Berlin. Boghos Pasha Nubar headed the Armenian delegation at the Peace Conference, and was one of the signatories to the Treaty of Sèvres.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, June 19.

The Dewan of Mysore.

There is a world of difference between what we get from the British-Indian politician, a man usually half-hypnotised with phrases, and an Indian such as Sir Mirza Ismail, the Dewan of Mysore, a man whose *métier* accustoms him more to face facts than to mouth words. Sir Mirza, addressing the newly constituted Representative Assembly in Mysore a few days ago, said this to it: "At the same time let us Indians realise that there is not much use having self-government or Dominion status, if when we get it we do not know what to do with it. Let us by all means make sure we do reach the promised land, but is it not also our duty to see that the orderly march of our caravan, by no means a united and homogeneous body, to that destination is ensured, that it follows the right road and does not split up on the way, lose itself in innumerable by-paths? If the Round Table Conference results in the establishment of a constitution on the basis of a self-governing Dominion, with necessary safeguards, that ought to satisfy every patriotic Indian."

The Ruler of Bahawalpur.

Then in a manifesto from H.H. the Ruler of Bahawalpur, we have this: "The country has been plunged into a welter of misery, bloodshed and chaos; general unrest and anarchy are the order of the day; all respect for law and constituted authority is fast disappearing, and the peaceful administration of this unfortunate land has been upset and unsettled. The ignorant and unsophisticated masses are being inoculated with a rebellious and revolutionary poison, and the lessons of racial hatred are being industriously imparted and inculcated into the impressionable and unbalanced minds of the younger generation." What, all reports testify, is being made most use of "to inoculate the ignorant masses with a rebellious and revolutionary poison," is the lie about the Sarda Act (the Child Marriage Restraint Act)—that it was the work of the English officials in the Government, and that it is an attack upon the just liberties of the people of India. The truth is well known in London—that the Bill was promoted by Mr. Harbilas Sarda and other Indians; that it was strongly supported (expressly or by implication) by the Age of Consent Committee, and that Pandit Motilal Nehru, then the leader of the Nationalist Party in the Legislative Assembly, wrote a public letter in which he strongly urged the Assembly to pass the Bill. And now his myrmidons are using the fact of the Act's being the law of the land as the most deadly weapon in their armoury against the Government.

The British Indian Politician.

This is what we get from the British-Indian politician. Sir Phiroze Sethna, President, Liberal Federation, speaking of "Volume One," will say: "We could not have expected anything but unanimity from the Statutory Commission. When the Great War broke out, the suffragettes were very militant and the Irish were giving no end of trouble to the British, yet they readily joined hands against the common foe. There is something analogous in this. The Simon Seven, however well-meaning any or all of them may be, must likewise agree to give India as little as possible, and keep England's hold on it as long as they can. I hope I am doing no injustice, but, reading between the lines, I am tempted to believe that the recommendations of the second volume will be to that effect."

"Too Familiar Arguments."

In another report, one from which come those words—"too familiar arguments"—Sir Chimanlal Setalvad, taking the too familiar line of damning in advance any promise to try for some betterment of the government established in India, says: "The covering is so thin, that there is no difficulty about arriving at an intelligent anticipation of the recommendations. It is pretty clear that the recommendations are sure to be of a character which would never satisfy Indian national aspirations. The summary of the present situation, as given in this Report, states the too familiar arguments and the point of view of the bureaucracy and the reactionary elements." That word "reactionary" is one of their stereotyped words. Twenty-five years ago the word was "retrograde." Every time an Englishman now expresses an opinion, formed by him *not* regardless of the fact that the Dewan of Mysore is so perfectly aware of, that the Indian body is not a "united and homogeneous" one, his opinion is immediately called "reactionary," as twenty-five years ago it was called "retrograde." No attempt is made to examine the opinion, or to look at the facts it is based on; but instantly comes the cry, "Reactionary."

Two Voices.

Two prominent members of the Hindu Party in the Punjab Legislative Council, Lala Keshoram and Kukandilal Puri, have said together: "Sir John Simon proceeds on the assumption that Hindu and Muslim Indias are distinct entities, and makes the amazing assertion that communal electorates are not responsible for the present dissensions. We particularly protest against the Commission's remarks that the differences between the Hindus and Muslims are of a fundamental character, and affect every aspect of their life."

That is what we get. The assertion is not "amazing," but true; the differences *are* of a fundamental character; they are so fundamental, that from the nature of things they must persist until doomsday. Nothing on earth could make the Ram *lila*, which will move even as intellectual and philosophical a Hindu as Pandit Madan Mohan Malaviya to the core of his being, have any worth whatever for any follower of Islam. An indication of the depth of the gulf between the Hindus and the Muslims is that, when a Muslim talks to one about the "Indians," he is not talking of the Hindus and the Muslims both, but is talking only of the Hindus. India is now his country, he having been born in it; but he does not think of himself as an Indian, or ever speak of himself as one.

Sir A. P. Patro.

A more reasonable opinion is that of Sir A. P. Patro, expressed in an interview. He has said: "My first impression on reading the Report was that it is a sympathetic and interesting survey of the Indian problems, manifesting good will and thoroughness in the appreciation of the present political situation in India. It is hazardous to draw inferences relating to the conclusions of the Commission. It has no doubt recognised the necessity for establishing the greatest possible measure of agreement as to the fundamentals of the complex political problems of India, with a view to arriving at decisions regarding the direction in which the constitutional advance of the country for the full realisation of Indian nationalism should proceed."

Press Opinions.

I take this from the *Pioneer* of one of the days of this week: "The *Hindu* says that whatever might be the commitments of the parties or of the Government in England over the Commission's Report, it would be sheer madness to expect that India could consider, much less accent, any of its conclusions."

Just think of that. If anyone, Sir John Simon or any other, expects that India could even consider any single one of the conclusions of the Commission, it is sheer madness on his part.

The *Pioneer* proceeds with: "The *Swarajya* declares that no honest section of political opinion in India will attach serious importance to the Commission's report."

Those are not words seriously weighed, but words used in play-acting in a part.

STATE RIGHTS AND THE SIMON REPORT.

BY PROFESSOR L. F. RUSHBROOK WILLIAMS, C.B.E.

Some little time is likely to elapse before the Rulers and Governments of the Indian States express their considered opinion upon the proposals of the Simon Commission. Meanwhile, it may be of some interest to compare the view which the Commission takes as to the position and rights of the Indian States, with the pronouncements, published more than a year ago, of Sir Harcourt Butler and his colleagues.

The Indian States Inquiry Committee, over which Sir Harcourt Butler presided, was neither as numerous in personnel, nor as extensive in its terms of reference, as the Indian States had originally desired. In the course of the last session of the Chamber of Princes, the Rulers of the Indian States gave expression to their dissatisfaction in regard to a number of the features of the Report. For while this document recognised in certain important particulars the strength of the case which the Indian States are putting forward, it did not carry to a logical conclusion many of the admirable general principles which it laid down. To put the matter briefly, the Report of the Butler Committee found that the relationship between the Indian States and the Paramount Power was a relationship with the Crown; that the Treaties and Engagements were binding between the Crown and each individual State; that in view of the peculiar character of this relationship, the Indian States could not be handed over by the Crown without their consent to any Government responsible to a British Indian legislature; that British Indian financial interests ought not to be allowed to weigh down the scales unfairly against the interests of the States, when the two came in conflict; that the Indian States had fiscal and financial grievances of a kind which necessitated expert inquiry; and finally, that the Viceroy, rather than as at present the Governor-General-in-Council, was the really appropriate agent for the transaction of the day-by-day business between the Crown and the Indian States.

While these principles were of a kind naturally to appeal to the majority of the Indian Rulers, any value which they might have had as supporting the case put forward by the Indian States was to a large extent negatived by particular pronouncements of the Committee in other portions of the Report, which seem to confer upon the Crown the right to modify or override the Treaties and Engagements at its pleasure. The Report of the Indian States Committee, in a word, while it laid down general principles which appeared unexceptionable to the Rulers of the Indian States, refused to allow in practice that these general principles operated as a restrictive force upon the unfettered discretion of the Crown. Further, the Butler Committee made no provision for satisfying the desire of the Indian Rulers for the erection of a judicial tribunal which would be in a position to give an impartial and final decision between themselves and the Government of India, whenever a conflict of rights arose. Finally, the Butler Committee made no provision for the voice of the States to be heard effectively in matters of common concern to India as a whole.

Very different is the treatment which the States received in the Simon Commission's Report. In the brilliant survey of existing Indian conditions which has been published as Part I of the Report, it is apparent that for the first time in any British official document, the Indian States find their due place in the picture of India as a whole. Sir John Simon and his colleagues have recognised, in fact, that Indian India is an essential part of Greater India; and that it is impossible to plan the future even of British India by itself, without taking into account the fact that British India is only one part of a greater entity. And in the second volume of the Simon Report, this idea is rendered so precise that it becomes indeed the turning point upon which the whole proposals of the Commission rest. As the Commission note, "Any constitutional changes now recommended for British India must have regard to a future development when India as a whole, not merely British India, will take her place among the constituent States of the Commonwealth of Nations united under the Crown" (p. 9.). Again, in another passage, Sir John Simon and his colleagues refer to "the hope that in days to come, the constitutional evolution of India will lead to the establishment of a federal system, in which Indian States as well as British India will find a place. Every proposal now put forward should be tested from this point of view" (p. 179.). Indeed, instead of being relegated to the background, the Indian States are recognised as constituting perhaps the most important individual factor in Indian conditions to-day.

Perhaps the most interesting difference between the the ideas of the Simon Commission and those of the Butler Committee in regard to the Indian States is the fact that the former body deliberately recognises the Indian States as free negotiating agents. The Simon Report plainly postulates that only through federation can India achieve what we call for convenience Dominion Status; and that such a federation is impossible without the co-operation of the States. Nevertheless, Sir John Simon and his colleagues have frankly recognised that the States cannot be compelled to join a federation, except when and in so far as they desire to do so. In marked contrast with the ideas of Sir Harcourt Butler and his Committee, Sir John Simon and his colleagues have recognised the right of the Indian States to say "No" even to the Paramount Power. For in the first place, the constitutional position of the States is recognised in the Commission's Report as entitling them to refuse to join a federation of Greater India, should they so decide. Again, in the all-important matter of the Crown's control over the British Indian army, Sir John Simon and his Commission recognises that the rights of the States constitute a definite limitation upon the Crown's discretionary freedom of action. In other words, in these two very important particulars at least, the dictum of Sir Harcourt Butler that "Paramountcy must remain paramount" is implicitly contradicted by Sir John Simon.

The more closely we pursue our investigations into the differences between the views of the Butler Committee and the Simon Commission in regard to the Indian States, the more strongly we shall be impressed by the conclusion that the position taken up by the Statutory Commission coincides closely with the views put forward by the States themselves. The Commission recognises in so many words that the Legislative Assembly, while legislating professedly only for British India, has in effect imposed indirect taxation upon the States; it further recognises that independently of the States' claims to financial adjustment—a claim sparingly recognised by the Butler Committee—the States have a constitutional right to be consulted in the formation of financial policy, especially tariff policy, and the imposition of All-India taxation. The Commission further recognises that the time has come to set up some permanent machinery of consultation between the States and British India, for dealing with matters of common concern; and in the suggested schedule of such matters, the Simon Commission explicitly recognises that claim of the States to a voice in a variety of important affairs, which has been more or less explicitly ignored by Sir Harcourt Butler and his colleagues. A reference to the proposed schedule of subjects which, it must be remembered, have been placed by the Statutory Commission outside the sole control of British India, shows that it includes the Customs Tariff, the Salt Tax,

various forms of Central Taxation, Railway Policy, Air Communications, Trunk Roads, Posts and Telegraphs, Wireless, Currency and Coinage, Commerce, Banking and Insurance, Opium Policy, Indians Overseas, matters arising in connexion with Indian membership of the League of Nations. In regard to all these, the States have for several years been putting forward a claim to a consultative voice; but this claim has never hitherto been specifically admitted in any official document.

It has also been noticed that in the picture which Sir John Simon draws of a federal India, he lays stress upon certain of those very features which the Indian States have always regarded as being essential to their participation in such an arrangement. He postulates the preservation of the internal autonomy of the States; the recognition of the right of the States to a voice in All-India affairs; the erection of a Federal Court; equitable fiscal adjustment between the States and British India; and the constitution of the Viceroy, rather than as at present, the Governor-General-in-Council, as Agent of the Crown in its relation with the States. In these, as in all other matters connected with the States, the Report of the Statutory Commission carefully avoids anything like dictation. It disclaims any intention to do more than to concentrate attention upon certain suggestions in the hope that this work may be useful to the Round Table Conference; and recognises frankly that until the opportunity arises at the Conference for the representatives of the Indian States to put forward their own views, to pronounce any dogmatic conclusions would obviously be improper.

It would not perhaps be overstating the case to say that the Report of the Statutory Commission accepts the conclusions of the Indian States Committee only in three particulars; the proposal that the Viceroy and not the Governor-General-in-Council should be the Crown's Agent; the proposal that the States' claim to financial relief should be investigated by an expert committee; and the finding that the States cannot be handed over without their consent to any new Government responsible to a British Indian Legislature. With the exception of these three conclusions, which are quoted with approval, it seems pretty plain that the Statutory Commission has taken its own view—which is the States' view rather than the Committee's view—of State rights.

THE INDIA SOCIETY.

The India Society gave a reception to meet Prince Damrong of Siam at the rooms of the British Indian Union, Grosvenor Gardens, on Friday, June 27. Some beautiful Siamese fabrics lent to the Society by Prince Damrong were exhibited. Colonel Sir Francis Younghusband, who presided, said they welcomed in the person of the Prince not only an honoured elder statesman of his country, but also a scholar whose sympathetic guidance and learned support had contributed largely to the furthering of knowledge and appreciation of Siamese art. The India Society could not adequately fulfil its functions as an interpreter of Indian art, unless it dealt with the interactions between the artistic impulses of India and the other countries of Asia, notably Siam, Indo-China, Java and Persia. They thanked his Royal Highness for giving them that opportunity—the second of the kind that they had enjoyed—of seeing many Siamese printed fabrics, including some of the finest examples available at the Royal Bangkok Museum. The Society had arranged for their exhibition in Manchester, and for the publication of a selection of coloured plates of these cloths in a book which would also contain some account of their origin, technical character, and artistic value.

Prince Damrong, in replying, said that he appreciated the remarks of the Chairman regarding the close links between the artistic culture of India and Siam. The influence of Indian civilisation extended to Siam probably more than 2,000 years ago, and it was from India that Siam derived her religion and much of her literature and customs. While the Siamese had an ancient art of their own, Indian influence upon it was to be seen. The India Society was doing a noble work which deserved universal encouragement.

Sir John Simon's two broadcast talks on India have been published by Messrs. Faber and Faber in the Criterion Miscellany series (price 1s.).

INDIAN EMPIRE SOCIETY.

That on the whole the reforms suggested in the Central Government represent a decided improvement upon the existing system is the verdict of the Provisional Executive Committee of the Indian Empire Society in a preliminary review of the Report of the Indian Statutory Commission. The main objects of the Society and the personnel of the Provisional Committee, which includes four ex-Governors of Indian Provinces, were set out in THE NEAR EAST AND INDIA of May 29.

While the proposed extension of the life of the Provincial Councils is approved, the Committee finds it impossible to reconcile the proposals to lower the franchise, and thereby largely increase the roll of illiterate voters, with "the candid admission by the Commission of the farcical character of the present elections." The result, it is feared, will be a further deterioration in the quality of the elected members. Exception is also taken to the transfer of all provincial affairs, including law and order, to Ministers appointed not by the Crown but by the Governor. "This is a change which in present conditions is dangerous. Moreover, there is no obligation to include any trained administrator in the Cabinet. . . . The vital question is—have the provincial executives been rendered more or less fit for their extended duties? The Commission, which rightly insists that strong and fully competent executives are vital to peace and progress, evidently feels some misgivings on this point."

In the administrative sphere the Committee stated that the Commission, however unconsciously, had given more weight to the exaggerated political aspirations of a small Western-educated intelligentsia, unrepresentative of the masses and hopelessly divided among themselves, than to the interests of the 97.5 per cent. who had no votes, took no interest in the forms of government, but desired above all things the maintenance of peace, security and impartial justice. These fruits of British government were being endangered by the rapid elimination of the small British element from the Legislature and the Administration, a process which would be further hastened by some of the proposals. The disappearance of the official *bloc* was a particular instance in point. The Commission had made wise proposals to ensure adequate representation of minority interests, but when it came to representation of British interests—and surely British India to-day was mainly a British creation—the share of Great Britain in that great work was completely ignored.

The Commission proposed to transfer to the control of the Provincial Councils the all-important subject of law and order, including the magistracy and police. That proposal was opposed by the great mass of sober Indian opinion. It would seriously imperil public security, the margin of which was already dangerously narrow. It must, as the Commission itself feared, tend to break up those two splendid services (the I.C.S. and police) which were the only bulwarks of order and internal security left, outside the Army. "This most rash proposal," the Committee proceeds, "is made on the ground that it will bring home to the Indian politicians a sense of their responsibility. But is there anything in the records of the all-India and Provincial Legislatures for the last ten years to support such a theory? And is there not a greater responsibility to be kept in mind, the responsibility of the British Parliament and people for law and order in India? That is our justification for being in India. If we are not prepared to shoulder that responsibility, we have no business to remain there."

On the vital subject of the Army in India, the Commission was to be congratulated on its recognition of the "special features of India's military problem which must be provided for before Army administration can be a function of a self-governing India." But the Committee emphasised that the Indianisation of the Indian Army was not as easy as many were disposed to think.

INDIAN NOTES

(Continued from page 30.)

of India as a whole. In fact the Commissioners' whole conception of the Indian problem turns upon their conviction that Indian India is an essential part of All-India and that "any constitutional changes now recommended for British India must have regard to a future development when India as a whole, not merely British India, will take her place among the constituent States of the Commonwealth of Nations united under the Crown." But, and the significance of the condition, which is absolute, is rightly emphasised by Professor Rushbrook Williams, the greater unity which the Commission envisages can only come about "when it is to the mutual advantage of both sides to pursue it." The States cannot be compelled to come into any closer relationship with British India. The Commission is concerned merely to "provide an open door whereby, when it seems good to them, the Ruling Princes may enter on just and reasonable terms." That this is in accord with the conception of India's future held by the majority of the Princes themselves is evident from many of their recent speeches, and will, no doubt, be confirmed when they meet the Viceroy next week. Even more important, from the standpoint of the States themselves, than the proviso itself are its implications in relation to the much-discussed question of Paramountcy. It is primarily to this aspect of the Report that Professor Rushbrook Williams rightly directs particular attention in a notable contribution to the study of one of the most important problems confronting the forthcoming Round Table Conference.

Probable Attitude of the States.

On the other hand, it would be idle to expect that all the recommendations in a document as complicated as the Report of the Statutory Commission, will be acceptable in every degree to the Indian States. In particular, it seems likely that the States will object to the suggestion that they might associate themselves individually with the new federation. They have won at great cost to themselves their right of common action; and they are unlikely to revert to individual action at this juncture. Doubtless too, in certain other particulars, it will be found that the States do not agree with every letter of every recommendation which has been put forward. Broadly speaking, it seems reasonable to suppose that the Indian States will find the recommendations of the Statutory Commission most useful: and indeed far more sympathetic to State rights than any other official document yet published. But it is important to remember that the ascertainment of the true constitutional position of the States did not fall within the scope of the Statutory Commission's terms of reference. This task still remains to be accomplished. Until it has been begun and completed, we cannot expect the States to enter upon any federal scheme. They must know what their rights are, both as regards the Paramount Power, and as regards British India, before they can justly assay what federation will mean to them, and on what conditions they will find it possible to enter an All-India Constitution.

The Agenda for the Conference.

By the time these lines appear in print the arrangements for the Round Table Conference, including presumably the precise terms of reference, if any, to that body will have been announced, either by the Prime Minister or by Mr. Wedgwood Benn in the House of Commons and by the Viceroy in his address to the Legislative Assembly, which reassembled for the brief Simla session on Monday. It is already understood that the Government will not bring forward any new proposals, but will merely explain the issues raised since the Simon Report was published and, we may hope, clear up the uncertainty concerning the official attitude on the subject, which the recent authoritative statement did not wholly remove. Meanwhile, in spite of the vigorous activities of the Congress the situation in India generally shows distinct signs of improvement in several directions, notably on the Frontier. Moreover, which is even more welcome, there is a discernible increase in constructive effort towards a constitutional solution of political problems, although the Committee of the All-Parties has again failed to reach any concrete result. Contrary to the general expectation the most destructive criticism of the Report has come from the Muslim side, the Executive Board of the All-India Muslim Conference, while reaffirming the earlier decision in favour of Muslim participation at the Round Table Conference, being "emphatically of opinion that the minimum demands of Mussulmans of India have not been met by the Commission."

AN AHMADDIYA PROTEST.

We have received the following telegram from Saltpond, Gold Coast:—

> "Thousands of West African Ahmadites condemn the scandalous and most provocative propaganda against the Head of the Ahmaddiya movement in India conducted by reactionaries. Since 1919 our Indian community has kept peaceful on religious principles. When the police fled their representatives preached co-operation from Congress platforms; they suffered boycotts and persecutions. The Punjab Government has failed to protect the honour of His Majesty's law-abiding subjects. India needs organised loyal communities to-day and will need them more to-morrow. We appeal to the British public to cause moral pressure to be brought on the Indian authorities..

ANGLO-JEWISH CONFERENCE.

An Anglo-Jewish conference, to consider the recent political developments as affecting the establishment of the Jewish National Home, and the Administration of Palestine by His Majesty's Government, will be held under the auspices of the British Section of the Jewish Agency on Sunday, July 20, at 8.30 p.m., at the Kingsway Theatre, Kingsway, W.C.2. Mr. O. E. d'Avigdor Goldsmid, J.P., Chairman of the British Section of the Jewish Agency, will preside. Lord Melchett and other distinguished members of the Anglo-Jewish community will address the conference.

As from July 1, 1930, the title "Deputy Governor" in the Sudan Political Service has been abolished.

Seven Badawin were arrested last week on suspicion of having been concerned in the murder of Miss Eileen Smith, the English girl who was shot dead while motoring with her financé in Cairo on June 7.

The Iraqi Regent on July 4 dissolved the Chamber of Deputies on the ground that the new Treaty with Great Britain places Iraq on a new political footing, which makes it desirable to consult the wishes of the nation at the earliest opportunity by means of a General Election.

According to a message from Larnaca the Swedish Archæological Mission to Cyprus has succeeded in excavating the famous temple of Isis and Aphrodite mentioned by Strabo. Several statues and large heads of Isis and Osiris have been brought to light.

The Power and Traction Company in Athens last week aroused strong feeling by increasing the tramway fares. Passengers refused to pay, trams remained stationary, and people broke the windows, almost wholly destroying eight tramcars.

The Turkish Grand National Assembly in Ankara adjourned at the end of last week until November 1 after a session mainly devoted to the discussion of economic and financial matters. A law providing for the foundation of a Central Republican Bank has been passed, and other measures designed to protect the national currency have been approved.

EGYPTIAN GOVERNMENT.

ASYUT BARRAGE.

WITH REFERENCE to the previous notice concerning the intention of the Egyptian Government to invite Tenders for the remodelling of the Asyut Barrage in Upper Egypt, it is brought to the notice of the Public that the Egyptian Government has decided to POSTPONE the above-mentioned adjudication.

Book Review

POLICY IN PALESTINE.

"SOME OBSERVATIONS ON THE POLICY OF THE MANDATORY GOVERNMENT OF PALESTINE with Regard to the Arab Attacks on the Jewish Population in August, 1929, and the Jewish and Arab Sections of the Populations." By J. H. Kann, late Consul of the Netherlands in Jerusalem. (The Hague: Martinus Nijhoff.) (London: Luzac & Co., 2s. 6d.)

The writer of this pamphlet has lived for some years in Palestine, both as an official of the Government of the Netherlands and as a worker on the Zionist Organisation. He believes that, though he was not in Palestine at the time of the riots, his knowledge of the whole Jewish and Palestine question entitles him to make observations on the policy of the Mandatory Power.

In his inaugural notes, upon the Mandate, the author partly discloses his point of view, as he says: -

> The clauses of this Mandate are based on the acknowledgment of the historic right of the Jewish people to make Palestine once more its National Home. The Mandatory Power was made responsible for effective measures which were to secure the establishment of this National Home.

It will not be claimed that such a wording of the origin of the Mandate is non-partisan. The author naturally proceeds to point out that Jewish expectations have not been realised, that the British officials have found the difficulies of administration very considerable—so considerable indeed, that the Government's *leitmotiv* is: "not to displease the Arabs at any price."

Turnnig to the Arabs, Mr. Kann says that in Palestine the great majority set little store on Arab nationalism. Those who are affected by nationalism, and those who are opposed to Zionism, are the effendis, who have done absolutely nothing for the country. "The fellaheen," he says, "do not really object to the Jews at all." And since the political agitation of the effendis among the masses missed fire, "these gentlemen explored the possibilities of religion, with fanaticism as pace-maker." Yet, even among the effendis

> There are reasonable and decent people who realise that in the interest of Palestine co-operation between Jews and Arabs is necessary. The interests of the fellaheen are entirely parallel to those of the Jewish peasantry, although it may take many a year before the fellaheen will be sufficiently organised to understand this.
>
> One need not doubt, however, that on the part of the Jews everything will be done to come to an agreement with the entire population. This agreement must eventually be such that the two sections coalesce and that finally the Government of the country by a foreign Mandatory Power will be unnecessary. In the near future this is out of the question. The contrasts are still too glaring, and the Jewish National Home is not yet strong enough in its foundations.

Mr. Kann then criticises the Jews. The Zionist leaders, he states, acted lightheartedly in promoting Jewish immigration without having prepared a proper plan for colonization—"more lives have been lost through this negligence than through the Arab attacks. And enormous financial means have been wasted." There ought, he states, to have been a definite plan of colonization, but the Zionist leaders, stamping all enterprises with propaganda, wanted to keep everything in their own hands. Hence there has been disappointment all along the line. The Jews, moreover, have "concentrated exclusively on their own difficulties and neglected to study the Arab problem in relation to the Jewish settlement in Palestine."

As for the Wailing Wall, it is regrettable that the Jews played into the hands of the Grand Mufti—it was "not at all the proper place for a national demonstration."

There follows what is in essence a criticism of the Government of Palestine. The amount of Jewish labour employed in public works in Palestine, for instance, is unjustifiably small, as is the number of Jews in the Police. The Government ought to have known that the riots were coming—but it has repeatedly failed adequately to protect the Jewish population—in 1920, in 1921, and again in 1929. Mr. Kann states that had Englishmen been killed instead of Jews, quick justice would soon have been meted out. Even after the August riots—and, of course, Mr. Kann attributes them to the machinations of the Grand Mufti and his colleagues—the agitation "was not firmly enough suppressed by the Administration"—for speeches were allowed to be made against the Jewish settlement.

Speaking of the British officials, Mr. Kann says:—

> The Jews cannot stomach the fact that the British officials do not, on the whole, help to smooth their path, neither in the pursuit of their calling, nor in their commerce, nor in their colonisation. They feel that everywhere difficulties are put in their way. Perhaps they feel this more strongly than the facts warrant. But whereas after the Balfour Declaration the Jewish population felt universally friendly towards England, there is but little needed now to turn this affection into hatred. The Jews are embittered and do not trouble to hide their distrust.

And then, abandoning summary of other people's views, Mr. Kann himself says: "The officials are lacking in sympathy with the Jewish settlement."

Turning to the future, the author states that the Jews should not lose sight of the fact that Palestine will for many a year remain largely an Arab country, forming part of the continent of Arabia, Trans-Jordan, Syria, and Iraq. It follows, therefore, that the Arabs and the Jews must to some extent have a common destiny. What the Jews immediately need is: security of life and property, free purchase of land, and immigration in accordance with economic possibilities. He suggests the appointment of a neutral intermediary to ensure friendliness in Palestine as between Arabs and Jews. When such friendship is established, it will be time for the Mandatory Power to disappear. But there must be no more *divide et impera* policy.

Finally ,Mr. Kann indulges in a conditional statement with which, at any rate, no one, and least of all the Arab Muslim, will disagree:— "And if it is in keeping with the Will of God, that the Jewish people shall again return to Palestine, no Mufti, no Latin Patriarch and no unwilling officials will be able to prevent it."

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

Two lions, in the charge of their Somali keeper, were transported one day in May by aeroplane from Jijiga to Addis Ababa, a journey of two hours. They were a present from the Governor of Jijiga to the Emperor Haile Selassieh.

A quarrel between two prominent Roumanian generals was settled in Bucharest by a duel on July 5. General Cihoski, a former Minister of War, considered himself insulted by a series of articles in the Press written by General Lupascu, and demanded satisfaction. In the resulting duel with swords General Cihoski was slightly wounded.

Russian subjects settled on the north-west frontier of Persia have for some little time been trying to immigrate, with their cattle, into Persia, a result of the collectivisation of farms in Russia. These immigrants are reported to have been greatly assisted by one of the Shahsavan chiefs in Persia, who was later attacked (on June 3) by Russian troops, who looted some of his villages in Persian territory.

A steamer of the Dubrovnik Navigation Company, the Karageorge, which had on board 500 passengers who had taken part in the Sokol festivities in Belgrade, when off the Dalmatian coast near Taskman on July 5, came into collision with the Italian ship Morosini, Venice to Zara. The Karageorge was badly damaged and went on to the rocks. Three women and two men passengers, all Czechs, were killed by the collision, and 16 other passengers were seriously injured. All the passengers from the Karageorge were taken on board the Italian ship, which then proceeded to Zara.

Lord and Lady Dickinson returned to London last week from Geneva.

Captain Phocas has been appointed Naval Attaché to the Greek Legations in London and Paris.

The King received the Maharaja Jam Sahib of Nawanagar at Buckingham Palace on June 30.

The Crown Prince of Kapurthala, accompanied by his secretary, Captain S. C. Dass, arrived last week at the Savoy Hotel.

The Maharaja of Kapurthala and his suite arrived last week at the May Fair Hotel, where they expect to remain for another fortnight.

Mr. and Mrs. Charles Mackintosh, who returned last week from Cairo, are staying at 23, Chapel Street, Belgrave Square, S.W.1.

The Right Hon. Sir Stanley Jackson, Governor of Bengal, had an audience of the King at Buckingham Palace on June 30.

Field-Marshal Viscount Allenby and Viscountess Allenby returned to 24, Wetherby Gardens on July 7 from the country.

The Greek Community and the Anglo-Hellenic League are giving an At Home at the Carpenters' Hall, Throgmorton Avenue, next Thursday (July 17), to meet the Patriarch of Alexandria.

The Yuvaraja of Mysore and Khan Bahadur Mian Sir Muhammad Shafi arrived at Marseilles on July 5 from Bombay.

Mr. A. D. Macdonald has resigned his post of Director, Equipment and Finance, Egyptian Ministry of Interior, and he and Mrs. Macdonald left Egypt at the end of June for London.

M. Janig Chaker, representative of the International Sleeping Car Co. in Egypt and Palestine, who has been on a visit to Persia, accompanied by Mme. Chaker, returned to Cairo at the end of last month.

Kaimakam H. Vernon Jarvis Bey, Director of Permits and Passports, left Egypt on June 30, accompanied by his wife and family, for England and Switzerland, on leave.

The King of Egypt has conferred the Order of the Nile, Second Class, on the following officials of the Sudan Government:—Mr. A. J. C. Huddleston, C.M.G., O.B.E., Mr. H. A. MacMichael, C.M.G., D.S.O., Sir Nigel Davidson, C.B.E., Mr. T. D. Acland.

H.M. King Faisal of Iraq arrived at Alexandria on June 24 by an R.A.F. machine from Baghdad on his way to Europe. His Majesty was received on arrival at the aerodrome by the Governor of Alexandria, representing H.M. the King, Mr. Smart, Oriental Secretary to the Residency, the Consuls for Iraq, and a number of local notables. King Faisal, who took up his residence at the Iraq Consulate in Ramleh, was entertained at dinner by the High Commissioner the following evening, and he embarked on June 26 for Europe on the Sitmar s.s. Ausonia.

Lady Irwin, wife of the Viceroy, who will leave India at the end of July on a short visit to England, will return to Simla early in October.

PLANT LIFE IN THE BALKANS.

Dr. W. B. Turrill, author of "The Plant Life of the Balkan Peninsula" (Oxford, 1929), is anxious to get into touch with residents and travellers in the Near East who would be willing to collect plant specimens for determination and preservation at Kew. He will be glad to answer botanical inquiries concerning the wild flora and cultivated plans of the Near East, if letters are addressed to him care of the Director, Royal Botanic Gardens, Kew, Surrey, England.

On July 2 members of the Embroiderers' Guild visited Oldbury Place, Ightham, at the invitation of Professor and Mrs. Newberry, to see their collections of Nearer Eastern embroideries, brocades, and velvets. Many hundreds of the embroideries date from the thirteenth and fourteenth centuries, and some are as early as the fifth century A.D.

The death was reported last week of Prince Kahoutza Tcholokachvili, the leader of the Georgian rebels who were defeated by the Bolsheviks in 1924. After the failure of the rising the Prince retired with his followers to the mountains, and took refuge until he could escape to France. The Prince, who was 42 years of age, died of phthisis resulting from a wound received in the Great War.

NOTES AND NEWS

170, *Strand, London, W.C.2,*
Tuesday Morning.

Bankers and Tariffs.

Developments in the last two or three years have made it abundantly clear that there is no prospect in the present state of international relations of any general reduction of tariffs. Of praise of tariff reductions in the abstract there has been plenty, but concrete examples have been few and far between, and have been due in many cases merely to the fact that the existing tariffs were so high that their reduction was essential in the interests of trade development. In the face of the rising tariff walls Great Britain has hitherto remained constant to Cobdenism, but for a long time evidence has not been wanting of a growing lack of enthusiasm in this adherence, which is scarcely a matter for surprise in view of the trade statistics and the increasing unemployment. This change of feeling found a notable reflexion last week in the resolution passed at a meeting of leading bankers held at Hambros Bank. Briefly the resolution, while expressing the hope of an ultimate extension of free trade throughout the world, pointed out that the expectations of the removal of restrictions on European trade have not been realised, and advocated in the circumstances immediate measures for the development of inter-Imperial trade. The Free-Trader-at-any-price may be able to ignore or to argue away the result of a by-election at Puddlecome-cum-Slobury, but this resolution, representing as it does a very important section of City opinion, cannot be dismissed so easily. From the feeble attempts to decry it the extent to which it has embarrassed the Cobdenist advocates is self-evident.

Phœnix Oil.

Despite the low prices, the past year has been a most satisfactory period for oil companies as a whole, and the report of the Phœnix Oil and Transport Company shows that this concern also has had a favourable twelve months. The net profits amounted to £275,577 as against £239,099 for 1928 and £223,553 for 1927. The output of oil at 483,013 tons was nearly 100,000 tons greater than in the previous year, and this factor more than counteracted the effect of lower prices. For the first half of the current year the output amounted to 296,412 tons, a total which, it is pointed out, is far in excess of any corresponding period in previous years. The investment reserve receives an allocation of £50,000, bringing it up to £450,000, and it is proposed to pay a final dividend of 6d. per £1 share, making 5 per cent. for the year as against 2½ per cent., and 3.464227d. per 1s. share, making 6.928597d. as against 3.464841d.

The Palestine Orange Industry.

As is well known, the tendency in Palestine since the War, both among Jews and Arabs, has been to concentrate on orange growing, and in every one of the last few years there has been a large extension of the area under orange groves. The first fruits of this development were forthcoming last season when the exports were the largest on record, but the yield unfortunately was unsatisfactory, and in view of the extent of the new groves which will be coming into bearing yearly, this has caused some disquiet among the growers. The position of the industry is dealt with in detail in a very valuable survey, which has just been published, by Mr. Harry Viteles, General Manager of the Central Bank of Co-operative Institutions in Palestine, Ltd. He points out that what he terms the "pro-orange" group takes the view that the prospect of increased competition and of further crises constitutes an inadequate reason for interrupting the expansion of the industry. It follows, however, that it is useless to continue to produce more oranges each year without paying due attention to the development of larger markets for the fruit, and Mr. Viteles remarks that the consumption of more oranges in the United Kingdom depends almost entirely on the growers. He emphasises in this connexion the importance of better grading and packing, and advertising. So far little has been done to advertise the "Jaffa," and it would be well if Palestine growers would take a leaf in this respect out of their American competitors' book.

The Area Under Oranges.

The importance of due attention to markets will be realised when it is learned that so far only about one-third of the land estimated to be suitable for orange growing in Palestine has been utilised, or roughly 100,000 dunums, and of this total only about one-third represents the groves as yet bearing fruit. Actually, according to Mr. Viteles, only about 35,000 dunums are fruit bearing, 11,250 of them belonging to Jews. The total area of Arab orange groves is estimated at about 50,000 dunums, of which 26,000 are new groves, while by the end of this year the new Jewish orange groves will amount to about 47,000 dunums, giving a total of 58,000 dunums of Jewish groves. Without allowing for any further planting it is obvious that the production of oranges should in due course be treble that of the past season, but it is, of course, quite

certain that planting will continue to go on as long as oranges remain a remunerative crop.

Persian Currency Reform.

A considerable part of the speech of Sir Hugh Barnes at the meeting of the Imperial Bank of Persia was devoted to the far-reaching currency reforms carried out in the past year by the Persian Government. Briefly, to meet the position brought about by the fall in silver, the Government decided on the withdrawal of the existing silver currency and its replacement by a currency with a gold basis. The reforms have necessitated a material change in the bank's concession, and the arrangement reached may be deemed satisfactory both from the point of view of the Government and the bank. The delicate negotiations were conducted by Mr. Sydney Rogers, the retiring London Manager, to whom a well-deserved tribute was paid by Sir Hugh Barnes.

Tourists in Egypt.

One consequence of the trade depression, and in particular of the slump in America, is to be seen in the smaller profits earned in the past year by the Egyptian Hotels Ltd. At the general meeting Sir William Peat explained that Egypt has had fewer visitors in the past season owing to the financial crisis. It is, of course, inevitable that there should from time to time be breaks in the development of Egypt as a tourist resort, but it is particularly unfortunate that the present decline in the tourist traffic should have coincided with the cotton crisis, as cotton and tourists are the two great sources of Egypt's wealth. Mr. Baehler was able to point out that the attraction of Egypt is so strong that the country has suffered far less than any other part of the world. With the improvement in conditions that cannot be long delayed the Egyptian season will resume its normal course.

COMMENTATOR.

NEWS FROM ALL SOURCES.

Kitson and Co., Leeds, have obtained a contract for six 4—6—2-type passenger engines, with double-bogie tenders, for the Sudan Government Railways.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended June 10 amounted to £E7,061, making the total from April £E55,257, as against £E56,299 for the corresponding period of the previous twelve months.

Sir Friedrich Gustav Jonathan Eckstein, first baronet, of Whitehall Court, S.W., of London Wall Buildings, E.C., and of Oldlands Hall, Uckfield, Sussex, who died on June 10, aged 73, left estate for the purposes of the English grant provisionally valued at £1,000,000 in net personalty "so far as at present can be ascertained."

At a meeting of the Directors of the P. and O. Banking Corporation, Ltd., it was resolved to recommend, at the annual general meeting, that a dividend of 5 per cent., less income tax at 4s. 2.71d., be paid for the 12 months ended March 31, 1930, leaving £25,668 0s. 8d. to be carried forward.

It is announced that all passengers proceeding from Beyrout to Istanbul (Constantinople) will henceforward be liable to a medical examination by the Turkish health authorities.

A new régime for the cultivation, manufacture, and trade in tobacco and tombac in the Lebanese Republic (in place of the previously existing monopoly regulations) is provided for in a recent Law. It is provided that the importation of tombac, leaf tobacco, cigars, cigarettes, and other foreign tobaccos is to be subject to a licence from the Ministry of Finance, which licence is, however, to be granted as of right to holders of internal licences to trade in tobacco. In addition to the normal Customs duty, imported tobacco is to pay a special import tax of 250 piastres per kilog. for leaf tobacco and 500 piastres per kilog. for cigarettes, cigars, and prepared tobacco. There is also a "banderole" tax of 25 per cent. of the price.

AIR ROUTES OF THE EMPIRE.

Sir Eric Geddes, Chairman of Imperial Airways, speaking at a luncheon given by the company at the Carlton Hotel to members of the Imperial Press Conference, emphasised the need for a single control of the great air routes of the Empire.

He said that after a period of preliminary trial, they embarked upon two Empire routes. The Indian route by stages after many buffets of political fortune had settled down to the weekly mail service between London and Karachi, a service which was run with remarkable regularity and increasing comfort. The second route they were on the eve of inaugurating, namely, the London-Cape Town Service. Those two services would give them an Empire route mileage of 12,000 miles. The scheduled times London to Karachi was now 6½ days; it was 7½; London to the Cape started at 11 days and they hoped would soon be 9 days, and both routes would be operated within the commercial limitations imposed by the public support of them on a first-class standard, but with all the care and efficiency which had made Imperial Airways' operation the pride of the country, and if he might say so with due humility, the envy of the civil aviation world. They hoped to start the route to the Cape in January as far as Lake Victoria, serving Kenya, Uganda, Tanganyika, and the second more southerly section to Cape Town a month or two later.

They were operating to-day with the financial assistance of the British Government primarily, and so far as the Cape route was concerned, with the contributory assistance of the various Governments of the Empire on that route. Financial stringency and political difficulties faced them in the extension of the Indian route to Australia via Burma and Singapore, but he hoped that those in time would be overcome. Every great country in the world recognised that civil aviation to-day could not fly by itself—it must have assistance. Every great country in the world assisted civil aviation, and every great country in the world believed that that highly scientific product of their time would, in due course, command public support which would make it self-supporting. Imperial Airways had got nearer to that ideal than any other major civil aviation operating organisation in the world.

It was absolutely essential in the interests of efficiency, comfort, punctuality, progress, and economy that the two great Empire routes should be in one operating hand and one financial hand. It was absolutely impossible to take the best out of civil aviation practice to-day if each section of these Empire routes were to be separately operated. In the Indian Service they would shortly be arriving in Karachi with four-engined planes carrying a total pay load of over 3 tons with seating capacity for 20 to 40 passengers, and they were told that the connecting planes to Delhi and Calcutta would have a carrying capacity of about ¼ of a ton. The chaos which would come with sectional ownership baffled imagination, and if the mistake were made initially, it could only result in failure of the through routes and retard their development. The date of their economic independence would also be indefinitely postponed.

Just as they felt strongly that the through trunk lines on these great Empire routes must be in one hand, so they were equally of opinion that the development of feeder lines and local services in territories through which they passed might be best undertaken by local effort, and their policy would be to assist such enterprise in every possible way. It must not be understood that they would not consider the development of feeder lines themselves, but they would be glad if efficient and well-run feeder lines were developed locally by local enterprise, and they would be prepared to give assistance, advice, and co-operation to such undertakings.

It was to the long Empire routes that civil aviation looked to free itself from the shackles of subsidies. It was only possible as long as the route was not sectionalised in control. There must, he submitted, be one programme of development, and one programme of extension, one control of operations and standards. This was only possible when one authority controlled the route and its policy.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended June 28 :—

The weakness which characterised grain markets for the last few weeks has, to a certain extent, been relieved by a slight but steadily increasing demand for barley from German markets on the one hand, and the Rotterdam market on the other, in consequence of which several sales have been concluded and fairly large shipments are already being and will be shortly effected. The inquiry for U.K. ports has, on the contrary, fallen off considerably, although there are indications to-day that a revival of the previous inquiry may be expected. The Antwerp and Mediterranean markets remain quiet. Chartering continued fairly active and several steamers were chartered for both July and August shipment at the same rates as last fixtures. Spot rates were maintained at from 10s. to 10s. 6d. Antwerp/Rotterdam and from 10s. 9d. to 11s. Hamburg/Weser. For English destinations a few large parcels, for which June loading was required, paid as much as 13s. 3d. to 13s. 4½d. At Constantza the position improved a little as several sales were effected for Hamburg, for which port the necessary room was engaged for prompt and July loading at 7s. to 7s. 6d.

The timber market remains lifeless and no revival is noticeable. The sudden demand which set in for North France was not maintained, but there are a few parcels in the market for South France and North Africa, for which destination £8 per waggon is quoted. In execution of the South American business mentioned in our last report, it is said that monthly shipments of full cargoes of about 400 waggons will take place, but no details of the freight conditions have yet transpired. A 6,000 tonner has been fixed for a full cargo to Basrah with return cargo from there, but the chartering having been done direct between London and Baghdad, conditions are not yet known here. Small shipments are taking place for Greece and Alexandria with rates at about £5 15s. per waggon. The Roumanian State Line, trading regularly between Galatz, Constantza, and Near Eastern ports, is finding full cargoes consisting mostly of small parcels of timber and general cargo, and it is hoped that the service will be maintained.

Except for a few local thunderstorms, some of them sufficiently severe to cause damage to crops and property in small areas, the weather has remained dry during this week. It has become intensely hot, especially during the last few days, the temperature reaching 24 to 36 degrees Centigrade in the shade during the day, though the nights have been relatively cool. It is good harvesting weather for the straw crops, which are expected to give abundant yields of good quality; but the maize, though still looking well, will require more rain shortly if the promise of its start is not to be followed by disappointment.

Sulina.—Bar depth, 24 feet, passage 23 feet. According to the latest soundings the conditions are normal and there is no reason to fear a reduction in the depth. River minimum, 24 feet.

Constantza.—During the week about 4,500 tons were shipped for Antwerp, Rotterdam and about 2,500 tons for Marseilles. Fifteen vessels loaded over 55,000 tons of petroleum products and three took oil fuel for bunkers.

Bulgarian Report.

Bourgas, June 21.—Business has been very quiet owing to the further weakening of grain prices abroad, and also as a consequence of the continued rainy weather delaying the reaping of the new crops. The weather was rainy and cold at the beginning of the week, but has been dry the last few days, although generally cloudy. Reaping of barley has been greatly delayed by the weather conditions.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates :—

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, July 11); s.s. Tarantia for Bombay (Glasgow, July 16; Manchester, July 24; Birkenhead, August 2). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malancha for Calcutta (Glasgow, July 16; Birkenhead, July 22).

Bibby Line.—S.s. Staffordshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, July 23).

British India Line.—S.s. Mandala for Colombo, Madras, and Calcutta (London, July 12); s.s. Burdwan for Bombay, Port Okha, and/or Bedi Bunder (Jamnagar), and Karachi (London, July 18); s.s. Mancla for Colombo, Madras, and Calcutta (London, July 26).

Cunard Line.—S.s. Bantria, closing in Glasgow July 19 for Casablanca, Gibraltar, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement. Closing in Liverpool July 19 and in Swansea July 22 for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if inducement; s.s. Bactria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if inducement (Glasgow, July 31; Liverpool and Swansea, August 2).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 17); s.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 9).

P. and O. Line.—S.s. Macedonia for Bombay (London, July 18); s.s. Burdwan for Calcutta (London, July 18); s.s. Ranpura for Bombay (London, August 1); s.s. Behar for Calcutta (London, August 1).

Prince Line.—S.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, July 30); s.s. Korean Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, August 2).

Ellerman and Papayanni Lines.—A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haiffa* (Glasgow, July 18); s.s. Maronian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 23); s.s. Lisbon for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 26; Swansea*, July 26); s.s. Malatian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 30); s.s. Mardinian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, August 2; Swansea, August 7). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Messageries Maritimes.—(From Marseilles).—S.s. Theophile Gautier for Piræus, Istanbul, Izmir, Larnaca, and Beyrout (July 15); s.s. Mariette Pacha for Alexandria, Jaffa, and Beyrout (July 15); s.s. Angkor for Alexandria, Jaffa, and Beyrout (July 22); s.s. Pierre Loti for Naples, Piræus, Istanbul, Izmir, Larnaca, and Beyrout (July 29); s.s. Champollion for Alexandria, Jaffa, and Beyrout (July 29).

Cables and Wireless, Ltd., announce that the transfer books of the 7½ non-cumulative "A" Ordinary stock and "B" Ordinary stock of this company will be closed from July 7 to 15, inclusive.

The Peninsular and Oriental Steam Navigation Company have given an order to Messsr. Alexander Stephen and Sons, Ltd., for two passenger and cargo steamers. The vessels are to be of about 15,000 tons gross, 520 ft. long, driven by Parsons geared turbines, and designed for a high speed. Accommodation will be provided for 160 first class passengers and 150 second class.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 8.

Some slight improvement in the general tone of the Stock Markets during the past week has to be recorded, but the volume of business remained on the small scale of recent weeks. Thanks, however, to prevailing money rates and the reinvestment of July dividend disbursements, gilt-edged stocks maintained their firm appearance and further rises were recorded in many cases. Home rails drooped further on the poor showing of the traffic returns for the half-year, L.M.S. and L.N.E.R. being the most seriously affected. In the industrial section a sharp fall in Cables and Wireless stocks followed the disappointing dividend announcement, and for a time prices were purely nominal. Motor shares were exceptional and rises were shown in one or two instances. As a whole, however, markets show no sign of discarding their present lethargy, and in view of the approach of the holiday period no improvement is to be anticipated for several weeks.

Home Rails Dividend Prospect.

The aggregate traffic receipts of the big four Home Railway Companies for the first six months of this year show a decline of £3,125,000, compared with the corresponding period last year, the total receipts for this year up to June 29 last being £83,588,000. General merchandise showed the heaviest fall—a drop of £1,399,500. The next largest decline was in coal traffic, which fell by £909,504. Passenger receipts were down by £816,000. It will be seen, therefore, that there was a falling off in receipts in all departments. Examined under the heading of railways, the biggest decline, amounting to £1,628,000, was shown by the L.M.S., next comes the L.N.E.R. with a decrease of £829,000, then the Great Western, £532,000, and lastly the Southern, whose receipts fell by £136,000. From the general industrial point of view it should be remembered, however, that a fair amount of traffic has been transferred from the railways to the roads, so the picture is not quite as black as it looks, nor should it be overlooked that the railways have an interest in some of the road transport services. However, on the above figures reduction of dividends may occur to the following extent: L.M.S. Ordinary, 1¾ per cent.; L.N.E.R. Preferred, 2 per cent.; Great Western Ordinary, 1½ per cent.; and the Southern may shed ½ per cent. The Underground, the bright spot among railways, made increased earnings for the half-year, and the unchanged interim dividend was therefore in accordance with anticipations.

Cables and Wireless.

The Stock Exchange is rather resentful of the silence maintained by the Board of Cables and Wireless during the last three months, which has been followed by the announcement that the "A" and "B" Ordinary stocks are not to receive a dividend, producing a shock on the market. The value of the stocks has been falling for some time, but the Board never offered any explanatory statement to guide investors. It appears that revenue fell off during the last six months of last year. This was due in part to the fact that the company did not take over the Post Office's Beam Service—the Post Office believing it could itself offer the public a cheaper service—but it was also due to slackness of trade. The falling off in shipping activity, for example, meant a serious decline in cable business. Imperial and International Communications Company looks for a revenue of £1,800,000 in times of fair trade, but this was far from earned during 1929. It is believed that the surplus earnings were duly equivalent to half the amount required for the dividends. Some critics consider the passing of the dividends as due to other factors besides bad trade and regard the company as having been over-capitalised in the first place. Meanwhile, the 5½ per cent. Cumulative Preference shares are to receive their dividends in full.

Hudson's Bay Meeting.

The proprietors were naturally in a somewhat critical mood at the General Court of the Governor and Company of Adventurers of England trading into Hudson's Bay, held last Friday week. Profits from trading fell from £427,000 to £137,000 last year, and revenue from interests on instalments and from rents fell by £30,000 to £98,000. The proprietors have also seen the market value of their shares fall from a highest of 6 17/32 in 1929 to 3¼. The Governor, Mr. Charles V. Sale, explained how the company had been hit by the phenomenal fall in the price of furs which resulted from the Stock Exchange collapse of last autumn. The average price of furs has fallen some 45 per cent. in nine months. The company, in common with practically every concern interested in Canada, has also suffered from the fall in the price of wheat. He reiterated his opinion of the great future that lies before the company. The crisis in the fur trade has been met, and with the continued development of the great resources of the Dominion of Canada, the company should again reach prosperity. There are undoubtedly grounds for supposing that recent increases in capital have not yet become productive. The company's difficulties are not at an end, but holders would be well advised not to realise their shares at the present low prices.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for June was 80,420 tons.

The Economic Delegation of the Roumanian Government has decided to reduce the export taxes on wheat and rye from 2,800 to 1,000 lei per waggon, and on maize and oats from 2,800 to 1,400 lei, while the tax of 2,800 lei on barley is to be ended. The question of the reduction of the taxes on other agricultural products will be considered later. It has further been decided to reduce the taxes on transport by railway.

The gross profits of the Bank of Greece for the year ended December 31 last amounted to 225,461,186 drachmæ, while the net balance amounted to 100,548,645 drachmæ. With the balance of 73,750 drachmæ brought forward there is a disposable sum of 100,548,645 drachmæ, out of which a dividend of 8 per cent. is paid. The Ordinary reserve fund receives 36,000,000 drachmæ, and the State participates to a similar amount, leaving 74,900 drachmæ to be carried forward.

ECONOMIC CONDITIONS IN BULGARIA.

[*The following notes are taken from the Bulletin of the British Chamber of Commerce (of Bulgaria), dated June 30.*]

General Conditions.

Owing probably to the increasingly good crop prospects and to the exports of tobacco, eggs, maize and other agricultural produce, trade activity is showing more and more signs of improvement. Increased turnovers are reported by retailers and in some cases by wholesale merchants from almost every part of the country. For the time being this quickening up of business has only helped to deplete congested stocks and there is no material increase of orders for goods abroad, with the exception, perhaps, of wool and woollen yarns for the local weaving factories and of hides for the leather industry. Textiles are slightly better, as well as yarns. Cotton yarns of local manufacture have changed hands at almost non-remunerative prices, but there is also an increase of activity to be observed. Building materials, metals, chemicals, and timber are still less active than last year. Agricultural machinery, motor cars, tyres, and lubricating oils continue to make a poor showing, as compared with the figures of previous years. Important stocks of these articles remain unsold, and there is little hope of important business being done in them up to next spring.

The raising of the customs duty co-efficient from 20 to 27 will most certainly have a checking effect on new orders for goods abroad. This measure is unfavourably commented upon in business circles from the point of view of local trade. On the other hand, it will hardly produce any appreciable effect on the Treasury's receipts which are still on the decrease, especially with respect to customs duty, excise and other indirect taxes.

Although there are more liquid funds available, local banks continue to be extremely discriminating in granting new credits. They do not appear to be willing to exceed the present volume of their credits before the revival of trade takes a more complete and definite shape.

It may be stated that better trade is in view, and that the market can be studied now with a view to developing business, establishing new relations, and readjusting the credit limits for next autumn.

Exports and Imports.

The foreign trade during the three months ending March 31, was closed with a surplus of exports over imports of 370 million leva, as compared with a deficit of 297 million leva for the same period of 1929. Exports totalled 1,417 million, as compared with 1,317 million leva in 1929, and imports 1,105 million, against 1,614 million leva for the same period in 1929. This tendency continued during April and May. The principal export was leaf tobacco, 8,244 tons of a value of one milliard leva, against 6,381 tons of a value of 810 million leva, in 1929, followed by attar of roses, maize, cocoons, hides and skins, etc.

State Finances.

The economic depression through which the country has been passing during the last three years has affected the receipts of the Treasury. The total ordinary receipts for the three months ending March 31, amounted to 1,206 million leva, as compared with 1,614 million for the corresponding period in 1929, or a decrease of 28.5 per cent. This reduction is mainly due to the non-payment of indirect taxation (200 million leva for the first quarter of 1929, against 138 million leva for the same period this year), and in some measure to other Treasury receipts.

Foreign Capital in Bulgaria.

The economic development of the country, both before and after the War, depended, in a large measure, upon the import of foreign capital, in order to create and extend new industries, credit institutions, and, to develop and exploit the natural riches of the country. For this reason the State gave every encouragement possible to attract foreign financial interests, and encouraged private initiative. The State negotiated, on the foreign markets, loans for new roads, railways and ports, and other public works. The Agricultural Bank was created as a credit institution for the development of agriculture, and several private foreign banking institutions were formed with the co-operation of foreign capital.

In the last ten years foreign capital has taken a greater interest in Bulgaria, as compared with the pre-War period Up to 1912 foreign capital participated in the various credit institutions, and industry with a sum or 56,464,000 gold francs. Out of 134 companies or societies, 27 were financed with foreign capital only.

From 1919 foreign capital investments increased more rapidly than during any other period, mainly in commerce, tobacco exploitation, eggs, etc., for export. The following figures show the gradual increase of this capital, in leva: 1919 15,350,000; 1920 71,000,000; 1921 98,000,000; 1922 86,000,000; 1923 128,136,000; 1924 140,000,000; 1925 54,000,000; 1926 124,000,000; 1927 117,000,000; 1928 159,000,000; 1929 99,215,000.

In 1928, the number of registered firms or companies was 622, with a paid up capital of 3,168 million leva, of which 515 were purely Bulgarian, with a capital of 2,182 million leva, and 107 foreign companies, with foreign capital amounting to 985 million leva, or 31.11 per cent. of the total capital invested. The percentage of foreign capital invested was in transport 48.25, commerce 40.82 and credit institutions 39.25 per cent.

Viscount Glenapp and Mr. Roger Wright have been appointed Directors of Westminster Bank.

The Bengal-Nagpur Railway have given a contract for alminated steel springs to Steel, Peech, and Tozer Company, Sheffield.

The Roumanian Chamber has passed the Bill for the granting of a concession for the telephone system to an American company.

It is understood that the Town Prefecture of Constantinople will shortly invite tenders for the supply and erection of a new bridge over the Golden Horn.

It is reported that the construction of a new bridge over the Danube, giving railway communication between Yugoslavia and Roumania, is under consideration.

Coupons and drawn bonds due July 15 on the Piræus Athens and Peloponnesus Railway Three per Cent. Loan will be paid on that date at the office of Messrs. R. Raphael and Sons, Austin Friars House, E.C.2.

PERSIAN TRANSPORT FACILITIES.

In an interesting article in the United States "Commerce Reports," the American Vice-Consul at Teheran, Mr. Henry S. Villars, discusses developments in transport facilities in Persia. We give the following extracts :—

Long one of the most inaccessible lands in the world, Persia is witnessing significant improvements in transportation facilities that seem destined to place the country definitely on the trade routes of Asia and to bring it into even closer contact with modern progress and ideas. The announcement by the American Export Lines of a new service in the Black Sea and the recent completion of 150 miles of railroad north from the Persian Gulf are among the developments which may not only revolutionize the present system of transport but which may render obsolete the commercial arteries that have been in use for many years.

Before the introduction of the automobile, which did not take place on a commercial scale until 1923, Persia depended entirely on mule or camel caravan to carry to the border its rugs and carpets, its sheep casings, dried fruits, gums, and opium, and to bring in such foreign produce as tea, sugar, and woollen and cotton textiles. Months were often necessary to complete a journey between Teheran and Baghdad or the Persian Gulf, but the motor lorry and better roads have wrought material changes. Since then, certain well-defined routes have formed the outlets to Europe, but their importance is now threatened by the latest means of access—one via Russia and the Black Sea and one by the new railroad from Bandar Shahpur in the south.

The two most frequented routes for merchandise from the United States are at present via Beyrout and Baghdad and via Basrah and Baghdad. The Beyrout-Baghdad route is complicated by the 0.5 per cent. ad valorem transit taxes which must be paid on all merchandise crossing Syria and Iraq, and by the customs examination that takes place in both those territories. It is also the most expensive of all routes, owing to the long motor haul, but at the same time it is probably the swiftest for traffic with the United States. Its chief competitor—that via Basrah—has a distinct advantage in being open for a greater proportion of the year, since winter rains in Syria and Iraq often make motor travel impossible for weeks on end.

A third route, via Bushire (on the Persian Gulf), in former days led all the rest, but with the newly constructed railway in the south it seems likely to lapse into unimportance. In the first place, steamers at Bushire must anchor at least four miles off the shore, unloading by means of barges, with attendant difficulties and expense. The waters of the Persian Gulf are apt to be very rough in winter, and goods are frequently lost or damaged in the transfer by barge. It was reported last December, for example, that 1,500 packages had been lost in this operation and, although the majority were recovered later on, their insurance failed to cover the resulting damage. Furthermore, the motor road north from Bushire, via Shiraz and Ispahan, has always been extremely unsatisfactory—climatically, topographically, and politically. Severe weather conditions are invariably met in the mountains during the winter, the road itself is over difficult terrain, and tribal rebellions contribute to the shutting down of the route for some times as much as half the year. Even to reach Ispahan it will be more economical to utilize the new railroad to the west.

Persia's only rail connexion with Europe has until now been a short extension of the Russian Caucasian system, connecting Julfa on the Caucasian border with the north Persian town of Tabriz. Goods from Russia or Germany thus enjoy the advantage of an all-rail service, but consignments from other countries are forced to follow lengthy, circuitous, and difficult routes in order to reach the interior.

When the rail system from the new Persian Gulf port of Bandar Shahpur begins regular operation, it will be possible for steamers to discharge cargoes, regardless of their bulk, directly on to a pier at that town. Goods will then proceed by rail to Dizful, the present terminus, where distribution to interior points will be made by motor lorries. It is planned eventually to extend the railway to Teheran.

The port of Mohammerah (on the border, between Basrah and Bandar Shahpur), and connected with the town of Ahwaz to the north either by road or by the Karun River, will likewise diminish in importance as Bandar Shahpur correspondingly increased. From the United States the Bandar Shahpur-Ahwaz-Dizful rail route will not be as swift as that via Beyrout, but it will provide the undeniable benefits of cheapness, direct shipment to port of entry, and a route that will be usable nearly all the year round.

A fourth approach to Persia, which before long may assume importance, is that via Aleppo, Syria. Except for a 240-mile stretch between Nisibin and Kirkuk, now served by motor, this provides an all-rail connexion between Beyrout and Baghdad as well as between Istanbul and Baghdad. When the remaining gap is bridged, via Mosul, there will be available a rail route to the Persian border that will be practically independent of the weather.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Plant for Electric Power Station.—The Egyptian Ministry of the Interior invites tenders for the supply of electrical plant and material for the electric power station at Suez. August 2. (D.O.T.)

Electrical Instruments, etc.—The Municipalities and Local Commissions Section of the Ministry of the Interior invites tenders for the supply and mounting of electrical instruments and apparatus for the Kom el Nour Outgoing Feeder on the Mit Ghamr Power House Switchgear. August 16. (D.O.T.)

Mild Steel Flat Bars, etc.—The Egyptian State Railways, Telegraphs, and Telephones, invite tenders for :—Mild steel flat bars; cables; coloured cotton waste; pig iron; zinc sheets; medical springs; artificial Portland cement; reinforced concrete pipes; battery materials; construction, supply, and erection of 100 ton electric-driven shallow type locomotive traversers.

Compressor Sets.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for the supply and erection of four electric air compressor sets for Egyptian Army Barracks drainage at El Arish and Mankabad. September 14.

Stoneware Pipes.—The Director-General, Main Drainage Department, No. 2, Sharia El Melaka Nazli, Cairo, invites tenders for the supply of stoneware pipes required during 1930-1931. August 16.

Measures.—The Director-General, Physical Department, Sharia El Inhsa, No. 1, Dawawin Post Office, Cairo, invites tenders for the supply of steel and linen measures of length. August 18.

Surgical Instruments, etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of surgical instruments, sundries, and appliances required for the year 1930-1931. August 26.

Chemicals.—The Egyptian Ministry of Agriculture invites tenders for the supply of :—10 tons calcium arsenate, 300 tons sulphuric acid, and 100 tons sodium cyanide. July 20. (D.O.T.)

Steam Roller.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of a 15-ton steam roller to be run with coal. August 5.

Cotton Duck.—The Egyptian Ministry of Agriculture invites tenders for the supply of 85,000 yards of cotton duck. July 20. (D.O.T.)

The Cunard Line celebrated its ninetieth birthday on July 4.

JOHNSTON LINE
Mediterranean, Black Sea and Danube.
REGULAR SAILINGS from:
Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

Company Meetings.

IMPERIAL BANK OF PERSIA.

Satisfactory Agreement with the Government.

Sir Hugh Barnes's Speech.

The forty-first ordinary general meeting of the Imperial Bank of Persia was held on July 2 at the Cannon Street Hotel, London, E.C. Sir Hugh S. Barnes, K.C.S.I., K.C.V.O. (Chairman of the company), presided.

The Manager and Secretary (Mr. E. M. Eldrid) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—You will, no doubt, have noticed the considerable drop of nearly £3,000,000 in the total figure on each side of the balance-sheet. This is partly due to a change in the rate at which our Persian assets and liabilities have been converted into sterling. For many years past we have been in the habit of converting these assets and liabilities at a fixed rate, ignoring, for the sake of convenience, the yearly fluctuations in the value of the kran. As I explained last year, after discussion with the Inland Revenue Department, and at their request, it was agreed to convert the Persian figures into sterling at the rate current on the last day of our financial year. As the kran has recently fallen seriously in value this decision accounts for a reduction this year of some 16 per cent. in the sterling figures.

A further cause has been the withdrawal by the Persian Government of deposits held by us on their account, and required by them, among other purposes, for their railway commitments and for the needs of the National Bank of Persia. This explains the reduction on the assets side of £1,370,269 in the amounts shown under the headings "Cash in Hand" and "Investments" as compared with the figures of last year. Bills discounted, loans and advances are this year £797,971 lower, mainly owing to the decision of the Persian Government to repay to us the equivalent of some 30,000,000 krans of defective coin which for some time we have been collecting in the provinces and holding on their account.

Bills receivable show a decrease of £428,268. This is attributable to the world-wide fall in the price of commodities and the difference in exchange, coupled with the serious disorganisation of trade occasioned by the recent Exchange Law enacted by the Persian Government, to which I shall refer later on. As was inevitable, the strict rationing of exchange, as carried out at first under this law, very serious incommoded Persian importers and exporting merchants on this side. Indeed, for a time our business was almost at a standstill until we arrived at the understanding with the Persian Government to which I shall shortly allude.

Turning to the liabilities side, notes in circulation are less by £207,476, but this is more than accounted for by the difference in the adjustment rate of the two years, for the kran amount of the circulation was actually greater than at March 20, 1929.

I have already referred to the withdrawal of large deposits by the Persian Government, which, added to the difference occasioned by this year's adjustment rate, more than accounts for the fall in the kran totals of deposits. The decrease in bills payable and adjustments is accounted for by the lesser drawings of branches, owing to the operation of the Exchange Control Law, to which I have already referred.

Turning to the profit and loss account, the net profit at £124,278, which is arrived at after making ample provision for bad and doubtful debts, is only some £1,677 less than last year, and this calls for no comment. We propose again to add £40,000 to our reserve account, bringing its total up to the amount of our paid-up capital, namely, £650,000. This, as you know, has been our aim for some years, and is a result of which shareholders may, I think, be justly proud. We propose, if you agree, to signalise this landmark in our history by paying, in addtion to a final dividend of 7s. per share, free of tax, a special bonus of 2s. per share, also free of tax, making, with the interim dividend of 4s. per share, a total for the year of 13s. per share, free of tax. I do not think, gentlemen, I need anticipate any serious objection to this proposal, especially as we are able to carry forward no less than £44,880 14s. 4d., against £35,601 brought in.

This leaves us in a position which should help us to face any difficulties which may arise during the current year, in which the currency changes recently decided upon by the Persian Government will begin to operate. To set shareholders' minds at rest, I may here state that the board have taken adequate measures to guard against exchange loss on the bank's capital. This brings me to the subject of the negotiations with the Persian Government, of which you were given a brief account in our circular of May 14, 1930.

Depreciation of the Kran.

As you are aware, the Persian currency is on a silver basis; consequently the kran, the chief monetary unit, varies in value not only with the balance of trade but with the price of silver. At one time, during the War, owing to the high price of silver and the large sums remitted to Persia, the kran was equivalent in exchange value to the shilling. Since the War, until recently, the exchange value of the kran in relation to sterling has been fairly steady at from 40 to 45 krans to the pound. During the past year the kran has steadily depreciated in value, the chief causes being an adverse balance of trade, the large commitments of the Persian Government for railway construction, and above all the steady fall in the price of silver. In December last the kran fell to 60 to the pound, and in January touched the figure of 70. With silver at its present price, the figure would probably have fallen to 100.

The Persian Government became seriously alarmed, and on February 24, at the instance of His Imperial Majesty the Shah, the Majlis passed an Act forbidding the export and import of silver and the export of gold, and also forbidding all foreign exchange transactions except under Government control. A Commission, on which the banks were to be represented, was set up to fix the buying and selling rates of exchange and no purchase or sale of foreign exchange was to be allowed without a permit from another Commission called the "Commission of Inspection." Previous to this the Government had for some time been considering the desirability of establishing a gold standard, and at the suggestion of the Government we, with expert advice, prepared two schemes for their consideration.

In the end the Persian Government adopted a scheme of their own, and, on March 9, the Majlis passed a law providing for the withdrawal of the present silver kran currency and its replacement by a new unit to be called the ryal, and the coinage of a gold piece called the pahlavi, containing the same amount of gold as a sovereign. As there are to be 20 ryals in the pahlavi, the ryal will nominally be equivalent to a shilling. The date for the introduction of the new coinage is not yet definitely settled.

In the meantime the two Commissions appointed by the Act of February 24 having set to work, the rate of exchange was fixed at krans 60 to the £, and some very stringent regulations were drawn up, among them one which compelled us to hand over 50 per cent. of our purchases of exchange to the National Bank of Persia, as the agent of the Government. These regulations appeared to us to infringe our rights under our Concession, and we therefore decided to send Mr. Sydney Rogers to Teheran to assist our chief manager in his negotiations with the Persian Government. Mr. Rogers, owing to his position on the board and his long experience of Persia, was particularly well fitted for this duty. He left England on March 13, and, travelling from Cairo by aeroplane, reached Teheran on March 21, a very rapid and successful journey.

The Bank Note Question.

It soon became apparent that in order effectively to carry out the currency reforms the Persian Government deemed it essential that they should be at liberty to issue their own bank notes, and so great was the importance attached to this point that in Mr. Rogers's view there was little hope of any progress in the negotiations unless the bank were prepared, for a consideration, to relinquish its exclusive right under Article 3 of its Concession.

In the circumstances, from their own point of view, the Persian Government's desire was not an unreasonable one. We had for some time been aware that, owing no doubt to the revival of national feeling since the accession of the present Shah, both the Government and the people have been inclined to regard it as a serious grievance that the only currency notes in the country were those issued by a foreign bank. On our part, it was, of course, of the utmost importance to the bank to retain the good will and confidence of the Persian Government (hear hear); also, so long as the interests of our shareholders were safeguarded, it was no doubt our duty as a State bank to do our best to co-operate with the Government in carrying out the contemplated reforms. We therefore came to the conclusion that it was wise to meet the wishes of the Government in this respect if we could obtain such a relaxation of the restrictions of exchange as would enable us to carry on our business successfully.

In the end, after long and difficult, but I am glad to say friendly, discussions, Mr. Rogers was able to recommend to us the settlement which is described in our Circular of May 14 to the shareholders. This settlement has been drawn up in the form of an Appendix to our Concession, and accompanying the Appendix is a letter from the Persian Government granting us most of the facilities under the Exchange Act for which we have been contending. The agreement has been ratified by the Majlis, and has, I am glad to say, been received with much gratification by the Persian public and the Persian Press.

Effect on the Bank's Business.

Some of you may be inclined to ask: What will be the effect on our business of the loss of the note concession? Apart from its advertisement value, the chief advantage of the note concession was that the uncovered portion of the note issue—£450,000—represented so much additional kran capital for the conduct of our business in Persia. The loss of these funds, when all our notes are repaid, may, for a time, involve some restriction of our opportunities in Persia, but there are ways of meeting this difficulty, and the payment to us of £200,000, plus the release from payment of royalties, is not an inconsiderable solatium. I think, therefore, shareholders, on the whole may be satisfied with the settlement achieved.

Such, gentlemen, is a brief account of a very important event in the bank's history, and I cannot conclude my remarks on the subject without paying a tribute to Mr. Rogers's public spirit in undertaking, at his age, the long journey to Teheran on our behalf, and without expressing our high appreciation of the tact, moderation, and ability with which he conducted the negotiations. (Hear, hear.)

Digitized by Google

In this he was ably assisted by our chief manager, Mr. Wilkinson, to whom also our thanks are due. Nor can I refrain from expressing our obligations to the Persian Council of Ministers for the impartial and reasonable attitude they adopted throughout the discussions with our representatives.

You will notice from our report that Mr. Sydney Rogers, while retaining his seat on the board, has resigned his position as our London manager. Mr. Rogers joined the bank 38 years ago. Approximately half his service has been in Persia, and for the past 15 years, to our great satisfaction and content, he has been the manager of the bank in London. I am sure you will join with us in wishing him long life and happiness in his retirement. (Hear, hear.)

Mr. V. A. Caesar Hawkins seconded the resolution, which was carried unanimously.

The retiring directors were re-elected, the auditors were re-appointed, and the meeting closed with a vote of thanks to the Board and the staff which the Chairman briefly acknowledged.

EGYPTIAN HOTELS.

Development of the Enterprise.

Sir William Peat's Speech.

The thirty-third annual general meeting of the Egyptian Hotels, Ltd., was held on July 7 at the registered offices of the company, 11, Ironmonger Lane, E.C., Sir William B. Peat, C.V.O. (Chairman of the company), presiding.

The Chairman said:—Gentlemen,—The Directors' report and accounts for the year to April 30, 1930, have been sent to all the registered shareholders, and I therefore assume that you will agree to take these documents as read.

You will observe from the accounts that the profit for the year amounts to £55,144 18s. 5d., which in the circumstances prevailing during the past year may be considered satisfactory. The Directors recommend a dividend of 17½ per cent. on the Ordinary shares, which will absorb £43,636 1s. 6d., and which, after payment of the Preference dividend of £5,750 will leave a balance to be carried forward of £4,568 14s. During the year the Ordinary share capital of the company has been doubled in amount by the issue of 125,000 Ordinary shares at par to the Ordinary shareholders. The amount being paid in Ordinary dividend is equal to the amount distributed last year, but by reason of the increase of capital the rate is reduced from 35 per cent. to 17½ per cent.

The decline in profits shown is due to causes over which the company has no control. There has been a reduction in the number of visitors to Egypt as a consequence of the financial crisis which has developed in various parts of the world, and especially for that reason the cruises visiting Egypt in the spring have not been so well patronised. Our Managing Director, who has been visiting the United States, will take the opportunity of saying a word or two on that subject.

As a result of the expenditure in the enlargement and renovation of the Semiramis Hotel, the company now possesses a magnificent freehold asset. At the general meeting last year reference was made to the demand for a good hotel in Cairo of a less luxurious character than that of the Shepheards Hotel or the Semiramis Hotel, which demand it was intended to satisfy by the opening by the company of the Metropolitan Hotel. This hotel provides first-class accommodation to people of moderate means. Reference was also made to the opening of a new hotel at Fayoum, together with a small pavilion at Karoun in the interest of sportsmen. All these enterprises have been well received, and now that the expenses in connexion with their opening have been written off, the results will be a normal addition to the profits of the Hotels.

The development in the extension of the company's property has, of course, greatly increased the potential earning power of the whole undertaking. The Management in Egypt look forward with confidence to the expansion of the revenue of the company in the future. The whole of the hotels and property which the company controls have been maintained in first-class condition, and improvements have been effected to keep the properties and equipment of the company in line with modern development. These maintenance expenses have all been charged to profit and loss account, and it is considered that the area of great expenditure in this respect is now over.

I will now deal with the balance-sheet of the company as at April 30 last, which is before you. I have already referred to the issue of 125,000 Ordinary shares to the existing Ordinary shareholders of the company which has been made during the current year, and the balance-sheet, of course, records this increase. The number of shares taken up by the shareholders is 124,349 and the balance of 651 shares has not yet been applied for. The new capital subscribed has been utilised for the purpose of the additions to buildings and plant and the liquidation of the temporary overdraft which had been arranged to provide the initial finance for these extensions.

You will recollect that at the last general meeting of the company a sum of £20,000 was reserved from the profits for the year ended April 30, 1929, to be held as applicable to the amortisation of the considerable expenditure which had been incurred in connexion with the furnishing of the new wing of the Semiramis Hotel. Accordingly, this reserve from profits has been applied in reduction of this expenditure as shown in the balance-sheet.

In my opening remarks I made the observation that in the circumstances prevailing during the year the profit shown by the accounts may be considerd as satisfactory. As you are well aware, the London Board has no control over the actual management of the hotels in Egypt. This work is carried out by Mr. Baehler, the Managing Director, who is supported by a Local Board, and I think that Mr. Baehler and the Local Board must be congratulated upon producing such satisfactory results in the face of world-wide depression and reduced purchasing power which has naturally brought about a contraction in the volume of business obtainable.

I beg to move that the Directors' report and accounts for the year ended April 30, 1930, as submitted to the shareholders, be received and adopted.

Mr. Baehler's Statement.

Mr. Charles Baehler (Chairman of the Board in Cairo, and Managing Director), in seconding the resolution, said:—Gentlemen,—You have heard the Chairman's explanation of the balance-sheet and financial position of the company. I wish, in as brief a manner as possible, to explain to you the state of the company's business in Egypt during the past financial year.

I have little to add to the causes which, as a consequence of the world's financial crisis, have diminished the spending power, as well as the number, of the visitors to Egypt, but I am glad to say that the attraction which Egypt exerts has proved so strong that we suffered less than any other part of the world as a result of that crisis.

I recollect that last year I referred to the Semiramis Hotel, which is now complete, and may be called—in the words of one of our highly valued clients—"The finest hotel in the world." He also added, by the way, that it is the most expensive one, but our company has several hotels with 2,000 rooms in Cairo and in its immediate vicinity where visitors can find most comfortable and up-to-date accommodation at reasonable terms. Semiramis being only open from December to April, we have a very short period of profitable working.

Our other main hotels are open from October to May, and some the whole year round.

Semiramis Hotel is a magnificent freehold overlooking the Nile, and its appointments are perfect. The shareholders possess in that property a splendid asset.

Shepheards has maintained its universal reputation, and it is not too much to say that the life of Egypt is concentrated there. For many years we have expended considerable sums to maintain it in first-class condition in every respect, and it is undoubtedly a modern and up-to-date hotel, although it has a history of 80 years. No efforts are spared to maintain that reputation.

At our other hotels, the chief of which are the Continental-Savoy and the Mena House, the standard of excellence has been thoroughly maintained with success.

The King David Hotel in Jerusalem, in which our company is

Travellers in the Near East

THE CONVENIENCE OF THE CHEQUE

For those who know beforehand where they will be likely to require money, the system by which the Westminster Bank can arrange for a customer to cash his own cheques abroad is an undoubted attraction. Any local branch manager will be pleased to arrange with the Bank's agent in Constantinople, say, and Ankara, and Izmir, to cash a customer's cheques within any pre-arranged limits. Nothing but a cheque-book need be carried, and the utmost ease and safety are enjoyed

WESTMINSTER BANK LIMITED

HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

interested, and whose management it will take over, is nearing completion, and I hope that this will be towards the middle of December. The hotel is situated in the very best position, overlooking the city, and will certainly fill a great want to the ever-increasing visitors to the Holy Land.

I have just been on a visit to the United States, where my reception was most cordial and the hospitality overwhelming, not only from my own colleagues, but from the public generally. It is amazing to find what a great reputation Shepheards enjoys, so much so that I came to be called "Mr. Shepheard." I was delighted to get the impression that the number of American visitors during the coming season is likely to be well maintained, and I have been able to make arrangements with the tourist agencies for the numerous cruises which are coming next winter to the Mediterranean and round the world, all of which will visit Cairo.

I cannot let this opportunity pass of paying a tribute to our local board, whose constant care and devotion to the company's interests have largely contributed to the welfare and smooth running of our enterprise, including therein Mr. L. Suter, the general manager, and Mr. C. Muller, general inspector of the company.

The resolution was carried unanimously, and a cordial vote of thanks was passed to Mr. Baehler.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 2:—

Egyptian Futures.

Sakel Contract.—Whilst a somewhat better undertone has been displayed in this market during the past week, no fresh features of significant weight have developed to turn values to any material extent from their recent levels. During the sessions immediately following our last report, the tendency was distinctly firmer, speculative buying being encouraged owing to improving advices from both America and Alexandria at that time. This led to Novembers touching 11.59d., the highest point of the session. Since the commencement of the present week the earlier advance has been gradually reduced, partially due to the continued absence of trade support and also owing to the failure of the overseas markets to consolidate their previous gains.

Manchester reports continue to reveal a restricted demand for yarns, and with Bolton closed for holidays, the demand for cotton out of the local stock has been very moderate. In view of the ruling differences with Alexandria, the recent action of the current position has been somewhat surprising. Just prior to the first tender July dropped back to 30 under November, twenty old Sudan dockets were declared, and, as these were promptly taken up by spot houses, we rather look for the month in question to close in again with new crop deliveries. In view of last week's Government announcement, that their stocks would be offered at a minimum price of 28 dollars until the new crop comes on offer, and after that withdrawn for the remainder of the season, the Alexandria market has appreciated further in comparison with local values. The position, if the officials adhere to their declared policy, implies that markets are freed, for the time being, of any carry-over, a factor that would react strongly on the position in the event of either detrimental new crop news or any improvement in the trade outlook. For the immediate future, it appears probable that values will fluctuate in the neighbourhood of the present level with both spinning and speculative interests adopting a neutral attitude.

Upper Contract.—A moderate recovery in values has taken place in this contract during the past week, the market not having been faced with "straddle" selling against American, which has been the cause of much of the recent weakness. The spot demand continues on a satisfactory scale, and this is reflected in the premiums paid for the old crop positions. New crop deliveries still run at a cheap parity with Alexandria, and on this account any covering that has to take place will probably be attracted to this market.

Egyptian Spot.

Owing to the fact that mill holidays have now commenced, the inquiry for spinners' cotton has fallen off under this additional handicap. A good deal of averaging has taken place, but actual sales have dropped some way below recent totals. Interest has again been chiefly centred on the Upper qualities, and Continental buyers have maintained some interest. Sakels have suffered badly from neglect and prices have eased in consequence. We feel that this slackening in the demand can only be temporary, and when the mills again resume their normal output, sales will improve.

Sakel.—Very little business has been noted in any quality, and what demand there has been appears to have been concerned chiefly with cotton from 150 to 200 on, of which there is very little available. Cotton lying here on consignment and based on Alexandria is, of course, right out of the market, and it looks as if holders would have to wait some time before disposing of this cotton, unless, in the meanwhile, something unforeseen occurs, or spinners make up their minds to pay the Alexandria basis—*faute de mieux*.

Uppers.—Inquiry has been good, but chiefly for cotton within a range of from 40 to 100 on July contracts. However, the local stock has now been so thoroughly sifted that buyers are finding difficulty in fulfilling their requirements. Much of the more desirable cotton available is based on Alexandria, and spinners are not yet disposed to pay anything like this price; as a result, sales have been only fair to moderate. The basis hardens steadily.

Pilion.—This cotton has been almost entirely neglected and we have not heard of any sales this week.

Nahda.—There have been a few inquiries for Nahda cotton in the neighbourhood of 11d., but concrete results have been meagre in the extreme. We can only repeat our remarks of last week, that, owing to the scarcity of Sakel, this cotton will probably receive more attention in the near future.

White Cotton and Maarad.—Very little business has been reported, but an odd inquiry or two has been met with here and there.

Sudan Sakels.—These have been quite a bright spot under the circumstances, and a small line of about 500 bales of Kassala cotton changed hands on one occasion. We would like to draw our friends' attention to this cotton during the ensuing season. The crop, although a comparatively small one, is of excellent quality, and as its merits become better known it is bound to find increasing favour.

C.i.f. business, both old crop and new, has shown no improvement, and spinners still appear to be waiting for lower prices. Forwardings have been returned at 5,160 bales Egyptian and 1,360 bales Sudan. The estimated spot sales for the past week amount to 1,400 bales Egyptian and 900 bales Sudan. Quotations of Sakel show a reduction of 25 to 30 points. Uppers have advanced 18 to 28 points, and Pilion 30 points. F.G.F. Sakel to-day, 12.10d. F.G.F. Upper to-day, 9.51d. F.G.F. Pilion to-day, 10.40d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended June 26:—

The market has been very active during the week and with the exception of Monday's session prices have been very firm. The week's summary of price movements is as follows:—Sakellaridis: July, 28.00 dollars, unchanged; November N.C., 23.13 dollars, 0.20 dollars up; January N.C., 23.36 dollars, 0.16 dollars up; March N.C., 23.70 dollars, 0.15 dollars up. Ashmouni: August, 16.45 dollars, 0.30 dollars up; October N.C., 15.74 dollars, 0.22 dollars up; December N.C., 15.87 dollars, 0.09 dollars up; February N.C., 16.24 dollars, 0.13 dollars up; April N.C., 16.49 dollars, 0.06 dollars up; June N.C., 16.74 dollars, 0.04 dollars up.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows for the month ended June 30:—

The market during the early part of the period under review remained exceedingly quiet, no transactions of any importance being recorded, and in spite of the nearness of Whitsuntide, buyers showed no disposition to depart from the hand-to-mouth policy followed for some considerable time past. Hopes were entertained that on the resumption of trading after the Whitsuntide holidays greater activity would prevail. We had been favoured with a continued spell of fine weather, which might have created a more active state of affairs than had existed previously. However, the depression that seems to be deepening in the industrial world, coupled with the financial disturbance in America, and the fall in values of our own securities, afforded little encouragement for the trade to depart from their policy of confining their purchases to very narrow limits. As the month progressed business took place on similar lines to those prevailing before the holidays, but signs of an early awakening and renewal of interest on the part of buyers are not lacking, as undoubtedly they are working on the barest margin of stocks.

Currants.

The demand continues to be of a dragging nature, and business remains restricted. The intervention of the Whitsuntide holidays has necessarily curtailed trading, but holders are disappointed with the very small progress, and are willing to make concessions to encourage operators. However, dealers persist in their determination to avoid carrying stocks. The Bosnia, Mardinian, and Kana arrived during the month with about 1,100 tons, and the limited progress reported consisted of:—Pyrgos, 36s.; Amalias, 37s. to 37s. 6d.; Zante, 37s. to 39s.; Patras, 39s. to 41s.; Gulf, 39s. to 45s.; Vostizza, 48s. to 50s. (few Fine, 60s.).

Duty paid clearances from opening of season to date, 13,576 tons, against 14,374 tons to the same date last year. Quotations are:—Pyrgos, 36s.; Amalias and Patras, 37s. to 41s.; Zante, 37s. to 39s.; Gulf, 39s. to 45s.; Vostizza, 48s. to 58s. Reports of damage through excessive rain to the growing crop failed to stimulate any interest in the new crop prices, notwithstanding the fact that many receivers had offers withdrawn.

Sultanas.

Smyrna.—Confirmation of damage to the vines—referred to in our May report—proves it to be of a more serious character than was at first anticipated, owing to the lack of chemicals for syringing and spraying. It now appears likely that the yield will not exceed 35,000 tons, against the earlier prospect of a crop of over 60,000 tons. Despite this news there is no evidence of any improvement in values or demand, and sales are difficult:—Rain damaged, 25s. 9d.: Medium qualities, 36s. to 40s.; Good to Fine, 45s. to 52s.

Cretans.—Good, 42s. to 43s.; Fine, 48s. to 52s. 6d.

Greeks.—Coloury fruit, 52s. to 58s.. Lower grades neglected.

New Crop.—The Berwickshire, Ulysses, and Anchises brought a good selection of all qualities, but the indifference of buyers is most pronounced. The distributing trade is undoubtedly apprehensive of a fall in prices, and consequently are steadfast in refusing to anticipate requirements in the slightest degree. The prolonged inactivity has had no weakening influence on holders, who are quite content to await a renewal of the demand. The only transactions reported are a few coloury parcels at 50s. to 56s.

Notes of the Week.

Kurdish Unrest.

The Turkish Government found itself confronted with a more serious task than was to be anticipated from the earlier reports in settling the unrest that had broken out among the Kurds. What was represented as the invasion of a few bands of "brigands" was shown to be a determined rising over an area extending from Mt. Ararat to Lake Van and still further south along the Persian frontier. The first sign of the pending trouble may well have been the arrest over two months ago of Selahattin, son of Shaikh Said, who was hanged with many others for complicity in the Kurdish rebellion of 1925. Selahattin was arrested at Erzeroum, the charge against him being that by forming an "Association for Northern Kurdistan" he was working for a revival of Kurdish feeling with a view to avenging his father's death. Whether the present trouble is an outcome of his arrest, or whether it has to be regarded as part of the movement which Selahattin was alleged to be promoting is not likely to be known. The extent suggests that it is on a par with the rising of 1925, which involved the Turkish Government in serious military operations extending over several months. The situation is not calculated to be improved by the attitude of the Turkish Press, which declares it to be "a well established truth" that the "brigands" from across the frontier are "protected and armed by the Persian Government." If the rising is serious, the Turkish Government cannot want to be involved simultaneously in a quarrel with Persia, thereby offering Soviet Russia an opportunity of fishing in troubled waters. It is more than probable that any movement in Turkish Kurdistan will have the active, as well as the moral, support of Kurdish exiles in Persia, but the real seat of the trouble will remain in Turkey. It is unfortunate that the Kurds should be partitioned between Turkey, Persia and Iraq; for even if centrifugal tendencies among them militate against any clearly defined nationalist movement, each section is likely to be continually comparing its own lot with that of its fellows across the border. In such a comparison the strict discipline enforced on Turkish territory will be contrasted to its disparagement with the *laissez faire* policy of Persia and the co-operation between Kurds and Arabs in Iraq, where recently Kurdish has been recognized as the official language of the northern liwas. Sooner or later Turkey will have to decide whether she will face periodic outbreaks among the Kurds, variously interpreted by a foolish Press as due to British or Persian machinations, or will make a serious effort to investigate the Kurdish problem, to see whether a peaceful solution cannot be evolved.

The Palestine Problem.

The suspension of the issue of certificates for the immigration of Jewish labour into Palestine, while the British Government is waiting for Sir John Simpson's report on the questions of immigration and land settlement, continues to exercise organized Zionist opinion. On July 2 the Secretary of State for the Colonies received a deputation from the Board of Deputies of British Jews, and a summary of the Deputation's case and of Lord Passfield's reply has been issued. At a special meeting of the Political Committee of the Jewish Agency held ten days earlier a detailed statement dealing with the subject was adopted, which must be supposed to contain all the arguments that can be adduced in support of the Zionist case. In spite, however, of all this concentration on the one point, there would seem to have been no attempt made to understand, still less to answer, the Government's attitude on the subject. It is common ground that there must be a limit to Jewish immigration determined by the absorptive capacity of the country. The Shaw Commission cast doubt on the accuracy with which that absorptive capacity was being gauged, and the British Government at once decided that such an all-important question must be settled without delay. Hence the mission of Sir John Simpson.

Immigration Certificates.

The issue of immigration certificates has become after many years a matter, more or less, of routine; they are sanctioned *en bloc* in advance, after due inquiries, which, until the Shaw Commission presented its report, seemed to all concerned adequate for the purpose. The appointment of Sir John Simpson to investigate the subject found a block of 2,300 certificates authorized, of which 950 had already been taken up. There could, surely, be no course

Digitized by Google

more natural or reasonable for the Government to adopt than to say that the issue of the balance of the certificates must be suspended until Sir John Simpson had reported. If he decides that the absorptive capacity of Palestine is five hundred immigrants annually, neither the Government nor the Jewish Agency can have any interest in outstripping that capacity by the issue of 1,350 superfluous certificates; if, on the other hand, he holds that Palestine needs ten thousand Jewish immigrants this year, the Government will, no doubt, issue all the certificates up to that number that the Jewish immigration bodies can utilize. The statement of the Jewish Agency declares: "The effect of this suspension of our immigration is to create a presumption against it. Being political and not economic in character, that measure cuts at the very foundations of the Mandate." The first sentence is certainly not true, unless the authors know more about the absorptive capacity of Palestine than the rest of the world does. As for the second sentence, the suspension of the issue of certificates being neither political nor economic, but merely a commonsense precaution adopted in regard to a matter *sub judice*, it is difficult to see how the mandate or its foundations come into the picture. Opinions as to what the expression "Jewish National Home" entails differ; but it would be thought that no reasonably-minded person would contend that the undertaking given by the British Government to "use their best endeavours to facilitate the achievement" of a National Home for the Jewish people in Palestine was being violated when the issue of 1350 immigration certificates is being postponed for a few months. On the other hand, there can be no doubt that the success of the Jewish National Home must rest largely on co-operation between Jewry and the British Government, whereas nothing is more calculated to hinder such co-operation than the constant holding of a pistol, albeit unloaded, at the British Government's head. It is safe to say that, if present-day tactics had been employed towards Great Britain in 1917, there would have been no Balfour Declaration. Yet if ever a return to "sweet reasonableness" were called for, it would seem to be at the present moment when circumstances compel a careful stock-taking in Palestine in the interests of the Jewish National Home. Far more important matters are involved than the 1,350 certificates.

Constitutionalism in Egypt.

The situation in Egypt is, perhaps, clear to the Egyptians, but the foreign onlooker is apt to find it bewildering. In the sacred cause of constitutional government the death-roll from street rioting has slowly mounted up. The late Prime Minister in a motor car, to which a score of students are clinging, charges through one police cordon, to be brought to a standstill by a second cordon composed of troops with fixed bayonets. And this, when, so far as is known, no attempt has been made to discuss the points at issue between the parties concerned. The maintenance of law and order, it would seem, finds no place in the Wafdist conception of constitutionalism, which, apparently, is also held to exclude the possibility of alternative Governments. After a period of eighteen months, during which Parliament was suspended and Egypt, enjoying a spell of complete peace, saw considerable headway made with administrative reforms of which the country stood in need, the Wafd, as the protagonists of constitutional government, returned to power. Following the lead of the previous Cabinet, the Ministry of Nahas Pasha identified itself with a long list of useful administrative measures, but before one of these could be placed on the Statute Book it chose to resign. In accordance with the letter of the Constitution, King Fuad called upon another political leader to form a Cabinet, and Parliament was adjourned for a month to enable the new Government, under Sidky Pasha, which was in a minority in the Chamber of Deputies, to take stock of its position. For this brief period it would have been thought the peace of Egypt was secure against any organized attempt at disturbances. Great Britain had nothing to do with the matter and the Constitution had not been violated; but an exceptional situation had arisen in the refusal of the Party commanding a majority in Parliament to remain in office, and steps had to be devised for dealing with it. The Wafd's immediate reply, however, was to provoke disturbances in various centres. During the last ten years Egypt has been no stranger to riots and disorders. Hitherto an explanation has been found in British participation in the administration of the country. The events of the last few weeks, with the reappearance of students and mobs as political factors, serve to confirm the warnings of so many foreigners that rioting must be regarded as second nature to the Egyptians so long as the Wafd remains in being. The problem is one for which Egypt must find her own solution. For the present the Government is trying to deal with the situation by closing the parliamentary session, in order that senators and deputies who may be accused of responsibility for disturbances may not enjoy parliamentary immunity from arrest. If, however, constitutional government and the maintenance of law and order are found to be incompatible in Egypt, there can be little doubt as to which is the more important for a country where foreign interests are so largely involved.

INDIAN NOTES

The Opening of India House.

Ten years after the appointment of the first High Commissioner for India, the official representative of the Government of India in the capital of the Empire is at last housed in a manner appropriate to his dignity and Imperial status. The opening ceremony was in keeping with the importance of the occasion and, like the building itself, afforded yet another example of how India is steadily acquiring all the attributes of Dominion Status. As the King-Emperor aptly observed, "of that advancement India House is in some degree a symbol." But he added, in words which will long be remembered by those present, "as I look around me I see the emblems of the religions, the Provinces, the States of India. The building which contains them surely testifies to the unity of India in herself." No echo of the present disturbances was allowed to mar the harmony of the proceedings, but his Majesty's reference to the "anxious heart" with which he had watched "the troublous passage of events" and his vision of the day when the restoration of "the gift of understanding" should unite "every race and creed in one desire to bring peace and contentment to my Indian people" was an eloquent reminder of the need of that "wider sympathy" between the peoples of Great Britain and India "for which I pleaded many years ago and I plead again to-day." That the honour of presiding on such an occasion should have fallen to Sir Atul Chatterjee was in the nature of things peculiarly appropriate. His elevation to the order of the Star of India is a fitting and somewhat belated acknowledgement of the conspicuous ability and distinction with which, during an exceptionally difficult period, he has represented Indian interests not only in London, but also at Geneva.

The Viceroy's Address.

The Viceroy's address to the joint session of the Central Legislature, a summary of which appears on another page, whatever its deficiencies in other respects, makes one essential point quite clear. Neither the British Government nor the Government of India intends to depart in any way from the programme laid down in the much-discussed declaration of November 1. There can be no doubt that the authorities are right in refusing to be deflected from their purpose by the events of the past few months. Grave though the situation created by the latest developments in the Congress activities may be, and

THURSDAY, JULY 17, 1930.

A NEW ROUMANIA.

The audience that M. Vintila Bratianu had last week of King Carol will, it is to be hoped, prove the starting point of a new order in Roumanian political life. The head of the Liberal Party is essentially a man of action, accustomed to command, impatient of criticism, and impetuous in word and deed. The continued exile of Prince Carol, he had decided, was necessary to the security of his own political position, and with the Prince's sudden return he saw not only the outworks of that position pass into the hands of the "enemy," but also, as he imagined, reinforcements reaching the latter which might place the Liberals at a permanent disadvantage. Where a more cautious politician would have hesitated, in order to gauge the effect of the Prince's appearance on the people as a whole, M. Bratianu rushed in with a denunciation which under his own masterful régime would have brought the direst penalties upon the author's head. Fortunately for M. Bratianu and for the country at large Dr. Maniu's Government has set its face against anything in the nature of political extremism. It has been at pains to take no action that might tend to place the Liberals with their backs against a wall and has avoided the charge, which contributed so largely to the undoing of the Liberals when in power, of subordinating the welfare of the country to the interests of its Party and the personal advantage of individual supporters. Accordingly, M. Bratianu's outburst against King Carol passed without official action, and within a few days attempts were being made by his chief lieutenants to explain it away, and to place a different interpretation on the Liberal Party's attitude. The wisdom of the course pursued by the King and Dr. Maniu, as well as by Liberals with longer vision than their leader, is now to be seen in the meeting between King Carol and M. Bratianu. It matters less what course the conversation took—on this point no information would seem as yet to have leaked out—than that the principle should be established once and for all time in Roumania that the Throne is above political parties and is not to be regarded as, what hitherto the Liberals have affected to believe it to be, the personal asset of any one Party. By resigning, as he did when Prince Carol arrived in Bucharest, and making way for a Government under M. Mironescu, which presided over the Parliament that proclaimed the Prince as King, Dr. Maniu may be supposed to have deliberately rejected any claim to the identification of the National-Peasant Party with the King's appointment to the Throne. It is, therefore, a right principle that has prompted King Carol to re-establish touch with the Liberals.

Unless all the indications are at fault, not the least service that the Government of Dr. Maniu will be found to have rendered to Roumania—and in so doing, it may be hoped, it will have set an example to neighbouring countries—is the introduction of impersonal politics, the adoption of, and conscientious adherence to, a policy that recks nought of party advantages, but is prompted by single-minded devotion to the country's interests. A system that allowed a series of Cabinets to hold office without disclosing the existence of a serious deficit in the State's finances was both immoral and prejudicial to Roumania's credit. When M. Bratianu made way for Dr. Maniu, after the Liberal Party or its nominees had been in power for ten years, the new Government was confronted with the alternative of declaring Roumania bankrupt or of setting at once to work to make good the deficit of eighteen milliard lei in the national exchequer. The latter course was adopted. The fiscal policy was changed, drastic economies were introduced in State expenditure, heavy taxation was imposed and the whole administrative machinery was overhauled. For the first time provision was made for the efficient auditing of State accounts, and a complete break was made with methods that allowed the payment of taxes to be avoided in party interests and provided no effective accountancy for Government offices. It says much for the confidence placed by the nation in the National-Peasant Government that the strict application of the new order has been acquiesced in without evoking greater disappointment. At the risk of sacrificing its popularity the Maniu Cabinet has laid the foundations of sound administration in Roumania, from which its successors will have no excuse for departing.

The work that Dr. Maniu has set himself to perform, it need hardly be said, has not yet been accomplished. If King Carol has made up his mind to identify his accession to the Throne with a new order in Roumania, he will take care to give the present Government sufficient time to accustom the people to the self-discipline that sound administration entails. How lightly the real interests of the State weighed with Liberals when they conflicted with the Party's interests may be inferred from the readiness shown to encourage the intervention of the Army in politics. The return of Prince Carol frustrated the manœuvre, and the danger of a military *pronunciamiento* has, we may hope, been removed from Roumania for some time to come. If King Carol is able to establish himself above all political parties, and to some extent as arbiter between them, he will appreciate the value of a complete break with the administrative laxity that found favour with successive Liberal Governments, as well as with the violence of political antagonism that has prompted the Liberals to regard political opponents as traitors to the country and has given rise to the abuse of elections and of political power in general. In the healthy progress of a State there is always room for different schools of political thought, and the value of the Liberal Party's contribution to the development of Roumania in the past is not denied. The more statesmanlike attitude adopted in the recent crisis by M. Duca, M. Argetoianu and M. Georges Bratianu suggests that the Liberals will continue to deserve well of the State, if they can bring themselves to recognise the good work done by the National-Peasants in introducing efficiency and honesty into the public administration. The economic stringency through which Roumania is passing calls for co-operation between all the best intellects that the nation can command, and it is evident that the Liberal leaders can do more for their country by taking advantage of parliamentary institutions to make their own intellectual contributions to the problems of the day than by affecting to regard those who do not enrol themselves under their banner as enemies of Roumania.

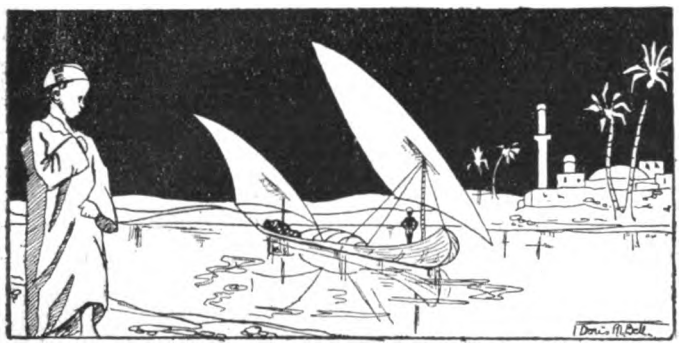
From Our Own Correspondents.



EGYPT.

Cairo July 4 (Delayed in Transmission).

The Wafd and the Government.

The Wafd's challenge to the Government continues, and on Tuesday resulted in bloodshed as the result of the Cabinet's attempt to disperse a demonstration which had adopted a threatening attitude. The occasion was Nahas Pasha's visit to Zagazig, where he went at the invitation of local Wafdist notables. All the stations *en route* were crowded by enthusiastic Wafdists, who had assembled to watch their leader pass, with the single exception of Bilbeis. The Mudir of that town is one of those who were dismissed by Nahas Pasha, when he last came to power, but he has since been reinstated by Sidky Pasha. He, unlike the Mudirs of other towns *en route*, decided to carry out the Government's order that no demonstrations interfering with public order were to be allowed, and he permitted only a certain number of people to wait on the station platform. When the train had left Bilbeis the crowd mobbed the station, breaking all the windows and the doors and threatening the Mudir. Things began to look dangerous, so the Mudir ordered his soldiers to fire over the heads of the crowd. This led to a volley of stones and the soldiers were forced to fire, killing two men and severely injuring another (who has since died). One policeman, two officers and two station clerks were badly hurt by sticks and stones, and about 50 people on each side were more or less slightly injured. Fifty-four people, including some of the town notabilities, have been arrested and an inquiry is being held by the Advocate-General in person.

At Zagazig great enthusiasm was shown, but no unfortunate incidents were reported. An Egyptian crowd is usually one of the best-humoured in the world—if it is left alone. It is, however, easily excited and, once tempers are aroused, it can become very ugly.

The Wafd have been loud in their blame of the Government for these unfortunate happenings, and there are even some non-Wafdists who are of the opinion that the Cabinet did not act very sensibly. They argue that, if Sidky Pasha had made no restrictions at all, there would have been no trouble. That is all very well, but unless the attempt had been made to stir up the country by anti-Government speeches, there would also have been no trouble. There have been no acts of repression or tyranny; the Constitution has as yet not been touched; and the ordinary fellah has been interfered with less than usual. The Cabinet was called to power by the King, following Nahas Pasha's resignation, and is trying to carry on the government of the country. In that it is being obstructed by the Wafd, and if Nahas Pasha wishes to traverse the country preaching sedition and non-co-operation with the Government, there is bound to be trouble. Sidky Pasha's main fault is that he has allowed all these inflammatory Wafdist meetings, because he did not wish to appear unconstitutional or despotic. But, as it has now been shown how such meetings are likely to end, it is probable that further tours will be prohibited. A Ministerial *communiqué* issued on Wednesday hinted at such a course; for it said, in effect, that, as the Opposition were attempting to stir up trouble, the Cabinet would be forced to take the necessary measures to see that the country's laws were respected and that order was maintained.

The next item on the Wafdist programme is a visit by Nahas Pasha to Mansourah next Tuesday. It will be most interesting to see what happens on that occasion. It is generally anticipated that the trip will not be permitted, or at least that no public meeting will be allowed. Makram Bey Ebeid left for London yesterday, to attend the meetings of the International Parliamentary Congress, but it is supposed that he will take the opportunity of stating the Wafd's case to the British Government or to some of its followers. Attention is now being called in some quarters to the fact that, if the British Government had not insisted that Mahmoud Pasha should refrain from putting into operation his plan for electoral reform, with elections on the two-edged plan, as laid down in the Constitution, the present trouble would not have arisen, for Egypt would have had a Parliament consisting of Government and Opposition and not a parliamentary dictatorship as at present.

The Murder of an English Girl.

A murder was committed late last Friday night in the vicinity of the Koubbeh Mosque on the Mataria Road, Cairo, in which the victim was an English girl, Miss Eileen Smith, the 18-year-old daughter of an official in the Egyptian Markets. Miss Smith was accompanying her fiancé, an English constable in King Fuad's Royal Cyclist Guard, for a drive in his motor-cycle and side-car. The couple were sitting in the machine, talking and eating an ice-cream, when two men suddenly confronted them and immediately fired. The bullet intended for Constable Lilley missed, but Miss Smith was shot in the side, the bullet entering her heart, and she died immediately. The weapon was an old-fashioned Schneider rifle of the pattern served out to Egyptian watchmen, which frequently find their way into the hands of wandering Badawin. Some arrests were made yesterday, but it is too early to say whether the real criminals have been caught. The murder was made the occasion of scandalous stories in the Arabic Press. All the libels have been officially denied, but unfortunately they can be published with impunity under the Egyptian laws. It is another instance of the crying need for the new Press Law which has been so much talked about lately.

Cairo, July 11.

The Removal of the Court.

King Fuad and the Ministers took up their summer quarters in Alexandria yesterday. His Majesty was received at Sidi Gaber station by the High Commissioner. The Ministers then left the train and proceeded to the Summer Offices, and the Royal train proceeded direct to Montaza Palace, where His Majesty will reside until he leaves for Europe.

Unsatisfactory Outlook.

Unless anything unforeseen happens, it is almost certain that fairly general disorder will prevail in Egypt shortly, due to Wafdist incitement. The distressing incidents at Mansourah last Tuesday have already had

---

***Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania Turkey Cyprus, Palestine, Iraq, and Persia.**

Digitized by Google

their repercussions, and lesser disorders broke out at Tantah, Damanhour, and Port Said yesterday. The Alexandria Committee of the Wafd have called a two hours' general strike next Tuesday, in memory of the "Mansourah martyrs," and demonstrations are promised. Detachments of the Egyptian Army are being hurriedly sent to all storm centres, and at present the Government seem to have the situation in hand. But if concerted action is taken by the different Wafdist Committees, the Government will be hard pressed to prevent a really bad outbreak.

The Disturbances.

The Mansourah incident was very bad, and at least six deaths resulted. Had it not been for admirable restraint shown by the forces, the deaths would probably have been nearer sixty. Under great provocation both the police and the soldiers showed the utmost self-control and made every effort to inflict as few and as slight injuries as was possible. At Mansourah, as on every other occasion when there has been trouble, it is difficult to acquit the Wafdist leader of the whole blame, if only for the fact that he shows neither inclination nor ability to control his followers.

The Government had, wisely, forbidden the large political meeting which the Wafd had arranged at Mansourah, but had, unwisely, sanctioned a large luncheon party. It was arranged that only ten cars should be allowed access to the house where the luncheon was to be given, and only those who were invited were to attend. When Nahas Pasha and his party arrived at Mansourah, a whole horde of people from Samanud, Nahas Pasha's home village, which the train passed on its way to Mansourah, had accompanied him, riding on the roof of the train. These men then proceeded to cling on to the cars. The entrance to the house was guarded by three cordons of troops. Nahas Pasha's car, almost hidden under the crowd of Wafdists who were hanging on—the police estimate was 30 people, and that is borne out by photographs—approached at great speed and broke through the first two cordons. The officer in charge then hurriedly gave the order to fix bayonets. While the third line of troops were carrying out that order, the car dashed into them. Naturally those Wafdists who were hanging on received wounds from the bayonets, and two, in fact, fell under the car and were killed. Sinnot Bey Hanna, a prominent Wafdist, who was sitting next to Nahas Pasha, received a wound in the arm. The story was immediately circulated that a soldier had attempted to strike Nahas and that Sinnot Bey Hanna had thrown himself in the way and had received the wound. This story Nahas Pasha deliberately fostered. Consequently the more extreme elements in the mob lost all control. They made a concerted attack on the troops with bottles filled with sand, which, it has since been proved, were prepared beforehand. They pulled down the telephone poles and electric lighting wires and pelted the troops with large pieces of stone, of which dumps had been arranged that morning.

The troops were ordered to fire into the air; this they did, but as that had little effect, they charged the mob. The crowd ran away, but, as the troops returned, they stretched the telephone wires across the street, and the soldiers rode into the wires at full gallop. Two were thrown on their heads and killed. Thirty horses were injured and two killed by electric light wires, and many serious injuries were sustained by the soldiers. A proof of the great restraint shown by the troops is that in no case has any injury from a bullet been reported. On his way to the station Nahas Pasha made a speech in which he declared that a deliberate attack had been made upon his life because he defended the Constitution. He asked his hearers to arise and defend the Constitution. He called upon them to pause and "listen to the fluttering of the martyrs' wings." He said "at a place which they had chosen and fortified, our carriage was surrounded by brutal soldiers who at once attacked us with their bayonets, while their officers brandished sabres as though they were in a battle and were fighting the nation's enemies instead of its chiefs."

What will happen next is not clear. It is understood that the Cabinet will forbid any further tours, under whatever pretext they are made. However, the Wafd are arranging another huge demonstration at Damanhour, always a dangerous town, on July 28. They have issued ten thousand invitations.

The Wafd allege that the demonstrations occur only through the enthusiasm of the people, but the fact remains that, unless there is the incitement caused by the presence of Nahas Pasha or other members of the Wafd executive, the country is entirely peaceful. It is understood that Parliament will be dissolved at the end of the session, July 12, and then the Deputies will lose their parliamentary immunity. If there is any further incitement to sedition or non-co-operation, some interesting arrests may be expected.

YUGOSLAVIA.

Belgrade, July 4.

Yugoslavia and Czechoslovakia.

The Sokol *Slet* (Rally) proved to be of more than athletic interest, as can be seen from the statement of the Czechoslovak Minister of War, Dr. Vyshkovsky, who was present at the *Slet* with the head of the Czech General Staff and many other prominent officers. He said: "I attribute to the Sokol *Slet* a great importance not only from the standpoint of physical culture, but also from the standpoint of national politics—foreign and internal," and he emphasised the connexion of the *Slet* with the meeting of the Foreign Ministers of the Little Entente, which was held simultaneously in Czechoslovakia. Dr. Vyshkovsky continued: "The collaboration of the armies of the Little Entente has become an accomplished fact in the same way as the political collaboration of the three States, and this means much for our security. . . . As things stand at present, it is quite impossible to do without co-ordination in military affairs, for the elaboration of identical programmes for our armies, both in regard to tactics and to the training and equipment of the troops. We are strong, and will be strong as a result of our alliance—of course, in co-operation with Roumania—but we must broaden the base of our alliance."

It has to be inferred that the Czech Minister of War considers that his mission to Belgrade was successful. His declaration that each State of the Little Entente can now face without anxiety any eventuality suggests that not only did Czechoslovakia receive guarantees against the return of the Hapsburgs, but that Yugoslavia's special interest in preventing any recurrence of activities among the Macedonians has also been satisfied. M. Marinkovitch was careful to emphasise in his statements to the Press after the Little Entente Conference that the only question in foreign politics arousing apprehensions in Yugoslavia was the question of the Macedonian Committee.

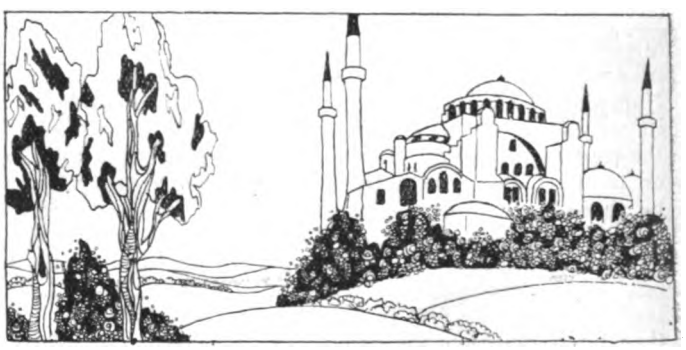
The Conference of the Little Entente also resolved to safeguard the agrarian interests of the countries of the Little Entente in the answers that the Governments will give to the Pan-Europe scheme proposed by M. Briand. M. Marinkovitch on his return from Roumania, where he went after the Little Entente Conference, said that although the States had taken up an unyielding position in regard to the return of the Hapsburgs to Hungary, they would be willing to accept Hungary—an agricultural country as well—into their unity of agrarian interest. How far economic *rapprochement* on these lines can exist side by side with political distrust remains to be seen. It would be much easier for Roumania and Yugoslavia to deal with the Hungarians now that the two States are so closely bound to the Czechs. M. Marinkovitch's visit to Roumania is certainly able to dispel the misgivings that existed in certain quarters here lest the return of Prince Carol should stimulate the pro-Italian sympathies of some of his supporters, and place Roumania more emphatically on the side of Italy in the diplomatic struggle now in progress.

Formation of the Banat Councils.

In the domestic affairs of Yugoslavia the influence of France and Czechoslovakia, with their democratic leanings, could also be detected during the last few days. Rumours have been current of a return to representative government, and various assertions have been made as to the way in which it would be effected. The Czech Minister of War declared that each of the component States of the Little Entente must first settle its main internal problems, so as to allow for stronger action to be taken by the Little Entente as a whole, and there can be no doubt that Yugoslavia's allies would favour any step taken in the direction of a return to representative government. Almost immediately after the departure of the foreign guests a Decree was issued giving practical form to the first representative advisory bodies nominated by the Government, *Banske Vetche* (Banat Councils), for which provision was made in general terms several months ago, but about which nothing further had been heard. This week General Zhivkovitch announced the nominations of 512 deputies to the nine Councils. The persons elected by the Government as representatives of the various districts composing each Banat stand for various interests, but they can all be said to be among those who are understood to have accepted the ideas and tendencies of the new régime. The most prominent of them are, for instance—for the Croat Banat Council—those who organized last December the peasant delegations that made their pilgrimage to Belgrade, these including M.M. Kovatchevitch, Markovitch and Mitchitch. In the Serbian Banats are some deputies of the late Skupshtina, who, belonging to the group of M. Voukitchevitch, may be said to have contributed to the dissolution of Parliament. Thus the Government, while appointing bodies in which a certain amount of opposition will make its appearance, has taken no risks. Caution has been observed in regard to the work and competence of these Banat Councils. They will be advisory bodies on economic questions, working under the chairmanship of the Ban, who is the highest administrative official; they will give their opinions on various financial and social matters, but will vote only if the Ban requires them to do so. Their functions will be limited to one regular session in the year, lasting not more than fifteen days, and they will be summoned by the Ban before the final drafting of the local Budget— that is to say the first regular session of these bodies will not take place before next spring, as the Budget year is from April 1 to March 31. There is also a provision in the law for the summoning of extraordinary sessions of the Banat Councils, when important matters, such as loans, are under consideration. These extraordinary sessions may not last more than five days each, and can be summoned only by the Ban, if the Minister of the Interior gives in advance his consent to such a session. How far this arrangement of representation in Yugoslavia will suit the Allies and the country itself remains to be seen.

The Extension of State Control.

An attempt in another direction at State control has provoked considerable protests. The Congress of Representatives of the Banking Institutions of Yugoslavia, sitting at present in Belgrade, have strongly protested against State interference in purely banking matters by the creation of State banking businesses and of so-called "privileged" banking and trade societies. The Congress emphasized the fact that the work of such State-favoured enterprises in spheres where private enterprise is working without privileges tended to confusion, whereas the safeguarding of the normal interests of the banks would guarantee the interests of their clients—the general population. Accordingly, the bankers ask for a fair Banking Law, and propose to make a draft of such a law themselves, which they will submit to the King for approval. The strong misgivings manifested at the Congress in regard to the rapid expansion of State-control in spheres where private enterprise is working in a more satisfactory way originated from the fact that honest competition is hardly possible for a private undertaking side by side with institutions that are state-owned or enjoy privileged status —a condition of things which tends to aggravate the economic crisis from which Yugoslavia is suffering.



TURKEY.

Istanbul, July 8.

Events on the Turco-Persian Border.

Communiqués from Ankara appearing from day to day in the local Press impel one to the belief that the trouble in the Oriental Provinces is more serious than was first made out to be the case. Whereas reports were confined, only about a week ago, to the incursions of "bandits" hailing from Persian territory, who had established themselves on the flanks of Aghri-dagh (Mount Ararat) and were terrorising the countryside, the Press now makes reference to movements further afield of *Ashirets* or Kurdish tribes. Unrest, tumult, even hostilities in the area where the northern confines of eastern Anatolia and Persia adjoin each other are by no means a novel feature in the history of those distant regions. In the days of Abdul-Hamid, disputes over the Turco-Persian border-line —particularly over the Sujbulak sector—often brought the Sublime Porte and Teheran within measurable distance of a rupture of diplomatic relations, if of nothing worse. Two years ago, the situation over the same border-line and the incursion of bands became so acute that the Persian Cabinet dispatched their War Minister, Firoughi Khan, to Ankara in an endeavour to solve the *impasse* which had been reached. The problem proved more difficult of solution than was anticipated, however, and it became necessary at last to accredit Firoughi Khan as Persian Ambassador to Turkey to permit of the settlement by easy stages of the differences which confronted the two Cabinets.

On the present occasion the trouble would appear to be of a much wider scope, though of more local and national

Digitized by Google

bearing. To anyone who visited in the old days the particular region now so much in the public eye—as the writer once did—much of the local internecine strife could be explained away by interminable tribal blood-feuds and conflicting inter-tribal claims to pasture-land for the flocks which constitute the only riches of the nomadic *Ashirets* of the border-land. To-day, the source of the trouble would appear to be political rather than inter-tribal. Whereas the first newspaper reports were confined almost exclusively to the "Aghri-dagh bandits," Press messages now refer to military operations farther afield in which, amongst others, a senior Turkish staff officer and a number of leading Kurdish Shaikhs have met their end. The last messages to hand describe the military operations as a comprehensive encircling movement, the full effects of which are not expected to manifest themselves for a few days to come. In the meanwhile the capture of a number of Kurdish prisoners is announced.

As an interesting side-light on these far-away events, Press messages from Ankara report Colonel Lawrence's presence at Rowanduz, in Iraq territory, within 30 miles of the Turco-Persian border. It is an interesting fact—even if for no more than as an echo of old campaigning days in the Arabian and Sinaitic Peninsulas—that whenever trouble arises on the eastern confines of Turkish territory, in close vicinity thereof, sure enough, will Lawrence of Arabia be reported to have his headquarters.

The Ordeal of "Miss Turkey."

Mubedjel Hanoum, Turkey's reigning Beauty Queen, can scarcely have foreseen, when bowing to the plaudits of an enthusiastic audience at the Café Turquoise in Beyoglou after her triumph some few months ago, that, as a sequel to her election, two Turkish schools of thought—the one very old, the other ultra-modern—would be, before long, at serious grips with each other over the details of her . . . silhouette. It is here necessary to interpolate that "Miss Turkey's" enthusiastic supporters looked forward with complete confidence to the elevation of their fair champion to the very pinnacle of glory by her eventual assumption of the proud title of "Miss Europe." That signal distinction, however, was to be reserved by Kismet and the votes of mere men for the candidate of a neighbouring country, "Miss Greece." Mubedjel Hanoum's lack of success became, after her return from Paris to the fatherland, the subject of acute controversy between her admiring partisans and certain detractors who now entered the arena.

It is here again necessary to digress for a moment in order to touch very lightly upon a singularly delicate and embarrassing issue on which the whole controversy turns. Oriental and Western eclecticism in the matter of the female figure—in the old days at all events—differed *toto cælo*. The moon-faced houri of very substantial bodily charms was the ideal which ever inspired Turkish and Persian bards and minstrels. Western taste, we know, particularly in northern climes, ran on different lines. Mubedjel Hanoum's detractors—amongst them there figured the head of the Physical Training Department of the Ministry of Public Instruction—made a grief of the fact that, classical in cast as her features might be, the rest of "Miss Turkey" could obviously not be held to conform to general Western standards as expressed in the cold marble of the Venus de Medici or of Milo, and that, on those grounds alone, Turkey's candidate had failed, very naturally, to carry off the coveted prize. Mubedjel Hanoum, impressed by this explanation of her want of success in Paris, thereupon submitted herself, at the hands of two of the Head of the Physical Training Department's lady instructors, to a very intensive course of "physical jerks" whereby adipose tissue of just over 7 kilogrammes was made to vanish in the course of as many weeks.

Whilst this controversy has been raging, however, the Turkish General Medical Council have met to consider the communication of a formal complaint to the Department of Hygiene at Ankara against the usurpation by the Head of the Physical Training Department of the Ministry of Education—witness the "toning-down" process applied by his underlings to Mubedjel Hanoum—of functions, privileges and prerogatives which, in the spirit, if not in the letter, of latter-day Republican legislation, should be reserved for the exclusive benefit of the Medical Faculty.

"Miss Turkey," in the meanwhile, has sailed for South America, where a World Beauty Contest is being staged.

The Turkish Women's Union.

When the Turkish Women's Union was established some three years ago, the main object which its founders and members had in view was the acquisition by every Turkish woman of the right to cast her vote at parliamentary elections. The battle has been an up-hill one and, although the final result is not yet in sight, the fair sex have certainly registered a success in the preliminary skirmishes. Turkish women are to be allowed, henceforth, to vote at all municipal elections throughout the country. Whilst steadily pursuing their main object, however, the Union has not neglected that side of its social programme which falls more particularly within the domain of feminine activities. By the opening of soup-kitchens during the winter season, of pure milk depôts for young infants, of clothing depôts for indigent school children, and other exertions, the Union has certainly contributed its quota towards the alleviation of distress among the poorer classes of this city.

The Turkish Women's Union, about a month ago, instituted on a small scale a course of instruction in four modern languages for young Turkish ladies of higher social rank and left it to prospective candidates themselves to select the language in which they desired to attain proficiency. The published entries to date record the following applications: For instruction in the English language, 11; French, 6; German nil; Italian, nil.

ROUMANIA.

Bucharest, July 11.

Political Situation.

Notwithstanding the rather mocking attitude of certain organs of the foreign Press, the new King gives every evidence of a determination to take his duties seriously. He takes a lively interest in the activities of Parliament, of the Army and of the Municipality of Bucharest. The other day King Carol sent for the Mayor about 4 o'clock in the afternoon, and on the arrival of the latter at the Palace gates he was met by the King coming out and carried off on a tour of inspection of the town. The King visited all the market places and the new suburbs, and was everywhere cheered by the people. During last week he received in audience M. Vintila Bratianu, hitherto regarded as one of his bitterest enemies. The fact that M. Bratianu asked for an audience is indicative of a change of attitude on his side and seems to indicate that he is

CENTRAL ASIAN SOCIETY
(in which is incorporated The Persia Society.)
Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published.
The subscription of £1 per annum entitles members to a copy of each issue of the Journal, tickets for all meetings, and the loan of books from the library.
Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W.1

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.
ORIENTAL LANGUAGES AND RELIGIONS.
Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

desirous of working on good terms with all the other forces that are striving for the advancement of the country's interests. Had he not taken this decision, there is little doubt that he would have lost some of the great influence that he undeniably enjoys as leader of the most powerful party in Roumania for the last two or three generations. On all sides satisfaction is expressed that Roumania once more has a King capable of carrying out the duties of his high office, and even in non-political circles great hopes are entertained that he will succeed, by his energy and obvious love for his country, in bringing Roumania's affairs into order and earning the gratitude of his people.

From all points of view it is most satisfactory that the older section of the Liberal Party has decided to bow to the inevitable and to co-operate in the affairs of the country, as otherwise it was in danger of being split in two and defeating its own ends by adding to the already too large number of small parties in the political arena.

The Visit of M. Krueger.

Considerable interest was taken in the short visit paid to Bucharest last week by M. Ivar Krueger, the Swedish Match King, and many rumours are afloat as to the significance of this visit. It will be remembered that last year M. Krueger's firm obtained the concession of the Roumanian Match Monopoly, and in some quarters it is reported that he came only to pay his compliments to the Government and to inspect the working of his organisation in Roumania. M. Krueger was received in audience by the King and was given a banquet by the Roumanian authorities, and he was received by several Ministers, including the Ministers of Finance and the Minister of Industry and Commerce. Other rumours have it that he was offered several concessions, and the Liberal Press was immediately up in arms against any such concessions being given by the Government, the exploitation of Roumania's wealth by foreigners being the chief bugbear of the Liberal Party. It is already greatly distressed at the concession of the Match Monopoly and that of the Telephone system, which was recently granted to The International Telephone and Telegraph Corporation of New York. This great financial group has been negotiating for the contract for many months, and it was at last signed, ratified by Parliament and published in the *Official Gazette* last week. A Roads Contract with a British firm, Messrs. Stewart and Partners, has also been ratified and, in view of the execrable conditions of the high roads, the hope is generally being expressed by the public that work will soon be begun. The Bucharest-Brashov road is to be the first undertaken.

A Disastrous Fire.

A terrible fire broke out some days ago at a village called Borsha in Maramuresh (in the north-west of Roumania), inhabited mainly by Jews. The greater part of the village was destroyed and hundreds of families are left homeless. A rumour was raised at once that it had been the work of anti-Semite agitators, but the Governor of Transylvania went himself to investigate the matter and his report in no way confirms this statement. The village was mostly built of wood, there was a high wind blowing and, as there had been no rain for some weeks, an accidental fire in one house was sufficient to account for the whole conflagration. It is true that it happened immediately after the threatening visit of a well-known anti-Semite agitator, but it is hardly conceivable that even the virus of hatred flowing in the veins of these fanatics could move them to such acts of inhumanity.

Agriculture.

According to the latest official statements, the condition of the crops on the whole is excellent, although some districts have suffered from drought and others from hail. Last week near Tirgovishte enormous hailstones fell during a violent thunderstorm, which completely destroyed the crops over a considerable area. The maize sowings this year are considerably less than for the 1929 harvest, but they are over the average for the years 1924-1928. No estimate of the crop can be made until later, when the cobs are well formed.

The Government has just passed a law for the encouragement of agriculture and the export of cereals, by the establishment of a Central Purchasing Institution under Government control, in which the exporters will participate. This is in the nature of a grain export monopoly, and it seems doubtful whether the exporters will be in favour of the new institution.

PALESTINE.

Jerusalem, June 28.

The Wailing Wall Commission.

There is an old saying that the very air of Palestine makes a man wise. And now there are even added aids to wisdom. As a result of Sir John Hope Simpson's mission to examine the country's "absorptive capacity," we are all becoming learned in the economics of local land development and settlement. And now comes the League of Nation's Wailing Wall Commission, which promises to put us in the way of learning more of the history of the "Western Wall" or "El Buraq" than anyone has ever known before. Unfortunately such profound learning will not of itself solve our troubles, since there is another old local tradition that the air of Jerusalem is so impregnated with the undissipated theological rancours of four thousand years that it has absorbed acrid chemical qualities sufficient to serve as an automatic antidote to snake-bite; therefore nobody dies of snake-bite in Jerusalem, whatever else they die of.

So far the Wailing Wall Commission has put in two days' work towards its task of settling once and for all the dispute between Muslims and Jews. One doubts whether the sessions will be finished within the month, as at first supposed. The Commission sits but four days a week, with a six-hour day, and, to judge from the way things are beginning, the Muslim side is determined to let no evidence through without a maximum of cross-examination. The Jewish side has put all its cards on the table in the shape of a lengthy Memorandum provided by Dr. Cyrus Adler, President of the Jewish Theological Seminary of New York, giving the history, from King Solomon to the present day, of Jewish veneration for the Temple, of which the "Wailing Wall" counts as the sole relic. The Commission, however, is asking in addition for evidence as to details of public and private Jewish devotions at the Wall, and of the appurtenances customary, whether demanded by liturgical propriety or by personal convenience—in other words, we are to have the old question of benches and screens, etc., argued out in full.

On the other hand, though the Muslim side, in its preliminary statements at the non-public session last Monday, is reported to have dug in its toes, insisting that it was not called upon to defend any case, in that its absolute ownership of Wall and environs was indisputable, and that it was not in a position to barter away any of the religious possessions of the entire Muslim world, and that it must declare in advance that the Muslim world was not in the least likely to submit to any decision which offended Muslim religious susceptibilities, and that, since it did not

recognize the validity of the bestowal of the Mandate of Palestine on Great Britain by the League of Nations, it could not recognize the authority of the Commission sent as emissary of the League of Nations to determine a point raised in respect of the application of the Mandate —in spite of this the Commission is requiring the Muslim party in the dispute to produce all documents purporting to vest Muslim parties with any nature of property rights to the Wall, pavement and adjoining property.

Dr. Eliash, counsel for the Jews, has repeatedly emphasized before the Commission the point that the Jews claim no manner of property rights at, in or near the Wall, but they require that the Muslims shall produce evidence showing the type of property rights which exist in connexion with the much-spoken-of Abu Madian *Wakf*. [There are many varieties of *wakf*; a *wakf* is not necessarily inalienable. The site of the new Palestine Museum was *wakf*, but was exchanged for other property on the Government's applying its powers of expropriation.] The Jewish side also urged that there can be no property-rights in the ordinary, accepted sense in a Holy Place: "it cannot be demolished to make way for another construction, it cannot be sold; hence, even as property, it is subject to special restrictions. One of these might obviously be that nothing shall be taken away from it and nothing shall be added to it, and to this extent" (the quotation is from the Memorandum) "we feel that the decision of the Palestine Government [allowing the building of the Zawiyyah, the balcony on the top of the Wall, etc.] was wrong and should be reversed by your Commission."

The Jewish side are pressing for a ruling that the actual ancient Wall cannot be vested in either Muslims or the Jews, but that it should, rather, be vested in the Government for the time being. They are making much of the fact that in the earlier days of the British Occupation, before the Wailing Wall had become the outstanding feature in the political arena, it was taken for granted by the officials that the Wall was the direct concern of the Administration, and they issued various orders and rulings accordingly without any protest or even any show of interest from the Muslim side.

The Muslim side have not yet shown what line they propose to take in arguing their case, but it is understood that they will, to a large extent, pin their faith on Christian witnesses as to the *status quo* usage at the Wall, since, as Auni Bey Abdul-Hadi, the chief counsel for the Muslim side, naively announced, neither Muslims nor Jews could be accounted worthy of credence in a matter affecting their religious claims. The second counsel on behalf of the Muslim side is a leading Christian advocate from Damascus, one Faiz Bey Khuri, a member of the Constituent Assembly of Damascus.

The recent plague quarantine imposed on persons entering Persia from Iraq was lifted last week.

M. Liaptcheff, Prime Minister of Bulgaria, arrived on July 9 in Budapest, where he dined with Couth Bethlen, Prime Minister of Hungary. In the evening he left for Bulgaria by Danube steamer.

Two Arab mounted police, while patrolling the Safed-Acre road in Palestine one night last week were attacked by highwaymen. One policeman was killed. The other escaped to Acre and brought reinforcements.

M. Jean Ghika of Roumania, who was attempting to beat the record for a non-stop flight in a straight line from Bicester aerodrome to Roumania, crashed near Teteven, in Roumania, and was slightly hurt.

The Board of Imperial Airways announced at a recent meeting that the general manager of the company, Mr. G. E. Woods-Humphrey, had been elected a Director and appointed Managing Director.

An exhibition at present being held at University College, Gower Street, by the British School of Archæology in Egypt, to display objects excavated during the last season at Tell-Fara (the Biblical Bethpelet), within the borders of Palestine, will remain open from 10 to 5 until the end of this month. An evening session from 6.30 to 8 was held on the 15th and a second one will be in the 25th inst.

Book Review

EGYPTIAN INFLUENCE ON EARLY GREECE.

"AEGYPTIACA." Catalogue of Egyptian Objects in the Ægean Area. By J. D. S. Pendlebury. (Cambridge University Press. 15s.)

Pharaonic Egypt's rôle in the formation of Hellenic civilisation has been placed on record even in ancient times by the myth of the marriage of the fifty daughters of *Danaos* to the fifty sons of the King *Aegyptos*. Until lately little was known from the archæological point of view of the real nature of this Egyptian influence on early Greek art and history.

Mr. J. D. S. Pendlebury (Beatson Scholar of Pembroke College, Cambridge, and a member of the British School of Archæology in Athens and of the "Egypt Exploration Society" in recent years) has thrown a great deal of light on the subject in this book.

As he says, he has had to overcome the double difficulty of dealing with the extraordinary diversity of publications and languages in which the original references are to be found, and the widely scattered state of the objects themselves. He gives a short account of each site from the point of view in question, and then a catalogue of the objects together with their context.

Dr. H. R. Hall, in his Foreword to the book, emphasises the particular interest of the work in showing us what sort of things "were prized by the Greeks of the Bronze and early Iron Ages, and the kind of memento of the Land of the Nile which the early Greek seafarers were in the habit of bringing back with them, much as we bring back Scarabs ourselves nowadays." Dr. Hall notes that the Ushati does not appear in the list; "it is a funerary object that belonged only to the dead and the tombs, at a time when the Egyptian religion was a living one and it had not fallen into the hands of the casual tourists, as it now has. The Scarab, Vase of Alabaster and Faience were the common Egyptian objects most valued in Greece. The Alabastron no doubt came containing Egyptian unguents, as in return the Minoan stirrup Vase was sent to Egypt from Greece with Olive Oil. . . ."

The connexion of Egypt with the Ægean has received prominence even in early Greek history, and shows us where to turn for a possible foreign influence on art and culture. Although Gobineau admitted the fact that the first Grecian civilisation was fostered by Egyptian and Semitic elements long before the arrival of the Ionians and the Ayran elements coming from the north, most of the scholars of the nineteenth century have accustomed us to believe that the Grecian civilisation was entirely original. Did not Renan, comparing Greece and Egypt, write: "Egypt is a China, born fully developed and almost decrepit, having always had this air at once infantile and senile, which its monuments reveal. We are in a land of clear and rapidly acquired knowledge; but a knowledge limited and stationary"?

We know to-day from Mr. Cecil Firth's excavations at Sakkara that it was in Memphis that the early Greeks were taught the rudiments of Architecture and that the Doric Column originated in Egypt three thousand years before Phidias with Imothep, Architect to King Zozer, who built the two lovely temples of Sakkara, with their Forum and fluted columns.

Monsieur Victor Bérard has gone further in his monumental works on Homer to prove the Egyptian and Phœnician origin of the Odyssey.

Mr. Pendlebury's book brings new evidence of this Nilotic influence on the Pelasgians, Cretans and Ionians. Even pre-dynastic Egypt left its mark on the South of Crete, and two objects at least have found their way north to Knossos. This influence seemed to have been at its highest in the 18th Dynasty; the Argolid Mycenæ had objects of Amenhotep II, Amenhotep III, and his wife Tiyi, as well as many fragments of alabaster and faience. There is no doubt that all scholars interested in this subject will find Mr. Pendlebury's book a most important contribution to the sum of our knowledge of it. O. C.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, June 26.

A Hindu Raj.

June 24 has passed; but more time than one has yet had is required for the collection of the opinions of Indians on the recommendations in Volume Two of the Statutory Commission's Report. My letter this week must, therefore, deal mainly with principles. There are evidences that there will be more plain speaking about the tangle in India than we have been treated to hitherto. Take this, for instance, from a leading article in one of the newspapers this week: "Even Congress cannot flout the opinion of the Western world, unless they are deliberately attempting to keep India in a state of turmoil as being more likely to strengthen and consolidate Hindu influence than a reformed constitution in which the position of minorities would be adequately safeguarded." Then, speaking of Volume One, the writer has "The truth is that such an authoritative and impartial delineation of conditions in India must come as a rude shock to the Congress, who prefer to deal with every practical difficulty by the simple but unstatesmanlike method of denying both its existence and its importance. So drugged are the leaders with the belief that Dominion Status means the rule of the majority, that is, the domination of the Hindu, that they will have nothing to do with a genuine attempt to frame a constitution that will be fair to all. History will condemn this attitude as shortsighted and foolish, but in such an atmosphere what chance is there that a brilliant survey of conditions from other points of view also will meet with due appreciation?"

The Unchanging East.

We had Matthew Arnold writing:--

> The brooding East with awe beheld
> Her impious younger world.
> The Roman tempest swell'd and swell'd,
> And on her head was hurled.
>
> The East bowed low before the blast
> In patient, deep disdain:
> She let the legions thunder past,
> And plunged in thought again.

Now we have the Statutory Commission writing: "The authors of the Montagu-Chelmsford Report stated that the process on which they were engaged was not that of federalizing India, but an antecedent one of breaking up the old structure before building a new. They were giving independent life to organisms which would, in future, form members of the new body." It is my conviction, often already expressed, that in India the "old structure" cannot be broken up, it being so strong, and that in India no new structure can be built.

Anarchy.

In the opinion of an Indian with whom I spent two days of this week, he and I separated from all the world except those who passed us in silence on the roads, the attempt of the British to break up the old Indian structure was doomed inevitably to lead to anarchy. The only measure of salvation that he could think of, he told me, was that the Government should now enlist the masses on its side against those agents of political unrest--the politicians--that it had armed itself in its own misguided belief that one thing was "progress," and nothing else was to be thought of. This enlisting of the masses was to be done by a carefully planned campaign of educating the masses back to their old belief that the British *raj* was a more benevolent one than any Government that could be thought of as established in its place. "I would have the Government," he said, "use a special constabulary on a large scale, suspending all development for some years in order to provide the funds that the special constables would cost. If necessary, I would fix the maximum income of any man, be it an English official of the Government, or whoever it might be, at Rs.2,500 over some years. The special constables would be drawn from the educated classes. They would assist the ordinary police in maintaining order, but more especially they would teach and instruct the people."

The Round Table Conference.

There is still the Round Table Conference; there are still tongues that could tell the British Parliament what a deadly strife is in progress, unsuspected by those, who, because they think a Parliament elected on a franchise the greatest boon and blessing to man, cannot see anything else. The line that the Indian politicians will now take will be to say that a very much larger measure of self-government is due to India than the Statutory Commission has shown itself prepared to recommend. If those who listen to that pleading assume that those who ask for that larger measure of self-government sincerely mean to use it, as they will profess to mean to use it—for the better government of India—they will be ready, one may believe, to turn their backs upon the Statutory Commission, and grant that larger measure. Who would grant it, who knew, or at least suspected, that the larger number of those representatives of India had a concealed design to establish a Government in India of a kind never spoken of, while the remaining representatives were struggling for a position in which they would be strong enough to defeat that design? The truth does appear to be that there is that design. Even if it was sincerely intended to use the larger measure of self-government as the very best of the English politicians of the past--the Sir Robert Peels, the Brights, Cobdens, Gladstones--would have wished to use it, it would not do, because so wrongly suited to India; and what if there is no sincere wish so to use it, but the intention to use it as an engine with which to carry out a now concealed design?

Time and Tide.

Men know how little a few years count in the life of a race; Indians particularly must feel how little a few years matter in the life of a race so old as the Indian, to think of it for the moment as one race. If with the certainty of securing as large a measure of self-government as the Statutory Commission has recommended—that at the least—and with the good prospect of securing a larger, if the Indian representatives at the Round Table Conference were agreed, would not all the Indians be ready to wait the comparatively short number of years that would have to be watied, until things were ripe for a still larger measure? They would be, if the professed intention to use self-government for the better government of India was sincere. Would a man of the standing and influence of Pandit Motilal Nehru be found saying, as he has just said: "If the terms of reference of the Round Table Conference are to be left open, and we are expected to go to London to argue the case for Dominion Status, I should decline. If it was made clear, however, that the Conference would meet to frame a Constitution for a free India, subject to such adjustments of our mutual relations as are required by the special needs of the conditions of India and our past association, I for one would be disposed to recommend the Congress to accept the invitation to participate in the Conference?" Why should the Pandit show that haste to get *all* he wants *immediately*, if all he wanted to use the instrument for was the better government, *impartially*, of all the races in India; the furtherance of the well-being of them all? I would emphasise this point finally—that the opinion that there is a concealed design is not my opinion; is not the opinion of an Englishman. It is the opinion of Indians.

THE VICEROY AND THE ROUND TABLE CONFERENCE.

The attitude of the Cabinet and the Government of India towards the Statutory Commission's Report and the functions of the forthcoming Round Table Conference was authoritatively stated by the Viceroy last week. Contrary to the general expectation, no similar pronouncement was made in the House of Commons, the Secretary of State for India, in reply to several questions, merely referring members to the Viceroy's statement.

Addressing the joint meeting of the two Houses of the Central Legislature on July 9, Lord Irwin, after congratulating Maulvi Yakub on his election to the office of President of the Legislative Assembly, explained his reasons for summoning the present Session, which marks the close of the second Council of State and of the third Assembly, and for his decision to hold the elections to both bodies in September. Speaking with the utmost frankness and sincerity, "for the gravity of the times requires that I should place all who hear or read my words in full possession of my thoughts," Lord Irwin proceeded to trace the development of political consciousness in India and said that the principal duty of any Viceroy "was to devote all his energies to the maintenance of a progressive, orderly and contented India within the orbit of the British Commonwealth."

After recalling the circumstances in which the declaration of November 1 "was made and stands," Lord Irwin referred to the Statutory Commission's Report. Nobody, whatever his views as to the actual recommendations, would, he said,

> deny that the Commission have made a weighty and constructive contribution to a most difficult problem. Great, however, as for its intrinsic value must be the authority of the Report, it was neither the desire nor the function of the Commission to anticipate the decisions of H.M. Government, reached after conference with representatives from India, or of Parliament itself. . . . The duty of expressing an opinion now passes to the Government of India . . . who would fail in their duty if they similarly did not approach the consideration of the Commission's Report with a full sense of their own responsibility.

Lord Irwin then briefly outlined the series of untoward events, culminating in the attempt of the All-India Working Committee of the Congress to seduce police and troops from their allegiance, which had so gravely prejudiced a calm examination of the question. Characterising the civil disobedience movement as exactly analogous in other respects to the General Strike, which the British Government had recently found it necessary to mobilise all its resources to resist, Lord Irwin proceeded :—

> I fully realise that in normal times such frequent resort by the Governor-General to the use of his special powers would be indefensible. But the times are not normal, and if the only alternative is acquiescence in the result of efforts openly directed against the constitutional Government of the King-Emperor, I cannot for one moment doubt on which side my duty lies.

Lord Irwin then turned to a more detailed account of the functions of the Round Table Conference in a passage which has aroused considerable controversy and must be quoted in full :—

> The date of the assembly of the Conference has already been made public, and on behalf of his Majesty's Government I am now able to define its functions more precisely. After very careful consideration, his Majesty's Government have reached the conclusion that it would not be right to prescribe for the Conference any terms more limited than were implied in my statement of November 1 last, and that the Conference should enjoy the full freedom that those words connote. The Conference accordingly will be free to approach its task, greatly assisted indeed, but with liberty unimpaired, by the Report of the Statutory Commission or by any other documents which will be before it. It is the belief of his Majesty's Government that, by way of the Conference, it should be possible to reach solutions that both countries and all parties and interests in them can honourably accept, and any such agreement at which the Conference is able to arrive will form the basis of proposals which his Majesty's Government will later submit to Parliament.
>
> From such a definition of the scope of the Conference it is clear that his Majesty's Government conceive of it, not as a mere meeting for discussion and debate, but as a joint assembly of representatives of both countries on whose agreement precise proposals to Parliament may be founded. The Conference will thus enjoy the unfettered right of examining the whole problem in all its bearings with the knowledge that its labours are of no academic kind, and his Majesty's Government still hope that Indians of all schools of thought, whatever the attitude that some have hitherto taken, will be ready to share in this constructive work. I see no reason why from a frank discussion on all sides a scheme might not emerge for submission to Parliament which would confound the pessimism of those who would tell us that it is impossible for Great Britain and India, or for the various interests in India, to reach agreement.

In an eloquent peroration Lord Irwin, recalling the short period left of his term of office, and speaking rather as a friend than as a Viceroy and Governor-General, appealed for a revival of the mutual trust and co-operation between the two countries that alone could find "the right and best solution of the riddle of India."

INDIAN NOTES

(Continued from page 58.)

though widely conflicting reports of the real extent of the recent disturbances are current, the trouble appears in the main confined to the Bombay Presidency, any wavering or indecision at this juncture might well prove fatal. Just as the Simon Commission worked resolutely to the end of its allotted task in the face of every attempt at discouragement, so the Round Table Conference will carry out its appointed rôle whether the Congress and other interests hold aloof or not. It is the more precise demarcation of the rôle itself, though the Viceroy's description of the Conference's functions appears to us to be merely an elaboration of the form, rather than the substance of the original plan, and the part allotted to the Simon Report that have aroused such heated controversy. We have some difficulty in appreciating the grounds upon which Lord Irwin's statement is held to indicate "a fundamental departure from the original purpose of the Conference" in either regard. The conception of the Conference not merely as a miniature debating society, but "as a joint assembly of representatives of both countries on whose agreement precise proposals to Parliament may be founded" is surely of the essence of the scheme.

Girding at Phases.

Similarly the objection taken to the position assigned to the Report is also hard, we think, to justify. We have always held the view that when, rightly or wrongly, the Conference was proposed, the Conference must have before it every constructive proposal bearing upon the subject—that is to say, the Simon Report, no less than the Nehru Report, the Indian Central Committee's Report and the reports of the Provincial Committees. To suggest that the former, invaluable though its contribution incontestably must be to the Conference's deliberations, is the only document to be laid before the Conference, any more than it is not to be brought forward at all, is to deny the "free and effective" character of the gathering postulated from the beginning. But that is not, as many politicians in both countries are so anxious to suggest, to disparage the Report by comparison with the Conference. As matters now stand, they are essentially complementary, and merely stages in the process of submitting to Parliament, on which the ultimate authority rests, proposals which shall carry the widest possible measure of general assent, in this country no less than in India. For nothing is more calculated to make mischief at a time when Indian leaders are composing their differences than the suggestion that fresh difficulties are arising among the political parties at this end over what we can only describe as "girding at phrases."

LORD ZETLAND ON THE SIMON REPORT.

The Marquis of Zetland, better known to those acquainted with India as the Earl of Ronaldshay, lectured on Thursday last to the members of the East India Association on the Report of the Simon Commission. His highly successful administration of that difficult province, Bengal; his brilliant study of the career of one of the greatest of the Viceroys; and his numerous scholarly publications on Indian subjects, give weight and authority to Lord Zetland's views on the Indian problem. And, as was to be expected, his lecture was a valuable criticism of the Report, informed by first-hand knowledge and practical experience of the issues involved.

Lord Zetland did not attempt an exhaustive examination of the various recommendations. But he emphasised some of the more important; and he drew prominent attention to the danger that, during the coming months of controversy, there may be a serious loss of perspective both in England and in India. It was, he said, therefore, desirable that, before the Commission's specific proposals were examined, consideration should be given to the question of the direction in which, and the speed at which, constitutional progress has been travelling in India of recent years. Responsible opinion in Great Britain towards the whole problem of India had undergone a revolutionary change in a very short time. The announcement of August 20, 1917, had pledged this country to an Indian policy the outstanding feature of which was the establishment of those very Parliamentary institutions which, before that time, had been held to be totally inapplicable to Indian conditions. He was surprised at the time, and he was surprised now, that so many Indians failed to grasp the fundamental nature of this change. During the past ten years its magnitude had no doubt been obscured to a great extent. It would, however, become apparent if the outstanding recommendation which the Commission had made were given effect to, namely, the recommendation that dyarchy should be abolished, and that in the Provinces the whole field of administration should be transferred to Ministers responsible to the Legislative Councils. Except in extraordinary circumstances there would then be no *deus ex machina* in the shape of the Governor to step in as at present, and to save the Legislature from the responsibility for its decisions. The Legislature would have to deal only with a Government drawn from its own ranks and responsible to it for its actions. It would have to realise that if it registered disapproval of the policy of the Government, it would have to be prepared to provide an alternative Government whose policy it preferred. That was the essence of responsible self-government.

Dealing with the Central Government, Lord Zetland referred to the enormous size of the constituencies which, under the existing system, return members to the Legislative Assembly. And he mentioned that in at least one case the constituency comprises an area of 83,000 square miles. To talk of the responsibility of a member to his constituents in such circumstances was, he said, to indulge in the language of the most extravagant hyperbole. The only practicable solution appeared to be that which was recommended by the Commission, namely, that election to the Central Legislature should be indirect. The electors should be the members of the Provincial Legislative Councils, and the election should be on the basis of proportional representation of communities. In addition to its other merits this system would have the advantage of opening the door to the inclusion of the Indian States in a federated India. If the provinces of British India, with their wide differences, could enter into such a federation without jeopardising their own internal autonomy, it ought to be possible for other self-contained units, such as the States, to do the same.

In concluding his address, Lord Zetland said that the Indian problem is far too great to be allowed to become the shuttlecock of parties in this country. There was sometimes noticeable here a tendency to twit the various representatives of different interests and schools of thought in India on their inability to compose their own differences and to agree upon a common programme. He hoped that we would not lay ourselves open to a similar charge. In his own view the report of the Commission provides a common basis on which the three historic English parties may unite. He did not dissent from what had been said by the Viceroy on the preceding day as to the relation of the Report to the Round Table Conference. But the invitation to the Conference came from the Government of this country, and surely it was the duty of the host to place before his guests something tangible to serve as a basis for discussion.

And was not the Report the obvious contribution for the Government to make to the common stock? It was a definite constructive attempt to give effect to the promise made by Great Britain in 1917. A working constitution could not be built up on catchwords, however attractive. Such phrases as "self-determination," "provincial autonomy," "Dominion status," and so on, gave expression to abstract ideas, and they might be admirable as indicating the goal to be aimed at. But they were useless if you tried to make them serve as bricks in the building which you proposed to erect. Concrete and practicable proposals, not abstract ideas, were wanted for that purpose. And it was because he believed that the recommendations made in the Report were of this character that he regarded it as an outstanding contribution towards the solution of the great problem with which the peoples of India and of this country are faced.

In the course of the discussion which followed, the Maharaja of Burdwan said he feared that the grant of complete provincial autonomy on the lines laid down in the Report would be dangerous unless provision were made for the creation of Second Chambers. He also expressed the opinion that the Commission was in error in proposing to eliminate the direct representation of the landowning interests in certain Provinces. Sir Basil Blackett testified to the deep sincerity and honesty of purpose of the Viceroy, and to his great desire to do the best by India. Regarding the Report, Sir Basil Blackett said that it was a very important document, and whether this was desired or not, it was bound to be in the forefront of the documents submitted to the Round Table Conference. Lord Winterton deprecated the attacks made by newspapers in thic country on the Viceroy. And he expressed a hope that Indians visiting England would understand that such writings are not taken at their face value by any responsible section of the people here.

The King has given orders for the following appointment to the Most Exalted Order of the Star of India:—

K.C.S.I.—Sir Atul Chandra Chatterjee, K.C.I.E., High Commissioner for India.

The King has also given orders for the following promotion in the Most Excellent Order of the British Empire.

C.B.E.—John Collard Bernard Drake, Esq., C.I.E., O.B.E., Indian Civil Service, formerly Secretary to the High Commissioner for India.

A meeting of the Royal Commission on Labour in India was held at India House, Aldwych, on Tuesday, July 15, when Sir Walter Kinnear, K.B.E., Controller of Health Insurance, Ministry of Health, was orally examined in regard to the actuarial foundation and the working of the Health Insurance scheme in Great Britain.

The Secretary of State for India has appointed Mr. Leonard Day Wakely, C.B., Secretary of the Political Department, India Office, and acting Assistant Under-Secretary of State, to be one of the Assistant Under-Secretaries of State and to be Clerk to the Council of India.

Mr. R. H. A. Carter, of the India Office, who was one of the assistant secretaries of the Statutory Commission, has been selected to be Secretary-General of the coming Round Table Conference. He is being assisted by Mr. F. E. Grist, a principal clerk in the Financial Department of the India Office.

THE CENTRAL ASIAN SOCIETY.

The Situation in India.

The Annual Dinner of the Central Asian Society was held on July 9 at Grosvenor House. Lord Peel, who is relinquishing the post of President after five years of office, was in the Chair, and the principal guests of the Society were Lord Lloyd of Dolobran and M. de Fleuriau, French Ambassador to the Court of St. James's. The toast of "The Central Asian Society and its President" was proposed by Lord Lloyd, whose speech is given below. In his reply Lord Peel spoke of the progress made in recent years by the Society and its wide scope. He welcomed the presence of the French Ambassador and referred to the need for a common policy for France and Great Britain. There could be no single policy for Asia, but there should be a different common policy for different countries, arrived by organizing contact between the French and the British on the spot. The toast of "The Guests" was proposed by Lord Peel and seconded by Lord Allenby, the new President of the Central Asian Society. Replies were made by M. de Fleuriau, who spoke of China, which was passing through one of the periodic revolutions that history showed were apt to last for from forty to sixty years, and by Sir Harcourt Butler, who declared that he still refused to be pessimistic about India. Revolution, he said, was in the blood of the East, and experience showed that it found expression in a succession of autocracies.

Among those present at the Dinner were:—

Earl and Countess Peel, H.E. M. de Fleuriau, Field-Marshal Viscount Allenby and Lady Allenby, Lord Lloyd and Lady Lloyd, Lord Lamington, Major Lord Carnock, the Maharajadhiraj of Burdwan, Lord and Lady Headley, Field-Marshal Sir Claud Jacob and Lady Jacob, Sir Ronald and Lady Storrs, Sir Michael and Lady O'Dwyer, Lt.-General Sir Webb and Lady Gillman, Sir Maurice de Bunsen, Lady Doris Blacker, General Sir George and Lady Barrow, Sir Charles Bayley, Sir William Berridge, Major-General Sir William and Lady Beynon, Sir Edgar Bonham-Carter, Sir Harcourt Butler, Sir William Clark, Major-General Sir Percy Cox, Sir Nigel and Lady Davidson, Sir Edward and Lady Every, Sir George and Lady Forbes, Sir Harry Fox, Admiral Sir Sydney Fremantle, Lt.-Colonel F. E. Fremantle, M.P., Colonel V. Gabriel, Sir William Geary, Major-General Sir Henry and Lady Hawkes, Lady Hiltzel, Sir Edwyn Hoskyns, Mr. and Mrs. A. F. C. Huddleston, Lt.-General Sir Aylmer and Lady Hunter-Wilson, General Sir George and Lady Kirkpatrick, Sir Henry Lawrence, Major-General Sir Charles Melliss, V.C., Air-Marshal Sir David Munro, Sir Denison Ross, Sir Leslie Scott, Sir Malcolm and Lady Seton, General Sir Andrew and Lady Skeen, Lt.-Colonel Sir Stewart and Lady Symes, Colonel Sir William Willcox, Lt.-Colonel Sir Arnold Wilson, and Sir Francis Younghusband.

Lord Lloyd's Speech.

After a reference to the late Lord Curzon, who had been the principal speaker at the last dinner, six years ago, at which Lord Lloyd had been the Central Asian Society's guest, Lord Lloyd continued:—

We have been sitting by and watching the mighty machine of the King's Administration in India insulted and openly defied in seditious language by what, if checked at the outset, would have been a numerically negligible, if noisy, fraction of the whole population—but which has now grown to larger though still only fractional proportions. We have heard strident abuse of our officials at a moment when the British and Indian Governments were patently and patiently engaged in studying how best and most prudently to help India along the road to responsible self-government and how best to meet the legitimate aspirations of politically-minded India. We have seen both our trade and India's trade gravely prejudiced by the licence of mobs, by the lack of confidence engendered by the Government's policy of hesitations and ambiguous announcements and by the unhappy raising of hopes which were clearly incapable of any early fulfilment.

It is time this country realised clearly what incalculable and possibly irreparable damage is being done to our trade and to Indian trade by the condition of things that is being allowed to go on in India. Our total trade with India is upwards of 150 millions a year. India is our best customer and upon our trade with her the working people of this country, more than ever to-day, depend for the absorption of a large part of their industry.

Do the electorate of this country realise that over and above all this there is invested in India, in cotton mills, woollen mills, paper mills, coal mines, tea and coffee plantations, iron and steel works, river steamers in Bengal and Burmah, coasting steamers, rope works, etc., more than 1,000 millions of British capital?

So much for what we stand to lose by our failure to govern and to maintain order. But India and her peoples stand to lose far more. During the last 60 years India's total foreign trade increased from 61 million to 427 million pounds. The first half of that increase took 45 years for its accomplishment; the whole of the latter half was registered in the last 15 years; irrefutable evidence of the recent growth of India's constant and continued prosperity and of her security under British rule. And yet there are those who talk of India being bled white under alien rule.

India has hitherto, you see, always had a favourable balance of trade, but since the recent disturbances there has been a disastrous shrinkage both of imports and exports; ships trading with India and in constant trade are being laid up or running with an alarming amount of unfilled space, and there is every prospect that a continuance of the present conditions of unrest will result in a complete paralysis of trade.

I am continually amazed at the attitude of apology which in these days is too often adopted in regard to our possession of and achievements in India. And just because so many seem to have lost faith in our great task and pride in our heritage it is not out of place to recall the hard facts. I have just shown how in trade India has profited always vastly more from the British connexion than ever has England, though the gain has been mutual, but that is not a fraction of the account.

From North to South, from East to West, India has not only been benefited but the lives of the people transformed by the beneficence of British administration. Out of a handful of disconnected coral reefs valued at a few dollars we made Bombay the second city of the Empire. Out of a miserable agglomeration of fetid swamps and brackish lagoons, from Sutanati to Kalighat, Job Channock, daring its deadliness, made Calcutta. Into areas like the Great Deccan plains, where Maratha armies marauded and drought, famine and disaster held regular rule, the British engineer stepped; and in a little 70 years' job hammered

the monsoon to his purpose to give the people food instead of famine. In all the Punjab plains to-day, wheat has supplanted want, and through the length and breadth of the land the doctors and missionaries, English men and women, have for 100 years been risking their own lives to fight for the bodies and sometimes the souls of India's millions. To them alone—no human thing was untouchable.

It is an intolerable treachery to the British Service, civil and military, and to the devoted work of hundreds of thousands of Indians themselves who for all these years have laboured in happy and loyal co-operation with the Sirkar, that these Moscow-manufactured mendacities should not have more constant and more courageous refutation.

And to those who, in this country and elsewhere, belittle our work or seek to put an end to our rule, what do they propose should take its place? The weakening or premature withdrawal of our strong guiding hand has always had the same results, anarchy and bloodshed, be it in China last year, Palestine last winter, or Egypt last night. If we commit the same follies in India as we have recently committed in other parts of the East, we shall surely reap, and, indeed, are reaping, the same reward, but on a vaster and more calamitous scale.

The size of the political canvas on which we are painting is so vast. After all, from Egypt to China, the predominant influence has, for centuries past at least, been British. In Egypt and India we have been for so many years directly responsible for administering the affairs of so many millions of inhabitants—in China, in Persia, in Arabia and in many border States inland, as well as along the vast stretches of the Asiatic coast—we have acquired, by our Imperial prestige and by the confidence and respect we have won from the people themselves, an indirect influence which has been used to suppress lawlessness and to spread the principles of ordered progress and development. Were we to abandon our direct responsibility in these areas or continue to allow our moral authority to be weakened, our indirect influence in adjacent areas would be shattered and thus the ordered progress and development, not only of the whole of our Asiatic Empire, would be imperilled, but that of other countries as well.

It is a curious fact that throughout Asia and in all these countries of which I have been speaking, we have arrived at a state of affairs simultaneously so critical as to call for a searching examination of the foundations of our recent Imperial policy.

Sometimes in a storm the rumbling of the thunder suddenly ceases; for an instant the wind falls dead and the very gossamers are still, and in that moment the rain-washed horizon of our vision is clear and long—and we can see. The moment always comes, as of old on Mount Horeb came at long last to the distracted prophet a still small voice. Some such moment—between the Royal Commission's Report and the Round Table Conference—is perhaps coming to us in the consideration of these great affairs. On all sides, and not only from disaffected quarters, we hear that Indians have lost faith in our word. What is the reason for this loss of faith? We know from events only recently in our memory how we succeeded in making Egyptian politicians believe that seditious agitation must yield them political results. Even in India the same belief is gaining ground. I should like to be able to say—Not at all. But I am compelled to admit that we have given them some justification by seeming to take refuge in ambiguous phrases which mask a lack both of policy and determination. Such attempts to pour oil on troubled waters must inevitably, in fact, have the same results as pouring oil upon glowing embers. I cannot repeat too often that general phrases are dangerous always and particularly in the East—they are capable of different interpretations and for that reason are bound to lead to charges of bad faith against those who use them.

I regret the Viceroy's latest pronouncement made in Simla to-day in so far as it makes use of the very type of general and ambiguous phrase which has already done so much to obscure our policy and confuse the situation. If it has any immediate effect, it can only, I fear, be to detract from the importance of the Simon Commission's Report and to raise hopes that its carefully studied recommendations be set aside in favour of proposals which, whatever their sentimental appeal, can be of no practical value.

In any case, for good or ill, we are committed to a Conference. The only way to prevent the Conference from leading to further confusion and eventual disaster is that its terms of reference should be clearly defined and within the limits of the policy laid down in 1917, authorised by H.M. the King and Parliament, and from which we have never departed.

I, for one, still firmly believe that the situation can be restored and that old support and trust regained, if we once more show ourselves clearly determined to carry out our responsibilities fully and fearlessly. There is nothing to be gained by not looking them squarely in the face. We, and we alone, are responsible for the government of India, and responsible, therefore, for any decision which has to be taken in regard to its political developments.

The most important step towards solving its difficulties will have been taken the moment we show ourselves ready to face them with confidence in our own decision and a firm determination to carry them out.

THE EGYPTIAN CABINET.

As a result of the appointment of Dr. Hafez Pasha Afifi as Egyptian Minister to London, Sidky Pasha has reconstructed his Cabinet as follows:—

Ismail Pasha Sidky	Prime Minister, Finance, and Interior.
Abdel Fattah Pasha Yehia ...	Foreign Affairs.
Aly Pasha Maher	Justice.
Tewfik Pasha Dosi	Communications.
Tewfik Pasha Rifaat	War.
Ibdahim Bey Fahmy	Public Works and Agriculture.
Murad Bey Sid' Ahmed	Education.
Hilmi Pasha Issa	Wakfs.

THE ARAB HORSE SOCIETY.

At the recent General Meeting of the Arab Horse Society the scrutineers reported the result of the annual election of ten members to fill the places of those retiring this year from the Council, but eligible for re-election. The Council is composed of 30 members elected by the members of the Society, together with the Past Presidents and Governors, who are *ex-officio* members of the Council.

The general meeting noted the election of the following:—Lt.-Col. R. E. Cecil, D.S.O., Passford House, Lymington, Hants; the Marquis of Hartington, Chatsworth, Bakewell; H. H. T. Hoyer, Koninginnegracht 72, The Hague, Holland; D. E. Neale, Nant Fawr, Lisvane, Glamorgan; Major G. B. Ollivant, Cavalry Club, London, S.W.; Alexander Philippi, Crawley, Winchester; Count Joseph Potocki, The Polish Embassy, 47, Portland Place, W.; Col. F. S. Kennedy Shaw, O.B.E., Feffont Magna, Salisbury; Major C. B. Toms, O.B.E., 109, Oakwood Court, Kensington, W.; L.-Col. C. D. E. Upton, Milton House, East Knoyle, Salisbury.

The Persian Majliss has agreed to the proposal of the Finance Ministry to build a new city, 1,000,000 square metres in extent, round Ahrenjam, a town near Salmas, which was practically destroyed by earthquake last May, and to call the new town Shahpoor, after the Crown Prince. Salmas will not be rebuilt. The new site has been chosen as one that is not likely to be affected by future earthquakes.

An important Turkish munition dump at Derlinghe, in the military zone near Ismid, blew up on July 10, causing a very serious loss of ammunition. The explosions, which continued for several hours, were heard fourteen miles away. The inward bound Ankara express was held up at Ismid from seven in the morning till five in the afternoon, while engineers tested the line and permanent way.

The Archbishop of Cyprus, on July 9, unveiled a marble memorial erected in memory of the Archbishop, Bishops, and leading citizens who were executed by the Turks on July 9, 1821, on a charge of conspiring for union with Greece. The ceremony was attended by representatives of the Greek Government, by students of Athens University, and by the members of numerous Greek Associations in Cyprus. The usual demonstration in favour of union with Greece followed.

July 4, 1930 (Old Style).
Saphar 20, 1349 A.H., of the Muslim Calendar.
Tammuz 21, 5690, of the Jewish Calendar.
Tir 26, 1309, of the Persian Calendar.

The King received the Maharaja of Kapurthala at Buckingham Place on July 12.

Lady Barton had the honour of being received by the Queen at Buckingham Palace on July 10.

General Nouri as Said Pasha, Prime Minister of Iraq, arrived in London last Thursday.

Sir John and Lady Chancellor and Miss Rosemary Chancellor arrived in London from Palestine last week, and are at 31, Hyde Park Square, W.2.

General Sir Alexander and Lady Wardrop left London on July 10 to join the Kaisar-i-Hind at Marseilles on their way to Bombay.

Sir Arthur Hirtzel vacated office on July 10 as Permanent Under-Secretary of State for India, and Sir Findlater Stewart took over charge.

Mr. Geoffrey Parker, Inspector-General of Irrigation in the Sudan for the Egyptian Government, left for England early this month on leave.

Sir Francis Humphrys, High Commissioner for Iraq, who flew from Baghdad to Alexandria, has arrived in London on leave.

Lieut.-General Sir Peter and Lady Strickland left Cairo on July 2 on a visit to Cyprus, from which they expect to return to Egypt about the end of the month.

Sir Abdul Hamid Soliman Pasha, General Manager, Egyptian State Railways, has left Egypt for Europe on leave.

The Indian High Commissioner and Lady Chatterjee are giving a reception at India House this evening from 9 to 11 p.m. (Thursday).

The Patriarch Meletios II officiated at the Greek Cathedral, Bayswater, on Sunday, July 13, assisted by the other Orthodox Prelates now in London for the Lambeth Conference.

The Rev. Philip Simpson, Curate at Holbeck, Leeds, arrived in Khartoum at the end of June to take up the duties of British Chaplain at All Saints' Cathedral. His work in the Sudan will be mainly in the provinces.

The Rt. Hon. V. S. Srinivasa Sastri, C.H., will lecture on "The Report of the Simon Commission" at a meeting of the East India Association, to be held at the Royal Society of Arts, on July 22, at 4.30 p.m. Lord Chelmsford will be in the Chair.

Mr. Leonard Woolley will give a lantern lecture on "Ur of the Chaldees and the traces of the Flood" to-day (Thursday) at 5.15 at University College, London. The lecture is in aid of the half-century fund for Sir Flinders Petrie's researches. Tickets may be obtained from Lady Petrie, University College, London, Gower Street, W.C.1.

The British Government has invited Turkey to send a naval squadron to Malta to return the visit which Admiral Sir Frederick Field's squadron paid to Constantinople in October, 1929. The invitation has been accepted, and it is understood that in November the battlecruiser Yawuz, formerly the Goeben, will lead a Turkish squadron to Malta.

Sir James Crerar left London on July 10 to join the Kaisar-i-Hind at Marseilles on his return to India.

Sir Reginald Cradock was to lecture before the Central Asian Society yesterday (July 16), on "The Indian Reforms and Asia."

The Greek community in London and the Anglo-Hellenic League are holding a Reception to meet the Patriarch of Alexandria, at Carpenters' Hall this evening (Thursday), at half-past nine o'clock. The Lord Mayor and Lady Mayoress and the City Sheriffs will be present.

Sir Ronald Storrs (Governor of Cyprus), Lieut.-Colonel Sir G. Stewart Symes (Resident, Aden) and Mr. H. C. Luke (Lieutenant-Governor Elect of Malta) were among members of the Colonial Office Conference, now being held in London, who were received by the King and Queen at Buckingham Palace on July 14.

Dr. Hafez Pasha Afifi, who has been Minister for Foreign Affairs in Ismail Sidky Pasha's Cabinet and formerly in that of Mahmoud Pasha, has been appointed Egyptian Minister to the Court of St. James's. Dr. Hafez Afifi accompanied King Fuad on his visits to England and is already well-known in London.

The Anglo-Egyptian Association of British Past and Present Government Officials entertained Lord and Lady Lloyd at the annual dinner of the association held last Thursday (July 10) at the Edward VII Rooms, Northumberland Avenue. Colonel Sir Henry G. Lyons took the Chair in the absence of Field-Marshal Viscount Allenby, President of the Association.

The King, on the recommendation of the Secretary of State for Scotland, has approved the appointment of the Rev. Alexander Reid Gordon, M.A., D.Litt., D.D., Professor of Hebrew, McGill University, and of Old Testament Literature and Exegesis, the United Theological College, Montreal, to the Chair of Hebrew and Oriental Languages in the University of St. Andrews in place of the late Professor David Miller Kay.

An Exhibition of embroideries, silver-ware and basket-ware, made by Yemenites in Jerusalem, was opened at the offices of the Palestine Economic Board, 38, Great Ormond Street, W.C., on July 15 by Lady Waley Cohen. The "Shani" workshops are under the supervision of the Jewish Women's Organisation in Jerusalem, and give work to hundreds of men, women and girls who have settled in Jerusalem. The Exhibition is the official opening of the London Depôt for Palestinian Handicrafts ("Shani, Ltd.").

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Foreign Companies in Iraq.

British companis doing business with Iraq through an agent are vitally affected by a judgment given last month by the Basrah Court to the effect that an agency must be registered in Iraq. The judgment was given in a case against a corporation for not registering in accordance with the Indian Companies Act an insurance company which it represented. In Article 277 of that Act it is provided that every company which "establishes a place of business" in Iraq shall be registered, and in giving his decision the Judge, Mr. Hooper, held that the word "establishes" could not mean anything but "carries on business," and that for such carrying on of business it was immaterial whether the company operated in its own name or through an agent. This judgment, it is held, if it is not altered, may render it necessary for every company doing business in Iraq through an agent to file full particulars with the Registrar together with an annual balance-sheet, while such registration may make a company liable to income tax. The judgment, the text of which is given in a pamphlet, published by the Times Press, Basrah, at R.1, entitled "The Law of Agency in Iraq" which also contains two preceding judgments on the law of insurance, has caused considerable perturbation in commercial circles in Iraq.

Roumania's Difficulties.

The adverse conditions with which Roumania has been confronted were dealt with by Sir Herbert Lawrence at the general meeting of the Bank of Roumania. Last year Roumania had her best post-War harvest, but the same was true of other countries, and the high duties still maintained on cereals made it difficult to compete with other countries, and the result was that by the end of the year out of an available surplus of 5 million tons only 1,700,000 had been exported. Sir Herbert Lawrence expressed the hope that the conclusion of various commercial treaties would facilitate the export of the balance. Again this year it looks as if Roumania is going to have a bumper harvest, and as the Government has very wisely modified the duties, and railway rates have been reduced, it would normally be much easier to dispose of the surplus. Unfortunately, in common with other commodities, the prices of cereals have been sinking, so that it is a very moot question whether Roumania is likely to derive any great benefit from the harvest. The oil industry too has been passing through a crisis as a result of the world over-production, though as the report of the Phœnix Oil and Transport Company, to which I referred last week, shows it is possible for individual concerns in Roumania to obtain favourable results even in such unpropitious circumstances, just as it is for oil companies in other regions. The latest development—the offer by two companies representing two of the great oil groups—to buy the export surplus of crude oil and refined oil products of Roumanian producers, gives a promise of better times for the industry, as it at any rate solves the marketing question. The offer is now under consideration, but there seems little doubt that it will be accepted.

Turkey's Finances.

The Ottoman debt question has again come to the front in the past week, and the latest developments are certainly not calculated to relieve the anxiety of the bondholders. M. Rist has been investigating the financial position of Turkey, and it is understood that he is now preparing his report. Meanwhile the Council of the Ottoman Debt, with a view to assisting Turkey in her financial difficulties so far as possible, offered, provided certain conditions were accepted by Angora, to regard as advances to the Turkish Government two-thirds of the instalments due from June to October inclusive. Angora's reply to this is that it is only obliged to pay one-third of the interest from June until M. Rist presents his report, and that the remaining two-thirds will be utilised by the Government, and that the negotiations with the bondholders will be resumed when the report is forthcoming. If, as is possible, M. Rist takes the view that Turkey is in a position to meet her obligations there will be an end of any question of further concessions by the long suffering bondholders, whose experience has been a decidedly unfortunate one.

Trade Difficulties.

At the meeting of the P. and O. Banking Corporation, Lord Inchcape referred to the effect on trade of the situation in India and the Far East. He pointed out that developments in India were rendering business very difficult, while in China the continuing fall in the price of silver has dislocated both the import and the export trades. Lord Inchcape also touched on the position with regard to commodities and emphasised the over production that has taken place, particularly in raw materials. As showing the situation he instanced two commodities—wheat and cotton—the supplies of which are symptomatic of the

commodity position. Stocks of wheat are estimated at 1,500 million bushels as against 1,445 milion bushels a year ago, while the supply of cotton is estimated to have increased by 1,200,000 bushels. A stabilisation of prices which will restore confidence cannot be expected, Lord Inchcape added, until this surplus of supplies over demand has been overtaken by the consumption capacity of the world.

Coal Competition.

The question of price is the all-important factor in the Near East markets, and once it became evident that Russia and Turkey were out to capture coal orders in the Near East, it was clear that it was going to be very difficult for British coal exporters to hold their own in that region. The latest contract to fall to our competitors is that for the Athens Gasworks, and it invites comment because of the extremely low prices quoted by Russia and Turkey—prices which make it impossible for us to compete with them. The quotation for Durham coals, including freight, was 20s. 6d. per ton c.i.f., while the quotation for Russian coal was 17s. 9d. per ton c.i.f., and that for Turkish 15s. 9d. per ton c.i.f. Turkey has been given a contract for 15,000 tons and Russia one for 10,000. As showing the position, it may be pointed out that to beat the Turkish quotation it would be necessary, allowing for freight, to quote for the coal alone at 7s. 9d. Of course it cannot be done.

COMMENTATOR.

EGYPTIAN CONTRACT FOR GREAT BRITAIN.

(From Our Own Correspondent.)

Cairo, July 4.

Messrs. Siemens and Co., of London, have been given the important contract for part of the North Delta Electrification Scheme. There were seven firms trying to obtain the contract, including one American, two British, one French and one Italian. Siemens's tender was for £E565,227, while the Italian firm's was lowest, £E506,695.

The object of the scheme is to drain the salt water from the North Delta into the Manzala Lake by means of electrical pumps. Siemens and Co. are laying the wires for conducting the current to these power stations, which will be three in number. The erection of the power stations comprises the second part of the scheme and will involve another contract of about £E700,000.

A Calcutta message states that the Calcutta Corporation has refused to accept a tender for British gas mantles.

The Yugoslav Government have received an offer from a French group for the reconstruction of roads in the Banat at a cost of 800 million dinars to be paid in ten annual instalments.

The Egyptian Budget, which was recently approved by the Egyptian Cabinet, showed a deficit of £E9,357,000, but Ismail Pasha Sidky, Prime Minister, in his capacity as Minister of Finance, has laid a Note before the Cabinet providing for economies to the extent of £E5,232,000, thus reducing the deficit which will have to be made good from the Reserve Fund.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 15.

The Stock Markets have exhibited this week a somewhat brighter tone, based rather on political conditions, the terms of the bankers' resolution on tariff policy being to the liking of the Stock Exchange as a whole. "Empire Free Trade" Stocks were in many cases marked up, but the increases were not always held. Gold withdrawals by France checked the advance in gilt-edged stocks only temporarily, and most quotations in the list closed the week higher on balance. Home Rails kept fairly steady despite the disappointing traffics and the unsatisfactory nature of the overseas trade figures for June. Foreign loans continued weak, and international industrials reflected the uncertain tendency in Wall Street. The gloom cast by the report of the Communications Company was not relieved by the publication of the report of the operating subsidiary, Cables and Wireless, Ltd., which confirms the impression that the concern is over-capitalised. The continued weakness in base metal prices was a depressing factor in the mining markets.

Underground New Issue.

The prosperity of the London Underground Railway group is in sharp contrast with the misfortunes of the trunk lines companies. While, as we showed last week, the latter's traffics for the first half of the current year were all below those of the corresponding period of 1929, the Underground's receipts, which include omnibus receipts, were £7,808,000 against £7,280,000, while those of the Metropolitan Railway were £956,300 compared with £931,000. The continued progress of this group is attributable largely to competent management which draws full advantages from the rapid development of the Greater London area in which these lines operate. The combine, of course, is almost entirely concerned with passenger traffic, and in this field it had brought into existence a high degree of co-operation between rail and road transport long before it was generally advocated by railway companies. The expansion of the companies requires increasing financial resources, and last Friday a new issue of 5 per cent. debenture stock by the London Electric Railway Company was oversubscribed. The stock, which is a full trustee security, is, of course, an excellent high-class investment and the flat yield of about £5 2s. 6d. on the basis of the issue price of 97½ is unusually attractive. The stock is redeemable between 1985 and 1995 at the option of the company, and the investor is therefore assured of his income for 55 years

BANQUE MISR (S.A.E.)

at least. Underground Electric ordinary shares return £7 per cent., and contain good prospects of appreciation with the continued development of the group

I.C.I. Rumours.

For some time Imperial Chemical Industry shares have been regarded with a little misgiving on the Stock Exchange, and a decline in quoted values has occurred. Apparently, however, there is no cause for panic. A few days ago, when a number of jobbers, and one or two brokers, went as a deputation to inquire directly from Imperial Chemicals what was the state of affairs of the company, they were given the very reassuring statement that both trade and finance were sound. Sales have been very well maintained, despite general trade depression, according to the official announcement. The fact that £4 million of the company's profit of £6½ million for 1929 was forthcoming entirely from one subsidiary, Brunner Mond, which gave a lopsided appearance to the company's source of revenue, was explained as being merely a way of transferring reserves from Brunner Mond to the I.C.I., and was not treated by the latter as profits. Lord Melchett has himself delivered a cheering statement about the company. His lordship went even further and said that trade generally—besides that of the chemical industry would soon be on the upgrade.

How to Invest.

The small investor usually has another special quality besides that of investing comparatively small sums of money—his savings are more often than not money that he may very likely need to spend at no very distant date. Safety first should be therefore a matter of primary concern for the small investor. Many investors fail to understand to an astonishing degree the difference between a safe investment and a speculative one. As a matter of fact, there are a number of very safe investments giving a good rate of interest and combining the valuable quality of enabling the holder to obtain his money back in cash whenever he may need it. Those in search of this type of safe and useful way of putting their cash aside, either for a long or short period until required, will find the chief suitable outlets described in a new book, "The Small Investor," by Mr. Hargreaves Parkinson. This book, which is very clearly written, describes some fifteen classes of safety-first investments, besides stocks and shares of public companies. Mr. Parkinson also tills virgin soil in estimating the relative importance of these various institutions in the national financial organisation.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

SPECIAL NOTICE. New T.S.S CALIFORNIA, 17,000 Tons, carrying FIRST CLASS and THIRD CABIN passengers, sails from LIVERPOOL Oct. 21, MARSEILLES Oct. 27. All 1st Class state rooms are fitted with Punkah Louvres and with fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Diesel Driven Generator.—The Ministry of the Interior, Cairo, invites tenders for the supply, delivery, and installation of a Diesel-driven generator. September 9. (D.O.T.)

Steam Grab Dredge.—The Ports and Lighthouses Administration, Ministry of Communications, invites tenders for the supply of one steam grab dredge designed for dredging alongside quay walls. July 29. (D.O.T.)

Hand Carts.—The Sub-Director-General, Customs Administration, Alexandria, invites tenders for the supply of 20 two-wheeled hand carts and 5 four-wheeled hand carts as standard samples. August 16.

Calculating Machines.—The Central Stationery Stores, Ministry of Finance, Cairo, invites tenders for the supply of calculating machines. August 26.

Motor Cycles, etc.—The Director, Mechanical Transport Department, Ministry of Communications, Cairo, invites tenders for the supply of motor cycles, motor cars, and different chassis. August 5.

INDIA.

Transmission Line Materials.—The Chief Controller of Stores, Indian Stores Department, Simla, invites tenders for the supply and delivery of transmission line material. August 4. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Tarantia for Bombay (Manchester, July 24; Birkenhead, August 2). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malancha for Calcutta (Birkenhead, July 22); s.s. Maidan for Calcutta (Birkenhead, July 31).

Bibby Line.—S.s. Staffordshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, July 23); s.s. Gloucestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, August 6).

British India Line.—S.s. Manela for Colombo, Madras, and Calcutta (London, July 20); s.s. Trewyn for Bombay, Port Okha, and/or Bedi Bunder (Jamnagar), and Karachi (London, August 2).

Cunard Line.—S.s. Bantria, closing in Liverpool July 19 and in Swansea July 22 for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Corfu, Bari, Venice, Trieste, Fiume, and Shushak, also at Palermo, Messina, Catania, Gruz, and Ancona if inducement; closing in Glasgow July 22 for Casablanca, Gibraltar, Corfu, Bari, Venice, Trieste, Fiume, and Shushak, also at Gruz and Ancona if inducement; s.s. Bactria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if inducement (Glasgow, July 31; Liverpool and Swansea, August 2); s.s. Sea Rambler for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, Fiume, and Shushak, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if inducemen (Liverpool, August 16; Swansea, August 19).

Johnston Line.—S.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 9); s.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 13).

P. and O. Line.—S.s. Macedonia for Bombay (London, July 18); s.s. Burdwan for Calcutta (London, July 18); s.s. Ranpura for Bombay (London, August 1); s.s. Behar for Calcutta (London, August 1).

Prince Line.—S.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, July 30); s.s. Korean Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, August 2).

Ellerman and Papayanni Lines.—S.s. Maronian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 23); s.s. Lisbon for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 26; Swansea*, July 26); s.s. Malatian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 30); s.s. Mardinian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, August 2; Swansea, August 7); s.s. Oporto for Gibraltar, Algiers*, Oran*, Malta, Patras, Syra*, Smyrna, and Constantinople (Liverpool, August 16; Swansea*, August 16). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Messageries Maritimes.—(From Marseilles).—S.s. Angkor for Alexandria, Jaffa, and Beyrout (July 22); s.s. Pierre Loti for Naples, Piræus, Istanbul, Izmir, Rhodes, Larnaca, and Beyrout (July 29); s.s. Champollion for Alexandria, Jaffa, and Beyrout (July 29); s.s. Lotus for Alexandria, Jaffa, and Beyrout (August 5); s.s. Lamartine for Naples, Piræus, Istanbul, Izmir, Rhodes, Larnaca, and Beyrout (August 12).

Engineering Topics

(By An Engineering Correspondent)

Underground Ventilation.

The engineering lesson learned from the Holborn explosion of a few months ago, appears to be to have all underground tubes and conduits effectively ventilated. That is what I gathered from a chat last week at Scarborough with Mr. J. E. Parr, the Borough Engineer of Holborn, who read a paper on the subject before the Institute of Municipal and County Engineers at their recent conference at that town. It appears, as a result of the full investigations, that the old pneumatic tube under Holborn, which had been taken over by the Post Office, had, just prior to the disaster, become effectively filled with an explosive mixture of gas and air, and that this was ignited by a petrol lighter used by a workman in order to see if certain cables carried in the tube were in order. The explosion, which was of a slow character and of varying intensity according to locality and, presumably, the gas content of the tube, wrecked about two-thirds of a mile of London streets. The whole subject was thoroughly discussed at the conference, and Mr. Parr, who has evidently gone deeply into the matter, is to be congratulated on his excellent paper.

The paper read by that eminent engineer, Mr. William Muirhead, on "Estimating the Cost of Public Works" was most interesting and valuable, containing as it did, almost in tabloid form, all that an engineer would need to know on the subject. One of the points he made was that the cost of site supervision should include the cost of the necessary resident engineering assistance, competent foremen and clerical staff for time keeping, etc. On smaller classes of contract one man may perform several of these duties, but in more important work requiring a formidable organisation, an agent and sub-agent may be required as well as inspectors, time keepers and cashiers, and it may always be assumed that the right supervision, whatever it may cost in salaries, is a real economy. All estimators should, therefore, make a liberal allowance for this. Experience shows, he said, that amongst the many things to be purchased for the proper carrying out of works, the best value obtained is from the money spent on the highly paid services of a first-class executive civil engineer. Under the heading of head office supervision should be provided the expense of the staff for the purchasing of materials from merchants, the necessary insurances for workmen's compensation, and health, unemployment and third party risks. The head office should also arrange for the necessary financing of the scheme of operations, and is usually entrusted with the responsibility of making the measurements of work done during progress of the undertaking, and the final settlement of the quantities.

Provision should also be made in some form or other for unforseen expenditure which must inevitably appear as the work proceeds, such as extraordinary pumping, damage to roads and property, insecure foundations, and the like. This provision is one which may either be met by an item and a special sum of money in a Bill of quantities, or may be added to the total prices on a percentage, but the engineer will adopt the method which his special knowledge tells him is most suitable. Regarding contractors' margin, in many works contractors are employed, but whether the work is so carried out or done by the direct administration of the engineer without a contractor, an allowance in every estimate should be made under that heading. Many other costs were dealt with, including that of transport, and Mr. Muirhead said that the estimate of the cost of transport usually turns on the location of the source of supply of the materials to be purchased, their nature and the situation of the proposed work. For short haulage journeys, horse tractors may in many cases be found the most economical. In other cases, motors, large or small, may be considered and in others the construction of light railways may be found to be the most economical method of having the material brought to the site of the works.

In thus arriving at the initial prices, the engineer knows from a comparison with other undertakings what certain of the main items of cost referred to will cost in relation to others. It may be that for certain of them a percentage can, in some cases be adopted, but Mr. Muirhead's view is that nothing can be definitely laid down regarding that, but that in every case the engineer should decide according to the experience he has had in such matters.

Important New Waterworks Plant.

The subject of water purification for town supply is of particular interest for the East generally, and in this connexion a great advance, especially with a supply of doubtful quality, is represented by the New Langford Waterworks plant, now in successful operation, at the Southend Waterworks Co., at Southend-on-Sea (Essex). This deals with a difficult raw water.

The plant is designed to provide a supply of 7,000,000 gallons of purified and softened water per day, the raw water being taken from the rivers Chelmer, Ter, and Blackwater, having a total hardness of 33 parts per 100,000, comprising 23.6 temporary and 9.4 permanent. The water is stored in a reservoir divided into two sections, each of 30,000,000 gallons capacity, the area when full is about 10½ acres, and the general method adopted is to allow the raw water to lie in these reservoirs for eight or nine days, and then to treat it with excess lime which precipitates as calcium carbonate, almost all the temporary hardness, and at the same time a pronounced sterilisation. The treatment in this latter respect follows the suggestion

made a number of years ago by Sir Alexander Houston of the Metropolitan Water Board (London) but hitherto no success has been made on the large scale.

The pumping plant consists of two sets of vertical steam driven triple expansion units, each with a duty of 4,000,000 gallons per day with steam at 210 lb. per square inch pressure and 150 degrees Fahr. superheat, and a third set is now to be erected. With regard to the special lime process the raw water from the storage reservoirs flows over a weir which divides the water into two parts, one about 86 per cent. of the total volume and the other 14 per cent. To this smaller bulk is added lime cream to form lime water, which is then added to the main bulk of the water, along with alumina coagulent, so that in the mixed water there is a definite excess of lime, about 2 grains per gallon. A heavy precipitate results and after about 20 minutes the water is then passed to primary settling tanks where the bulk of the precipitated material, chiefly calcium carbonate, as stated, separates by gravity. The partly clear water then goes to three sets of long rectangular contact tanks, each 2,000,00 gallons capacity, and from there through a carbonising chamber for treatment with CO_2 gas which first precipitates the excess lime as calcium carbonate, and then to a slight extent redissolves it as carbonate. The final filtration takes place by means of a battery of 14 "Patterson" rapid gravity sand filters, each 24 feet by 14 feet, with compressed air cleaning on the well known lines developed by the Paterson Engineering Co., Ltd., of London.

In addition there is installed at Southend an ingenious automatic delivery device for the lime cream which adds to the hard water any desired amount of lime per unit volume of water, readily variable in proportion to the total flow. The results are excellent and no Bacillus Coli is found in 100 c.c. of the softened and purified water, while the harness is always considerably below the figure of 15 parts per 100,000 as required by the Southend Waterworks Act of 1924.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended July 5:—

Large shipments of grain continued to be effected this week for Rotterdam as well as for Antwerp, in consequence of the better feeling which set in on consuming markets, and had it not been for the scarcity of grain at the shipping centres, due mainly to the peasants being busy on the fields with the reaping of wheat, barley, etc., much brisker business would have resulted. For English destinations the inquiry has, as anticipated, also become livelier and fairly large quantities have been shipped this week to U.K. ports. The demand for the Mediterranean was quiet. Chartering was also fairly active for prompt July as well as August loading, freights remaining in the neighbourhood of 13s. 9d. to 14s. full terms Antwerp/Hamburg range for both months. At Constantza the position improved somewhat and berth rates of freights consequently rose to 8s. 6d. prompt and 8s. July.

Timber freights continued depressed owing to the low prices of timber in general. A parcel of about 100 waggons Rouen has been placed at £8 10s. per waggon and a similar parcel for Rotterdam at £8. Mediterranean chartering is confined for the moment to a few Greek ports and Alexandria at previous rates. The Turkish Government having granted facilities for the import of about 200 waggons for Smyrna, where otherwise a prohibitive import duty is applied, two small steamers have been berthed for that port at £6 per waggon. Important parcels are in the market for Naples and South France at £7 5s. and £7 15s. respectively. There is also an inquiry for about 300 waggons whitewood, beech, and oak for Spain, for which £10 10s. is quoted.

The weather has been generally fine. The intense heat of last week continued till Tuesday, since when it has been somewhat cooler. Thunderstorms of short duration have brought beneficial moisture in scattered areas, but the need of more rain for the maize is being felt in many parts. Cloudbursts have again done more or less severe damage to crops and buildings in a few places and have caused interruption of railway traffic in several places on branch lines. The harvesting of straw crops is now in full swing and reports are favourable regarding the quantity and quality of the yield, especially that of wheat. The Ministry of Agriculture and Domains reports the agricultural position at the end of June as follows: The state of the crops in the second half of June was very satisfactory. The wheat ears are well developed and the hot weather favours ripening. The cutting of autumn sown barley has been effected everywhere under favourable conditions. In some regions of the plain of the Pruth and Bessarabia need of rain is still felt. In the counties of Baia and Dolj invasions of Russian caterpillars are reported. The locusts have been destroyed in the counties of Caliacra, Durostor, Constantza, Cetatea Alba, and Ismail; but they are still being combated in the Danube delta in rather difficult circumstances. The following are the preliminary estimates of the areas planted with maize this year (in hectares):—Bessarabia, 919,849; Bukovina, 52,616; Transylvania, 794,948; Old Kingdom, 2,418,532; total, 1930, 4,185,945 ha., a reduction of 12.7 per cent. compared with 1929 (4,794,952), but nearly 3.2 per cent. increase over 1924-8 (4,057,316). Beans in separate fields have been planted on about 93,000 ha., against 79,932 in 1929, and 97,373 average in 1924-1928.

In view of the critical economic situation, due largely to the stagnation of grain exports resulting from over-production and low prices, the Government has decided to reduce export duties on grain as follows:—Wheat and rye, 280 lei to 100 lei per ton; barley, 280 lei to free; maize and oats, 280 lei to 140 lei per tons. The Railway Administration has agreed to a freight reduction of 10 per cent. on all cereals, excepting wheat and beans, exported up to August 1.

The reduction in the import duty on jute sacks from 12 lei per kilo. to 2.50 lei per kilo., allowed by a Government order issued on August 10 last, has been modified so that in future the reduction without special order will only be allowed on sacks imported by agriculturists and millers. Sugar, cement, etc., factories will be allowed to import sacks at the reduced rate subject to special permits being obtained.

Constantza.—About 13,000 tons of grain were shipped to the Rotterdam/Hamburg range and 1,000 to the Mediterranean. Nine vessels loaded over 42,000 tons petroleum products and two took oil fuel for bunkers.

Company Meetings.

BANK OF ROUMANIA.

Adverse Economic Conditions.

The twenty-seventh annual general meeting of the Bank of Roumania, Ltd., was held on July 9 at Winchester House, London, E.C.

General the Hon. Sir H. A. Lawrence, G.C.B. (the Chairman), who presided, in moving the adoption of the report and accounts, said:—The uncertain outlook in Roumania, to which I referred at the last annual meeting, has unfortunately continued and no immediate prospect of improvement can be seen. Firms of standing in that country have felt the effects of the prolonged period of trade depression and have found themselves in difficulties. There have been a number of failures, properly secured advances are difficult to place, and interest charges have fallen with the attendant effect on banking profits. Naturally, our own clientele has suffered and your Directors have deemed it expedient to follow the most conservative of policies, while effecting every possible economy both in London and Bucharest.

An outstanding feature of the year under review was the flotation of the Stabilisation Loan. As a result, the State debt to the National Bank has been considerably reduced and that institution is thereby placed in a stronger position for carrying out its functions of regulating credit and maintaining the stability of the company.

The total imports for 1929 were valued at 30 milliards of lei. Up to the end of August imports exceeded exports, but from September onwards, owing to grain shipments, the trade balance improved. Exports were valued at 29 milliards of lei. The exports from Roumania to Great Britain during 1929 were valued at £2,983,000, against £1,752,000 in 1928. The imports into Roumania from Great Britain in 1929 totalled £2,319,000, as compared with £2,859,000 in 1928.

In accordance with anticipations, the harvest for 1929 was the best since the War, especially as regards barley and maize. It is estimated that the total production of cereals was 13 million tons, of which 5 million tons were available for export. Of the exportable surplus only 1,700,000 tons were shipped up to the end of 1929, as sales were effected with difficulty owing to competition and tariff barriers. It is hoped that the export of the remainder will become easier under the provisions of certain commercial treaties now being negotiated with some of the Western European countries which formerly constituted the chief markets. The following telegram has just been received from our Bucharest Manager:—"Present indications lead us to believe surplus available for export is:—Wheat, 60,000 wagons; barley, 150,000; oats, 40,000; sundries, 50,000 wagons. Too early estimate maize, but crop showing well. Expect 200,000 wagons. Best harvest for many years, but price 50 per cent. to 60 per cent. less than last year."

The crisis in the oil industry continued throughout 1929 and is attributed to world over-production which kept prices low and non-remunerative; whilst as regards internal sales, the oil companies competed severely with each other. In spite of these unfavourable circumstances, an extensive programme of boring operations was carried out, thus further increasing production. The oil companies hope for more satisfactory results in 1930 from new methods of boring at a reduced cost and from their efforts at rationalisation of production.

Railway receipts for 1929 totalled 11 milliards of lei and expenditure amounted to 12 milliards. Steps have been taken to cover the resulting deficit of 1 milliard lei. With the help of part of the proceeds of the Stabilisation Loan, transport conditions were considerably improved. The provision of additional rolling stock and locomotives enabled the railways to meet the transport needs of the country during the grain export season, and goods traffic noticeably increased during 1929. The Railway Budget for 1930 amounts to approximately 13 milliard lei.

The good harvest did not produce the beneficial results that had been anticipated. The world supplies of grain and the consequent fall in prices robbed Roumania of about 60 per cent. of the benefits which it was expected would have been realised on the 1929 harvest. Owing to these conditions the Government have decided to create the Agricultural Credit Institute for the assistance of agriculture.

The National Bank took a stricter view of bills presented for discount, and the volume of discounts showed a diminution as compared with the previous year. The fiduciary issue also reflected a decrease. The National Bank placed at the disposal of institutions having funds lying idle Bons de Caisse for a minimum of ten million lei each, bearing interest at 6 per cent. per annum for one month, and 7 per cent. per annum for two months.

During 1929 the Government continued its endeavours to bring about a more normal state of affairs. Regulations regarding State properties, the Mining Law, and the Fisheries Law have been modified and negotiations for commercial treaties have been initiated. During the last weeks there has been a change in the Government of the country: Prince Carol, with the assent of the people, having returned from exile and been proclaimed King. Complete tranquillity reigns in the country and there is no reason to suppose this will be in any way changed.

Before resuming my seat I have pleasure in referring to the co-operation of Lord Goschen who, since the last annual meeting, has rejoined the Board. Lord Goschen was associated with the bank for many years prior to his departure for India in 1924, and we welcome his return.

The motion was carried unanimously.

THE P. AND O. BANKING CORPORATION.

A Difficult Year.

Satisfactory Results.

Lord Inchcape on Eastern Trade.

The tenth ordinary general meeting of the P. and O. Banking Corporation, Limited, was held on July 11 at 122, Leadenhall Street, E.C.

The Right Hon. the Earl of Inchcape, G.C.S.I., G.C.M.G., K.C.I.E. (the Chairman), who presided, said:—Gentlemen,—The result of the year's trading has left us with a profit of £107,345 4s. 4d., which is slightly in excess of that shown in the previous year.

There has been some variation in our balance-sheet figures which I will proceed to explain. Last year there was a decrease in our loans, and you will observe that this year the figure has been restored to the normal amount to which we have been accustomed.

The special causes which last year induced us to lighten our holdings in bills and investments having disappeared, we have increased our loans against such investments.

There is also, as you will see, a gratifying increase in our current, deposit, and other accounts, which have risen from £7,250,000 to over £8,000,000; against these liabilities we are holding a larger amount of cash in hand, and with an increase in the item of bullion in hand the figure of our resources available to meet our liabilities on current account stands at £1,532,000. Our advances to customers continue on much the same level as in the previous year, and I am glad to say that they are all in a good and healthy condition.

Bills receivable are considerably up on last year; they are nearly £6,000,000, as against just over £3,000,000 in the previous year. Our investments have increased by £970,000.

BANQUE FRANCO-BELGE ET BALKANIQUE

Joint Stock Company

Capital - Leva 150,000,000 fully paid up.

Affiliated to the Banque Belge pour l'Etranger (a foundation of the Société Générale de Belgique), Banque de l'Union Parisienne, Wiener Bank Verein, Oesterreichische Credit Anstalt für Handel und Gewerbe, Ungarische Allgemeine Creditbank.

Over-production of Commodities and Decline in Prices.

Instability in all markets and throughout the world has been the keynote of the past year. Bank rate, which at March 31, 1929, was 5½ per cent., at the close of our year had been reduced to 4 per cent. after undergoing six changes. International money conditions have been affected by these fluctuations to an unusual extent. Commodity prices have suffered a severe and continuous decline, which is estimated in respect of those commodities which form the subject of Index Numbers at not less than 12 per cent.

Throughout the world there has been over-production, more particularly in raw and primary materials for industrial productions. I may instance in illustration the large supplies of wheat and cotton, the first of which is estimated to amount to 1,500,000,000 bushels, as against 1,455,000,000 bushels a year ago; while the world's visible supply of cotton is estimated at 1,200,000 bales higher than a year ago. Until this surplus of supplies over demand is overtaken by the consumptive capacity of the world we cannot expect to see a stabilisation of prices sufficient to restore the confidence which has been disturbed by the severe depreciation to which I have referred.

Difficulties in India and China.

In India and the Far East two additional causes have affected the volume of trade and aggravated the difficulties of the economic conditions to which the whole world has been subject. In India an acute hostility to established authority and a boycott of British goods have rendered business very difficult and in many cases impossible, while in China the almost daily continuance of the fall in price of silver has dislocated both the import and export trades and has reacted on the stability of existing trading firms.

In conditions such as I have sketched above trading has been unusually difficult, and we are greatly indebted to the management at home and abroad for the results achieved, and I feel sure you will wish to tender our cordial thanks to all our staff at home and abroad for their care and efforts on our behalf.

Progress of the Allahabad Bank.

Our affiliated bank, the Allahabad Bank, has again, I am glad to say, made good progress. Like all other Indian banks, which must necessarily hold a large amount of Indian Government securities, they have not escaped the effect of the sharp fall in the prices of these investments. A very considerable proportion of this fall will be recovered when these securities mature, and by far the greater proportion of the Allahabad Bank investments is in Government bonds maturing within the next four years.

The Chairman concluded by moving the adoption of the report and accounts.

The Right Hon. the Earl of Selborne, K.G., G.C.M.G., seconded the resolution, and it was carried unanimously.

On the motion of the Chairman, seconded by Mr. W. E. Preston (deputy-chairman), a dividend of 5 per cent., less income tax, was approved, payable on July 18.

The Directorate.

The retiring directors, Mr. W. E. Preston, Mr. Colin F. Campbell, Mr. E. F. Mackay, and Mr. A. D'A. Willis, were re-elected, and Messrs. Peat, Marwick, Mitchell, and Co., were reappointed auditors.

The Chairman proposed a resolution increasing the remuneration of the directors. He said that he made this proposal with the less hesitation, as he himself drew no fees as a director of the company.

The resolution was seconded by Mr. E. T. Hargraves and carried unanimously.

Mr. Hargraves proposed a vote of thanks to the chairman, directors, management, and staff, remarking that shareholders might rest perfectly satisfied so long as their interests were in the hands of Lord Inchcape and his colleagues. (Hear, hear.) They had achieved wonderful results in a difficult year, and he thought it would be the wish of the shareholders to thank the Board and management for the admirable way in which they had carried out their duties. (Cheers.)

The vote was seconded by Mr. Pitt and unanimously accorded, a brief acknowledgment by the Chairman concluding the proceedings.

LATIFIYAH (IRAQ) ESTATES.

Progress of Development Work.

Sir Edward Manville's Speech.

The ordinary general meeting of Latifiyah (Iraq) Estates, Ltd., was held on July 15 at the registered offices, 10, St. James's Street, London. Sir Edward Manville (the Chairman) presided.

The secretary (Mr. W. S. Gregg) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—Gentlemen,—At the last annual general meeting of shareholders, I went fully into the position of the company at that time, and which arose out of our relations with the Iraq Government, so I do not think I need go over the ground again. It will be remembered, however, that we were not then in possession of the title deeds of the Latifiyah Estate, this being the only matter outstanding at that time. The delay was due, I am informed, to the necessity of surveying the land taken up by the road and railway which intersect the estate, but I am now pleased to inform you that the Government of Iraq has issued to your company the Tapu Deeds of the estate.

Your company now owns an estate of approximately 60,000 acres situated a short distance (23 miles) from Baghdad, and I am glad to say that all the information we have received—much of it from disinterested parties—since we took over the property, confirms previous reports. The task before us is actively to develop this estate, by which means we hope the patience of our shareholders will, in due course, be rewarded. Our property covers a considerable area, and it cannot be brought into cultivation in a short time. We must proceed by stages and not attempt anything of a spectacular nature at the outset.

We are the pioneer agricultural company in Iraq controlled by European interests, and the Government and the Iraqis look to us to establish a high standard of efficiency; in fact, we have to show what land will produce when properly cultivated by the most up-to-date methods. Any failure to do this would be a serious reflection on our ability and enterprise. The first steps to accomplish our object have already been taken, and, as you will have learnt from the reports, the construction of the first 20 kilometres of the main irrigation canal is already well advanced. The contract was approved at the beginning of 1929 and a large labour force has been engaged on this work ever since, except during the period of the flood, when the labour was required by the Government elsewhere. The amount of earth to be removed is considerable (800,000 cubic metres), and time must be allowed for this work to be accomplished. The contractors are at present behind their schedule, but as a result of representations made to the Iraq Government, jail labour has now been brought in to supplement the ordinary labour, and we are informed that our main irrigation canal will be completed in time to enable winter crops to be sown.

The canal as at present designed will serve by flow approximately 32,710 acres and by lift 2,200 acres, equal to a total of 35,000 acres, which lie to the east of the Baghdad-Basrah Railway. The above area is divided into two more or less equal parts, which will be watered in rotation, and each given alternate periods of seven days' water at the full discharge of the canal. Half of the total area can be put under winter crops in one season, viz., 17,500 acres, while the approximate area of summer crops which can be irrigated is 5,833 acres.

The main canal has been so designed that the earthworks can be conveniently enlarged when the need for so doing arises. The major works, such as head works, bridges, etc., have been constructed to take the full discharge required for the whole estate—the area irrigable by the major scheme is:—(a) By flow, 32,710 acres, and 10,904 may be summer crop and the balance winter crop; and (b) by pump, 25,100 acres, and 8,366 may be summer crop and the balance winter crop.

The contractors undertook to complete the first section of the canal by March 31, 1930, but the unprecedented floods on the Euphrates River during May and June, 1929, caused delay, and an extension of six weeks was recommended by the irrigation authorities. By the end of April, 1930, there was still approximately 300,000 cubic metres of earth to be moved, but we are informed this will all be completed in time to enable us to carry out our autumn programme.

Contracts have already been placed for an extension to the canal of a further 5 kilometres, and a parallel subsidiary canal and three other subsidiary canals have also been put out on contract. We are informed that satisfactory progress is being made on all these works. With regard to the head works, these are in the hands of a well-known contractor, the excavations are now complete and the founda-

Digitized by Google

tions are being constructed. We are advised that this work will be completed in the time allowed for in the contract.

The company's first task will be to farm a certain area on its own account, and the success we obtain with this area will have a most important bearing on the future of our company. We are a "land" company and our task is by up-to-date methods and efficient administration to raise the value of our land above the market price now prevailing. We can only establish this higher standard of values by modern cultivation and marketing, and we feel confident that this object can be achieved.

The motion was carried unanimously.

CABLES AND WIRELESS.

Effects of Trade Depression.

Mr. Denison-Pender on the Outlook.

The first ordinary general meeting of Cables and Wireless, Ltd., was held on July 15 at the Cannon Street Hotel, E.C., Mr. J. C. Denison-Pender (Governor and Managing Director of the Company) presiding.

The General Manager and Secretary (Mr. Edward Wilshaw, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Governor, in moving the adoption of the report and accounts, said:—This company came into being in April, 1929, as the holding company which brings together the traffic business of the Cable Companies and the Marconi Company (now operated by Imperial and International Communications, Ltd.) the non-traffic interests of the Cable Companies (in effect a big investment trust business) and the research, manufacturing and licensing interests of the Marconi Company. To some extent the statement I have to make to you to-day has been anticipated in the report of Imperial and International Communications, Ltd., in the speech of Lord Inverforth at the Marconi Company meeting yesterday, and at the meetings of the various cable companies also held yesterday, but I shall not hesitate to repeat what has been said elsewhere, if repetition appears to me to be necessary to a clear and comprehensive survey of the position. As stockholders of Cables and Wireless, whose fortunes depend on the working of all the companies included in the merger, you will expect me to sum up and bring together the outcome of these separate activities.

The calling of the Imperial Wireless and Cable conference, which resulted in the formation of the merger companies, was not, as is sometimes suggested, due to the initiative of the Eastern and Associated Telegraph Companies. It arose from the fact that the Post Office, as a result of its purchase from the Marconi Company of the beam stations, was fast destroying the revenue of its own cables and of the Pacific Cable Board, whose capital was held by the British Government and the Governments of Australia, Canada, and New Zealand. These Dominion Governments had made it clear that they were not prepared to see their property ruined by the competition of one of their partners on the Pacific Cable Board. It was obvious to them, as it was to us, that the only solution of the problem was the bringing together under one control of all the telegraphic circuits of the Empire, whether cable or wireless.

The source from which Cables and Wireless derives its income, and from which it pays dividends, is the dividends it receives from the Cable and Marconi Companies. The Cable Companies have investment reserves from which they derive interest, and the Marconi Company has manufacturing and other interests from which it derives profits. To these are added the dividends these four companies receive from Imperial and International Communications, Ltd. You will see, therefore, that our income is derived from three sources:—The traffic business of Imperial and International Communications; the interest on the investments of the Cable Companies; and the profits from the manufacturing and other non-traffic interests of the Marconi Company.

If you will refer to pages 4 and 5 of the Directors' report you will see that the income of the company for the 21 months now in question is set out in accordance with its sources.

I come now to our communications business. The results are frankly disappointing. It is the usual experience that big results and increased revenue cannot be looked for in the first year or two of the working of a rationalised business. I may remind you that at the general meeting of the Eastern Telegraph Company as long ago as May of last year, to which I have already referred, I said:—"It must not be anticipated that the full dividends on the 'A' Ordinary shares or a dividend on the 'B' Ordinary shares will be paid at the outset, for while we are confident as regards the future of these new undertakings, it must be some time before complete co-ordination, with its resulting economies, can be effected, and before the other benefits which should flow from the combined undertakings can be achieved."

At the same time we certainly did not look for so large a gap between the standard revenue and the actual figure for the first year. As against £1,865,000, the revenue actually secured during the 21 months was at the rate of £1,156,000 per annum only, and, as already indicated, we cannot safely reckon on more than £600,000 from this source in the year 1930. The reasons for this big fall in revenue are set out at length in the Communications Company's report. We have had the misfortune to run up against an unprecedented period of trade depression just at the moment when we are reorganising these world-wide telegraphic services.

In regard to traffic revenue, on which the prosperity of our company must principally depend, we look forward with confidence, because we have faith in the future of the British export trade and the prosperity of the British Empire. Almost every one of the great exporting undertakings of this country is going through a bad time, probably the worst time within the memory of anyone living. I refuse to believe for a moment that the present conditions are permanent. While it is impossible to prophesy how soon the export trade of this country will turn the corner, I am certain that it will be turned. The energy and skill of our exporting manufacturers, the unsurpassed quality of their products, must reap their reward as soon as world economic conditions show an improvement.

After discussion the report and accounts were carried by an overwhelming majority.

COMPANY NOTES AND REPORTS.

FURNESS, WITHY.

The report of Furness, Withy and Co., Ltd., for the year ended April 30, 1930, states that the profits, after providing for taxation, and including the balance brought forward, amount to £860,233 10s. 6d. The usual half-yearly dividends on the Preference shares were paid on November 1, 1929, and May 1, 1930, and an interim dividend was paid on the Ordinary shares at the rate of 5 per cent., less income tax, on December 31, 1929. The Directors recommend the payment of a final dividend of 5 per cent., less income tax, on the Ordinary shares, making a total dividend of 10 per cent., less income tax, for the twelve months ended April 30, 1930. A sum of £250,000 has been transferred to the depreciation account, leaving a balance of £236,171 0s. 6d. to carry forward to next year's account.

LATIFIYAH (IRAQ) ESTATES.

The report for 1929 of the Latifiyah (Iraq) Estates states that substantial progress has been made in the construction of the first 30 kilometres of the main irrigation canal. There have been occasional shortages of labour, but the irrigation authorities have taken steps to provide additional labour facilities to enable the contractors to complete the first section of the canal so that the company can proceed with its autumn programme. Contingent upon the canal being completed in time for the autumn programme of 1930, the Directors proposed to proceed to develop the northern section of the area irrigable by flow comprising approximately 16,000 acres. This area will be cultivated partly on the share system, partly on the basis of a fixed rental, while certain acreages will be farmed by the company on its own account. During the winter of 1931-32 the southern section will enter into cultivation, when it is hoped to increase the area farmed by the company and to prepare for the development of those areas irrigable by lift. Since the close of the financial year the Government of Iraq has issued to the company the Tapu deeds of the estate, and 30,000 fully paid 10s. shares have been allotted to the nominees of Eastern Irrigations, Ltd., in accordance with the provisions of the agreement dated December 22, 1927.

CYPRUS CROP PROSPECTS.

The report on Cyprus crops for June states:—

Wheat.—Climatic conditions favoured the further development of rust and heavy losses are reported from the Messaoria. On the whole production is not up to expectations and is below the average. Prices are 4s. 6d. to 5s. per bushel. New wheat is on the market.

Barley.—Threshing is now in progress. Production is estimated just below the average. A good stock is on hand. The price is 1s. 4d. per bushel.

Potatoes.—The new crop is very good both in quality and quantity. The market is very weak. Prices are £2 10s. to £3 per ton.

Cotton.—Planting is practically completed. Irrigated cotton is very promising and climatic conditions continue favourable. There is practically no stock in the hands of farmers.

The traffic receipts of the Egyptian Delta Light Railways, Ltd., for the ten days ended June 20 amounted to £E6,802, making the total from April 1 £E62,149, as against £E68,744 for the corresponding period of the previous twelve months.

The Sudan Plantations Syndicate announce an interim dividend of 5 per cent., compared with 10 per cent. last year, on the capital of £2,250,000. The dividend, less Sudan business-tax and British income-tax, is equal to 9.43453d. net per share and will be payable on July 31 to holders registered on July 19.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 9:—

Egyptian Futures.

Sakel Contract.—With no fresh developments occurring to give the market a decided tendency, business during the past week has been on a moderate scale. A slight hardening in values took place prior to the week-end owing to a restricted amount of "short" covering, but since this a minor set-back in the American markets has reacted on our contract to the extent of neutralising the earlier gains. The only position on the board to register any material difference since we last wrote is the current option; with the early tenders out of the way, July closed up again with new crops. Probably the outstanding interest in the month in question is relatively small, but with so little cotton here to cover the contract it certainly appears advisable for those who have "on call" or hedge commitments to square their accounts without delay. The Alexandria market has furnished consistently steady quotations throughout the week, and even a favourable official crop report covering conditions up to the end of June failed to depress these.

Trade reports continue to be unsatisfactory, but on the whole spinners have shown rather more interest in their qualities during the past few days, and the demand has an improving tendency. The market has the appearance of stabilising in the neighbourhood of ruling levels for the immediate future; those who look for lower prices are nervous to commit themselves to any extent at the present juncture owing to the total carry-over being in the Government's hands, and to fears of any crop sales emphasising the lack of contracts through this cause. Alternatively, those who consider prices have worked down to a reasonable level, are unable to indicate any factors likely to induce a material or sustained upward movement.

Upper Contract.—Very little interest has been shown in this contract by either trade or speculative operators during the past week, and values have fluctuated closely with the movements in the American department. Old crop positions continue to be well held, July again reverting to their premium of 60 points over Novembers. The local stock of tenderable cotton is now so restricted that the month in question may easily be manipulated to a still higher level between now and its expiration. Crop reports from Egypt continue to be highly satisfactory, and, provided nothing unforeseen occurs during the next few weeks, a record crop is confidently anticipated.

Egyptian Spot.

The amount of business transacted has again been on a very moderate scale. The mill holidays are not yet finished, and a certain number of mills have taken the opportunity of remaining closed for a further period. Nevertheless, interest in Egyptian growths, with the exception of Sakel, has been maintained and there are signs here and there that we are approaching rather better times. To-day, following immediately upon the acreage report issued by the U.S. Government, we have witnessed the largest inquiry we have seen for weeks past. Up to the time of writing, however, the actual results have again proved disappointing.

Sakel.—This cotton has suffered from neglect. It is now well known that the local stock is a very meagre one and that much of it is based on Alexandria limits. It is, therefore, only natural that spinners should prefer to search the stocks of outside growths (Sudan Sakel, Tokar, etc.) in the hope of obtaining a cheaper mixing. There have been a few inquiries for cotton at from 50 to 150 on, and in a higher range from 250 to 300 on, but, on the whole, sales have been unimportant.

Uppers.—These have been in fairly good request at from 50 to 100 on, and a certain amount of business has been done up to 10½d. per lb. The total business transacted, however, has been insufficient to raise prices more than a few points. A feature of the week has been the numerous offers received from the Continent for cotton lying there.

Pilion.—Little interest has been shown in this growth.

Nahda has been in somewhat improved request at from 10½d. to 11d., but results have much to be desired. Alexandria is pressing this cotton for sale and offers have been made for prompt shipment, which appear extremely reasonable compared with the prices asked for other Egyptian growths. It is a cause of surprise to us that spinners do not appear able to make more use of this cotton.

Maarad Cotton.—Some inquiry has been met with, but business is still pending, and actual results, so far, have been practically nil.

White Cotton, Fouadi, Farouki, etc.—Business in these varieties has been of a very hand-to-mouth character.

Sudan Sakel.—The inquiry for Sudan cotton continues to broaden; a fair business has been done at steady rates and more appears to be pending.

Tokar Sakel.—Less business has been done this week.

C.i.f. business remains practically at a standstill. Forwardings have been returned at 1,161 bales Egyptian and 322 bales Sudan. Spot sales have been estimated at 1,500 bales Egyptian and 800 bales Sudan Sakel. Quotations of Sakel have hardened 5 points on balance, Uppers 9 points, and Pilion 8 points. F.G.F. Sakel to-day, 12.15d. F.G.F. Upper to-day, 9.60d. F.G.F. Pilion to-day, 10.35d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended July 3:—

The market has been active during the week, but fluctuations have been confined to narrower limits than has been the case recently. The week's summary of price movements is as follows:—July, 28.00 dollars, unchanged; November N.C., 22.95 dollars, 0.18 dollars down; January N.C., 23.14 dollars, 0.22 dollars down; March N.C., 23.59 dollars, 0.11 dollars down. Ashmouni: August, 16.21 dollars, 0.24 dollars down; October N.C., 15.65 dollars, 0.09 dollars down; December N.C., 15.86 dollars, 0.01 dollars down; February N.C., 16.21 dollars, 0.03 dollars down; April N.C., 16.52 dollars, 0.03 dollars up; June N.C., 16.78 dollars, 0.04 dollars up.

The Imperial Bank of India has reduced its rate of discount from 6 per cent. to 5 per cent.

The Swedish Match Company is to construct a new factory near Istanbul.

The Bulgarian Customs and Excise duties on benzine (motor spirit) are now levied on the basis of 15 paper leva to 1 gold leva.

The Egyptian Government have given a contract to Swan, Hunter, and Wigham-Richardson, Wallsend-on-Tyne, for the construction of a fishing research vessel, 148 ft. long. The vessel will be fitted with wireless telegraphy and experimental tanks.

The Directors of Westminster Bank, Ltd., have declared an interim dividend of 10 per cent. for the half-year ended June 30 on the £4 shares, and the maximum dividend of 6¼ per cent. on the £1 shares for the same period. The dividends, 2s. per share and 1s. 3d. per share respectively (both less income tax) will be payable on August 1.

CYPRUS EXPORTS IMPROVING.

The Cyprus trade report for May shows a considerable improvement in exports, but a further decline in imports, as compared with the previous month, but both were below those for the corresponding period of 1929. The following are the values of imports and exports for the five months, January to May, for two years:—

	Imports.	Exports.
	£	£
1929 ...	793,497 ...	700,833
1930 ...	659,130 ...	510,049
Decrease ...	134,367 ...	190,784

The principal decreases in imports as compared with May last year, were:—Coffee (—£2,124); cotton goods (—£7,182); flour (—£18,671); motor cars (—£8,000); sacks (—£2,965); and woollen goods (—£1,816). There was an increase of £8,439 in machinery. The principal decreases in exports were:—Asbestos (—£10,110); carobs (—£19,174); potatoes (—£4,062); raisins (—£3,196); silk (—£1,673); wine (—£5,035); and wool (—£4,468). It is gratifying to note the following increases in exports: Animals (plus £4,358); cotton (plus £1,831); oranges (plus £1,929); tobacco (plus £3,184); and embroidery (plus £1,922).

NEWS FROM ALL SOURCES.

A Cairo message states that Messrs. Dorman, Long and Co. have definitely been awarded the contract for the construction of the new Kasr-el-Nil Bridge.

Yugoslavia's exports in May last amounted to 414,765 tons, of the value of 542,507,847 dinars, compared with 401,117 tons, of the value of 533,661,310 dinars. During the first five months of the current year the exports amounted in value to 2,854 million dinars, as against 2,459 millions for the corresponding period of 1929.

According to *Der Deutsche Fruchtgrosshandel*, prospects for the plum crop this year both in the Serbian and Bosnian producing districts give no hope of a larger yield than last year. On the contrary, a smaller crop is anticipated. The blossoming period was very promising, but there followed considerable dropping. Prospects in Serbia are better than in Bosnia. Old trees are reported to have suffered so severely from *Schildlaus* attacks that their bearing capacity is almost destroyed.

The members of the Cyprus trade delegation which is visiting Palestine, Syria, Egypt, and Greece with a view to the development of trade with those countries, arrived in Egypt on July 3 on the conclusion of their visit to Palestine. After spending some time in Cairo and Alexandria they left for Greece. The delegation is in charge of Mr. M. T. Dawe, O.B.E., Director of Agriculture, the other members being Mr. H. Llewellyn-Jones, Chairman of the Agricultural Bank, Mr. N. P. Lanitis, Director of the Cyprus Wine Company, and Mr. Caduana, Chief Clerk of the Treasury, as Secretary.

Notes of the Week.

An Egyptian Roland for an Oliver.

There can be no question as to the spirited nature of Sidky Pasha's reply to Mr. Ramsay MacDonald's communication to the Egyptian Government, and it must be a long time since a British Government exposed itself to such a retort. It would be interesting to know what Mr. MacDonald had in mind when he announced that his Majesty's Government did not intend "to be used as an instrument" for an attack on the Egyptian Constitution, for it could hardly be supposed that the statement was merely gratuitous and could be countered, as it has, indeed, been effectually countered, by the simple reply that nobody thought of so using it. When Mr. MacDonald went on to say that the British Government "could be no party to an alteration to the electoral law," it was obvious that the speaker's prejudices were outstripping his better judgment. After the unfortunate flouting of the British Government's request that the draft proposals for an Anglo-Egyptian treaty should be submitted to the Egyptian electorate—when Mahmoud Pasha authorised the holding of elections and the Wafd refused to allow any reference to be made to the proposed treaty—it would have been thought that Mr. MacDonald would avoid all further interference in constitutional matters in Egypt or even indirect reference to the peculiar intepretation or application of constitutionalism there. Conditions in Egypt might be held to call for a reminder that Great Britain had not yet been able to divest herself of responsibility for the safety of foreign lives and property in that country, and the Egyptian Government might conceivably be informed that it could count on British co-operation, if it found itself unequal to the task of maintaining law and order. To hold, however, the Egyptian Government responsible for the maintenance of law and order, and at the same time to attempt to tie its hands to such a shibboleth as an electoral law would seem to be almost as helpful and intelligent as to call upon Sidky Pasha to see that instructions to the Egyptian police and military when quelling disorders are given in English, because that language is found more effective than Arabic in similar circumstances in London. It is difficult to see what interest Great Britain has in Egypt's electoral law. Judged by the ordinary canons of common sense, a wide franchise in a country with from eighty to ninety per cent. of the population illiterate would seem to be entirely out of place. Any modification of it, however, must be regarded as a matter of domestic politics for Egypt, without bearing on foreign interests.

"As You Were" in Egypt.

Apart from any infelicitous wording of the Government's communications, perhaps the main interest centres in the resumption by Mr. MacDonald's Cabinet of the policy which it claimed to have abandoned when it forced Lord Lloyd to resign his High Commissionership. In addressing a separate message to Nahas Pasha, who has nothing to do with the Egyptian Government, Sir Percy Loraine, under Mr. MacDonald's instructions, dons for the first time the mantle of his predecessors and issues, as a power above the Government, direct instructions to individual Egyptians. What Mr. MacDonald said in effect to Nahas Pasha was: "As no Egyptian Government seems able to keep the Wafd's rioting propensities within bounds, the British Government is obliged to take over the task itself again." The point seems to have escaped the notice of Nahas Pasha, although it was promptly challenged by Sidky Pasha. The Wafd leader welcomes the warning addressed to himself as evidence of the British Government's "strict neutrality," and continues on approved Codlin-Short lines, which, it is to be hoped, Mr. MacDonald will be able to take as unction to his soul for a reversal of his former policy. It remains only for Sidky Pasha to press home the logic of the situation and to convince the Egyptian people that, thanks to the Wafd's tactics—the promotion of disorders, with the implied menace to foreign interests—the great achievement of Mahmoud Pasha's Government in obtaining its draft of an Anglo-Egyptian treaty runs the risk of being effectually undone, unless the moderate section of Egypt's politicians, represented by Sidky Pasha and Mahmoud Pasha, contrives to rehabilitate Egypt in foreign eyes. Until this virus of rioting, of which the Wafd holds a monopoly, has been eradicated, not even a Labour Government in Great Britain can contemplate a completely independent Egypt. In a few weeks or days all the progress made since July, 1928, to which the return to power of the Wafd, after eighteen months in the political wilderness, with protestations of friendship towards Great Britain bore evidence, must be regarded as having been cancelled. The set-back will be regretted by those who hoped that the time had come when Anglo-Egyptian relations could be placed on a permanently satisfactory footing. The recent rioting, however, has proved that the work of leading the country to better ways, begun by Mahmoud Pasha, and now devolving on Sidky Pasha, may yet have to be continued for some time.

A Way Out.

An interesting contribution to the Egyptian problem is made by Ahmed Ziwar Pasha in *The Times* of July 21. He points out that "all Egyptians, moderates and extremists alike, are united in abhorring any return to abnormal conditions of government." In these circumstances there should be little difficulty in Egypt's finding a way out of the present *impasse*. There would have been no question of a suspension of the Constitution, unless a Bill for the Protection of the Constitution, prescribing intolerable penalties, had been submitted to the King for presentation to Parliament. Ziwar Pasha recalls the fact that in 1924 he "had unwillingly to take the extreme measure of suspending altogether Parliamentary life, in the hope of saving Anglo-Egyptian friendship at a time of mutual resentment and suspicion." Under the Bill for the Protection of the Constitution Ziwar Pasha would now be serving a sentence of penal servitude for life, instead of "voicing Egypt's will to live constitutionally and peacefully as a friend and ally of Great Britain." The only protection that the Egyptian Constitution needs is that no political Party should be guilty of making it unworkable. If the Party commanding a majority in Parliament refuses to hold office itself, it must give reasonable support to the Government that takes its place in order to carry on the routine administration of the country. A round-table conference of political leaders, at which each leader would pledge himself to listen to the others and not allow temper to do duty for argument, might well open up the possibility of a satisfactory settlement.

The Macedonian Problem.

The Bulgarian Government has taken the extreme step of issuing a warrant for the arrest of Ivan Mihailoff, the head of the Macedonian Revolutionary Organisation, on the charge of having instigated the murder of a member of a rival body of Macedonians. It is not to be supposed that the warrant will be easy of execution, but it should dispose of allegations to the effect that Mihailoff is a constant frequenter of, and familiar figure in, the streets of Sofia. Not improbably the Macedonian leader will reply in his own way to the challenge. In any case a fresh stage will have been reached in the Macedonian problem, which can be solved only by the elimination, forcibly or by agreement, of the Organisation at present led by Mihailoff. There can be little doubt that the Bulgarian people are tired of Macedonian outrages and are more inclined to appreciate the opportunity of improving the lot of the Macedonians under Serbian jurisdiction by friendly agreement with the Yugoslav Government. If the Bulgarian Government can combine headway in the suppression of Macedonian *komitajis* with progress in the promotion of friendly relations with Yugoslavia, it will be difficult for the latter to withhold the natural response, the introduction of a more tolerant policy towards the Macedonian population of South Serbia.

The Anglo-Iraqi Treaty.

Perusal of the full text of the proposed Treaty of Alliance between Great Britain and Iraq—which is reproduced elsewhere in this issue—makes one wonder the more at the reception of its terms by the Nationalists of Iraq. On the whole, it may be said that the Baghdad Press is bitterly against the Treaty, on the ground, apparently, that its terms are far too favourable to Great Britain. These extremists express particular anxiety over the fate of the Treaty, should Iraq, by some misfortune, not be admitted into the League of Nations in 1932. Why, they asked, should not this Treaty come into force at once, if the Majlis, which was recently dissolved, approve of it? It is obvious from such criticism on what different planes of thought Iraqis—at least, some Iraqis—and the British authorities have been moving. For no unbiased observer, we imagine, could fail to describe the terms of this Treaty as generous; some, indeed, might even consider that the League itself would think them too generous. For consider the circumstances. Here is a country which owes whatever hopes of prosperity and independence it possesses entirely to the fact that British and Indian troops wrested it from the supine Turkish hand during the War. The country which made these sacrifices has, as all the world knows, and as the Cabinet of Nouri Pasha al-Said has fully recognised, important interests in Iraq, particularly in the matter of air communications. And yet the Baghdadis jib at the proposal to erect at some future date air bases away from the towns! Surely ingratitude and conceit could go no further. It is comforting to think that the Press is no reflexion of the best opinion in Iraq, and that in King Faisal and his Prime Minister, now welcome visitors in London, the country has accomplished, courteous, and statesmanlike men who see that Anglo-Iraqi friendship is the essential basis of Iraq's prosperity.

The Wailing Wall Commission.

To the non-Muslim and the non-Jewish observer there has been an air of *opera bouffe* about the evidence given before the League of Nations Commission, appointed to make a decision upon the Wailing Wall, which ended its month's labours on July 19. At this stage, before the Commission has published its findings, no purpose would be served in expressing an opinion upon which side, Muslim or Jewish, had the better case, but the Commissioners may have found it difficult to distinguish between the merits of the historical and the actual. It is true that the question is a very serious one, and the claim made by the Muslims that the issue is one, not between Arabs and Zionists, but between 400,000,000 Muslims and 17,000,000 Jews, is in a certain sense just. Really, however, the whole affair is a trumpery one, and there can be no question at all that, had the Arabs not taken fright at Zionist pretensions in Palestine, this sorry trouble would never have arisen. On both sides, the Jewish and the Muslim, men who have forgotten what orthodox religion is have leapt in to defend their "co-religionists," and the evidence so far available gives little hope of a *via media* being found between the rival claimants. It is good, however, to see that the Commission has not yet relinquished hope of reconciliation, and it proposes to wait until September 1 for proposals from either party which might provide the basis of a peaceful agreement. That is certainly a wise decision, and it must be the hope of all men of good will that Palestine will not suffer from the misfortune of an imposed, and of what would doubtless be considered an arbitrary, decision.

NEW WINE IN OLD BOTTLES.

Although the solution of Egypt's troubles is primarily Egypt's own affair, subject to the proviso that in finding a solution she does not impinge upon the safety and rights of foreigners, it is inevitable that the recent course of events in that country should be followed with the closest attention, not untinged by anxiety, in Great Britain. For this reason, it is necessary that, as the situation develops, the successive stages should not become obscured by the prejudice of the observer, but should be kept in their proper perspective. There are three features that call for separate examination—the rioting, the constitutional issue, and possible solutions of the trouble. It is to be hoped that nowhere outside Egypt will the attempt be made to justify the first, or explain it away by seeking a connexion between it and the second. The capacity of Egyptian crowds to riot is an axiom of contemporary history, and consequently no one with any sense of political responsibility would deliberately create a situation that lends itself to rioting. As soon as the leader of the Wafd discovered that the effect of public demonstrations against the Government was to promote disorder, patriotism and statesmanship alike called for a change of tactics. It would have been supposed that it was obvious to the meanest intelligence that Egypt in her own interests cannot afford the luxury of indiscriminate rioting. Yet after Balbeis came Mansourah and, a few days later, Alexandria, to be followed in turn by Cairo, Port Said and Suez. The Wafd, it must not be forgotten, claim the support of ninety-five per cent. of the Egyptian people. It is obvious, therefore, that the rioters, wherever they are found—students clinging to a political leader's car or hooligans of Alexandria breaking shop windows and delivering an unprovoked attack on the police—are all Wafdists, members of the Party that claims to speak with the voice of Egypt. Inevitably the events of the last two weeks will have profoundly affected the estimate formed abroad of Egyptian affairs. If the character of the Egyptian people as a whole is such as it has been revealed to be in Mansourah and Alexandria, then the only hope for the country lies with its leaders, and these, it is seen, are of two kinds: those who are prepared to maintain law and order, and those who at the least provocation let loose the forces of disorder on the country. Can there be any doubt as to the side to which foreign sympathy must incline?

Circumstances, however, alter cases, and it may be held in some quarters that the means are always justified by the end. Thus, rioting may have to be condoned, if carried out in the course of constitutionalism. Probably no word is more frequently bandied about in Egypt to-day than Constitution or Constitutionalism. Incidentally, as four-fifths of the population, including, it is said, some members of Parliament, are illiterate, and when called upon to defend "the Constitution," would understand the invitation only in a physically combative sense, the picture of a people stirred to its very depths over constitutional issues is not convincing. A Constitution, like a motor car, is a useful thing in the hands of those who know how to run it; when either falls into the hands of those who know nothing about it, or for one reason or another are incapable of driving it, society has in the one case to be protected by the suspension of driving licences, and may well claim similar protection in the other case. A month ago Egypt enjoyed what passed as constitutional government, with Nahas Pasha, leader of the Wafd, as Prime Minister. On the question of the submission of a Bill to Parliament differences of opinion arose between the Government and the King. Without, so far as is known, attempting to reach any understanding on the subject, the Wafd Cabinet resigned. The Party refused to co-operate in a Coalition Ministry, and the King was obliged to entrust the formation of a Government to politicians who had no following, or a minority of supporters, in Parliament. The new Cabinet, as is customary in such cases, adjourned Parliament for a month to take stock of its position. So far each step in these developments had conformed with constitutional usage. Before, however, the month had expired and the new Prime Minister had had opportunity to declare his programme, the incitement to disorder and rioting had begun. There had been, it will be noted, no infringement of the Constitution, or of constitutional practice. The system of alternative Governments is the essence of constitutionalism; consequently, for a Party commanding an extensive following in a country to adopt the attitude that the only alternative to its own Government shall be indiscriminate rioting is the negation of constitutionalism. When, therefore, the Wafd charges the Government of Sidky Pasha with acting unconstitutionally, there would seem to be no need to take constitutionalism seriously in Egypt, for there can be little doubt as to which party deserves well of the country where one mouths the word and ignores the spirit, while the other looks beyond a fetish and sets store on the essential foundation of all good government, the maintenance of law and order.

With such conditions prevailing in Egypt it is essential that the British Government and the British public should refrain from trying to apply to the Egyptian people rules and phrases that are not understood in the country and are, therefore, not applicable. If the Wafd, which alone, in normal circumstances, according, at least, to Western ideas, would be entitled to form a Government, refuses to hold office, some other group of men must be appointed. To argue, as Mr. Ramsay MacDonald appears to have done, that, when the essentials of constitutionalism have been stultified by one party, which refuses to hold office itself and will not allow any one else to do so, the situation ought still to be met by slavish adherence to certain forms of constitutional procedure on the part of those who are trying to carry on the government of the country, is either political pedantry run mad or unjustifiable interference wtih the domestic affairs of Egypt. Even if the Wafd's explanation of the present position is correct, that the disorders are a spontaneous expression of the Egyptian people's innate devotion to a Constitution to the spirit of which no Egyptian politician conforms, Great Britain should take no step calculated to lend countenance to rioting or to a party which bases its claim to govern on the inclusion of the rioters in its ranks. Until temper and violence cease to be employed as substitutes for political argument by those who consider themselves the champions of constitutionalism, it is better that Egypt should make up her own mind in her own way as to whether she can further her own interests better by a system of government which she understands or by one which is alien to the traditions and instincts of the people

*The Near and Middle East

From Our Own Correspondents.

Belgrade, July 18.

The Dictatorship.

The declaration of the Yugoslav Government prolonging indefinitely the Dictatorship régime continues to be the main point of speculation in all political quarters here. Many persons are inclined to think that such a step, which certainly could not have been taken without the approval of France, could be condoned by her, in spite of her desire to see Yugoslavia return to normal conditions, only because the tension of French-Italian relations after the speeches of Signor Mussolini became so acute that France had to take stock not only of her own forces, but also of the strength of the countries allied to her. In such case an outgoing Dictatorship would hardly have been an asset *versus* Italy, and, therefore, the course of prolonging the existing régime in Yugoslavia had to be adopted.

In the meantime the Bans (Governors) of the nine provinces, who are distributing the decrees to the recently appointed members of the Banske Vetche (Banat Councils), intimate in their official speeches that the present order of things will last for a considerable period of time—"at least for 50 years." But the general feeling remains, in spite of the Government's declaration and of these intimations, that some sort of change will have to be made.

New Groupings.

Both the proposal of M. Briand to form a federation of the States of Europe—which Yugoslavia is answering in the course of this week—and the Polish proposal for the forming of a block of agrarian States, which was conveyed through the Polish Minister in Yugoslavia, M. Babinsky, on July 16, have received the full approval of the Yugoslav Government. As a matter of fact both proposals constitute an attempt to ease the situation for many of the States of Central and South-Eastern Europe, for which the present arrangements with the League of Nations do not prove entirely satisfactory. As things stand at present, many complaints can be heard in this part of the world that important questions, on the settlement of which much depends for the Balkan and Central European States, come in the League of Nations before a body which, though enjoying the consideration of all, numbers among its members many States which are so remote that Central European affairs of vital interest to the countries concerned are a matter of relative indifference to so many members of the League that there is a tendency to avoid embarking on any kind of decisive action. Moreover, the smaller States of Europe that are under the ægis of France will always be outnumbered at the League by Great Britain and her Dominions and the group of American Latin States, with their pro-Italian leanings. Therefore, the plan of forming a federation of the States of Europe, from which the above features would be eliminated, is generally welcomed here. Yugoslavia in her answer to the proposal of M. Briand, emphasises the fact that, "The States of Europe would enter the Federation to discuss problems of common concern. The questions that will be dealt with by the Federation are frequently of little or no importance for the non-European States that are members of the League of Nations, and these problems do not enter into and ought not to figure among the activities of the League of Nations. By its constitution and its aims, the League deals with questions which are of interest to all its members. The Yugoslav Government, therefore, holds that the League of Nations can supervise and support the work of regional organisations, but should not intervene in regional activities itself. These are among the considerations that justify the forming of a Federation of the States of Europe, and which prompt the Yugoslav Government to accept the proposal of M. Briand with enthusiasm." In these words expression is given to the disappointment that the League of Nations seems to have aroused among many of the smaller States.

The Polish proposal—to form a block of agrarian States of Europe, in order to defend their legitimate interests by means of a permanent body corresponding to the Secretariat of the League of Nations reflects the same feelings, and seems to be of the same French origin. During the last few years all that has happened has been the reverse of what was expected during and shortly after the War. Instead of suffering from a shortage of corn from the time when Russia ceased to supply the world's markets with her cereals, the world has experienced the opposite. Non-European countries rapidly extended their corn-growing to new areas, improved their methods, increased their means of transport, with the result that States which in addition to Russia helped to supply the markets of Europe with their agricultural produce can hardly cope with the competition of non-European States, especially of the Argentine and Canada. The most-favoured nation clause has become rather a mixed blessing. Several good harvests following one after the other leave big stocks of unsold corn and of other produce (e.g., sugar beet in Poland), and the formation of an agricultural block "with protective and not aggressive aims" is designed to remedy the fall in prices. For some time there has been an increased activity on the part of the States of the Little Entente for the creation of a body of this kind, and France has furthered these endeavours from her side, as shown by M. Loucheur's visits in the spring to the States concerned.

The list of the States chosen by Poland for this agricultural block is certainly interesting. It comprises the Little Entente (Yugoslavia, Roumania, Czechoslovakia) and the Baltic block (from which Lithuania is excluded). Hungary and Bulgaria are also to be invited to enter it. This explains why France should have chosen Poland to take the initiative: Polish relations with both these States are quite satisfactory—with Hungary they are even good—and an approach to them through Poland seemed the easier. It remains to be seen how far this new attempt of an agrarian block will succeed. If it does, it will not only greatly help the States concerned in raising the prices of produce exported, but in case of any sort of entanglement might prove an important factor in Europe.

***Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania Turkey Cyprus, Palestine, Iraq, and Persia.**

The side on which the block would cast its lot in case of war would be supplied with corn from Europe, while the other side would have no other course left than to import from overseas. This political feature makes the prospect of forming such a block uncertain. Hungary must pay as much attention to the political aspect as to the economic side, and Bulgaria may not be eager to enter a body in which the States of the Little Entente will play such an important part.

In any case, the two proposals, for a federation of European States and of a block of agrarian countries, whether they fail or succeed, are an interesting attempt to create a new grouping in Europe.

Yugoslavia and Bulgaria.

On the invitation of Yugoslavia, a joint committee of Yugoslavs and Bulgarians is holding sittings at a Yugoslav resort, Vrntze, with a view to elaborating further steps for settling frontier relations between the two countries, to drafting detailed regulations for the liquidation of estates divided by the frontier line, and also to making final arrangements for the work of the Mixed Commissions in the frontier zone. The commission is expected to terminate its labours within a month, so as to inform the Geneva Secretariat of the results before the beginning of the session of the League of Nations. As is always the case, however, there is the danger that frontier outrages may break out and frustrate the good work that is being done, although there is a firm resolve in Belgrade, even in the case of outrages, not to allow the work to be interrupted.

THE PERSIAN GULF.

Bahrain, June 22.

Completion of Electric Supply.

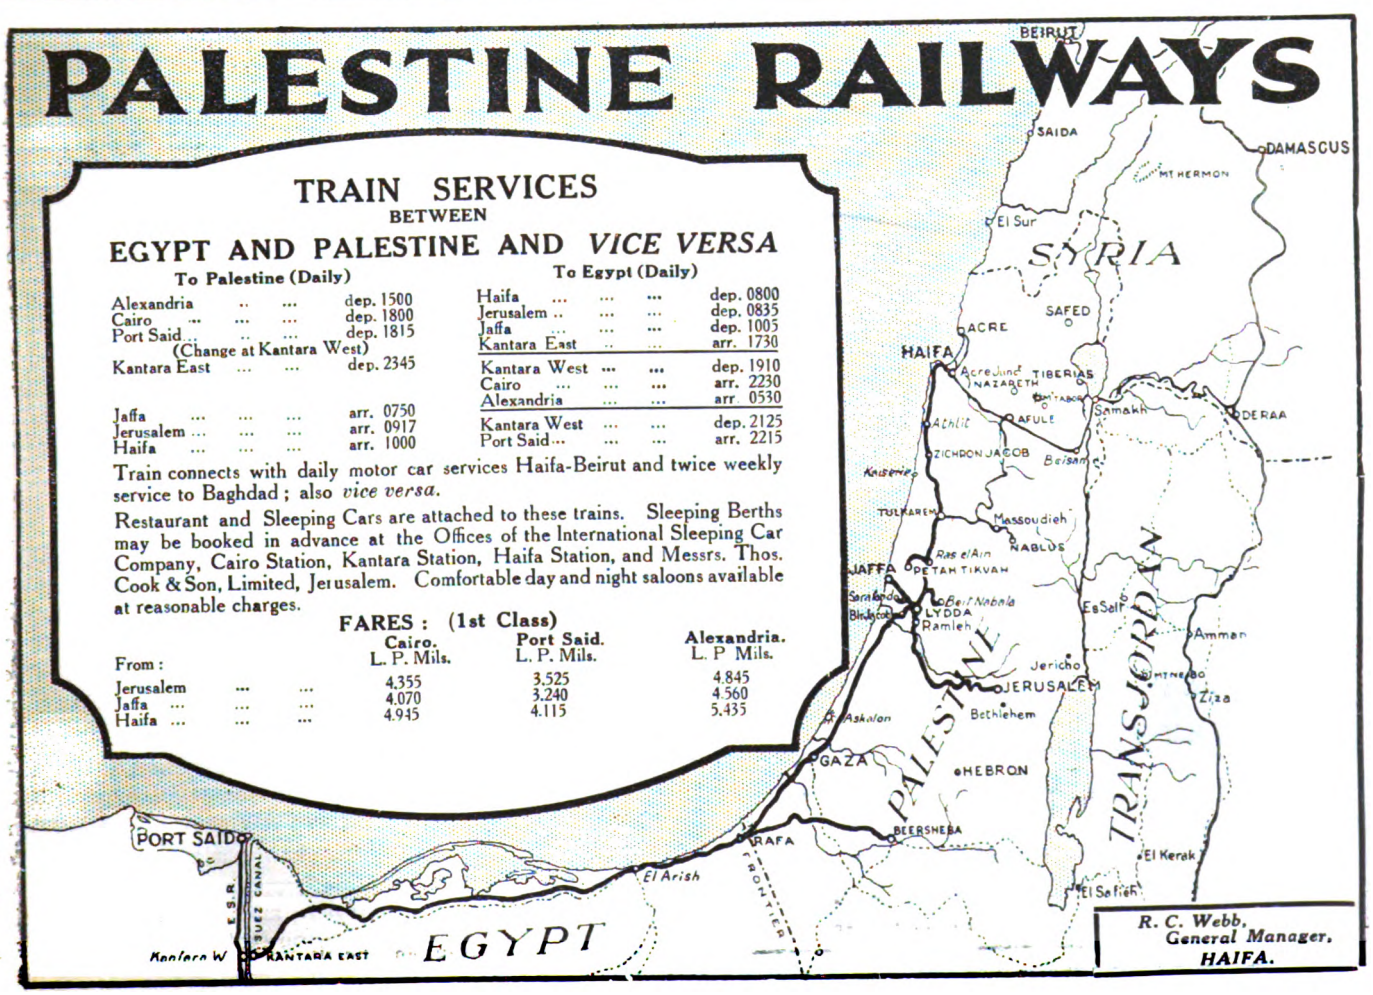
On May 11 the Manama Power House was officially opened by Shaikh Hamed in the presence of a distinguished company, which included members of the Ruling Family, the European community, the members of the Manama Municipal Council, and a number of local notables. An inscribed silver padlock on the door of the power house was opened by the Shaikh with a silver key. Speeches were made inside the building and finally the Shaikh mounted the platform above one of the engines and turned the wheel which set the machinery in motion. The appearance of the lights was greeted with loud applause by a large crowd which watched the proceedings from outside. Afterwards the Shaikh and his party drove through the town and inspected the illuminations, before returning to his country house in the middle of the island, where he was living at the time.

With the exception of Bushire, Bahrain is the first port in the Gulf to have installed electric light. It is hoped that in the future the supply will be extended to the town of Muharrak on the neighbouring island. The benefits of electric fans and other cooling appliances have not yet been really appreciated, as the weather during the last month has been abnormally cool for this time of year.

Muharram.

The first ten days of this month were kept by the Shia community with the usual observances. A number of mullahs were hired from Persia and Iraq to preach in the mosques and the matems. During recent years there has been a tendency to celebrate Muharram in Bahrain with increased fervour—the result, perhaps, of greater religious freedom, which contrasts strongly with conditions on the mainland. The culminating point was reached on the tenth day when the Muharram procession took place in Manama. As usual Shaikh Hamed lent some of his camels and horses to be used in the spectacle, a striking example of religious toleration, for the Shaikh and his Government are essentially Sunni, and the Muharram procession, which commemorates and portrays the death of Ali and Hussein, might almost be described as an anti-Sunni demonstration.

Many hundreds of men took part in the procession, but



Digitized by Google

owing to there not being as many Persians as usual in Bahrain this year there were fewer flagellants and fewer swordsmen. The main feature of the proceedings is a band of men dressed in white robes who cut their foreheads with swords as they walk, causing the blood to flow freely, so that eventually their white clothes become crimson.

Cultured Pearls and Diving Suits.

A proclamation has recently been issued by the Bahrain Government, and is being published in the Indian papers, which, besides forbidding the import of cultured pearls, prohibits the bleaching and tinting of un-drilled pearls and also the use and import of diving apparatus. Before pearls reach their final purchaser they are subjected to many processes, including bleaching and tinting; but, if a pearl is bleached or tinted twice, it turns black and loses its value. The new regulation is intended to prevent people tinting fresh pearls, which gives them an appearance of being more valuable than they really are, and selling them to buyers who submit them to the same process again. Bahrain is considered to be the home of the natural pearl.

The pearl diving in the Persian Gulf has from time immemorial been carried out by divers who use no form of mechanical apparatus. Some ten years ago an individual took out a diving suit to the banks, but the innovation caused such an uproar that he hurriedly relinquished his project and returned to Persia.

General News.

The condition of the pearl market is still unsatisfactory. The new season is producing very few pearls owing to the rough weather; for many days in the season it has been impossible to dive. The important pearl buyers are not expected to arrive this year until much later than usual.

News has reached Bahrain of a serious fire in Muttrah, one of the ports of Muscat, in which the newly established American Mission Hospital was destroyed with all its contents. Muscat is unfortunate in this respect, as a similar fire took place there about two years ago, which caused considerable damage.

ALBANIA.

Tirana, July 9.

At about midday on June 26, Lieutenant Guiseppe Chesti of the Italian Corps of Engineers, was shot dead while riding a motor bicycle in plain clothes from Shiroka to Shkodra. His assailant was an Albanian Corporal of the Frontier Guards, Islam Salih Grazhdani, who escaped into Yugoslav territory, where he has been arrested by the Yugoslav authorities. The Albanian Government has asked for his extradition.

Lieut. Chesti had previously served as a civil engineer at Tirana. He returned to Albania some three months ago, and was posted to Shkodra in connexion with the Higher Military School for Officers. Grazhdani, who hailed from an Albanian district of Yugoslavia, had served in the Gendarmerie and had been dismissed for unsatisfactory conduct. After a short absence in Yugoslavia he returned to Albania and managed to enter the Frontier Guards. He sent in his resignation, which was accepted, a few days before the murder occurred. On June 26 he was on patrol with another man, and they both entered a *han* (inn) for a drink. Grazhdani drank several glasses of rakija, and then left his companion—on some pretext—at the *han*. A few minutes later the latter heard four shots, and, hurrying to the spot, found Lieut. Chesti dead and saw Grazhdani running off. Nothing has yet been revealed which explains Grazhdani's action; and there is no evidence that he had any personal grudge against Chesti, with whom, it is said, he had never been in contact. Nor has any evidence been made public which supports the belief widely held among Albanians that the murder was instigated for political reasons from Yugoslav territory. The report which circulated in Shkodra on the day before the murder that an Italian officer had been killed in the mountains was held to confirm this belief, but it seems to have originated in a call for assistance from Puka for an Albanian who had been accidentally injured.

The crime caused great consternation in Albania, where no foreigner has been murdered since April, 1924—and on that occasion the assassins mistook the two Americans concerned for two of their own countrymen whom they intended to kill for political reasons.

Lieut. Chesti's body was conveyed from Durrës to Italy on June 28, after impressive ceremonies, both at Shkodra and Durrës, at which large crowds of Albanians paid their respects to a foreigner who had been killed while serving their country. It is a curious coincidence that only a fortnight earlier a memorial service had been held at Durrës for Col. Thomson, of the Dutch Gendarmerie Mission, who was killed there on June 15, 1914, during the insurrection against Prince William's Government. During the ceremony the other day in his memory the Foreign Minister, M. Fitzo, paid tribute to those foreigners, of all nationalities, who had served or are serving Albania, and expressed the country's gratitude for all that they had done.

The Albanian Government offered an indemnity of 400,000 gold francs (about £16,000) to the Italian Government for Lieut. Chesti's young widow. But the Italian Government, while expressing its appreciation, declined to accept any indemnity.

The Economic Situation.

Since the fall in the value of the *korona* some weeks ago, owing to the fall in the price of silver, the monetary situation has been incredibly difficult. Hitherto, the majority of peasants and small tradesmen have refused to accept the nickel *lek* and would take only the silver *korona*, and thus the *korona* has remained in circulation. Now the *korona* is widely discredited, and is accepted—if at all—only at the value of the *lek*, or, if the tradesman happens to be an honest mathematician, at a little above it. In consequence there is a shortage of *lek*, and when one is lucky enough to change a note, one requires a prodigious amount of mathematical ability to count change given in *lek*, *korona*, and *half korona*! The Government refused to allow the National Bank to issue notes of one gold franc value.

CYPRUS.

Nicosia, June 28,

The Trade Mission.

The Cyprus Government Mission, which is visiting neighbouring countries "with a view to seeking outlets for surplus produce," has visited places in Syria, including Alexandretta, Tripoli, Lattakia, and Beyrout; and should proceed to others in Palestine, such as Haifa, Jaffa, Tel-Aviv, and Jerusalem. It is also undertaking propaganda for the Cyprus and Near East Exhibition, to be held next year (October 3 to 9) at Nicosia, which should be one of great interest, and of importance for Cyprus. The island Chamber of Commerce has been requested to communicate with that of Khartoum, with the object of exploring possibilities of trade with the Sudan market.

The Governor's Survey.

No better survey of the actual state of the island can, it may be said, be found than that given in the speech of Sir Ronald Storrs at the opening of the Legislative Council in April, 1930: and his comments on alarmist tendencies regarding present difficulties, before leaving Cyprus for England, were very opportune.

Mr. Herakles Michailides.

Mr. Herakles Michailides, who was called to the Bar in London a few years ago, has been unanimously elected to serve in the Legislative Council in the place of his late father, who was for many years the "Father" of the House, and to whose family Sir Ronald Storrs publicly conveyed profound condolence.

Emigration from Cyprus.

Notwithstanding repeated warnings that have been given to youths seeking a career in foreign countries, especially America, a large number have recently left the island, for the United States, where admission is doubtful, to try their fortunes. The Greek Archbishop has now issued a circular, warning intending emigrants of the almost certain disappointment they will meet with in the present state of hardship and unemployment prevailing everywhere. He points out also that most of the youths are totally unfitted by the education they have received in the island for the kind of work which they are likely to obtain, if any, in the States. The Government has also made known that the Acting Governor, Mr. Henniker Heaton, has received a telegram from the British Ambassador at Washington (dated June 15) informing him of the serious lack of employment, which renders it very imprudent to seek for work in the country.

The Summer Season.

Hot weather has set in, and many residents, as well as visitors to Cyprus, have gone to the hills.

An enterprising Greek invites the people of Nicosia to a resort which he recommends as an ideal, magic, and romantic spot for summer time, at a rendezvous on a height called Agia Paraskevas, where cool breezes and picturesque views of the capital and suburbs and others are to be found.

Greek Centenaries.

July 9 will mark the centenary of the death of Archbishop Kyprianos, who was hanged by the Turks, as were many Bishops, clergy, and others who were alleged to have taken part in the Greek movement for liberty. The memorial which the Cypriot Greeks are erecting in Nicosia will perpetuate their memory.

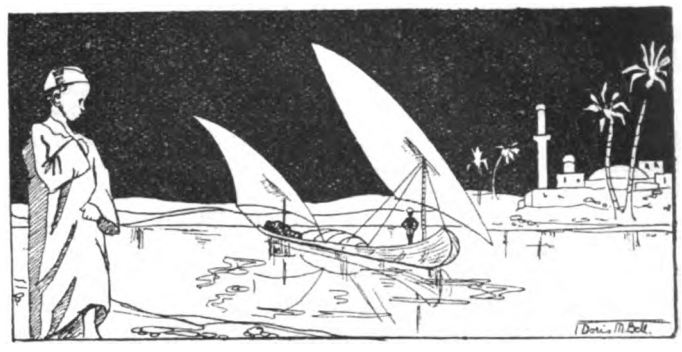
General News.

The great increase of those who are learning English is remarkable. Government examinations are now held in several places, one having been until lately sufficient.

The locust campaign has apparently fulfilled expectations. Over 75 tons of ten different species have been accounted for. Poisoned bran has been largely used in irregular patches.

A considerable number of officials—heads of Departments—are now on leave, including Lt.-Col. Gallagher, whose duties will be carried out by Mr. J. B. Montagu, a local Commandant of Police.

Mr. B. T. Watts, Director of Land Registration and Surveys, was transferred to Uganda, as from January 6.



EGYPT.

Alexandria July 19.

The Riots.

The accounts of riots which some of the Cairo and Alexandria correspondents of London papers cabled on July 15 were so exaggerated that most people outside Egypt have an entirely false idea of the situation. Very grave rioting did break out, but there was absolutely no question of an attack upon Europeans, nor was a single shop looted. The two Europeans who were killed, and those who were injured, received their wounds accidentally, mainly because they insisted upon looking on while the rioting was in progress. And with the thousands of missiles which were recklessly hurled, it is not surprising that a number of European shops were damaged. The riot was simply an organised attack made upon authority by the massed bad elements of the town. The attack was definitely organised—of that there is ample proof—but it is doubtful whether the organisers had any intention of stirring up so much trouble. They exhibited lamentable stupidity, for it must have been quite evident to them, from past experience, that once the Alexandria mob has its passions aroused, it requires an immense amount of stopping. And the European community's panic is justified, for, however innocently such troubles arise, so far as foreigners are concerned, they invariably result in an attack upon Europeans. Luckily, the very severe measures which the Government is now taking appear to have quelled the outbreak. Alexandria is full of soldiers, who, in steel helmets and armed with rifles with fixed bayonets, are stationed at all danger spots. Their presence should be a sufficient guarantee against more trouble.

Responsibility of the Wafd.

Although four members of the Alexandria Wafd Committee are now in prison, and although there is definite proof that Wafdist students were the leading lights in the actual organisation of the trouble, it is doubtful whether the higher Wafd officials realised how far their supporters would go. One cannot believe that even Nahas Pasha would allow such an outbreak in such a place, especially as there was no question of provocation. The riots began by a cowardly attack upon a handful of unarmed policemen by bands of galabieh-clothed ruffians,

CENTRAL ASIAN SOCIETY

(in which is incorporated The Persia Society.)

Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published.

The subscription of £1 per annum entitles members to a copy of each issue of the Journal, tickets for all meetings, and the loan of books from the library.

Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W.1

Digitized by Google

led, from a discreet distance, by Wafdist students with whistles. The police, owing to lamentable lack of precautions by the authorities, were routed, and the mob, thus encouraged, simply lost control. By the time the army had been called in and order restored, twenty-two people were killed and some hundreds injured.

Mr. Ramsay MacDonald's Statement.

Two English battleships arrived here at 8 o'clock this morning and their presence has greatly reassured the European communities. Strangely enough, their presence does not appear greatly to be resented by Egyptians. Official circles state quite frankly that, following Tuesday's incidents, they are not at all surprised, and as Mr. MacDonald has openly declared that they are here merely as a precaution, they accept the situation. Much more surprise was caused by the rest of Mr. MacDonald's statement, and many people expected that Sidky Pasha would have to resign in face of the scarcely veiled criticism of his policy. Luckily, so far he has not done so, for his resignation would mean a return of the Wafd and that would have lamentable results. If only Sidky Pasha can remain in office for a few months, Egypt may be rescued from the disaster to which the Wafd government always leads it. It is not only because the Wafd are so heartily distrusted by all foreigners, but also because they have not the confidence of the better classes of Egyptians. They have a record which is black with political disturbances, and with absolutely nothing constructive to atone for the trouble they make. The suppression of the three Wafdist newspapers has already had a calming influence on the nation, as the organs in question were seditious and anti-Government. Without the continual pricking of such fiery articles, a great portion of the country is rapidly relapsing into the utter indifference to politics which characterises the average Egyptian fellah.

Sidky Pasha is at present preparing his reply to Mr. MacDonald, and is also preparing to govern the country to the best of his powers. Once the political upset dies down, as it will surely do under strong measures, the Prime Minister, who is an economist of the first class, will be able to turn his attention to constructive matters.

The Electoral Law.

The reference to the supposed intention of the Sidky Cabinet to change the Electoral Law, which Mr. MacDonald made in his statement to the House of Commons, is puzzling many people out here. Sor far the subject has not been publicly broached by Sidky Pasha, and there seemed entirely no reason for bringing it in at the moment. Even if there was an attempt to do so, it would be quite constitutional. The Committee which drew up the Law of the Constitution stated in their minutes that they did not consider the country fitted for direct elections, and, therefore, a clause was inserted stating that "The act of dissolution of the Chamber of Deputies stipulates for the convocation of Electoral-Delegates for new elections . . . ." That obviously implies elections on more than one degree. Zaghloul Pasha changed that in 1924, and direct elections were held in 1926 and 1929, but if the Prime Minister wishes to return to two or more degree elections, there seems no reason why he should not do so, as the Law of the Constitution has not been changed.

M. Duca, who has been a member of several Roumanian Liberal Cabinets, following the example of his chief, M. Vintila Bratianu, asked for, and obtained, an audience of the King of Roumania, who received him on July 15.

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY

THE PATRIARCH OF ALEXANDRIA.

A largely attended reception was held on July 17 at the Carpenters' Hall, Throgmorton Avenue, by the Greek Community of London and the Anglo-Hellenic League in honour of the Patriarch of Alexandria. The guests were received by Earl Beauchamp, Sir John Stavridi, the Master of the Carpenters' Company and the Churchwardens of the Greek Cathedral in London. The gathering was notable for the large number of British Bishops who, with the Patriarch of Alexandria, Archbishop Germanos, and other members of the Greek Orthodox Church, are delegates to the Lambeth Conference now in session. The Lord Mayor of London and Lady Waterlow were present, and among others who accepted invitations were :—The Greek Minister, the Bulgarian Minister and Mme. Hadji-Mischeff, Mlle. Hadji-Mischeff, the Yugoslav Minister, the Roumanian Chargé d'Affaires, the Egyptian Chargé d'Affaires, the Consul-General of Greece, the Consul-General of Roumania, Professor Andreades, Sir Edward and Lady Boyle, Sir John and Lady Brooke, M. D. Buzdugan, Lady Cheetham, Lady Cooper, Lord Dawson of Penn, Lord and Lady Dickinson, Professor Dawkins, Sir Howard D'Egville, Canon Douglas, Canon and Mrs. Donaldson, Viscountess Dupplin, Lord Danesfort, Mr. N. Eumorfopoulos, Sir Banister and Lady Fletcher, Sir James and Lady Grieg, Sir Samuel and Lady Maud Hoare, Lady Hawke, Sir Stephen Killik, Mrs. Emile Mond, Lord and Lady Melchett, Lady Meiklejohn, Sir Frank and Lady Newnes, the Dowager Lady Oppenheimer, Lieut.-General Sir William and Lady Pitcairn Campbell, Sir Rennell Rodd, Mr. Athos Romanos, the Dean of St. Paul's, Prince Michael Soumbatoff, and the Hon. Katharine Thring. Before the reception the Patriarch Meletios, Archbishop Germanos and other Greek prelates had been entertained at dinner by Sir John and Lady Stavridi at 33, Lennox Gardens.

It is reported from Taranto that several most interesting statuettes of girls were recently discovered in a tomb there. One particularly interesting group represents Eros and Psyche. It is thought that the tombs belong to the Greek period.

A military seaplane last week crashed through the roof of a house at Trau, near Spalato, on the Dalmatian coast, and a woman who was upstairs at the time had a narrow escape. The pilot was killed and his passenger injured.

It is stated that Turkish aviators, who are reported to have been captured by rebellious Kurdistan tribesmen in north-eastern Kurdistan, have been tortured in an atrocious manner. Turkish troops retaliated by burning Kurdish villages in the affected area.

Ex-King Amanulla of Afghanistan, with ex-Queen Suriya and family, arrived from Italy in Istanbul on July 20, where they will spend the summer. A villa at Therapia has been placed at their disposal by the Ankara Government.

The Greek Government has accepted the offer of the Spanish Government to found a Chair of Spanish in the University of Salonika, in which town the large Jewish community still speaks the Judaeo-Español spoken by its ancestors who had to leave Spain at the end of the fifteenth century.

The Queen has presented to India House a magnificent Indian embroidered cover from Benares. It will be on view in the Exhibition Hall, together with the Kashmir shawl presented by the King and the carved Indian screen previously entrusted to the High Commissioner by the Queen.

A good number of those who were sentenced by Courts-martial for their share in the Syrian insurrection of 1925-26 have been amnestied. Those who had escaped abroad are to be allowed to return; but the Amirs Shakib and Adal Arslan, Dr. Shahbandar, and some other Nationalist leaders are not included in the amnesty.

The War Office announces that Colonel C. P. Heywood, C.M.G., D.S.O., has been appointed Director of Military Training, India, with effect from September next. Colonel Heywood was adjutant of the 2nd Bn., Coldstream Guards, commander of the 3rd Guards Brigade, lieutenant-colonel in his regiment, with the Egyptian Army, and Chief Staff Officer of the Aldershot Command under General Sir Philip W. Chetwode, on whose staff he will be in India.

The Secretary of State for War, in a written reply last week to Sir Nicholas Grattan-Doyle, stated that the regimental establishment of the British troops in Egypt, as given on page 9 of Army Estimates, consists of three cavalry regiments, six batteries of artillery, five infantry battalions and ancillary troops. There has been no change in the number of these units since last year. The actual strength of the troops in Egypt on June 1 this year was approximately 9,800, compared with 9,600 on June 1, 1929. The troops are stationed at Cairo, Ismalia, Alexandria, and Port Said.

A representative of the Société de Batignolles de France arrived in Teheran last week to submit a proposal for completing the southern sector of the Trans-Persian railway between Khor Musa and Dizful, which was partly constructed by the American group before the cancellation of its contract. Another party of engineers, representing a French company, is also in Teheran seeking for oil concessions in North Persia.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 3.

The Statutory Commission's Recommendations.

In the debate in the House of Commons that immediately followed the Viceroy's announcement regarding the goal of British-Indian policy, Sir John Simon observed that the announcement had made more difficult the task of his colleagues and himself. Persons may have doubted at the time how that could be. It is now seen. The task of the Commissioners was to state what India is; what form of constitution would suit the character and needs of the people. Their duty was to do that, not regarding too much whether their recommendations would please India or anger her; but there was the natural human desire that their recommendations should be accepted by the Indians as fair and wise. Have they been? Your *Nation* has been cabled this week as having expressed the opinion that the fact that the Commissioners have built up their recommendations coherently and consistently should entitle them to a fair hearing and the fullest consideration from Indians of every school and from their friends in all parts of the world. Has that fact brought them a fair hearing?

The Reception of the Recommendations.

The following are from a collection that I have made of the adjectives and other phrases used this week by the many public men in India who have been interviewed by Press representatives, with a sprinkling of the words written in the Nationalist Press regarding the Commissioners' recommendations:—"Most reactionary," "a mockery," "a farce," "a negation of Dominion status or even of an approach to responsible government," "calculated to aggravate the present tension," "a setback to Indian constitutional reforms," "hypocritical and reactionary," "not merely unsatisfactory, but utterly objectionable—in fact, preposterous and grossly insulting," "a most arrogant and ironical answer to India's national demand," "a cruel rebuke to weak-kneed Indians," "a mixture of a ton of powerful poison with an ounce of weak syrup." "a piece of unparalleled political humbug and chicanery," "characteristically unsympathetic, hopelessly prejudiced, and utterly impractical," "an insult to the intelligence of the people," "bad beyond description," "moth-eaten," "retrograde," "a hopeless failure," "a mirage and a deception," "mutually destructive," "thoroughly bad and undemocratic," "depressing reading," "positively insulting," "an insulting reminder of our political dependency and communal disunion," "wicked methods of propaganda directly opposed to all canons of clean and honourable fight," "a constitutional monstrosity," "a continuance in essence of the Miss Mayo spirit," "a repudiation of the claims of Indian nationalism," "a curious combination of Fabianism, Parliamentarism, and Americanism."

The Round Table Conference.

"Will the Round Table Conference now be held?" is naturally now the question. "Is there any good purpose to be served by holding it?" is another form in which I have heard the question put. India would never send representatives, merely to examine the recommendations of the Statutory Commission. India could not even be asked to do so. That, it is reported, is the view accepted even in the highest official circles. In non-official circles opinion naturally goes further. In one leading article of this week there was this: "Even in Government circles it is appreciated that the London discussions should be approached without commitments and on the sole basis of the Viceroy's offer." It is useless to argue, in India's present temper, that the Viceroy never made an *offer*. To announce what the ultimate goal of Britain's policy regarding India is, was to make no offer. The fatal mistake made was not to say plainly that Dominion status was the *ultimate* goal. All-India at once jumped at Dominion status as the goal to the reached to-morrow. So one has such as the following resolution of the Central Standing Committee of the All-India Shia Political Conference, no extreme body: "That the Committee is of opinion that the terms of reference for the Round Table Conference should be published at an early date, and that they should necessarily contain a declaration for the immediate goal." The same view, in other words, has just been expressed by the leader of the Justice Party, speaking to a Press representative at Ootacamund: "I should not be surprised if the prospect of Moderates taking part in the Round Table Conference appears slender, unless Government clear up the situation and declare that the Simon Commission Report will not be taken into consideration at all, and that the Conference will be convened with a view to drafting a Dominion status constitution, subject to such safeguards as may be necessary." The fact is that, the Viceroy having made that announcement on November 1 of last year, it was useless for the Statutory Commission to make any recommendations, and politically inexpedient that it should; a fact that I tried to impress upon the authorities, through these columns, without using too plain language.

English Views of the Recommendations.

In the opinion of the more philosophic of my Indian counsellors, the clearest thinkers amongst them (it was the opinion, moreover, of the late Sir Asutosh Mookerjee on the main issue involved—the value of parliamentary institutions to India), the view expressed in England by the *Morning Post* is the nearest to the truth. We have not yet seen more, of course, than a cabled summary. Of that summary this is the part that one would call attention to: "The paper refers to the passage in the Report, doubting whether the British parliamentary system is likely to prove a model for responsible government at the centre. It says that nevertheless it is to be tried for the provinces, where its unsuitability is almost as manifest."

The North-West Frontier.

The situation on the North-West Frontier, it is reported from Simla, continues to improve slowly, if cause for anxiety still undoubtedly exists. The Mohmand movement is said to have collapsed, the Haji and Badshah Gul having retired discomfited. The rumours at one time rife of sympathetic unrest among the Afghans across the border are said to have had no substantial foundation. One cannot speak with any certainty about any of these matters. It was understood that the Government was to review the whole Frontier situation, past and present, in a document that would be published; but it is now spread abroad that no such review will be published. There has been a good deal of criticism of this; but the main concern of every one must be that the frontier situation should be eased, and no publication could do anything to ease it. It should be sufficient for us to know that the utmost vigilance is being exercised to note every sign of impending trouble from across the border. Forewarned is forearmed.

Government Action.

Government has been more than vigilant this week within India. Action has been taken, if tardily, against the worst fomenters of disobedience and disorder—the Working Committee of the Congress, and the allied associations in the Punjab and the United Provinces. As the cables will have informed you, Pandit Motilal Nehru and Dr. Mahmud, respectively the Acting President and the Secretary to the Congress, have been arrested, tried, and sentenced, while the Congress Working Committee and the allied associations have all been declared unlawful.

The Indian Medical Council.

A Conference of representatives of the Provincial Governments and the medical faculties of the Universities has now been held to consider what action to take to meet the situation created by the temporary withdrawal of Indian medical degrees by the General Medical Council of Great Britain, and it has been decided to form an Indian Medical Council, which would collect information regard-

ing the curricula of studies, the methods of teaching, and the standards of examination of each university and medical college in India; should appoint inspection committees from time to time to satisfy the Council that the standards of none of the teaching bodies fall below the minimum prescribed, and should maintain a register on which shall be inscribed the names of all graduate members whose names are borne on the registers of the provincial medical councils. A Bill will have to be introduced in the Legislative Assembly.

DEFEATISM IN INDIA.

(From a Correspondent.)

One of the most serious dangers of the present situation in India is the possibility of the civil administration yielding to the strain under a feeling of hopeless weariness. Already we know that the head of one of the small Provinces has broken down, while in the Bombay district, which was the scene of the most serious disturbance, the health of the Police Superintendent gave way altogether, and the District Magistrate, who handled the trouble admirably, has had to go upon light duty. It is hardly surprising, therefore, that some of the highest placed officials incline to think that the administration may break down under the strain, and that a risk, however considerable, should be taken to meet the demands of the malcontents. The argument briefly is that Dominion Status has been promised and must be given: the only doubt is whether it should be given now, or postponed for a period which cannot well be placed later than forty or fifty years hence.

If it be said that the people of India are not ready for Dominion Status now, it is replied that they will be little more fit for it fifty years hence: why not, therefore, grant it now, while many of the old officials remain to assist and guide, instead of waiting till a period when the officials will certainly be fewer? The argument is specious: it is urged on the plea of necessity, and cannot be dismissed on the score of being due to weariness or cold feet, though these may be a contributory cause. Yet it must be withstood, if only on the ground of the extreme danger involved to all interests concerned. With such questions as the control of the Army, and the position of the States, to mention only two out of many, still unsettled, it would be folly to hand over India to the control of a small educated minority.

There is also the question of British commitments and British trade. These have been made or built up under the guarantee of the British Parliament, and the latter body is bound to see that they are safeguarded and not sacrificed. The *poilus* in France asserted their ability to beat the Germans "pourvu que les civils y tiennent." It is perhaps necessary to express the hope and belief that the civilian administration in India will be equally firm, if they receive the required backing from the British people and Parliament

ROYAL COMMISSION ON LABOUR IN INDIA.

A public session of the Commission was held at India House, Aldwych, on July 22, for the oral examination of Mr. F. W. Leggett, Principal Assistant Secretary, General Department, Ministry of Labour, Mr. H. L. French, C.E., O.B.E., Principal Assistant Secretary, and Mr. R. E. Stanley, of the Ministry of Agriculture and Fisheries.

The Ministry of Labour witness gave evidence in regard to Minimum Wage legislation and working of Trade Boards in Great Britain, while the representatives of the Ministry of Agriculture and Fisheries dealt with questions relating to the history of wage regulation in agriculture in Great Britain and the economic effect on the industry of State Wage Regulation. The Commission has also taken evidence in regard to the working of Employment Exchanges and Unemployment Insurance in Great Britain. All the meetings, unless otherwise notified, are open to the public.

THE BOUNDARIES OF INDIAN PROVINCES.

By P. R. CADELL, C.S.I., C.I.E.

Among the most interesting proposals of the Simon Commission is the recommendation that a Boundaries Commission should be appointed to consider the size and shape of the Provinces of British India. No doubt can exist that many of these Provinces are unduly large, and that they have been formed by the accidents of history and war, without regard to racial or linguistic considerations. An identical description of people and country is, for example, divided between the United Provinces and Behar: the Central Provinces area is a conjunction of at least two entirely distinct peoples and systems of land revenue: while Madras and Bombay comprise a variety of races speaking different languages and united only by the tie of British supremacy.

The rearrangement of the Provinces into more manageable and homogeneous units is a pleasing and easy task on paper; but it may prove difficult or impossible in practice. In the first place there is the objection so strongly felt in the East to the shifting of landmarks, with the inevitable curse on him that attempts it. Then there are the threads of the commercial and educational systems which cut across the divisions of race and language: and, finally, there is the acute suspicion between Hindu and Muhammadan, which objects to the creation of any new Province in which one or other will have a marked preponderance. It may be doubted, therefore, whether any practical redistribution of territory on a considerable scale will be possible. There are, however, two cases in which the cry for separation is so insistent that it cannot long be disregarded; that cry comes from Orissa and Sind.

In the former case there is no real opposition to the demand. It is agreed that the Oriyas are entirely alien from the peoples of Bihar and Madras with whom they are united, and that they undergo many inconveniences owing to their distance from the headquarters of these Provinces. The claim of the Oriyas for a separate Province has been admitted without demur by the Provincial Committee for Bihar and Orissa, and the Muhammadans have made no objection to the creation of another predominantly Hindu Province. There are, however, certain considerations which will probably prove troublesome when the new Province is created. Although such a Province would have a considerable sea-board, it would include no good port. Railway communications are singularly deficient, there is no historical intellectual centre, and a larger proportion of the area than is found in any existing Province would consist of forest and jungle inhabited by aboriginal tribes, alien in race and language from the Oriyas. The Province will, therefore, be a poor one; nevertheless it may be assumed that it will be soon created.

The case of Sind is entirely different, thought in many respects far stronger for separation. It has a very ancient history, during almost the whole of which it has been separate from any other Province of India. Its natural boundaries are distinct and its people homogeneous, entirely alien in culture, race, and language from the people of Bombay to which it has been united for nearly ninety years. It contains a very important port whose interests are not identical with Bombay, and which has a greatly increased importance as the air port of India. Its popu-

lation is predominantly Muhammadan, and in religion and system of cultivation it differs from the rest of the Bombay Presidency, in whose Legislative Council its representatives are a small minority. The case for separation is, therefore, *prima facie* strong, and is met only by two objections. The first is that Sind is too small to stand alone, financially or administratively; the second is mainly one of religious politics. As regards the first objection, it can hardly be suggested that a population already exceeding three millions and likely to be largely increased with the extension of irrigation is too small to support a modest administration; it is, after all, larger than several of the independent States of Europe. The Simon Commissioners point out the advantages of having the credit of Bombay behind Sind till at least the Barrage schemes are completed. There is, however, here some confusion of thought. If, as is confidently believed, the Barrage scheme is sound (and the constructional period has been safely surmounted), the credit of Bombay is unnecessary. If it is unsound, then Bombay is too poor financially to make good the loss, and, as the Commission's Report recognises in another passage, the credit of the Government of India, which advanced the money, and which reaps many collateral advantages from the project, must stand the racket.

The religious difficulty is still less of a sound objection. It may be true, as the Commissioners seem to think, that the Muhammadans want another Province as a political unit. But the Hindus in Sind will still be a far larger part of the population than the Mussulmans in the Central Provinces or in Orissa; and they command most of the money and a very large part of the brains of the Province. The Nehru Report, predominantly pro-Hindu as it was, admitted the justice of the case for a Sind Province: and it does not seem that it can be permanently withstood. There are many other proposals for redistribution, mostly on linguistic grounds, but they do not appear either practicable or necessary.

INDIAN NOTES

The Round Table Conference.

The belief that the British delegation to the Round Table Conference will, after all, consist of members of the three political parties, though not necessarily in the same numerical proportion, still lacks official confirmation. No doubt the Secretary of State's inability to make the statement in the House of Commons on Monday, which was expected to remove any remaining doubts, is capable of most simple explanation, but the delay is, we think, unfortunate. The question is known to have been the subject of informal discussion between the party leaders, and it is generally understood that a week ago the Prime Minister, following his conversations with Mr. Baldwin and Mr. Lloyd George, agreed to the suggestion of the Opposition parties that the British representation should not be confined, as was apparently originally intended, to the members of the Government. The arguments in favour of the revised procedure are overwhelming. If the decisions reached at the Conference are to be made effective, they must carry the authority of all shades of national opinion, in this country no less than in India. Meanwhile the prospects of the Conference itself have sensibly improved. The Viceroy's speech has created a marked effect and is largely responsible for the undoubtedly stiffening of the moderates' attitude towards the civil disobedience movement, while the fact that the Legislative Assembly, in spite of the irresponsible character of many of the speeches, endorsed the principle of the Conference, without a division, is not without significance.

The European in India.

The European Association has issued a wise and timely appeal for support of the efforts which are being made in India to secure the presence of all constitutional parties at the Round Table Conference. The Association is rightly impressed with the imperative necessity for the submission to the fullest criticism of any legislative proposals that may be framed. It deplores the mistakes which resulted from the neglect of Indian and British-Indian advice ten years ago. And it points out that not only is authoritative criticism necessary to successful legislation, but that it is also essential to the peace of India, political and commercial. There can be no peace on any sound basis if full consideration is not given to the views "of those parties whose achievements and standing demand recognition, as well as to the interests of those who will be dependent on the good will of others for an indefinite period." With many of the proposals set forth in the Simon Report the Association is in accord. But the great complexity of the problem makes it eminently desirable that all who can contribute to its solution should have absolute freedom of discussion at the Conference. In spite of the lack of understanding in many quarters the Association believes that in India a better atmosphere has been created during the past few weeks; and that there is a chance of the Round Table Conference attracting delegates who can give valuable assistance to Parliament. But in any case it recognises that the Viceroy's declaration of the scope of the Conference must stand, and that "attempts to deprecate or to alter it will only increase the lack of confidence in the good faith of Great Britain which, largely due to a poisonous Press, is widespread in literate India to-day."

A Charge Disproved.

In the past it has been often complained that the European community in India, and its representative Association have usually exhibited but a languid and superficial interest in political affairs. There may have been some foundation for this charge formerly, but it certainly cannot be sustained to-day. The Europeans are now as fully alive to the political situation as is any one of the other communities. They recognise clearly that, as a minority community, they must keep a vigilant eye on the safeguarding of their interests and the defence of their rights. But although this is obviously their primary duty, they are not undertaking it in any reactionary spirit. On the contrary, it is clear from their attitude that they are prepared to go far to satisfy the aims and aspirations of the Indians. The European Association's letter, from which we have quoted above, is of itself evidence that such is their view. It shows the extent to which the opinion of the community has moved in the direction of reform. And Sir Hugh Cocke, the leader of the European group in the Assembly, went farther the other day when he assured that House that there are no diehards among the Europeans nowadays. "Our object is," he said, "to help the Indians to get a stable constitution for India. If there is any hope of agreement at the Round Table Conference the European members will not fail to do their best to achieve it. The diehards in England are not going to dictate to India." Mr. Eric Studd, a member of the European group, also spoke in the Assembly recently in the same spirit. He was not, he said, in opposition to a new constitution provided that those interests which have been in past years built up by the co-operation of the British and the Indians are adequately safeguarded. These utterances clearly indicate that the Europeans in India are prepared to go farther in the way of constitutional change than many in this country, who have had experience of India, are prepared to go. This fact is of great importance, and it cannot fail to exercise considerable influence on the solution of the Indian problem. It is not for a moment to be supposed that the Europeans in India are insensible to the risk involved in a further advance. But they recognise that this risk must be faced, and they are consequently in favour of going boldly forward.

PERSONAL AND GENERAL

TO-DAY

July 24, 1930 (New Style).
July 11, 1930 (Old Style).
Saphar 27, 1349 A.H., of the Muslim Calendar.
Tammuz 28, 5690, of the Jewish Calendar.
Amordad 2, 1309, of the Persian Calendar.

The Aga Khan arrived at the Ritz Hotel last week from Paris.

The Patriarch of Alexandria was received by the King at Buckingham Palace on July 18.

Professor Andrews Andreades, who is on his way to Japan, was in London last week.

Sir Edward and Lady Boyle left London on July 18 for the Continent. They expect to be away until about August 26.

M. Athos Romanos, Member of the Greek Senate and at one time Greek Minister to the Court of St. James's, left London on July 19 after a short visit.

Dr. Wolfgang von Weisl, who has been travelling in India, Malaya and Europe for the past three years, returned to Jerusalem early this month.

The James Mew Arabic Scholarship at Oxford University for 1930 has been awarded to Arthur E. H. Paxton, B.A., Hertford College.

Mr. Mark Aitchison Young, Colonial Secretary, Sierra Leone, has been appointed Chief Secretary to the Government of Palestine, in succession to Mr. H. C. Luke.

Dr. Hafiz Bey Afifi, the new Egyptian Minister to the Court of St. James's, arrived on July 22 in London and took up his residence at the Royal Egyptian Legation, 75, South Audley Street, W.1.

The Roumanian delegation to the Inter-Parliamentary Union Conference in London were last week the guests of M. and Mme. Barbu Jonescu, at Oakhurst Court, Godstone, Surrey, where King Carol of Roumania stayed during a portion of his exile in 1928.

The Prince of Wales received Lieut.-Colonel Sir John Chancellor (High Commissioner and Commander-in-Chief, Palestine), and Sir Ronald Storrs (Governor and Commander-in-Chief, Cyprus), at St. James's Palace on July 16.

Mr. Waris Ameer Ali will speak to the Near and Middle East Association this evening (July 24), at 9 p.m., upon "The Muslim Point of View in India." The address, which is to be delivered by kind permission of Lady Beecham, at 19, Grosvenor Square, W.1., will be presided over by Lord Lamington.

KING FAISAL OF IRAQ.

His Majesty King Faisal arrived in London on July 21, and will stay for a week at the Hyde Park Hotel as a guest of the British Government. The visit of King Faisal, who was met at Dover by Nouri Pasha as Said, Prime Minister of Iraq, and Afnan Bey, Iraqi Chargé d'Affaires in London, is a private one. At Victoria Station King Faisal was met by Earl De La Warr, Lord-in-Waiting, representing the King, and among others present were Lord Passfield, Mr. C. P. Duff (representing the Prime Minister), Sir Francis Humphrys (High Commissioner of Iraq), Sir Percy Cox, Sir Ronald Storrs, Mr. C. Cliffe (representing Sir Samuel Wilson), Hamid Pasha el Bassil of Fayoum, and many Iraqi subjects.

PALESTINE HANDICRAFTS.

An exhibition of the handiwork of Yamanites in Palestine, comprising dresses, lingerie, embroidery, children's clothes, jewellery and basket-ware, was opened on July 15 at the offices of the Economic Board for Palestine, 38, Great Ormond Street, W.C.1, by Lady Waley Cohen. The handicrafts concerned are organised by a Company known as "Palestine Handicrafts (Shani), Ltd.," of which Mr. Leopold Kessler is Chairman. The work is carried out as a home industry by workers resident in Jerusalem, Safed, Tiberias and other towns, and the object of the Company is to keep the industry alive, to co-ordinate it and to help the workers, who are responsible for the designs, with suggestions to enable them to meet the requirements of the "markets" for which they cater. To supplement local sales in Palestine, "Shani" has arranged for the sale of the goods in London, and the handiwork of the different crafts can be seen and purchased at 38, Great Ormond Street. On July 15 Mr. Kessler explained the part played by the Company in Palestine, and Lady Waley Cohen, with a brief speech in which she referred to the wisdom of adjusting, as far as possible, prices to local standards, declared the exhibition opened. The Yamanite work, with which visitors to Palestine will be familiar, is most attractive, and it is noticeable that care is being taken to adjust it to Western requirements.

The Maharaja of Kapurthala gave a luncheon party in honour of the Secretary for India and Mrs. Wedgwood Benn at the May Fair Hotel on July 15. Among the guests present were the Maharaja of Jaipur, the Rani of Puddukota, the Hon. Mrs. Ronald Greville, the Afghan Minister, Sir Sidney and Lady Lawford, Sir Arthur Bannerman, Colonel and Mrs. Patterson, and Sir Walter Gibbons. On the following day the Maharaja, together with the Tika Raja of Kapurthala, was received by the Prince of Wales at St. James's Palace, and subsequently entertained the King of Spain at lunch.

TREATY OF ALLIANCE BEWEEN THE UNITED KINGDOM AND IRAQ.

Preamble.

His Majesty the King of Great Britain, Ireland and the British Dominions beyond the Seas, Emperor of India,

And His Majesty the King of Iraq,

Whereas they desire to consolidate the friendship and to maintain and perpetuate the relations of good understanding between their respective countries; and

Whereas His Britannic Majesty undertook in the Treaty of Alliance signed at Baghdad on the thirteenth day of January, One thousand nine hundred and twenty-six of the Christian Era, corresponding to the twenty-eighth day of Jamadi-al-Ukhra, One thousand three hundred and forty-four, Hijrah, that he would take into active consideration at successive intervals of four years the question whether it was possible for him to press for the admission of Iraq into the League of Nations; and

Whereas His Majesty's Government in the United Kingdom of Great Britain and Northern Ireland informed the Iraq Government without qualification or proviso on the fourteenth day of September, One thousand nine hundred and twenty-nine, that they were prepared to support the candidature of Iraq for admission to the League of Nations in the year One thousand nine hundred and thirty-two and announced to the Council of the League on the fourth day of December, One thousand nine hundred and twenty-nine, that this was their intention; and

Whereas the mandatory responsibilities accepted by His Britannic Majesty in respect of Iraq will automatically terminate upon the admission of Iraq to the League of Nations; and

Whereas His Britannic Majesty and His Majesty the King of Iraq consider that the relations which will subsist between them as independent sovereigns should be defined by the conclusion of a Treaty of Alliance and Amity;

Have agreed to conclude a new Treaty for this purpose on terms of complete freedom, equality and independence which will become operative upon the entry of Iraq into the League of Nations:

Article 1.—There shall be perpetual peace and friendship between His Britannic Majesty and His Majesty the King of Iraq.

There shall be established between the High Contracting Parties a close alliance in consecration of their friendship, their cordial understanding and their good relations, and there shall be full and frank consultation between them in all matters of foreign policy which may affect their common interests.

Each of the High Contracting Parties undertakes not to adopt in foreign countries an attitude which is inconsistent with the alliance or might create difficulties for the other party thereto.

Article 2.—Each High Contracting Party will be represented at the Court of the other High Contracting Party by a diplomatic representative duly accredited.

Article 3.—Should any dispute between Iraq and a third State produce a situation which involves the risk of a rupture with that State, the High Contracting Parties will concert together with a view to the settlement of the said dispute by peaceful means in accordance with the provisions of the Covenant of the League of Nations and of any other international obligations which may be applicable to the case.

Article 4.—Should, notwithstanding the provisions of Article 3 above, either of the High Contracting Parties become engaged in war, the other High Contracting Party will, subject always to the provisions of Article 9 below, immediately come to his aid in the capacity of an ally. In the event of an imminent menace of war the High Contracting Parties will immediately concert together the necessary measures of defence. The aid of His Majesty the King of Iraq in the event of war or the imminent menace of war will consist in furnishing to His Britannic Majesty on Iraq territory all facilities and assistance in his power including the use of railways, rivers, ports, aerodromes and means of communication.

Article 5.—It is understood between the High Contracting Parties that responsibility for the maintenance of internal order in Iraq and, subject to the provisions of Article 4 above, for the defence of Iraq from external aggression rests with His Majesty the King of Iraq. Nevertheless His Majesty the King of Iraq recognises that the permanent maintenance and protection in all circumstances of the essential communications of His Britannic Majesty is in the common interest of the High Contracting Parties. For this purpose and in order to facilitate the discharge of the obligations of His Britannic Majesty under Article 4 above His Majesty the King of Iraq undertakes to grant to His Britannic Majesty for the duration of the Alliance sites for air bases to be selected by His Britannic Majesty at or in the vicinity of Basra and for an air base to be selected by His Britannic Majesty to the west of the Euphrates. His Majesty the King of Iraq further authorises His Britannic Majesty to maintain forces upon Iraq territory at the above localities in accordance with the provisions of the Annexure of this Treaty on the understanding that the presence of those forces shall not constitute in any manner an occupation and will in no way prejudice the sovereign rights of Iraq.

Article 6.—The Annexure hereto shall be regarded as an integral part of the present Treaty.

Article 7.—This Treaty shall replace the Treaties of Alliance signed at Baghdad on the tenth day of October, One thousand nine hundred and twenty-two of the Christian Era, corresponding to the nineteenth day of Safar, One thousand three hundred and forty-one, Hijrah, and on the thirteenth day of January, One thousand nine hundred and twenty-six, of the Christian Era, corresponding to the twenty-eighth day of Jamadi-al-Ukhra, One thousand three hundred and forty-four, Hijrah, and the subsidiary agreements thereto, which shall cease to have effect upon the entry into force of this Treaty. It shall be executed in duplicate, in the English and Arabic languages, of which the former shall be regarded as the authoritative version.

Article 8.—The High Contracting Parties recognise that, upon the entry into force of this Treaty, all responsibilities devolving under the Treaties and Agreements referred to in Article 7 hereof upon His Britannic Majesty in respect of Iraq will, in so far as His Britannic Majesty is concerned, then automatically and completely come to an end, and that such responsibilities, in so far as they continue at all, will devolve upon His Majesty the King of Iraq alone.

It is also recognised that all responsibilities devolving upon His Britannic Majesty in respect of Iraq under any other international instrument, in so far as they continue at all, should similarly devolve upon His Majesty the King of Iraq alone, and the High Contracting Parties shall immediately take such steps as may be necessary to secure the transference to His Majesty the King of Iraq of these responsibilities.

Article 9.—Nothing in the present Treaty is intended to or shall in any way prejudice the rights and obligations which devolve, or may devolve, upon either of the High Contracting Parties under the Covenant of the League of Nations or the Treaty for the Renunciation of War signed at Paris on the twenty-seventh day of August, One thousand nine hundred and twenty-eight.

Article 10.—Should any difference arise relative to the application or the interpretation of this Treaty and should the High Contracting Parties fail to settle such difference by direct negotiation, then it shall be dealt with in accordance with the provisions of the Covenant of the League of Nations.

Article 11.—This Treaty shall be ratified and ratifications shall be exchanged as soon as possible. Thereafter it shall come into force as soon as Iraq has been admitted to membership of the League of Nations.

The present Treaty shall remain in force for a period of twenty-five years from the date of its coming into force. At any time after twenty years from the date of the coming into force of this Treaty, the High Contracting Parties will, at the request of either of them, conclude a new Treaty which shall provide for the continued maintenance and protection in all circumstances of the essential communications of His Britannic Majesty. In case of disagreement in this matter the difference will be submitted to the Council of the League of Nations.

In faith whereof the respective Plenipotentiaries have signed the present Treaty and have affixed thereto their seals.

Done at Baghdad in duplicate this thirtieth day of June, One thousand nine hundred and thirty, of the Christian Era, corresponding to the fourth day of Safar, One thousand three hundred and forty-nine, Hijrah.

(L.S.) F. H. HUMPHRYS.
(L.S.) NOURY SAID.

ANNEXURE TO TREATY OF ALLIANCE.

1. The strength of the forces maintained in Iraq by his Britannic Majesty in accordance with the terms of Article 5 of this Treaty shall be determined by His Britannic Majesty from time to time after consultation with His Majesty the King of Iraq.

His Britannic Majesty shall maintain forces at Hinaidi for a period of five years after the entry into force of this Treaty in order to enable His Majesty the King of Iraq to organise the necessary forces to replace them. By the expiration of that period the said forces of His Britannic Majesty shall have been withdrawn from Hinaidi. It shall be also open to His Britannic Majesty to maintain forces at Mosul for a maximum period of five years from the entry into force of this Treaty. Thereafter it shall be open to His Britannic Majesty to station his forces in the localities mentioned in Article 5 of this Treaty, and His Majesty the King of Iraq will grant to His Britannic Majesty for the duration of the Alliance leases of the necessary sites for the accommodation of the forces of His Britannic Majesty in those localities.

2. Subject to any modifications which the two High Contracting Parties may agree to introduce in the future, the immunities and privileges in jurisdictional and fiscal matters, including freedom from taxation, enjoyed by the British forces in Iraq will continue to extend to the forces referred to in Clause 1 above and to such of His Britannic Majesty's forces of all arms as may be in Iraq in pursuance of the present Treaty and its annexure or otherwise by agreement between the High Contracting Parties, and the existing provisions of any local legislation affecting the armed forces of His Britannic Majesty in Iraq shall also continue. The Iraq Government will take the necessary steps to ensure that the altered conditions will not render the position of the British forces as regards immunities and privileges in any way less favourable than that enjoyed by them at the date of the entry into force of this Treaty.

3. His Majesty the King of Iraq agrees to provide all possible facilities for the movement, training and maintenance of the forces referred to in Clause 1 above and to accord to those forces the same facilities for the use of wireless telegraphy as those enjoyed by them at the date of the entry into force of the present Treaty.

4. His Majesty the King of Iraq undertakes to provide at the request and at the expense of His Britannic Majesty and upon such conditions as may be agreed between the High Contracting Parties special guards from his own forces for the protection of such air bases as may, in accordance with the provisions of this Treaty, be occupied by the forces of His Britannic Majesty, and to secure the enactment of such legislation as may be necessary for the fulfilment of the conditions referred to above.

Digitized by Google

5. His Britannic Majesty undertakes to grant whenever they may be required by His Majesty the King of Iraq all possible facilities in the following matters, the cost of which will be met by His Majesty the King of Iraq.

(1) Naval, military, and aeronautical instruction of Iraqi officers in the United Kingdom.

(2) The provision of arms, ammunition, equipment, ships and aeroplanes of the latest available pattern for the forces of His Majesty the King of Iraq.

(3) The provision of British naval, military and air force officers to serve in an advisory capacity with the forces of His Majesty the King of Iraq.

6. In view of the desirability of identity in training and methods between the Iraq and British armies, His Majesty the King of Iraq undertakes that, should he deem it necessary to have recourse to foreign military instructors, these shall be chosen from amongst British subjects.

He further undertakes that any personnel of his forces that may be sent abroad for military training will be sent to military schools, colleges and training centres in the territories of His Britannic Majesty, provided that this shall not prevent him from sending to any other country such personnel as cannot be received in the said institutions and training centres.

He further undertakes that the armament and essential equipment of his forces shall not differ in type from those of the forces of His Britannic Majesty.

7. His Majesty the King of Iraq agrees to afford, when requested to do so by His Britannic Majesty, all possible facilities for the movement of the forces of His Britannic Majesty of all arms in transit across Iraq and for the transport and storage of all supplies and equipment that may be required by these forces during their passage across Iraq. These facilities shall cover the use of the roads, railways, waterways, ports and aerodromes of Iraq, and His Britannic Majesty's ships shall have general permission to visit the Shatt-al-Arab on the understanding that His Majesty the King of Iraq is given prior notification of visits to Iraq ports.

(Initialled) F. H. H.
N. S.

[Notes are appended to this Treaty in which it is agreed, as between the High Commissioner for Iraq and the Prime Minister of Iraq, that the British Diplomatic representative at the Court of the King of Iraq shall have the status of Ambassador, that all outstanding financial questions, such as those relating to the Iraq Railways and to the Port of Basra, shall form the subject of a separate agreement and shall be deemed an integral part of the present Treaty, that the Iraq Government will normally engage British subjects when in need of the services of foreign officials, and that the Iraq Government will ask for a British Advisory Military Mission.]

NEWS IN BRIEF.

The Dowager Queen Marie of Roumania and Princess Ileana left for Bled on July 19 on a visit to the Yugoslav Royal Family, on the conclusion of which they will go on a visit to Sigmaringen with Queen Marie of Yugoslavia, who is a daughter of the Queen.

The committee of the East India United Service Club, St. James's Square, has received and hung a miniature of the General Sir Dighton Probyn (1833-1924), which was bequeathed to the club by Miss Charlotte Knollys, who died last April 24 at the age of 95. Sir Dighton Probyn won the V.C. in the Mutiny, and long commanded "Probyn's Horse"—the 1st Sikh Irregular Cavalry. In his later years he was Comptroller of Queen Alexandra's Household.

King Fuad of Egypt has conferred the honour of Chevalier of the Order of the Nile upon Mr. Joseph Rhodes, Director of the Gordon Memorial Technical Schools, Atbara, Sudan, in recognition of his educational services in the Sudan. Mr. Rhodes saw service with the Royal Engineers in the Egyptian Expeditionary Force during the War, and has published several works, including "Motor Transport in the Sudan" and "Across Africa by Car."

A manifesto, in which he claims the throne of Persia, has been issued in Paris by Prince Hassan, brother of the late Shah of Persia, Sultan Ahmed, who died last February in the American hospital there. He was the last sovereign of the Qajar dynasty, which was dethroned by Riza Khan Pahlavi, the present ruler of Persia.

The death is reported of Colonel Frank Lucas Netlam Giles, of Thurlston House, Fleet, late Royal Engineers. After the War Colonel Giles spent some years in Eastern Europe, from 1920 to 1921 as British Commissioner on the Yugoslav-Bulgarian Boundary Commission, from 1922 to 1925 as Commissioner on the Yugoslav-Albanian Boundary Commission, and latterly as British military attaché in Belgrade and Athens and Belgrade and Prague.

A solemn Requiem for the late King Ferdinand of Roumania was sung at Curtea Argesh on July 19, the third anniversary of his death. Members of the Royal family, the Government, and all high officials were present. King Carol and Prince Nicholas left Bucharest by special train for Curtea Argesh. The train halted at the station of Chitila, where the Dowager Queen Marie, Queen Helen and Princess Ileana joined the party.

Book Reviews

A BIBLIOGRAPHY OF PERSIA.

"A BIBLIOGRAPHY OF PERSIA." By Lt.-Col. Sir Arnold T. Wilson. (Oxford: Clarendon Press. 20s.)

It is difficult, as Sir Arnold Wilson suggests in a model preface to this invaluable compilation, to overemphasise the importance of Persia to mankind. Alike from the point of view of literature, religion, history, archæology, national development, and so forth, Persia has never ceased to attract the attention of Western scholars, with whose writings this bibliography is primarily concerned. Each year there issue from Europe and America books on Persia, varying, indeed, in merit, as they deal with the picturesque or the profound; but the very spate of works is evidence of the ceaseless fascination of the country.

It has long been a matter of embarrassment to the student of Persia how best to select from the books available on any particular aspect of the Persian genius. With this compilation by Sir Arnold Wilson in his hands, however, he has only himself to blame if his knowledge shows *lacunæ*. It has not been the object of the compiler to include, except incidentally, works on Persia in the Persian language; but otherwise his list is, so far as we are able to judge, admirably complete.

Undoubtedly this was a work which needed doing, and it is gratifying to record how excellently the compilation has been made. Nor should one forget the share of the Clarendon Press in the production, which is clear and neat. It is fitting that what was surely a labour of love for the author should have been made matter of pride by the publishers, and we congratulate them both heartily.

EGYPTIAN TALES.

"THE TEMPLE SERVANT & OTHER STORIES." By E. R. Morrough (London: Longmans, Green & Co., Ltd. 7s. 6d.)

Mr. Morrough introduces us to scenes which Mr. Hichens has made familiar to British readers, and it will be well to say at once that the stories which are most reminiscent of his predecessor are the least successful in the book. We trust that he will now definitely break away, and take up his own line, in which he here shows himself capable of doing excellent work. The romantic tales with their efforts to make the flesh creep and their use of the supernatural are poor things compared with those which deal with the Bedouin, Fallahin, and town-dwellers of Egypt as they really are. These are nearly all exceedingly good, and are not only well written but also display an inside knowledge of the mentality and life of the Egyptian in the desert, the fields, and the towns, and a sense of humour which are most refreshing.

ARAB HOME LIFE.

"ORIENTALE. 1930." By Lucienne Favre. (Paris: Bernard Grasset. 15 francs.)

This novel is a naive little study of Arab home life as seen through the eyes of a simple woman in Algeria. It is told without affectation and without prejudice, so that the reader is enabled to see intimately into the habits of a typical lowly Muslim household.

The teller of this story is a resigned Arab woman married to a dunkard, who, however, performs the *Haj* and thus becomes a reformed man. Her trials and her hopes, her restraint and her obedience, her reaction on the one side to French enlightenment and lack of religion and on the other side to Muslim obscurantism and preservation of religion—all these are excellently portrayed. It is a gentle story, related with winning simplicity and candour, and of its very grace and dignity it sustains the interest of the reader. And for those who do not know how poor Muslims live, and who have gained their impressions of Islam only from educated Muslims, it may prove very instructive.

NOTES AND NEWS

170, *Strand, London, W.C.2,*
Tuesday Morning.

The Position in Palestine.

It is clear from Mr. Goldwater's admirable survey of developments in Palestine in 1929 (extracts from which are given elsewhere in these pages) that, but for the unfortunate events of August and their consequences, the past year would have been fairly satisfactory for the country from the economic point of view, notwithstanding the severe economic depression which set in on the world markets in the closing months of the year. The first eight months, he points out, were marked by "progress in general development work, trade, and industry," while the fact that the crops were good was another favourable factor, though here falling prices had the inevitable effect. But while the year ended on an unfortunate note, developments during the period were on the whole such as to justify a feeling of marked optimism for the future of the country. The interruption in the country's progress was at the worst merely a transitory phase that could have no lasting consequences, while during the year much constructive work of great importance was carried out, the results of which will be seen in the future. Thus industrial development was steadily proceeding, and during the period 28 new companies were founded with a total capital of £P750,000, and have helped considerably to enlarge the field for employment. When to this is added the progress made with the major enterprises, such as the construction of Haifa harbour and the exploitation of the Dead Sea mineral resources, it will be realised that the year saw a great step forward in the process of laying the foundations on which Palestine can achieve a prosperous future.

Roumanian Oil Industry.

The offer by the Astra Romana and the Romano Americana companies, representing two of the great oil groups, to purchase the whole of the export surplus of the other Roumanian producers on certain conditions has been accepted. It was laid down that the scheme must be approved by 95 per cent. of the producers, and at the meeting at which it was adopted, producers representing 97 per cent. of the industry were represented. The scheme naturally provides for a restriction of output. It has been an anomaly that, while strenuous efforts are being made to bring world oil production more into line with the present demand for the commodity, the tendency in Roumania has been to push forward production as one means of counteracting the effects of low prices. The result of this mistaken policy has been to make matters worse rather than better for producers. It is understood that the scheme, which will be brought into force at once, provides that producers whose daily output is 100 tons or less shall not be interfered with, but that the large producers will be restricted on a temporary basis which will be reviewed in the autumn and subsequently every six months. It appears to be generally accepted that the scheme is just what is required to meet the crisis from which the important Roumanian industry has been suffering. It brings within view the prospect of resonable prices and profits, while it will act as a timely check on the too rapid utilisation of the country's oil resources. Finally, it constitutes an important move in the process of what may be termed the rationalisation of the world's oil industry.

The Egyptian Situation.

The fall in cotton prices and the relative failure of the tourist season as a result of the world depression generally and the slump in America in particular have made the economic position in Egypt quite difficult enough without the addition of such repercussions as might be expected to follow any widespread disturbances. Fortunately there is no reason as yet for anticipating any really serious developments; still it may well be the case that if nothing worse happens quite sufficient harm will have been done, for the tourist traffic is almost as delicate a plant as credit, and would-be visitors may think twice next season before deciding to visit the Nile valley. But we are still in July, and there is plenty of time for the complete restoration of confidence before the next season. Actually, if it were not for recent happenings, it would be possible to take a distinctly hopeful view of the immediate outlook for the country. The Government's scheme for disposing of the stocks of cotton appears to be meeting with considerable success, while, to judge by present reports from America, it would appear that there is a prospect of the world cotton position taking a turn for the better. A short American crop would, of course, have a pronounced effect on the situation, but it is too early as yet to take this factor into serious consideration.

Latifiyah (Iraq) Estates.

At the meeting of the Latifiyah (Iraq) Estates Sir Edward Manville gave an interesting account of the progress of the development work of the company on its estate of about 60,000 acres. It is expected that the main irrigation canal, which will serve by flow about 32,710 acres and by lift 2,290 acres, will be finished in time to permit the winter crops to be sown. About half of this area of 35,000 acres can be put under winter crops in a season, while the area of summer crops that can be irrigated is 5,833 acres. Of the total area it is estimated that it will be possible to irrigate by flow 32,710 acres and by pump 25,190 acres. For the first season it is proposed to sow wheat, barley, and linseed for the winter crops, while the summer crops will be sesame, cotton, etc.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 22.

The improved tone in the Stock Markets which was displayed last week has not been maintained, and this week there has been a steady decline both in prices and in the volume of business. Gilt-edged stocks, however, continued to attract a fair amount of investment interest, War Loan being in particular favour, but the poor response given to the Austrian loan had an unfavourable effect upon foreign bonds, while another batch of poor traffic returns depressed Home Rails still further. Business in international stocks was small. The shares of the companies concerned in the grocery amalgamation changed hands freely pending the publication of the terms, which were announced on Friday. Courtaulds improved a little on the declaration of an interim dividend of 3 per cent., tax free, as against 4 per cent. a year ago, this being quite up to market expectations. The more speculative sections were dull and devoid of interest.

Bank Balance-sheets.

The last of the balance-sheets of the "Big Five" banks as at June 30 was published last week. Compared with the position at the corresponding date of last year, the aggregate deposits are somewhat higher, at £1,646 million, against £1,627½ million. Cash reserves are also higher at £182 million, or 11.1 per cent. of deposits, compared with £178 million (10.9 per cent. of deposits) a year ago. Advances, on the other hand, have fallen from £913½ million to £887 million, or from 56.1 per cent. of deposits to 53.9 per cent. Balancing this fall in advances is a rise in the holdings of bills discounted, which stand at £251 million, or 15.2 per cent. of deposits, compared with £198½ million, or 12.2 per cent., on June 20, 1929. On the whole, the normally very strong position of the British banks has therefore become even slightly stronger. This strength is unfortunately likely to be tested in the near future, for the protracted trade depression has adversely affected the position of many concerns who were regarded as among the soundest of businesses. The British banks, however, have huge reserves, "hidden" and disclosed, and should be able satisfactorily to meet the calls upon them. In accordance with expectation, the "Big Five" have all announced unchanged dividends. The fall in deposit rates with the fall in the Bank of England rate, while the rate on advances, except for favoured customers, has not fallen below 5 per cent., should have meant improved earnings for the banks, as we have mentioned before, but of this no indication will be given until the end of the year.

Grocery Merger Terms.

The terms of the fusion of the Home and Colonial Stores, Meadow Dairy, Maypole Dairy, Pearks Dairies, International Tea Stores, and Liptons have been generally approved in financial circles. The new concern, Allied Stores, Ltd., is to have a capital of £13,262,698, divided into £2,750,000 of 6 per cent. "A" Preference shares, £3,000,000 of 7 per cent. "B" Preference shares, £1,012,698 of 15 per cent. Cumulative Preferred Ordinary shares, and £6,500,000 in 26,000,000 Ordinary shares of 5s. each. Without making any allowance for economies arising from the merger, the combined earning power based on results for the periods down to the beginning of May, is given as £2,165,816. This sum, after meeting prior charge requirements, leaves £1,699,740 for division amongst the ordinary shareholders, allocations to reserves, etc. The capitalisation of the combine hence appears both moderate in regard to earning power and distributed over the various classes of shares on sound lines. The details of the terms of exchange for shares of the constituent concerns are naturally too complicated for reproduction in this column, but they appears to be fair to holders. An important point is that provision is made for the continuance of Unilever's control, but in a limited form. A strong board representing the combining interests has been appointed under the chairmanship of Sir James Martin, of the Maypole Company and of Liptons. Allied Stores should therefore not lack efficient and experienced direction. Full benefits of the merger cannot be expected in a week, but ultimately very considerable economies of buying and of administration should be possible. These should help the provision stores to maintain profits against the competition of the co-operative societies, which have been the original cause of the merger.

Cables and Wireless.

At the first annual meeting the other day of Cables and Wireless, Mr. John Denison-Pender, the Governor of the company, put up a good speech in reply to the many criticisms which the poor results of the company naturally brought forth. The excellence of his address does nothing to alter the fact that the company was created with a certain capital and it was held out that a fair return could be earned on that capital. In actual fact a fair return has not been earned on the nominal capital. The ordinary stocks receive no dividend for the first year, and are not likely to receive a dividend next year, and current revenue is only just sufficient to meet preference dividend. The whole service of the company is now working up to only one-third of capacity, and that is the crux of the trouble. Some cables are indeed not making a net profit at all. The fact that the Post Office has insisted on conducting its own Beam Service, instead of letting the company operate such a service, is only part of the reason for the poor results of Cables and Wireless. Bad trade and resulting falling off in telegraphic messages is a more important cause. Even so, the suspicion still remains that the nominal capital of the company does not correspond to the actual earning power of the assets. On this point the Governor gave no word of immediate encouragement to shareholders. Meanwhile, the 5 per cent. Cumulative Preference stock is obtainable to yield over £7 per cent.

The production of the Anglo-Egyptian Oilfields for the week ended July 11 was 5,271 tons.

The Government of Assam have given the contract for the first year's programme for the construction of road bridges in Assam to Braithwaite and Co. (India), Ltd.

The traffic receipts of the South Indian Railway Company for the week ended June 21 amounted to Rs.12,40,623, making the total from April 1 Rs.1,49,32,728, as compared with Rs.1,54,77,719 for the corresponding period of the previous year.

The Vulcan Foundry, Ltd., locomotive manufacturers, of Newton-le-Willows, Lancashire, have received a contract for 27 engines and tenders for tht Indian State Railways for service on the North-Western Railway. The engines will be of the new Indian standard "XA" type, with 4-6-2 wheel arrangement. Each engine will weigh 108¾ tons in working order.

GREEK COMMERCIAL NEWS.

The report of Hambros Bank for the week ended July 18 contains the following:—

The Consular Agents in India are reporting that the requirements for currants and other Greek food products in that country (such as olives, Greek caviare, preserved groceries, etc.) may afford a good outlet to Greek produce.

The Ministry of Finance has circularised to the tax districts that, according to the Greek law, merchants and companies are obliged to keep their books in the Greek language. If books are kept in foreign languages the income tax authorities may insist upon their translation into the Greek language.

A Circular of the Ministry of Agriculture lays down regulations to be observed for the packing of figs.

On June 26 an agreement was signed by the six big wine and alcohol producing companies in Greece, as a result of which sales of the products of the parties to the agreement will be transferred to a central selling agency as from July 1. It is expected that, by this method of rationalisation, considerable economies will result in the selling and transport expenses hitherto incurred by the companies individually.

The weather conditions have not been very favourable lately. Thunderstorms broke out in various parts of the country, with unfavourable effects on crops. The damage so far ascertained, although greater in some districts, is not on the whole as serious as it was earlier reported. The new currant crop is estimated at 300,000,000 Venetian pounds. It is reported that tobacco growing in Thessaly is enjoying favourable weather conditions. The area planted is larger than last year's, and the qualities are expected to be better.

The number of Greek ships as on March 31 was as follows:—Steamers, 549, of a total tonnage of 1,363,726 tons; sailing ships, 719, of 57,989 tons; total, 1,268, of 1,421,715 tons. The above figures show that during the first three months of 1930 three units of a total tonnage of 13,633 tons were added to the fleet as on December 30 last.

From January 1 to May 31, imports totalled 986,588 tons, of the value of 4,510,972,000 drs., while exports amounted to 372,972 tons, of the value of 2,060,929,000 drs. Wheat and flour of a total value of 190,897,000 drs. are heading the list of imports, and are followed by textiles of a value of 95,877,000 drs. and minerals of a value of 88,851,000 drs. Tobacco and currants are heading the list of exports with 182,352,000 drs., then followed by oil valued at 20,345,000 drs. and wines and spirits at 12,725,000 drs.

The Sudan Government Railways have given a contract to Kitson and Co., Leeds, for four heavy goods locomotives.

The traffic receipts of the Suez Canal Company from June 28 to July 11 amounted to 37,640,000 francs.

It is reported that the Yugoslav State Railways have agreed to purchase on credit a large supply of British coal briquettes.

A conference of representatives of Roumania and Yugoslavia regarding a joint organisation for the sale of the two countries' agricultural produce was opened at Sinaia on July 20. Hungary has also been invited to send delegates.

Yugoslavia's exports for May totalled 414,760 tons, of the value of 542 million dinars, the imports being 146,282 tons, of the value of 608 millions. There was thus an adverse balance of 66 million linars, as against one of 168 millions for May, 1929. For the first five months of the year the value of the exports was 2,854 million dinars, that of imports being 2,973 million dinars, there being an adverse balance of 119 million dinars, as against one of 606 million dinars for the corresponding period of 1929.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Electric Air Compressor Sets.—The Ministry of Public Works, Egyptian Government, invites tenders for the supply of four electric air compressor sets. September 14. (D.O.T.)

Marine Engines.—The Ministry of Communications, Ports and Lighthouses Administration, Alexandria, invites tenders for the supply of four new Diesel vertical marine engines, two cylinders, four cycle type, airless injection. Each unit must develop a normal load of 70 B.H.P. The four engines are required for the propulsion of two hopper barges—two engines for each barge. July 31. (D.O.T.)

Fire Extinguishers.—The Egyptian Ministry of Education invites tenders for the supply of "Foam" and "Acid" fire extinguishers. September 15. (D.O.T.)

Plant for Waterworks.—The Egyptian Ministry of the Interior invites tenders for the supply and installation of electric motors, pumps, etc., at the Dessouk waterworks. September 30. (D.O.T.)

Stoneware Pipes.—The Main Drainage Board, Cairo, invites tenders for the supply of stoneware pipes. August 15. (D.O.T.)

Automatic Refrigerating Plant.—The Egyptian authorities invite tenders for the supply and installation of a new modern automatic refrigerating plant to be fitted on the yacht Mahroussa at Alexandria. August 7. (D.O.T.)

Plant for Electric Power Station.—The Egyptian Ministry of the Interior invites tenders for the supply of electrical plant and material for the electric power station at Suez. August 2. (D.O.T.)

Electrical Instruments, etc.—The Municipalities and Local Commissions Section of the Ministry of the Interior invites tenders for the supply and mounting of electrical instruments and apparatus for the Kom el Nour Outgoing Feeder on the Mit Ghamr Power House Switchgear. August 16. (D.O.T.)

Measures.—The Director-General, Physical Department, Sharia El Inhsa, No. 1, Dawawin Post Office, Cairo, invites tenders for the supply of steel and linen measures of length. August 18.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Tarantia for Bombay (Birkenhead, August 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maidan for Calcutta (Birkenhead, July 31); s.s. Mathura for Calcutta (Birkenhead, August 12).

Bibby Line.—S.s. Gloucestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, August 6).

British India Line.—S.s. Manela for Colombo, Madras, and Calcutta (London, July 26); s.s. Trewyn for Bombay, Port Okha, and or Bedi Bunder (Jamnagar), and Karachi (London, August 2).

Cunard Line.—S.s. Bactria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if inducement (Glasgow, July 31; Liverpool and Swansea, August 2); s.s. Sea Rambler for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, Fiume, and Shushak, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if inducement (Liverpool, August 16; Swansea, August 19).

Johnston Line.—S.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 9); s.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 13).

P. and O. Line.—S.s. Ranpura for Bombay (London, August 1); s.s. Behar for Calcutta (London, August 1).

Prince Line.—S.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, July 30); s.s. Korean Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, August 1).

Ellerman and Papayanni Lines.—S.s. Lisbon for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 26; Swansea, July 26); s.s. Malatian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 30); s.s. Mardinian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, August 2; Swansea, August 7); s.s. Oporto for Gibraltar, Algiers*, Oran*, Malta, Patras, Syra*, Smyrna, and Constantinople (Liverpool, August 16; Swansea*, August 16). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Messageries Maritimes.—(From Marseilles).—S.s. Pierre Loti for Naples, Piræus, Istanbul, Izmir, Rhodes, Larnaca, and Beyrout (July 29); s.s. Champollion for Alexandria, Jaffa, and Beyrout (July 29); s.s. Lotus for Alexandria, Jaffa, and Beyrout (August 5); s.s. Lamartine for Naples, Piræus, Istanbul, Izmir, Rhodes, Larnaca, and Beyrout (August 12).

Motors and Motoring.

(By Our Motoring Correspondent)

The Speed Limit.

One of my colleagues, perhaps opportunely, has been warning motorists not to take it for granted that there will be no more prosecutions under the speed limit before the coming into force of the new Bill. As a matter of fact, the 20 mile speed limit is still in operation, but I do not know any place where police traps are instituted to catch anyone going less than 30 miles per hour. Whilst on this subject of speed, however, a writer has just been criticising the unhappy motor coach driver again, and I would like to say once more, and as emphatically as possible, that in my experience the drivers of motor omnibuses and motor coaches are far and away the most careful and considerate drivers on the road, closely followed by chauffeurs driving high-powered private cars of quality make. The worst drivers are private owners of small and medium powered cars, and, personally speaking, I have found lady drivers quite as good and considerate as male drivers. It is a mistake to say that bad drivers predominate on the road; they do not. They are, however, more noticeable than they were, and their chief fault is hugging the crown of the road. As regards inconsiderate drivers, these are greatly in the majority. Apparently there is some idea afloat that the ownership of a car carries with it a licence to do exactly what one pleases and that one has only to blow one's horn and drive straight ahead to be in the right, whatever happens. It is astonishingly true that a very decent fellow will, as soon as he gets hold of a steering wheel, become a most arrogant person, with a fixed belief that he has a perfect right to do as he likes on a road. Something will certainly have to be done about this road danger, and it is no use blaming motor coach drivers for it. Were one-tenth of the accidents that happen on the roads, caused chiefly through the ignorance of private drivers, to take place on the railways, there would be Board of Trade inquiries and a great public outcry.

Balloon Tyres on Lorries.

The problem of deciding whether to change high-pressure tyres on a lorry in service to balloon tyres is different from deciding whether to have balloons on a lorry to be delivered, although in both cases the same principles apply. Tyres on a new lorry, as an authority rightly says, can be chosen for the service for which the vehicle is to be used. On an old job due consideration will have to be given to many other factors, such as wheel sizes and clearance space between tyre and wing or body. A balloon tyre is appreciably larger than the high-pressure tyre it would replace, and consequently users of commercial vehicles must exercise due care in measuring distances and in placing the balloon tyre so that it will be properly distanced from other tyres or parts of the chassis. Balloons can, of course, be used on the same rims and wheels as high pressure pneumatics in many instances, but in some cases the change would be impossible. Makers will at all times be ready to give full information on this point, and their advice should always be sought before attempting to change over. In 24-inch wheel sizes, such as 36 by 6 high pressure and larger, it is possible to install balloons on the same rims as were previously shod with high pressure tyres. However, it should be noted that the outside diameter of a balloon is larger than that of a high pressure tyre of the same carrying capacity. As an illustration it may be mentioned that a 40 by 8 high pressure tyre has an overall diameter of nearly 43 inches, and a 9.75 by 24 balloon, which fits the same rim, is nearly 45 inches in diameter. Use of a 22 inch base balloon in place of a high pressure tyre calls for a wheel change. On new equipment this imposes no great difficulties and on demountable wheels it is comparatively simple. Some advocates of 22 inch wheels point out that these wheels give greater clearance between brake drums and tyres than 20 inches wheels, and this may be an advantage in hilly country, where brake drums may be subject to a good deal of heat. Operating conditions and conveniences may determine whether one large single or two smaller tyres are to be used on rear wheels. There are advantages in having only one size of tyre on a vehicle and this, no doubt, explains the popularity of fitting tyres of the same size, single on the front wheels and double on the rear. Large single tyres are preferable for bad and rutty roads, and incidentally, the changing of a pair of large duals is far from easy compared with the task of changing a single wheel of the same size.

THE ECONOMIC SITUATION IN PALESTINE IN 1929.*

BY A. GOLDWATER, A.R.S.M.

The year under review is unfortunately memorable for the disturbances in the month of August and the attacks by Arabs on Jews in certain parts of the country, during which 133 Jews were killed and over 300 wounded and Jewish property and farms destroyed and looted. Coming as they did at a time when the country was just recovering after having emerged from a trying year of drought in 1928, the riots seemed to threaten for a time the economic structure which had been reared within the past decade, since the Civil Government was established in 1920, and reinforced under the Mandate which was ratified in 1922. Yet, notwithstanding the dislocation of the normal life of the country and the set-back to commerce and industry which followed the riots, the Government statistics show that for the year as a whole trade and production showed some progress over the preceding year, and that in some respects, the Government revenue included, there was a substantial improvement. The fact that this was possible despite the depression which prevailed during the last four months of the year, serves to emphasise the stability of the development work of the past few years, during which the country has been turning to productive account its sources of material wealth.

It is true that during those years the country passed through more than one period of economic depression, but that was largely the result of conditions abroad, to which Palestine re-acted most sensitively since it depended almost entirely upon foreign capital for its development, and will continue to do so while it is in the process of creating values. The last such depression in 1926-7 was not without its salutary effects as it witnessed the gradual settlement of various outstanding problems and the removal of some of the obstacles to the development of productive enterprises. These periods of depression certainly checked the country's progress to some extent, but there has been undoubtedly a general forward movement; and if part of the population did not participate in and benefit from that movement, it must be attributed largely to the conservatism of the social system and the indifference to material progress which has its origin partly in religious causes and partly, if not chiefly, in the patriarchal system, under which that part of the population has lived in their villages where their economic destinies are shaped by their overlords—the shaikhs or village chiefs. The infusion, however, into this system of people from progressive Western countries, coupled with the policy of the Government directed towards improving the economic organisation of the country as a whole, have altered conditions and have freed many of those people from their tutelage, thus enabling them to reap the full benefits of the material progress of the country, and it is perhaps for this reason more than for any other that only a small minority of the people participated in the riots of August, which were confined to only a few localities.

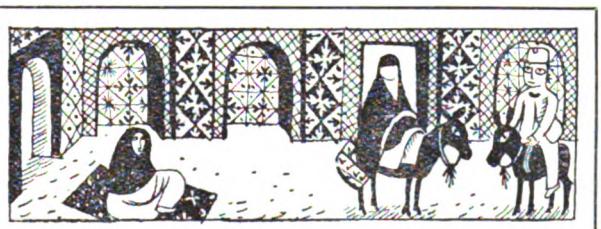
Effect of Disturbances.

Economically, the year under review may be divided into two periods—one, the eight months up to the last week in August, of progress in general development work and in trade and industry which fully justified the expectations at the opening of the year; the other, the four months up to the end of the year, in which the economic situation was dominated at first by Arab riots and the uncertainty in outlook following them, and later by the boycott declared by the Arabs on goods manufactured and merchandise sold by Jews, which was intended in the first instance to cut off effectively the local Arab market upon which a number of Jewish manufacturers and merchants largely depend, but was equally damaging to many of the other sections of the population, whose livelihood is equally dependent on their commercial relations with the Jews.

In the first part of the year, and up to August, practically all industrial enterprises were working at full pressure to meet increasing orders, and by August outputs and sales from almost all branches of industry had reached unprecedented high records, but the Arab riots, which brought for the moment the whole economic machinery of the country practically to a standstill, immediately re-acted upon the industries which, with only few exceptions, suspended operations. The banks suspended ordinary commercial business during the disturbances and trade generally was paralysed until order was restored, at least partially, about two weeks later. For agriculture, also, the year opened under very favourable conditions. In contrast to the drought and the general crop failure of 1928, as a result of which it became necessary for the Government to provide 2,000 tons of wheat and barley seeds for farmers, and for the Zionist Organisation and other Jewish bodies to make provision also for their settlers, the rains this year were plentiful and well distributed and exceeded the normal rainfall of the past few years all over the country, except in the region around Gaza. Despite, however, the heavy rains in the month of February which undoubtedly did some damage to certain field crops, abundant crops were reported everywhere throughout the country. Farmers, however, had to face a falling market; prices of all cereals dropped continuously throughout the year, excepting during the first four months when slight rises occurred, and at the end of the year stood at about 25 per cent. to 30 per cent. and more below the prices at the opening of the year.

No statistics of agricultural production were made available this year, not even those provided in previous years by the Government of the "estimated" yields which were based upon the tithes collected. But some idea of the increase in the crops can be obtained from the trade

* Extracts from the annual report on conditions in Palestine, issued by the Palestine Corporation.



Travellers in Persia

THE CONVENIENCE OF THE CHEQUE

For those who know beforehand where they will be likely to require money, the system by which the Westminster Bank can arrange for a customer to cash his own cheques abroad is an undoubted attraction. Any local branch manager will be pleased to arrange with the Bank's agent in Ispahan, say, and Kazvin, and Teheran, to cash a customer's cheques within any pre-arranged limits. Nothing but a cheque-book need be carried, and the utmost ease and safety are enjoyed

WESTMINSTER BANK LIMITED

HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

Digitized by Google

returns, which show substantial increases in the exports of some commodities, although in other cases there was very little movement in the export trade, as farmers were reluctant to sell owing to the abnormally low prices which prevailed. The export of melons, for example, amounted to over three times the 1928 exports, and exceeded the previous record figure of 1927 (38,133 tons) by 11,000 tons, while, on the other hand, the quantities of certain cereals exported show inappreciable increases over the exports in the previous year, and in some cases actually show a decline.

The orange crop did not come up to expectations, as a much larger crop than in any of the previous years was predicted for the 1929-30 season, that is from October, 1929, to May, 1930, in view of the new areas which would be coming into bearing; but Government returns of oranges exported, from which the production may be gauged, as home consumption accounts for only a small percentage of the crop, show that between October and December, that is, for the first part of the 1929-30 season, exports, including oranges shipped in bulk, totalled 585,450 cases, as against 541,200 cases in the corresponding period of the previous year, being an increase of only 44,000 cases, or about 8 per cent. Compared, however, with the same period in the record season of 1926-7, there was an increase of only 6,000 cases, and it may be assumed, not unreasonably, that there was a lower relative production per dunam of grove, as unofficial figures place the exports up to the end of February, 1930, at slightly under 2,000,000 cases and the balance to be shipped is estimated at about 500,000 cases, making a total of approximately 2,500,000 cases for the 1929-30 season, which, if correct, will be lower by about 170,000 cases than the crop in the record season of 1926-7.

A feature of the year was the increase in exports of grapefruit. Here there is evidence of the first crop of grapefruit from the plantations which have been developed within the past few years, as the exports of the fruit between October and December totalled 8,310 cases, as against only 1,500 in the corresponding period for the previous year. Lemons showed a decline, only 5,190 cases having been exported from July to December, as compared with 8,780 in the same period of 1928. In practically every grove included in the areas which have recently been put under development, a certain percentage of trees have been grafted with grapefruit. This should prove very remunerative to the grower, perhaps even more so than the oranges, if prices for grapefruit remain more or less stable at this year's level, about 17s. per case f.o.b Jaffa, or more than 50 per cent. higher than the price realised normally for oranges. The total exports of all citrus fruits during the year (in round numbers) was 1,841,000 cases, comprising 1,242,000 of the 1928-9 crop shipped from January to May, and 599,000 of the 1929/30 crop shipped from October to December. They included grapefruit, 9,000 cases, and lemons, 14,000 cases, and although a slight rise in the price enabled the industry to recover some of the lost ground, there was a drop of about £P150,000 in the value of exports, f.o.b. Palestine ports (and at railhead for bulk shipments), estimated approximately at £P1,030,000, compared with exports in 1928 valued at £P1,180,000. Included in the amount realised f.o.b., there was approximately £P200,000 in respect of materials imported and consumed in connexion with the industry, such as wood for cases, wrapping paper, nails, fertilisers, petrol, oils and grease, agricultural implements, etc., leaving approximately £P800,000 to cover all expenditure in connexion with grove operations, transport of fruit to ports, inspection fees, lighterage, etc., and the returns to growers.

The trade returns published by the Government give the total value of imports for consumption and exports of Palestine products (in round figures) as £P8,525,000. Compared with the previous year imports for consumption (after deducting re-exports), despite unsettled conditions in the last four months of the year, were £P376,000 higher, while exports showed an increase of only £P75,000, making the excess of imports over exports about £P300,000 higher. This does not mean that the country had been overbuying, as perhaps it did in 1928, when the adverse balance rose to £P5,100,000, after having been reduced from £P6,000,000 in 1925 to £P5,000,000 in 1926 and £P4,000,000 in 1927; there were, in fact, a number of substantial reductions, in the quantity and value, of certain imports, including some commodities locally manufactured, showing a still further consumption in the country of local products, and at the same time an increase in outputs from industry, since exports of products manufactured locally exceeded in many cases those of the previous year. The items which accounted largely for the increased imports were military stores, etc., which were higher by £P115,000 than in the previous year; cereals and foodstuffs, imported chiefly during the first half of the year, and at the high prices then ruling, to make good the deficiency caused by the drought of the previous year; constructional and other materials, including electrical appliances, iron and steel, etc., showed an increase of approximately £P175,000.

Industrial Development.

While the country has always depended and will, no doubt, continue to depend upon its agricultural production, the industrial development, which has been noted in previous reports, shows an increasing tendency to expansion, and should be greatly stimulated when power is available for the generating station of the Palestine Electric Corporation in the Jordan Valley, which, with the transmission lines, is now approaching completion. The generating station of the company in the Jordan Valley was almost completed by the end of the year and standards to carry the transmission lines were erected throughout the country and many miles of line laid. Some of the enterprises started within the past five or six years have already reached the profit-earning stage - some of them have actually paid dividends during the past three years—and there are many enterprises now under development which are bound to accelerate the rate of progress when they come into fruition. The most important of these enterprises is the harbour at Haifa, the construction of which was undertaken during the year, and in connexion with which extensive quarries were opened at Athlit, about 20 kilometres south of Haifa. Next in importance comes the exploitation of the vast mineral resources of the Dead Sea by the Palestine Potash, Ltd., an English company with a capital of £400,000, formed to acquire the concession over the Dead Sea. The company began active operations on the construction of its plant at the Dead Sea, and by the end of the year was employing a large number of workers on constructional work.

A number of new enterprises were launched during the year, 28 companies having been registered with a total registered capital of £P750,000. These include two important companies, the Palestine Hotels, Ltd., with a capital of £200,000, for the purpose of developing hotels in the country, and the Palestine Plantations, Ltd., with a capital of £300,000, for the purpose of developing a large estate as citrus groves in preparation for intending settlers, and a cold storage company, with a capital of £P35,000. All these concerns began active operations during the year and absorbed, therefore, large numbers of workers. And there were many other avenues into which labour was diverted, but chiefly into the rural districts, where they were employed on citrus plantations, the development of which continued unabated, further

Digitized by Google

large areas in the coastal plain having been put under cultivation by citrus estate development companies registered in England and America, and also by private groups. Another factor in the demand for labour was the large amount of building work which was undertaken in the latter part of the year, chiefly as a result of the re-distribution of the Jewish population following on the August riots and the boycott, and the demand chiefly for business premises thereby created. Fairly extensive building operations were undertaken in the new (Jewish) quarters of Jerusalem and Haifa and also in Tel Aviv, to which town practically all Jewish merchants previously established in Jaffa had removed.

During the year the total number of immigrants was 6,566 including 5,249 Jews, and the total number of emigrants was 2,835, including 1,746 Jews, making the net balance of immigrants over emigrants 3,731. The corresponding figures in 1928 were: immigrants 3,086, including 2,178 Jews, and emigrants 3,122, including 2,168 Jews. Thus compared with 1928, Jewish immigration increased by 250 per cent., while Jewish emigration decreased by about 25 per cent.

The general improvement in the labour market had already become evident by the second half of 1928, and in the latter six months of that year there was, for the first time since 1925, a slight balance of the number of arrivals over departures, that is, of immigrants over emigrants. Prior to that— from October, 1925, to June, 1928— the labour situation was only relieved by the emigration of superfluous workers, but during this year the balance of arrivals in the working class over emigrants of that class totalled about 2,200 and practically all of these found employment in some form or other in the country, and by the end of the year there was said to be no unemployed other than those unemployed for reasons of health, etc. In this respect, and having regard to the economic developments of the past few years, Palestine may be considered with much justification one of the most progressive countries of the world. Its production capacity, as shown, has been generally on the increase, and with this increase there has followed a steady decrease in production costs, with a corresponding fall in the price of local commodities, including manufactures and dairy products, and a fall in the cost of living.

Another satisfactory feature for Palestine was the tourist traffic, which was maintained at almost its record level of the previous year despite the financial outlook abroad, particularly in America, whence the majority of tourists to Palestine come, and the unsettled conditions in the country in the latter part of the year; the total number of visitors during the year were reported as 60,210, which compares with 63,320 in 1928, but the number of tourists, that is, organised parties, was only 15,700 compared with 18,000 in 1928, 15,000 in 1927 and 11,000 in 1926. Accommodation of a higher standard than heretofore was made available for the traveller during the year by the opening of two hotels, a small one in Jerusalem and a large one in Tiberias, in the early part of the year, and a third hotel in Jerusalem, opened only in the last month of the year. The returns of travellers published by the Government show that the "season" is no longer confined to the periods of religious festivals, but that the tourists now come to the country throughout the whole year, although apparently the months of February, March and April the spring months are the most favoured, as in the months of February tourists numbered 5,480, in March 8,650, and in April 13,200, while for the rest of the year the monthly numbers ranged from 2,400 to over 4,000. A still further stimulus will undoubtedly be given to the tourist business through the enterprise of the Palestine Hotels Ltd., already referred to, under the control of which the King David Hotel, in Jerusalem, is being constructed.

(To be continued.)

CARTRIDGES

TIME and Science have seen and brought remarkable changes in the methods of man as a hunter.

In early times the element of uncertainty involved great danger. To-day Eley and Kynoch Cartridges and scientifically accurate weapons make results dependent on little more than the skill of the shooter.

Wherever shooting men gather Eley and Kynoch Cartridges claim a reputation for accuracy which has built up a large and increasing demand in every part of the world.

IMPERIAL CHEMICAL INDUSTRIES LIMITED

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended July 12:—

Grain.—Last week's improvement on our market was not maintained this week owing to unfavourable news from consuming markets, with the result that business was limited. Grain continued to arrive only on a reduced scale, and this fact added to the difficulty of concluding sales. For English destinations the demand ceased almost entirely, whereas, as regards the Continent, Antwerp was the principal market interested in Roumanian grain, the inquiry from Hamburg and Rotterdam which characterised last week having gradually died out. Italy and Marseilles were likewise neglected. In spite of the above grain situation, freights were maintained, and in fact in some cases improved upon, but this was solely due to the scarcity of prompt and spot tonnage. From 10s. 9d. to 11s. were the rates for Antwerp Rotterdam and 11s. to 11s. 6d. for Hamburg; freights for the Adriatic and Mediterranean fell to 10s., and steamers are meeting with difficulties in finding their completions, 8s. in one case having been accepted in order to complete a steamer destined for Marseilles. Chartering was fairly active with an increase in freights of from 6d. to 9d. over last week's fixtures. In fact several steamers have been fixed for July and August loading at rates varying from 13s. 9d. to 14s. 6d. Antwerp/Hamburg range and in one case a 5,000 tonner for August loading obtained 3d. more. An unusual fixture which has been reported is that of a 5,000 tonner for a cargo of maize for Canada. At Constantza several sales have been concluded for the Continent which have permitted freight engagements at 8s.

Timber.—Several large vessels are under loading for different ports among which is one for the Argentine and another for Basrah. Fresh engagements, however, have not been effected owing to this being the dead season and no noticeable revival of business is expected before August. Meanwhile, under the pressure of a superabundance of ready stock, prices are giving way, and have already reached the lowest level for many years.

Weather and Crops.—Dry weather continues to prevail, but the heat has not been so excessive and the nights have generally been cooler. Scattered rains, generally light or of short duration have been reported from most parts of the country during the week, but a good general rain is still badly needed for the maize. According to official reports the quality of the wheat this year is very good owing to the more extensive use of selected seed, and a further improvement is expected next year as the result of the grain selecting stations established by the Government. Although the straw crops in some districts have suffered from too little rain, and hail and rust have done some damage, the latter more particularly in the south of Bessarabia and along the Pruth, nevertheless conditions on the whole were favourable and it is anticipated that when the figures of the yield are received shortly they will prove to be very satisfactory. The locust peril which at one time seemed somewhat serious, has been effectively combated by the energetic measures taken by the Government including the use of flame throwers brought hurriedly from Germany, the locusts having been practically extirpated except in the Delta of the Danube where operations have been more difficult and less effective owing to the absence of roads through the reed covered swamps.

Sulina.—The depth at the Bar is maintained at 24 feet and the general conditions are reported to be good. The building of the north pier continues rapidly; foundations mattresses have been laid for the full length of the pier, and the driving in of piles forming the staging is now being proceeded with.

Constantza.—Grain has been arriving more freely and shipments are expected to become more brisk though during the past week they amounted to little more than 3,000 tons mostly for the Amsterdam/Hamburg range. Twenty-two vessels loaded over 90,000 tons petroleum products and nine took oil fuel for bunkers.

Bulgarian Report.

There is no change in the grain markets. Prices ruling are not tempting producers to bring their new barley to the market and hardly any transactions have been effected the last few days. However, in view of the abundance of straw crops it is expected producers will be obliged to adapt themselves ere long to the ruling prices.

Heavy thunderstorms were experienced on Wednesday and Thursday in most parts of the country causing local damage to crops. The remainder of the week was dry and hot and generally favourable for harvesting. Autumn sown barley has been cut practically everywhere and threshing is well in hand. Reaping of wheat and rye is in full swing.

TANKER CHARTERING.

Messrs. John I. Jacobs and Co., in their report on tanker chartering for the six months ended June 30, state:—

The reaction in rates which we foresaw has, under the conditions enumerated below, been rather more precipitate than anticipated. In our last report we mentioned that the position was analogous to that of 1926, and this was later accentuated by the fact that the rate for clear vessels Gulf/U.K. Continent again reached, for a short time, the high figure of 50s. per ton. Such a rate of freight with the profit it shows for a round voyage of 40-45 days had the effect of augmenting the already considerable avalanche of building orders.

It is computed that at present there are fitting out, building and on order, 172 tank vessels of over 2,000 tons deadweight. These vessels will add to the world's fleet during the next 18 months or so a gross tonnage of about 1,350,000 tons. Such a figure may be usefully compared with the total of 1,470,000 gross, being the tanker tonnage in service in 1914. Building orders have now practically ceased, and in our opinion little allowance can be made for tonnage falling out of commission, as there is usually a ready market for second-hand vessels, but even making some allowance for tonnage to be taken out of service during the period, the net addition will be in excess of that of 1921 when the figure was about 1,000,000 gross tons.

Where transportation is concerned the oil trade is not susceptible to exact analysis, but a figure of 10 per cent. to 12½ per cent. may be taken as the normal annual increase. Most of the vessels now building or on order are from 9,000 to 11,000 tons deadweight, and it is of interest to note that during the last six years the average size of a tanker has increased from 7,500 tons to 10,500 tons deadweight. Although deep water facilities are available at most loading and discharging ports, charterers generally prefer tonnage not to exceed 27 feet draft. It may be seen from the above figures that despite the considerable normal expansion of the oil trade it will take some little time to get this vast amount of tonnage absorbed and distributed over the petroleum routes of the world.

The question of load-line for tankers is still under consideration by an International Committee, and new regulations are likely to come into force in 1932, adding to the carrying capacity of the world's tanker fleet, whilst a further factor which cannot be lost sight of is the higher speed of the modern Diesel vessel. The policy of conservation of production, which producers of oil have been discussing for some time, is now having its effect, although in 1929 the world's production of oil increased from 187,600,000 metric tons to about 210,600,000 metric tons. Of these figures, the United States of America were responsible for an increase of about 14,000,000 metric tons, and Venezuela for about 5,000,000 metric tons.

Time Charter.—The number of charters has been rather less than the previous six months. The rate for a Diesel vessel of 10/11,000 tons for two years at no time exceeded 9s. on the deadweight, although for steam tankers as high as 8s. on the deadweight was paid. At the close of the half-year, the market is quite nominal and bare of inquiry. Norwegian owners have undertaken to build specially two Diesel vessels of 10,500 D.W. for ten years charters at a rate which averages 6s. 10½d., and a further vessel of 12,080 tons D.W. for a similar charter at 6s. 5½d.

Black Sea (White Oil).—Chartered shipments have been up to the average of last year. The opening rate for U. K. Continent was 24s., but later in January there was an advance to 27s., and by the end of February so high a rate as 30s. 6d. had been paid. This high rate of freight was quite temporary, as before the end of March the figure was down to 26s., and ruled steady at about this basis during April. Rates declined in May to 23s., and before the end of June tonnage was available at 17s. 6d. There has been an active market for handy tonnage, principally of Italian register, from both Constantza and Soviet ports to Mediterranean destinations. Baltic ports took tonnage at 31s. 6d. in April and 20s. 6d. in June. Vladivostock secured vessels at 56s. early in March, and later at 54s.

Black Sea (Dark Oil).—Rather fewer charters were effected than in the corresponding period last year. A large fuel oil boat secured 25s. in January, but in March 21s. 6d. was accepted. From this date onwards the demand was limited. The demand for handy boats to carry lubricating oil has been fairly consistent, but at no time have charterers found difficulty in covering their requirements. Dark oil tonnage was fixed for the Baltic in February at 28s. West Italy secured handy fuel boats at from 12s. to 13s., and Dakar paid 20s in May.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 16:—

Egyptian Futures.

Sakel Contract.—This market continues to run in an uninteresting groove, and, as a result of the week's trading, we have again to report very little alteration from the levels at the commencement of the month. However, one or two factors have developed that may, later on, have a pronounced effect on the outlook. At the moment, the market is so much under the influence of trade conditions and the downward tendency in other commodities that prospective "bullish" developments are quite ignored. So far, crop reports have been uniformly satisfactory, but during the past week we have received, from a source closely posted with conditions, a report indicating very severe leaf worm damage in the Northern Delta Sakel districts. In addition to this, we have the critical situation that has arisen in Egypt during the past two days, as a result of the recent political crisis; severe rioting has already been experienced, and, unless the Government is able to maintain a firm attitude, there will be increasing danger of damage to stocks and property. In this respect, it is significant to notice a rise of about half a dollar in the Alexandria market during the restricted trading hours since the disturbances commenced yesterday morning. As far as the dealings in our own market are concerned there is little to report; near positions, as we anticipated, have attracted more support than new crop months, with the result that Julys have attained a small premium over Novembers. Trade support continues to be on a very minor scale, but any expansion in the demand would quickly show up the paucity of local stocks.

Upper Contract.—Business in this contract continues to be on a restricted scale and the fluctuations recorded have again been ruled mainly by the prevailing tendency in the American markets. Near cotton maintains its heavy premium over more distant deliveries owing to the restricted character of local stocks. Spinners are only purchasing when forced into the market, and very little forward business has been recorded. Provided crop reports continue as at present a further closing in with American values may be witnessed during the marketing period.

Egyptian Spot.

For the first day or two following our last report business showed some slight improvement, but latterly, although the inquiry has remained on a fairly extensive scale, actual results have been disappointing. However, on the week sales show a small increase over last week's totals and prices are a few points harder. Spinners are keeping in close touch with the market, and only appear to be waiting for some definite indication that the bottom has been reached. Unfortunately, there is nothing in the situation at the moment to warrant such belief.

Sakel.—A local firm entered the market on one occasion and purchased 400 or 500 bales, but apart from this the inquiry has been on a very moderate scale. The low or inferior cotton has come in for a greater share of attention than has recently been the case, but the better qualities have met with but a poor offtake.

Uppers have remained in good request at from 30 to 140 on July contracts. Here again the low and inferior qualities at from 4d. to 6d. have received some attention. The Continent still continues to offer cotton in this market, and it is reported that some success has been attained.

Pilion has been in very moderate demand and sales have been negligible.

Nahda.—Holders of this cotton continue to press for sales, but buyers are difficult to interest, even although current quotations appear to be most attractive. Both Alexandria and the Continent are keen sellers, but, so far, results have not been very encouraging.

Maarad Cotton.—The small inquiry noticed last week has continued, but results have been poor.

White, Fouadi, Farouki, etc.—These qualities have been neglected this week.

Sudan Sakels have been in fairly good request, and sales show a slight improvement. Prices have remained firm.

Tokal Sakel.—Rather more business has been done.

C.i.f. business.—There has been distinctly more interest shown in cotton for forward delivery. Prompt shipment of course is prohibited on account of the Alexandria basis, but some business has been done in new crops. Forwardings have been returned at 3,366 bales Egyptian and 688 bales Sudan. Spot sales have been estimated at 1,700 bales Egyptian and 1,000 bales Sudan Sakel. Quotations of Sakel have been raised 15 points on balance. Uppers are 6 points, and Pilion 10 points higher. F.G.F. Sakel to-day, 12.30d. F.G.F. Upper to-day, 9.66d. F.G.F. Pilion to-day, 10.45d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended July 10:—

The market has been quiet during the week, fluctuations being confined to a rather narrow range. The week's summary of price movements is as follows:—Sakellaridis: July, 28.000 dollars, unchanged; November N.C., 23.06 dollars, 0.11 dollars up; January N.C., 23.24 dollars, 0.10 dollars up; March N.C., 23.72 dollars, 0.13 dollars up; May N.C., 24.16 dollars. Ashmouni: August, 16.19 dollars, 0.02 down; October N.C., 15.65, unchanged; December N.C., 15.82 dollars, 0.04 dollars down; February N.C., 16.17 dollars, 0.04 dollars down; April N.C., 16.52 dollars, 0.01 dollars up; June N.C., 16.85 dollars, 0.07 dollars up.

It is understood that tenders will be invited this year for the construction of additional port works at Salonika. It is proposed to construct a new basin covering an area of 250,000 square metres, and additional wharf accommodation, and the works will include new warehouses and a railway freight station.

The accounts of Sospiro Oilfields, Ltd., for the year ended March 31, 1930, show expenditure at £8,231, making a total of £61,598. Preliminary expenses stand at £14,969. The report states that, owing to over-production in Roumania, operations have been suspended at the producing wells.

Barclays Bank (Dominion, Colonial and Overseas) announces that it has received the following cable from its Cairo office:—"The Ministry of Finance announces that total imports for Egypt for the month ended April 30 are £E2,738,431, against £E4,025,033 for the corresponding month last year, and exports £E4,138,521, against £E5,306,502 for April, 1929. Cotton exports amounted to £E3,302,631, against £E3,919,108 last year."

NEAR EAST MARKET REPORTS.

Barclays Bank (Dominion, Colonial, and Overseas) have issued the following cabled reports:—

Egypt.

Alexandria, July 14.

There has been no improvement in general trade conditions throughout the country.

Cotton.—During the past month, the new Government which has come into power has made two important decisions, the first being to offer its present stock for sale at 28 dollars for Sakels and 19.80 dollars for Uppers until the new crop arrives, and the other to press into steam-pressed bales a large quantity of its present holdings, in order to relieve the severe lack of storage accommodation. The futures market for new crop months has shown little change. A certain amount of trade purchasing has been more or less offset by speculative selling on the probability of very large crops here and the absence of any radical improvement in the world cotton situation. The new crop reports from up-country have all been very favourable. Arrivals from September 1, 1929, to date are 8,387,301 kantars, compared with 7,057,478 kantars for the corresponding period last season, while exports are 5,876,797 kantars, against 7,159,981 kantars. Stocks are 3,674,727 kantars, against 1,950,726 kantars a year ago.

Cottonseed.—The spot market has shown a slow improvement. The demand from England has increased slightly, with a corresponding expansion of shipments from here. The futures market, which had evidently been oversold, has also recovered from the previous low levels, July futures being quoted at P.T.60 and November at P.T.65; local consumption has improved. Arrivals from September 1, 1929, to date are 4,158,256 ardebs, compared with 3,000,578 ardebs for the corresponding period last season. Exports are 2,448,664 ardebs, against 1,538,528 ardebs, and stocks are 1,780,933 ardebs, against 1,538,209 a year ago. Local consumption has amounted to 1,243,099 ardebs, compared with 1,234,666 ardebs.

Cotton Goods.—The market generally has been very quiet, with large stocks and a small demand. The stock of Manchester goods is unchanged, but business is more active and prices are maintained, notwithstanding the fall in quotations abroad.

Flour.—During the past two weeks prices have ruled irregularly, with a tendency to decline.

Sugar.—Prices show a tendency to decline, owing to heavy stocks, but consumption is satisfactory.

Gunnies.—Prices for all varieties of gunnies have ruled weak, and the demand for cottonsacks have been very restricted.

Cabots.—The demand for cabots and drill is satisfactory, but quotations are declining in sympathy with the producing market.

Cereals.—Stocks are increasing, owing to the new crop. The market is quiet and prices are firm.

The Sudan.

Khartoum, July 11.

The market is uninteresting, with only a small movement and no outstanding features, but it would probably react to a better foreign demand. Gum arrivals have been heavier compared with the same period last year, and consequently prices have been forced down. The latest quotations c.i.f. United Kingdom are 62s. 6d. per cwt. for cleaned and 60s. per cwt. for natural.

Palestine.

Jerusalem, July 8.

Forward prices for oranges now range between 5s. and 5s. 3d. per case on the tree, but few purchases are being made at these prices. Crop prospects are satisfactory in areas which are not affected by the field mouse plague and the yield is abundant, although less than last year. Prices of cereals show a decrease generally.

Notes of the Week.

Economic Organization in the Balkans.

It must be regarded as a hopeful sign of the times that in different directions the Governments and people of South-Eastern Europe are trying to discover means of co-operation between the States. A few years ago it called for considerable optimism to believe that some form of Balkan union might become practical politics within a reasonable time and was, therefore, a goal to be kept steadily in view. Yet in October a meeting of representatives of the different countries will be held in Athens to explore the ground for such a union. The conference will have the good will of the respective Governments, without in any way committing these to the views expressed at it or to any resolutions that may be passed. The economic crisis through which the countries of South-Eastern Europe, in common with the rest of the world, are passing has also directed attention to the possibility of economic co-operation without waiting for a political *rapprochement*. The initiative in this instance would seem to have come from outside, as the idea of united action in their common interests on the part of the States, mainly if not exclusively agricultural, of Central and South-Eastern Europe has been promulgated by Poland. Whether, as has been suggested, the Polish Government was inspired in the first instance by France and whether there are political motives behind the movement must remain an open question. Poland's idea was understood to embrace a kind of agrarian *Bloc*, to which not only Czechoslovakia and Hungary, but also Bulgaria and Greece would belong. For reasons that may not be unconnected with the fear of outside wire-pulling the larger scheme appears for the moment to be in abeyance. Negotiations are taking place in Bucharest between Roumania, Yugoslavia and Hungary, and seem to be restricted to immediate issues affecting the prices of cereals in the three countries. At the same time the Yugoslav Government has invited Roumania to discuss the proposition whether the identity of the two countries' agrarian interests may not call for an agreement between them which "would be to a certain extent a real Customs union," with a view to a wider economic union with Czechoslovakia, which is more of an industrial State than either of them. Whatever may be the outcome of these tentative proposals—for the moment they suggest a measure of latent rivalry instead of holding out the promise of dovetailing one into the other—the principle involved is sound. No doubt a considerable amount of ground will have to be explored before co-operation on any wide basis becomes possible, but the negotiations will serve to familiarize all the different peoples with the fact that they stand to gain more from building upon their commons interests than from emphasizing minor points of difference.

Non-Co-operation in Egypt.

The arena in Egypt is now cleared for a fierce political struggle. On the one side is the Wafd, claiming the support of nine-tenths of the population and actually backed by all but a handful of deputies in Parliament; on the other side is the Government of the day, constitutionally summoned to power in order to carry on the administration of the country, which the Wafd had abandoned. An attempt has been made to represent the new Government as an instrument of despotism that has seized power against the wishes of the people. So far, however, there is no justification for such a view. The circumstances are admittedly anomalous; but, if the Party which commands a majority in Parliament refuses to hold office, there is no alternative to the formation of a Government outside that Party. When, immediately, before any further development in terms of the Constitution can take place, steps are taken to promote disorders throughout the country, the issue is no longer a constitutional one, but merely a question of the exercise of normal government by the enforcement and maintenance of law and order. Up to this point, therefore, denunciation of the Sidky Pasha Government as unconstitutional or despotic is wide of the mark. If there had been a sincere desire to work parliamentary institutions in Egypt and to make a success of them, it was open to Nahas Pasha on resigning office, as he felt obliged to do, to arrange with his successor for the normal functioning of government, until such time as agreement might be reached regarding the question at issue between the Wafd and King Fuad, the protection of the Constitution. By identifying himself with the elements of disorder throughout the country—the ex-Prime Minister set the example of undermining respect for the law, which is essential to any civilised State, by having his car driven through police cordons until brought to a standstill up against the fixed bayonets of a line of

Digitized by Google

soldiers—Nahas Pasha has stultified his appeal to constitutionalism, and the issue in Egypt has become primarily a question of ordered government or administrative chaos. The direct stirring up of mob passions and rioting have been checked for the present, by the measures taken by the Government for the maintenance of order and public security, and the Wafd has adopted the indirect method of inciting disturbances by calling upon the Egyptian people not to pay taxes. Thus the self-declared champions of constitutionalism have deliberately abandoned constitutional methods of advancing their cause, and the unfortunate spectacle is presented of a party pressing upon the country a course of action which can only drive Egypt farther from her constitutional goal.

The Kurds of Turkey.

Certainly no student of the history of the Kurdish people will be surprised at the tenacity with which, despite heavy initial defeats, they are holding out against the organised forces of Turkey. Whatever the original aim of those unfortunate Kurds who are subjects of Turkey may have been—some assert, improbably enough, that it was complete independence—it is quite obvious that the anti-Ankara movement had sufficient impetus within Turkey to render it independent of the support of Kurds in Persia or Iraq. That it has in fact received the support of Kurds in Persia is natural: no words either from Teheran or Ankara could stop such an event. The Persian authorities are, not unnaturally, a little annoyed that accusations of ill-faith should have been brought against them by Turks, for they certainly have countenanced on their own soil no hostile movements against Turkey. The radical factor of the situation appears to be that a Kurd is a Kurd, whether he be called a Turk or a Persian or an Iraqi; and if the Kurd in Turkey resents Turkish treatment of him, it is Ankara which is mostly to blame. Mustapha Kemal Pasha, we notice, on July 24, referred to the necessity of dispelling the impression that Persia was at the back of this expensive trouble with the Kurds, though it is not stated whether he believed the impression was well founded or not. His anxiety is natural enough, for with the Ankara Government more or less at its wits' ends to know where to find money, it must be irksome indeed to have to keep, round Van and Bayezid, 60,000 soldiers and gendarmes and 100 aeroplanes. That anxiety will never completely disappear, however, until it is realised that the Kurds can never be complete and utterly unprivileged subjects of any State, whether Turkey, Persia, or Iraq.

Protection in Palestine.

It is no disgrace to Palestine that expediency rather than rigid principle should govern its fiscal system, and no fault will be found with the measures which the Government has recently taken in the interests of agriculturists in Palestine. There can be little doubt that the position of the *fallahin* should be largely improved by such measures as the remission of thirty per cent. of the tithe, an increase in the Customs duty on imported grain (the fact that Australian wheat has been allowed to compete with home-grown grain has long been a sore point with Palestinian agriculturists), the prohibition of the importation of unrefined olive oil, and the re-imposition of the import duty on sesame seed. Palestine is in a special position in that both new and old industries have, in so far as is consonant with the interests of the country as a unit, to be protected. Once more the Administration has proved its claim to be looking after the interests of the land as a whole, rather than the interests of any particular section of it. It may be that there still exist anomalies possibly traceable to the disparity between the interests of old and new settlers in Palestine—it is frequently alleged, for instance, that Palestinians have to pay more for cement manufactured in Palestine than do the people of neighbouring countries—but, generally speaking, it may fairly be claimed that the Administration serves well the material interests of all sections of the community.

INDIAN NOTES

The Week in India.

Seldom since the beginning of the civil disobedience movement has the situation in India been more devoid of incident than during the past ten days. The damping effect of the monsoon on political exuberance is a partial explanation, no doubt, but the main reason, apart from the general lassitude and exhaustion, is the universal desire to await the outcome of the visit of Sir Tej Bahadur Sapru and Mr. Jayakar to Mr. Gandhi and his fellow Congress leaders in prison. The Governors' Conference has adjourned, as it assembled, in an atmosphere of strict secrecy. There are, however, indications, according to an exceptionally well-informed correspondent, that it was more productive of discussion than decisions and that there is no reason to anticipate that any marked change of policy, either in the Central Government or in the provinces, will follow as a result. Meanwhile the belief is entertained in responsible quarters in this country that the trend of developments is such as to encourage the hope that the King will be able to consider favourably the question of formally inaugurating the Round Table Conference. The appropriateness of the suggestion is generally acclaimed, for the gathering will be far more than a Conference in the ordinary sense and likely to prove one of the most momentous ever held in the historic rooms of St. James's Palace, which has now been fittingly chosen, with His Majesty's permission, for the purpose.

The Benares Hindu University.

The residential and teaching University which was established fifteen years ago at Benares, the ancient seat of the Hindu religion and of Hindu learning, is an altogether unique institution. For, on the one hand, it endeavours to revive the best traditions of the ancient *gurukulas* of India, where Hindu sages are said to have taught and fed ten thousand students at a time; and, on the other, it imparts instruction of the most modern university type in the arts and sciences, and in technology. And, differing from all other Indian Universities, it has been founded, not by the State, but by private effort. Furthermore, it is essentially an all-India institution. "If ever there was an all-India University it is this," Sir Harcourt Butler said when introducing, in the old Imperial Legislative Council, the Billl constituting and incorporating it. And the claim has been fully justified, seeing that of the 2,600 students now on the roll more than half come from parts of India other than the province in which Benares is situated. For the purposes of the University, land to the extent of 1,300 acres was acquired; and no fewer than 173 buildings, with a floor space of more than 750,000 square feet, have been erected. Twenty miles of roads have been laid out, and upwards of 20,000 trees have been planted. To finance a scheme of this magnitude was obviously no light task. But it was resolutely tackled, a public appeal being made in 1911 for a sum of Rs. 1 crore —£750,000. The scheme was most favourably received by Hindus throughout India. Several of the Ruling Princes came forward with generous donations, and the Hindu public likewise contributed liberally. A sum of no elss than Rs. 121 lakhs was eventually raised—Rs. 116 lakhs from the Princes and people, and Rs. 5 lakhs from the Government of India. The University was incorporated, in 1915, by an Act of the Central Legislature, to which reference has been already made. Nearly half of the sum of Rs. 1 crore has been kept as a permanent endowment, in accordance with the provisions of the Act. More than the remaining balance has been spent on buildings, equipment, etc., with the result that for several years past the University has been carrying on with a deficit. But this deficit will be cleared off in 1931-32 by a grant which has been sanctioned by the Government of India. More money is, however, needed. Certain of the Faculties require to be strengthened; the creation of other new

THURSDAY, JULY 31, 1930.

EGYPT AND THE PARLIAMENTARY SYSTEM.

A striking feature of one of the sessions of the Inter-Parliamentary Union Conference in London last week was an impassioned speech delivered by Makram Bey Ebeid, Egyptian Minister of Finance in the late Wafdist Government, who was an Egyptian delegate to the Conference. Passing from general considerations to the case of Egypt, he declared that "reaction, which spared no effort to destroy Parliamentarism, was fighting in Egypt in its true colours, brutal and unashamed. The Egyptian Parliament had four times in five years been suspended in one form or another, and the Egyptian peoples, goaded beyond endurance, were now defending their constitutional rights at the price of their blood." What action, he asked, was to be taken by the Conference in support of the youngest member of its family who was almost bleeding to death in the endeavour to hold high the Parliamentary flag? From the fact that the Conference did not follow Makram Bey Ebeid's incursion into the domestic affairs of Egypt it may be inferred that the members recognized that, in spite of his declaration that the parliamentary system in Egypt had "proved an unqualified success," they had not sufficient knowledge of the subject to discuss it further. Other speakers at the same session had discussed the parliamentary system in more general terms, and not a few had something to say on points which have a special bearing on the system that has been evolved in Egypt. Thus M. Renaudel, the French Socialist leader, in introducing a resolution that the Inter-Parliamentary Union should give its assistance in the strengthening and perfecting of parliamentary institutions, declared that the parliamentary system could have only one basis, universal suffrage, and this could be fully exercised only if there were liberty and civic education; and he added: "If there was no Opposition, then an important section of the population had no opportunity of having its opinions voiced, and the Government was not properly controlled." An Italian delegate paid tribute to Parliaments as useful and indispensable instruments of civilization, but considered that circumstances could make it necessary to impose certain controls on their evolution. A South African Member of Parliament held it to be of vital importance that methods should be devised for improving the efficiency of Parliaments and for making them the instruments of democracy in the future.

Of all the delegates to the Conference the Egyptian spokesman alone claimed that the parliamentary system in his country had proved an unqualified success, and it was clear from the course of the discussion that no other representative held the same opinion regarding the system in his own land. As the Egyptian Parliament was stated to have been suspended four times in five years, it must be supposed that Makram Bey Ebeid's eulogies on the system as evolved in Egypt are not shared by all his fellow-countrymen. The subject is of considerable interest to other countries besides Egypt, and it would have been, perhaps, a more practical contribution to the Conference, if the chief Egyptian delegate had challenged the views put forward by other speakers to show, in the light of Egypt's experience, where they were wrong. The French Socialist leader had laid stress on the necessity for Parliament to control the Government and on the indispensability of an Opposition. In Egypt, as is well known, no attempt is made under a Wafd régime for Parliament to control the Government. On the contrary, the control of Parliament by the Government is as effective as it is in Turkey, where only candidates belonging to a single party, who have been selected, or whose selection has been endorsed, by the President of the Republic are allowed to stand for election. It has never been suggested by any member of the National Assembly in Turkey that the parliamentary system, as there evolved, has been other than "an unqualified success"; but it may be supposed that the Turkish system hardly corresponds to the goal that the Conference set itself in introducing a resolution for "the strengthening and perfecting" of Parliamentary institutions. Again, the French Socialist leader, while commending universal suffrage, predicated as preliminary essentials liberty and civic education. What degree of civic education is claimed for Egypt has not been stated, but it is certain that there must be a complete absence of liberty in a system which at the last elections allowed the leaders of the largest party to prohibit all reference to the one subject of vital interest to the whole country—the discussion of which was the sole object of the elections—the draft proposals for an Anglo-Egyptian treaty.

Possibly, the failure of the Conference to respond to the eloquent appeal of the Egyptian spokesman was in part due to suspicion that there may be two sides to the parliamentary question in Egypt. Reference to that country as "bleeding to death in the endeavour to hold high the Parliamentary flag" must have sounded strange to those who had read in the newspapers of the hiring of ball boys from a tennis club by the instigators of riots, in the hope that they could throw stones at policemen with greater accuracy than the average youth of the streets. Egypt would appear to be unique as a State possessing parliamentary institutions based on universal suffrage where the sense of political responsibility is so undeveloped that the forces of disorder are repeatedly loosed upon the country at the word of command, and exclusion of a political party from office, whether as a result of resignation or of dismissal in accordance with the terms of the Constitution, is followed by attempts to break up the machinery of government. It is true that Egypt's interpretation of parliamentarism is her own affair, and it would not call for discussion, if some of the country's spokesmen had not chosen to appeal to what is regarded as the High Court of Constitutionalism. In such circumstances no useful purpose is served by equivocal utterances or by evading the issue, as the Inter-Parliamentary Union appears to have done. The mistake made in Egypt would seem to be the introduction of a Constitution based on universal suffrage in a country predominantly illiterate, entirely unversed in representative institutions and accustomed only to personal government. If ever there were a case for the graduai adaptation of novel procedure to the capacity of the people to understand and to work it, Egypt presented such a case. Yet it should have been possible for the country to have made a success, qualified, if not unqualified, of its parliamentary institutions, if there had been a resolve on the part of its leaders not to take advantage of the ignorance and inexperience of the electors. The first disillusionment that foreigners experienced in Egypt's interpretation of parliamentary institutions, after their restoration last year, was the issue of the *mot d'ordre* that the draft proposals for an Anglo-Egyptian treaty were not to be mentioned at the elections; an even greater shock has been administered by the deliberate inciting to riots and the movement, started by those who have actually been responsible for the government of Egypt, for the non-payment of taxes. Constitutionalism is not so understood in other countries and there must be better means of showing constitutional fervour than by supplying the Government of the day with apparently no alternative to the suspension of the Constitution.

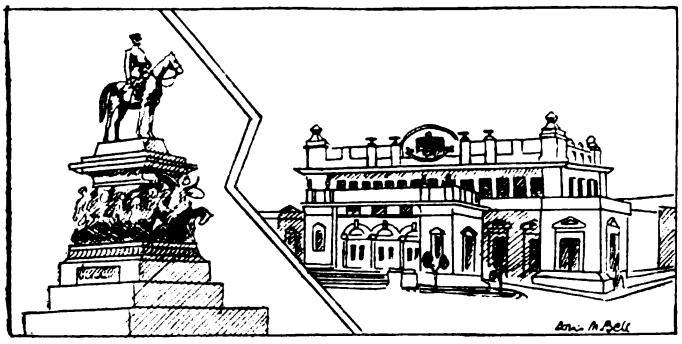
*The Near and Middle East

From Our Own Correspondents.



BULGARIA.

Sofia, July 18.

The Congress of "Younaks."

The seventh quinquennial congress of the great national gymnastic organisation called "Younaks," which is under the patronage of King Boris, was held at Sofia from July 12 to July 15. Over 10,000 "Younaks" and "Younakines," in national uniform, participated in the different evolutions which marked the programme of this congress. Several foreign countries were represented—for instance, the Czecho-Slovak Sokols, Swiss gymnasts, and anti-Bolshevist Russian Sokols.

The inaugural ceremony of the Congress was particularly noteworthy, for it was presided over by the King himself, in the presence of a company which numbered over twenty thousand people. The King made a short speech in which he praised the organisation of the "Younaks" as a cultural factor in the national life and as an educative institution for the Bulgarian people.

This congress in the Bulgarian capital was in effect a period of national *élan* and of patriotic fervour, such as have not been seen for a long time.

M. Liaptcheff at Prague and Budapest.

This year, under urgent medical advice, M. Liaptcheff went to make the cure at Carlsbad, in Czecho-Slovakia. After his cure, the President of the Council went, for the first part of July, to Prague, where he paid a courtesy visit to the Czecho-Slovak Government. He was received by M. Masaryk, President of the Republic, who had a long talk with him upon the political and economic situation in Central Europe and the Balkans. Apart from the subject of Bulgaro-Czecho-Slovak relations, the conversation turned on the relations between Bulgaria and her two neighbours of the Little Entente, particularly Yugoslavia. A similar interview was held by M. Liaptcheff with M. Benesh, Foreign Minister, who gave an official luncheon in honour of the President of the Council.

In general, the welcome which M. Liaptcheff received in Czecho-Slovakia was most cordial. The Czecho-Slovaks, gave evidence towards the Bulgarians of the warmest sentiments, exceeding the tenor of the Treaty of Friendship recently concluded between the two peoples.

Leaving Prague, M. Liaptcheff went on to Budapest, where he spent a day before leaving on a steamer for Bulgaria by way of the Danube. This short stay in the Hungarian capital was a veritable triumph for the head of the Bulgarian Government. Greeted at the station by the Minister of Foreign Affairs, M. Valko, he was received at once, first by the Regent, Admiral Horthy, who had specially interrupted his stay in the country for this purpose, and then by the President of the Council, Count Bethlen, who gave a large dinner in his honour. In addition, a luncheon was held at the Bulgarian Legation, at which some of the notable people of Hungary were present. Finally, he was received by the Archduke Frederick, who held an official tea at which was gathered the whole official world of Budapest.

Though thus unceasingly fêted, M. Liaptcheff found time to receive representatives of the local and foreign Press, to whom he made a statement emphasising the exceptional welcome which he had received at Budapest.

This undisguised cordiality between the Bulgarian Prime Minister and the authorities at Budapest has had the effect of saddening the Yugoslavs and of putting into relief the chilliness of Bulgaro-Yugoslav relations, emphasised by the absence of any official representative at the steamer's stopping point at Belgrade. Will these two visits have political consequences? Yes, because they have reaffirmed the relations between Bulgaria and Austria, Czecho-Slovakia, and Hungary, hardening the *rapprochement* already begun with these three countries of Central Europe; according, however, to the categorical assurances from Government circles, they will not change the essential lines which have marked the development of Bulgarian policy, which rejects the notion of adhering to one group of Powers against another group and which hopes always for the advancement of Bulgaria with the good will of all the Powers.

THE HIJAZ.

Jidda, July 8.

Court and Diplomatic News.

Since I last wrote, Jidda has settled down to its summer sleep and, in contrast with the riotous activity of the pilgrim season, resembles a city of the dead or moribund. Those who could have got away already, and those who have not been able to yet are counting the days till the day of their release. The rest are already resigned to the prospect of remaining, and console themselves with the thought that the Jidda climate is in truth much maligned—and so it is.

Some days ago we sped Shaikh Hafidh Wahba on his way to London, where on arrival he will take up the post of Minister for the Kingdom of the Hijaz and Najd and its Dependencies at the Court of St. James's. It is understood that for the time being he will reside at the Hyde Park Hotel, while looking out for a suitable permanent location for the Hijaz-Najd Legation. Sir Andrew Ryan entertained His Excellency to dinner on the day before his departure, and there was a large concourse of friends and well-wishers on the quay to see him off. He is travelling part of the way with Shaikh Abdul Rahman al Qusaibi,

the well-known pearl merchant of Bahrain, who has been here for the Pilgrimage and is now on his way to Paris on business.

Among other recent departures must be recorded those of the Dutch and Persian Chargés d'Affaires, who have gone off on leave, and of many lesser lights of the European community of this port.

We were honoured a week or two ago with flying visits by the Amir Saoud, the Heir Apparent, on his way to and from Madina. Shortly after his return to Mecca he proceeded to Taif, where King Ibn Saoud has now been installed about a fortnight and where he seems likely to spend the greater part of the summer. For all practical purposes the headquarters of the Government is established "for the duration" in the same delectable summer station. This is somewhat inconvenient from the point of view of the Diplomatic representatives of the Powers, who are thus deprived of direct access to the Foreign Office, to say nothing of the King; but I understand that a reorganisation of the Foreign Office is contemplated, which will remove all ground for dissatisfaction on this score in the future.

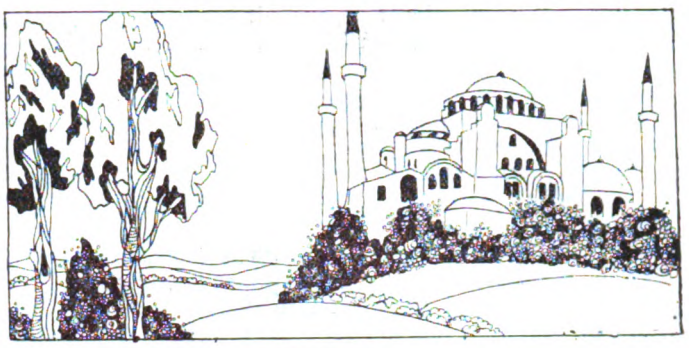
The Civil Government.

Meanwhile the King is fully occupied with the administrative organisation of the civil government, which has long been in urgent need of his personal attention. As a first step he has created an Administrative Inspectorate, consisting of a President and three other members, whose function will be to inspect and report on the administration of all departments. The late Inspector-General of Customs and the late Director of Revenue at Jidda have been appointed members of this Inspectorate, while new blood has been imported (Najdi blood, be it noted) into those two exceedingly important posts. The Directorship of Customs has also changed hands, and it is to be hoped that the Revenue and Customs departments at Jidda, which were admittedly in need of thorough overhauling, will benefit from the changes, which are, as it were, the first fruits of the King's personal attention to the administrative requirements of the country since his return.

Transport Arrangements.

It is believed that the next matter to receive attention will be the pilgrim transport arrangements between Jidda and Mecca and Madina. The economic state of the country is far from happy at the present moment and, although the number of pilgrims this year (some 84,000 according to the final figure) was far from unsatisfactory, there is general complaint that the year has been economically a bad one. Apart from the repercussion of the world-wide economic depression on the country, there is a special local cause for the present position here. The twenty or more motor transport companies which have been competing for the favour of the pilgrims have, during the past year, been engaged in a disastrous throat-cutting competition, with the not surprising result that practically every company has shown a loss on the year's working. They have only themselves to blame, but the effects of their general failure are too widespread to be any longer ignored by the Government. And it is anticipated that the Government will reimpose the control, experimentally imposed the previous year and wrongly withdrawn at the request of the companies themselves, in the matter of the fair distribution of pilgrims among the cars available from time to time. Some of the weaker companies could be eliminated without loss to anyone, and then the fair distribution of passengers should do much to eliminate the worse elements of the existing competition.

With all these matters to attend to the King has a busy programme before him. He himself is indefatigable, but the very fact that he has to attend personally to practically every item of Government business only serves to emphasise the "one-man" nature of his system. With him it is a race against time to get everything to rights and securely established before he goes. It is a stupendous task and one stands amazed at the unshakeable courage with which he faces it. *O si sic omnes!*



TURKEY.

Istanbul, July 24.

Turkey and Greece.

If the Ankara and Athens Cabinets were to be congratulated a short time ago on the consummation of their protracted efforts to remove the main causes of misunderstanding and friction between the two countries, they are now setting a praiseworthy example to other Near Eastern countries by the promptness with which they are following up their initial success by dealing with other problems which not so long ago appeared almost insuperable. The Greco-Turkish Pact of Amity, in draft form, is understood to be nearing completion. This instrument is reported to be framed, in its main lines, on a formula prescribed by the League of Nations for agreements of this nature and scope, whereby it is provided that all differences which might unhappily divide the two countries in future—including those of a political character—shall be settled by reference to the arbitrament of the International Court at The Hague. When it is borne in mind that Turkey is not a member of that League, Ismet Pasha and Tewfik Rushdi Bey are to be congratulated on their readiness to subscribe to the context of a document embodying the essence of the League's principles.

Better than the foregoing, however, is the news that

an agreement in principle—even if only on very broad lines—has been reached on the question of naval parity, that perennial source of rivalry and friction fraught with danger to the two countries. The negotiations are reported to have reached a stage where the problem can safely be turned over to the consideration of the naval experts of both Ministries, whose duty it will be to draft an agreement respecting aggregate tonnage, gun power and types of vessels to be kept in commission by the contracting parties. Even if from no more than the Exchequer point of view, any such agreement, in these hard times, is a move in the right direction.

As to the Consular Convention, although this instrument is being drawn up on lines which approximate on the whole to the Conventions already in force between Turkey and other Powers, special provision has to be embodied in the Convention whereby the interests of the remaining "Exchangeables" and "Non-Exchangeables" in both countries may be safeguarded. The Agreement, in other words, is to be so drafted that the Turkish Consular authorities in Greece, and the Greek Consular authorities in Turkey, will find themselves at some future undefined period in a position to take up the threads of the duties performed by the Commission for the exchange of populations, when that body—a costly one to both countries—has finally ceased to function.

Tewfik Rushdi Bey, who is spending a few days in Istanbul, was entertained to dinner last night by the Greek Minister at his summer residence at Therapia.

Discord Among the Dentists.

Whether the dental confraternity in Istanbul feel the effects of the dog-days more acutely than do other members of the local community, it is not easy to say, but they certainly have shown marked susceptibility and petulance in the last few sweltering days over an incident, which to a layman—perhaps even to the dentists themselves, if the weather were cooler—would appear to be no more than a very whimsical storm in a tea-cup. The two principals in the amusing little comedy—which led up to an outbreak of white-heat irascibility among the whole profession—are a Turkish and an Armenian dentist, neither at all prominent—whom we will name A. and B. respectively. On a ferry-boat proceeding up the Bosphorus a day or two ago, B. happened to seat himself next to a client of A. with whom he was acquainted. After passing the time of day, B. expressed his astonishment at the length of the teeth in the denture of his acquaintance, manufactured by A. The alarmed client rushed off next day to A. and protested against the length of the false teeth he had prepared for him, whereupon A. rushed off in his turn, forced an entrance into B.'s den and told the latter what he thought about him in highly unparliamentary language. A. then lodged a formal complaint against the action of B. with the Disciplinary Council of the Dental Faculty. This body at once issued a circular to all its members inviting them to abstain from proffering critical strictures on the professional handiwork of their "confrères." B. thereupon protested to the Disciplinary Council, in his turn, against the highly uncomplimentary language addressed to him in his own dental surgery before clients by his colleague A., embodying in his protest his personal views as to what did and what did not constitute good dentistry, as apart from mere tooth-pulling. B. in his document assimilated the science and art of a dental surgeon to that of a master-tailor or of a sculptor. A faulty or inartistic tooth turned out by an inexperienced dental craftsman, argued B., was quite as offensive to the canons of æsthetic taste, as a badly fitting suit of clothes clumsily put together by a mere jobber in the tailoring line. Young dentists who were beginners could not be expected to realise this fundamental truth, nor the fact that it was practice and experience which counted in the making of a good dentist and not years of theorising and book study.

These reflexions of B. were looked upon by the confraternity as a grave aspersion on the whole corps of dentists in Istanbul hence their wrath. Having failed to obtain satisfaction *in corpore* from the Disciplinary Board, the corps have decided to take legal action against the offender in the course of the next few days—unless, perhaps, the weather and the corps' ruffled spirits both cool down in the meanwhile.

General News.

Ex-King Amanullah, accompanied by Queen Suraya, his family and suite, has arrived in Istanbul and has rented a villa at Therapia on the shores of the Bosphorus for the summer months. The ex-Sovereign yesterday proceeded to Yalova in the Gulf of Ismid in order to pay his respects to the President of the Republic. The Ghazi is now taking the waters at that health resort and has been absent from Istanbul for the last ten days.

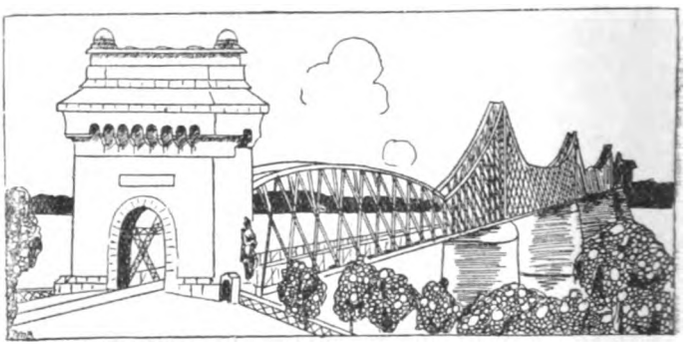
CENTRAL ASIAN SOCIETY

(in which is incorporated The Persia Society.)

Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published.

The subscription of £1 per annum entitles members to a copy of each issue of the Journal, tickets for all meetings, and the loan of books from the library.

Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W.1



ROUMANIA.

Bucharest, July 24.

The Internal Situation.

There is no doubt that the arrival of King Carol II has had a quieting effect upon the country; he has established the political situation, moderated the strife of the political parties, and generally introduced an element of authority. Everyone is agreed on this point and welcomes the change, in view of the excesses committed by certain youthful elements in the country during the last few months. The importance of these excesses must not be exaggerated, however, for they do not spring from any deeply rooted feeling in the minds of the masses of the people. It should not be forgotten that the National-Peasant Government is the first to have put "universal suffrage" fully into practice, and it is also the first to come into power by absolutely free elections, without the severe restrictions imposed by its predecessors. It is not unnatural that a country, which has been governed for many years under martial law and has been accustomed to be muzzled by a very severe censorship and otherwise restrained by vexatious measures, when given full freedom from all these restrictions, should be temporarily troubled by an outbreak of unrestrainedness on the part of its exuberant youth. These outbreaks have lately been responsible for some regrettable incidents, as for example the attack upon M. Anghelescu, Under-Secretary for the Interior, which fortunately has not endangered his life. The would-be assassin declared that his action had been inspired by the Law for the Colonisation of the Dobruja, which did not give fair consideration to the Macedonian element of the population. It appears, however, that this was only a pretext, as the man turns out to be neither a Macedonian nor a student, as he pretended, but a good-for-nothing fellow. He claimed to belong to the Nationalist party, but they disowned him and repudiate his action with indignation. The Government has, perhaps, been

Digitized by Google

over indulgent hitherto towards certain excesses of youth, attributing them to the growing spirit of democracy. But this leniency need not be mistaken for weakness.

Attacks on Jews.

As for the existence of any widespread anti-Semite feeling, this again is a legend with no foundation in fact. Certain organs of the Press have tried to contend that there is such a feeling, but have not established their case. An attempt was made to attribute the recent fire at the village of Borsha to anti-Semite agitators, but it has been proved by an official inquest and by witnesses, including some of the chief Jews in the community, that the real cause of the fire was negligence, and that it broke out accidentally in a quarter inhabited mainly by Jews, but also by Christians. The dwellings were all dilapidated wooden huts, and the authorities had long warned the inhabitants that they would soon be evacuated from those houses, which were dangerous to live in. The fire broke out shortly before the evacuation should have taken place and, fanned by a high wind, soon destroyed the whole quarter, leaving many families homeless. The Christian element of the population, far from persecuting the Jews, did all they could to help them and took in many of the homeless Jewish families, until aid was received from the State, from charitable funds and from the Queen.

The Liberal Party.

The return of the King has precipitated the evolution that had begun to take place within the ranks of the Liberal Party. This Party has been responsible for the two great democratic reforms, agrarian reform and universal suffrage, but by never fully applying them it delayed the development of the four million new landed-proprietors, who by the suffrage had become electors also. The Party has suffered from a narrowness of aim and fanaticism of doctrine, since it was bound to the economic conceptions of M. Vintila Bratianu, whose motto was: "By ourselves alone"—a principle which has brought the country to the verge of ruin. M. Vintila Bratianu, persisting in his narrow principles, pronounced himself against the revision of the Act of January 4, 1926, and the recognition of King Carol II. He was followed by M. Duca and the Committee of the Liberal Party. It was natural that M. Georges Bratianu, son of the late Ion I. Bratianu, should have hoisted the standard of youth and progress and demanded the abolition of the Act of January 4, 1926, and submission to the King, thus keeping up the tradition of the Liberal Party, which has always been a prop of the Crown, and expressing the adherence of the younger element to the King of their own generation. This energetic attitude forced M. Vintila Bratianu to capitulate, and both he and M. Duca have asked for audiences of the King and have been received. The internal troubles of the Party are by no means over, however. The younger element is grouping itself round M. Georges Bratianu in large numbers, including some personages of the greatest importance, and this is worthy of note, for the great strength of the Liberal Party has been based upon its organisation and strict obedience to the rules laid down by the leaders, which could be enforced by financial pressure, the Party leaders including a powerful banking element. In Transylvania and the annexed provinces M. Georges Bratianu is finding many adherents who had been estranged by the tyranny of the brothers Ion and Vintila Bratianu.

The Economic Situation.

The situation has not changed for the worse, and it is hoped that the splendid harvest may be the means of re-establishing it completely. In quantity and quality the harvest surpasses any that has been recorded since before the War. The prices of cereals are beginning to improve. These happy circumstances and the confidence inspired by the presence of the King give grounds for the hope that an agricultural loan may be obtained, as it is required to improve stocks and for the purchase of the necessary machinery. This is a matter on which the King has set his heart. He mentions it in all his speeches, and, to show his approval of the co-operation of foreign capital, he was present himself at the inauguration of the great hydro-electric works recently started in the Carpathians by a Belgian company, Petroshitza, to provide electricity to a large area of country. He made a very striking speech on this occasion, insisting on the security which would henceforth be given to foreign capital, based on the continuity of the Crown.

Parliamentary Vacation.

Parliament is now closed until September. The Ministers are taking leave one after another, except the President of the Council, M. Maniu, who is busy with current business. The King will not take any holiday. He works daily, together with Prince Nicholas, for 15 to 18 hours with members of the Government and various political personages.

The Court.

Queen Marie, accompanied by Princess Ileana, has gone on a visit to her daughter, the Queen of Yugoslavia, and will then proceed to Beyrouth. Princess Helen and the Crown Prince Michael are in residence at Sinaia, to escape the intense heat of Bucharest.

ALBANIA.

Tirana, July 23.

Anglo-Albanian Trade Returns.

In connexion with the reference in a former letter to trade opportunities in Albania, a statement made by an official of a Chamber of Economy is not without interest. He volunteered the information that letters are constantly received by Albanian firms from American business houses, stating that the name of the addressee has been passed to the writer (from the Americal Consul in Albania) as one who might wish to enter into business relations with his firm. My informant added that it was very seldom indeed that such letters were received from British firms. Anglo-Albanian relations, whether trade or other, it would be thought, would also be furthered if the British Legation and Consulate were at Tirana, instead of at Durrës (Durazzo). The Americans have built a fine new Legation at Tirana, where a reception in the morning and a dance in the evening were given on July 4, one or other of which was attended by the members of the Cabinet, Diplomatic Corps, and most people of note in the capital. The British Legation, a small house tucked away in a side street of Durrës, is unsuitable for such functions; and the King's birthday celebrations were, necessarily, restricted to a dinner attended by some only of the British colony in Albania. A move to Tirana is spoken of—but when will it take place?

While on the subject of trade in Albania, a consideration of the country's trade balance is interesting. In 1928 Albania exported goods to the value of 14,859,116 gold francs, and imported to the value of 32,311,583 gold francs. In 1929 the figures were: exports 14,682,608, and imports 38,643,900 gold francs. This may, at first sight, seem discouraging, but it has to be borne in mind that Albania is still making good Turkish neglect, and it cannot, therefore, be expected that at this early stage her powers of production should be equal to the demand for foreign goods in connexion with the extensive programme of constructive works and other essential developments now in hand. Thus some at least of the trade deficit represents invested capital which ultimately will be productive. Furthermore, against the deficit have to be set receipts such as emigrant remittances, the sums spent by foreign enterprises and missions in Albania, and receipts of a temporary character, among which those connected with the Italian loan for public works are of special importance. If Albania is able, within the next few years, to capitalise her magnificent and richly varied scenery by attracting

Digitized by Google

tourists, the position would be still further improved. The new and spectacular Kruja-Bureli road now under construction, a fine piece of engineering, is alone worth a visit to the country.

Miscellaneous News.

M. Briand's proposals for the formation of a European Federation were formally laid before the Albanian Government by the French Minister on July 14. The Albanian Government replied that they whole-heartedly supported the proposal, but were of the opinion, first, that no steps should be taken which would encroach upon the sphere or interfere with the activities of the League of Nations; and secondly, that economic problems ought to be settled before political problems were discussed.

A reply from the Yugoslav Government to the Albanian Government's request for the extradition of Grazhdani, the Albanian corporal who murdered the Italian, Lieut. Chesti a month ago, has not yet been received; but, as the Yugoslav Minister in Tirana publicly declared, before the request was made, that, if it was made, his Government would certainly hand over the criminal, it is to be presumed that the reply will be satisfactory.

Tirana's second cinema has recently been opened.

During the night of July 16-17 a fire destroyed a number of shops in Tirana; but as there were to be expropriated and pulled down to make way for the new Boulevard Zog, and as the fire has thus saved expropriation and demolition expenses, the Government does not share the distress of the owners.

EGYPT.

Alexandria, July 25.

The Situation.

A change has taken place in the Egyptian situation this week, and everything is now quiet and orderly again. Last Monday, July 21, had been looked forward to with anxiety by most communities in Egypt, as it was the day on which the Wafdist Deputies had announced they would break into Parliament and hold a meeting, despite the Government's ban. Comparatively little disorder resulted, and at the last minute the Deputies altered their plans and decided that their lives were too valuable to the country to be recklessly endangered. They contented themselves with sending a strange document to King Fuad, asking that an extraordinary session of the Chamber be convoked for Saturday, to-morrow. The petition invoked several articles of the Law of the Constitution and contained some amazing charges against the Sidky Cabinet, including the now famous accusation that the life of Mustapha Nahas Pasha had been deliberately endangered by troops acting on the Government's instigation. This petition was, needless to say, refused. It is now a matter of conjecture whether the Deputies will try to force their way into the Chamber to-morrow. In face of the very strong Government measures such a course is unlikely, for, while the Wafd leaders are very ready to urge their followers amongst the masses to "die for the Constitution," they themselves do not exhibit any desire to practise what they preach. There has been considerable comment amongst the people that Nahas Pasha and his officers remained in their houses all day last Monday, and small bands have been seen parading the streets with a stick on which was balanced a tarboush which was covered by a woman's dress. This effigy was meant to represent Nahas Pasha. It is, of course, a great insult, and means to imply that the Wafd leader is not a man but a woman and a coward.

The Wafd's Influence.

Full reports which are now available regarding Monday's disturbances show most definitely that the Wafd boast—that the nation is behind them—is entirely false. Despite immense endeavours, the Wafd were unable to arouse the least enthusiasm for their great campaign, and the small disturbances which occurred in Cairo, Port Said and Suez were the work of paid hooligans, and the ordinary Egyptian of the lower classes, on whom the Wafd were relying, took no part whatsoever. The Cairo troubles were easily controlled by very effective police measures, and troops were not required. The Cairo City Police, admirably led by Baker Bey, acting-Commandant, and other English officers, took the offensive throughout. Instead of waiting to be attacked, as the Alexandria police did the previous week, they broke up any demonstration immediately it was formed. If stones were thrown from a house, the police rapidly raided it and arrested the criminals. The mobs' only achievement was to destroy about 1,500 lamp posts, a certain number of trees, and a few tramcars. Some of the rioters were asked why they were wantonly smashing things, and the reply was in every case: "So as to destroy Government property."

Example of the Railway Workshops.

A very interesting instance of the complete failure of the Wafdist instigators was given yesterday by the Minister of Communications. Tewfik Doss Pasha stated that in the Egyptian State Railways' Workshops in Cairo there are 36,000 men. All can readily lay their hands on hammers or other dangerous weapons. These workshops have always had a bad reputation, and in 1919 the workmen caused immense trouble. It was feared that they might be stirred up by the Wafdist incitement, particularly as the previous Minister of Communications, Nokrashy Bey, a leading Wafdist, had been at particular pains to keep on very good terms with the men and had frequently surprised Heads of Departments by his intimate knowledge of even the lowest-paid workmen. It was surprising, therefore, to note that on Monday the number of absentees was no less than 66 per cent. lower than usual, and in workshops of about 3,000 men, where the daily average number of absentees is about 50, the average percentage on Monday was 7. Further, three times during the day the Minister received telephone messages from the workshops. The first was at 11.45 and was to the effect that the men had asked that instead of going home to lunch at 12 o'clock, as usual, they might be allowed to take their luncheons in the workshops. The second was at 5 p.m., when the men usually go home, and asked that they might work over time until 7 p.m. as 5 p.m., was the hour fixed for the breaking-in to Parliament and the men did not want to be mixed up in the troubles. The last message was at 7. This time the men's representatives said that they were aware that 36,000 men could not go into the streets without causing a crowd and, as they did not wish to be taken for demonstrators, they asked whether they could have a police guard. This was granted them, and one officer, two policemen and two soldiers accompanied each party of workmen.

This conduct is even more noteworthy in that on the previous day huge piles of circulars were distributed to the men calling upon them to strike on Monday. "This is your day," ran the circulars, "it is a day of sacrifice. It is your duty to safeguard the Constitution and pay homage to the martyrs." The men had these circulars collected and sent to the General Manager of the State Railways with the message that: "He had better have them, as the men did not want them."

Tariff Revisions.

A Council of Ministers meeting on July 24 decided to raise the Customs' import dues on wheat and flour. Wheat will now pay Pt.105 instead of Pt.90 and flour Pt.250 instead of Pt.220 per ton. The Cabinet are assured that this increase will not affect the price of bread. The object is to use up the great quantities now lying in store in Egypt, the presence of which has caused a serious drop in prices. The Council also decided that the import dues on sugar shall be £E4 per ton instead of 25 per cent. of the price of the quantity imported. This will, it is hoped, assist local growers.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 10.

The Dark Background.

To one who has some sense of the sinister forces working in the dark background—within India and on both sides of the North-West Frontier—it is difficult to be patient enough to report the mere surface happenings. The alternative is to ignore them, and to try to piece out what the sinister forces are, and with what volume that tide is now flowing; but that would perhaps be to breed fears that would have no foundation in fact. So to report the surface happenings.

The Unlawful Congress.

The Congress, one understands, has been declared an unlawful body in the Punjab—the whole Congress there and the banks have been instructed not to pay out its funds, while the Working Committee has been declared an unlawful association in the United Provinces, on the ground that it was inciting the public to refuse payment of lawful taxes; that it was using intimidation; that it had passed a resolution expressing sympathy with mutineers; that it was instigating the military and the police to disobey orders. To put the thing in words that have been used by a Press representative this week: "The country has seen the gradual spread of lawlessness and defiance, and thus the extension of the scope for revolutionary crime and terrorism, and, at long last, the challenge could no further be avoided, whatever the previous grounds of expediency. The tally of incitements is a long one, even if only happenings are considered—definite incitements of the populace to disobey ordinary laws and special ordinances, and of soldiers and police to fail in their duty, an armed rebellion instigated by Congress volunteers in the Midnapore district, and efforts to stir up the tribesmen to attack the frontier." That is a fair presentation of the facts. Yet we have Pandit Madan Mohan Malaviya declaring that "Government is an unlawful association and not the All-India Congress Working Committee"; and the Pandit was until recently the leader of the Opposition in the Legislative Assembly. When one insists that the Indian political leaders are the slaves of words, that they are self-hypnotised with phrases, it is of such an utterance as this last one by the Pandit that one is thinking. They can persuade themselves that any words are true.

Schoolboy Politicians.

They can persuade themselves also that any action is legitimate. I recently dined with seven Muhammadans and one Sikh. After dinner they talked politics, and presently they were all strongly condemning the unscrupulous use that the Indian political leaders will make of schoolboys. They have never scrupled to use that weapon against the Government of the country. Pandit Motilal Nehru and the other members of the All-India Congress Working Committee have not shown themselves more ready to exhort schoolboys to abandon their schools and studies, and be Congress volunteers and *satyagrahis*, and to swell their audiences at political meetings, than the agitators against the partition of Bengal twenty-five years ago. But all the sober men condemn that. Much approval has been expressed of the Government of India's action in publishing a resolution defining the Government's discretionary powers under the Primary Education Act of 1923, and declaring that the Government is responsible for seeing that the children are educated on sound lines, and that "the educational administration is carried on on accepted principles, uninfluenced by the ebb and flow of party politics." Government is not to allow the local authorities to use their powers to support the aspirations and actions of those seeking to subvert the Government, nor will they allow the staffs of the schools or the schoolboys to take part in politics. The penalty for infringement is a reduction of the grant-in-aid.

Student Politicians.

The Congress Working Committee has also directed its energies to the recruitment of the students in the colleges as political volunteers. As the students are older than the schoolboys, this is not so objectionable, but it is quite objectionable enough; and one is glad that this line of action, condemned by the Government, should also have been strongly condemned by the Council of the Western India National Liberal Association in a statement, part of which is as follows: "The Council cannot but view with grave anxiety and concern the appeal made by the Congress to the students of schools and colleges to give up their studies and take an active part in the campaign of civil disobedience. In the opinion of the Council this move on the part of the Congress appears to be mischievous, in that it is bound to lead to results which cannot be viewed with equanimity by any well-wisher of India. The Council feel that all the implications of this activity have not been fully realised by the Congress leaders or by the youth of the country. Owing to their immature judgment the young students are likely to be unduly influenced by this emotional appeal, and will be misled into believing that breaking laws and defying constituted authority can emancipate their Motherland."

All-Parties Conference.

The Committee of the All-Parties Conference, after spending a day in Simla in discussing the question of electorates—whether they should be separate, or joint, with reservation of seats and "weightage," met the next day, when it considered the question of residuary power whether it should be vested in the Central Government or in the Provinces—and then, suddenly discovering, upon Mr. Jinnah's putting a question, that in the absence of representatives of the Hindu Mahasabha there was no one to pledge the Hindus, it adjourned *sine die*. One has seen "All-Parties' Conference Fiasco" as a heading in at least one newspaper of the last day or two. It brings one back to a former wish—that the Viceroy himself had summoned an All-Parties' Conference. Sir A. P. Patro was not a big enough man to bring the whole team together, or, having brought it together, to keep it together.

Muslim All-Parties' Conference.

The Working Committee of the Muslim All-Parties' Conference has also been in session this week. They have reviewed the Report of the Statutory Commission point by point; so that the proceedings have been anticipatory of the October discussions in London. "While not expressing," runs a report, "any opinion on indirect elections, they oppose the system of proportional representation in the Assembly, and urge separate representation to the extent of one-third of the membership of the Assembly. They characterise Provincial autonomy as whittled down; want communal majorities in the Punjab and Bengal; the separation of Sind, and the same reforms for the Frontier Province and Baluchistan as for the other Provinces. They also want a statutory guarantee regarding Muslim representation in the public services, local bodies, and educational institutions." The last part of that might work very ill; for it would compel Government to force Muhammadans as teachers on colleges and schools that did not want them. They might have no gift or talent for teaching. But the public men in India now refuse to be influenced or restrained by any such consideration.

A New Policy.

The truest word about Indian affairs spoken this week is contained in a cabled report from your side of a speech to members of the House of Commons by the Rt. Hon. Mr. Sastri. This word: "The Viceroy's declaration had only succeeded in arousing new hopes in India of immediate steps towards Dominion Status. If the authorities had failed to get the right atmosphere to permit to the Conference being held, they would only have made things worse by the declaration." Mr. Sastri said he was unable to understand why Sir John Simon, knowing of the declaration, and avoiding association with it, when it was made, had not taken more notice of it in the Report. That Report was the outcome of, and was based on, a comprehensive survey, aided by the Indian Central Committee and by Provincial Committees, of the situation in India. The later-made Viceregal declaration was no part of *that* situation. The Statutory Commission would have had to say, in so many words or in effect: "We made an inquiry, and we formed opinions, but we must put them all aside, because the Government have made a declaration committing the two countries (not really so, but as India has misunderstood the declaration) to a definite policy. It is a policy we were not prepared to recommend." When I say that India misunderstood the declaration as committing the two countries to a new policy, I should rather say that it was misunderstood as committing the two countries to the immediate carrying out of that policy.

His Majesty the King Emperor.

As I wrote those last words, the text came of the gracious speech of His Majesty the King Emperor at the opening of India House—of that prayer for "deeper realisation of that twofold unity." Would to God that it might be so; but I have myself no hope; for those who have been called upon to lead, both of Englishmen and of Indians, do not see the facts of the situation, and will not be guided by those who do see them.

MR. SRINIVASA SASTRI ON THE SIMON REPORT.

Apart from being the only Indian member of the Privy Council, Mr. Srinivasa Sastri, who lectured to the East India Association on July 23 on the Report of the Statutory Commission, has many other qualifications for the task. In the opinion of the late Lord Balfour, who was not addicted to extravagant praise, he is "one of the greatest living orators;" his remarkable command of the English language is not the least, while his many outstanding achievements in the less spectacular but more enduring field of Anglo-Indian co-operation and amity and his long and distinguished record of public service generally entitle his views to the greatest respect and consideration. When, therefore, Mr. Sastri argues, as he did on the above-mentioned occasion, that the Commission's proposals were no more than a cover for the desire to keep the British in supreme control of Indian affairs for an indefinite period, his line of reasoning is interesting.

The first point which Mr. Sastri made was that, however much the meaning of the term "Dominion status" might be changing, its very bond and essence was the right of secession. If the Commonwealth was in reality a voluntary association of free peoples and the people of India were to come within this category, their continuance as a component part must be based on their active consent, which could not be said to exist so long as they remained without the power to effect a severance. To attain Dominion status, India needed to be placed in a position to defend herself both from external aggression and internal disorder. The Simon Commission, he contended, had decisively ruled out all prospect of the present Army being wholly Indianised or passing under the control of a self-governing India. As to the proposed creation of another Army, to be wholly Indian and under the control of a responsible Minister for purposes of internal order, even a tyro in public affairs must see how distant would be the prospect of full self-government if the Indian Treasury had to find the means for maintaining a second Army.

Another serious obstacle to Dominionhood was the guarantee proposed on behalf of the Princes that their political relations should henceforth be not with the Government of India, but with the Viceroy, as the representative of the Crown. In proposing a Federal structure for the whole of India, the Commissioners had shown an even greater regard for the susceptibilities of the Princes than the members of the Butler Committee. The necessity of two-thirds of India readjusting its constitution in order to make possible the accession of one-third of India would not appeal strongly to those who objected on other grounds to the Commission's idea of Federation. The States, being autocratically governed, would not come into a system in which the centre had the large legislative and superintending powers and financial control that it now enjoyed. An irresponsible system at Delhi would not be allowed to work by educated India even for a brief period, for they were resolved no longer to be kept out of control of their own destiny.

There was a more fundamental objection. In a country of the size of India there was grave danger of a central Government, however exalted its office and functions, becoming a mere abstraction to the people. The elaborate and learned arguments by which a case against responsibility at the centres was buttressed by the Simon Commission would carry no conviction to the Indian reader, while by refusing the greater part of the demands made by educated Indians, the Report had added to the causes of contention. To flout the intelligentsia while satisfying the Princes, the British, the minority communities, and the Services, was to involve Britain and India in strife the end of which no one could see.

Naturally in the debate which followed the arguments of Mr. Sastri were effectively criticised by many speakers. Sir Ibrahim Rahimtoola, a former member of the Bombay Government and the first President of the Bombay Legislative Council, pertinently remarking that Mr. Sastri had put the intelligentsia on one side and the Princes, the British, the minority communities and the Services on the other. But when all these exclusions were made, who were left? Sir Ibrahim, in particular, challenged the view that the Muhammadans had welcomed the federal form of Government because they expected under it to secure control of several provinces along the north-west border. The weakness of a case which involved such a narrow conception of the Indian intelligentsia was also exposed by Mr. Waris Ameer Ali, Sir Louis Dane, and Professor Rushbrook Williams, the latter assuring Mr. Sastri that the Indian States would never act as a drag upon the attainment of the aspirations of British India.

Mr. Wardlaw-Milne, who presided in the absence of Lord Chelmsford, read a message from the former Viceroy, in which he said that the last seven words were inserted in the announcement of August, 1927, at the instance of his Government and their meaning was clear. If "the right of secession" was implicit in the term Dominion status, as Mr. Sastri had suggested, the latter term was not a synonym for "responsible Government," as the right of secession was deliberately excluded from the 1917 announcement. It was a great mistake, the Chairman proceeded, to suppose that the Simon Report bound this country, which would welcome any settlement reached at the Conference which secured the welfare of the various races and communities of India. It was a question not of finding an ideal solution, but of men of good will getting together at the Conference and hammering out a settlement satisfactory to both countries.

With this view Mr. Sastri was in full agreement, and in winding up the debate the lecturer made it clear that he was by no means committed to all the arguments he had advanced and was willing to "shed the greater part of them in the cause of conciliation and peace."

INDIAN NOTES

(Continued from page 114.)

Faculties is deemed to be desirable; and scholarships for advanced study and research are a necessity. To meet these needs it is hoped to increase the permanent endowment by Rs.40 lakhs. Furthermore, a sum of Rs.70 lakhs is required for non-recurring expenditure for the provision of, among other developments, buildings for certain existing, and for other new, science departments, for a department of Technology, a University Library, a Museum, a Senate House, a University Press, etc. For these purposes an appeal for a second crore of rupees is being made by the Vice-Chancellor, Pandit Madan Mohan Malaviya, which is deserving of the support of all who are interested in University education in India.

Indian Railways and Water Transport.

That there is great and urgent need for the extension of the Indian railway system is universally acknowledged, but it is also agreed that the provision of the capital required to construct the lines is a matter of difficulty. It follows that those railway extensions that are most urgently necessary should be given the priority, and that those of less urgency should be deferred. In Bengal, commercial interests have maintained for years past that in the eastern districts of the province—where there is a magnificent system of waterways—the construction of more railways is not a matter of immediate concern. Upon this point the Government has not always agreed with the business community; and it will be remembered, by readers of THE NEAR EAST AND INDIA, that last year there was a somewhat acute difference of opinion regarding a certain project, namely, the construction of a line—to be called the Dacca-Aricha railway—which would run from the district of Narainganj to a point opposite Goalundo. It was understood last autumn that the Government of India had definitely decided to go on with the scheme, but it now appears from a communication which was addressed recently by the Railway Board to the Bengal Chamber of Commerce, that: "owing to financial circumstances it is impossible to allot funds in 1930-31 for the commencement of the actual work of construction." There is thus to be a postponement, and during this period the construction and traffic estimates are to be re-examined in order to ensure that they are as accurate as possible. This is satisfactory so far as it goes, and it is not improbable that the additional consideration which will thus be given to the scheme may lead to a longer postponement. The view now taken by the Board is, briefly, that the proposed line will meet a real local need, that is, that it is an eventual link in a trunk system of communication, and that it is likely to be remunerative. But, as they cannot at present finance it, they have directed that the estimates upon which their opinion was, of course, largely based, shall be further examined. It will be of interest to watch the further progress made by the scheme. But it has to be noted that the question of whether the line is of sufficient urgency—in view of the railway requirements of other parts of India where there are no waterways—to justify its construction, except at a time when funds are plentiful, is not answered by the Board. Nor does it seem to us to have been established that the line—which will be constructed and managed by the State—will not compete for traffic with private enterprise as represented by the Inland Steamer Companies.

The appointment of Mr. Surendra Nath Sen, Barrister-at-Law, to be a Puisne Judge of the High Court of Judicature at Rangoon, in the vacancy caused by the death of Mr. Justice P. N. Chari, is officially gazetted.

India will be represented at the Imperial Conference next September by the Secretary of State for India, His Highness the Maharaja of Bikaner, and Sir Muhammad Shafi. Sir Geoffrey Latham Corbett and Sir Padamji Pestonji Ginwala will be attached to the Delegation as substitute delegates especially on the economic side.

Book Review

INDIAN REMINISCENCES.*

This is an entertaining record of a bright and active personality. The author warns us that it must be egotistical and it certainly does suggest that he played largely for his own hand and was not an easy person to work with, especially for those set in authority over him. Yet his real ability and his power of quick decision justified his promotion to high places: and the cutting short of his tenure of office was a landmark in modern Indian history far more important than the personal interests involved. It cannot be doubted that he was in a most difficult position at the head of a Province created by a Partition of which he personally did not approve. He had to administer the Province amidst much clamour directed from outside of it, under a Government of India dominated by an autocratic Secretary of State, to whose mind the methods of Sir Bampfylde Fuller must have been particularly abhorrent. Incidentally it must be observed that the author does not hesitate to accuse Lord Morley of specific bad faith in his treatment of him. We may agree that the treatment was bad while perceiving that there was a good deal on the other side. Sir Bampfylde Fuller admits one of his indiscreet remarks, though in a form considerably bowdlerised from that current in India at the time; and, above all, he proffered his resignation, though with no idea that it would be accepted. But a man who says he will resign must take the consequences.

The serious consequences in this case were not to Sir Bampfylde Fuller himself, but to the prestige of British administration in India. Many people think that the dismissal, as it was regarded, of the head of a Province in response to a campaign of calumny in the Press was the first step on the dangerous slope which Secretaries of State and Viceroys have since so rapidly descended. Many will enjoy the stories of India, and of civil administration during the War. Perhaps, however, the most serious reflections will be aroused by the opinion of Sir Bampfylde Fuller on the present state of India. This opinion is based on a recent visit to India, and is not affected by the author's own performances or predilections. He observes that the old power and influence of the District official have largely gone, while the cost of the administration, and particularly of the trappings of Government, has enormously increased. While there is much good feeling towards the individual European, the confidence of the people, and particularly of the Muhammadans, has been alienated. Above all, the prestige of the British Parliament has diminished: partly because it is known to represent the working, as opposed to the governing, classes; but still more because it has surrendered authority in South Africa, in Egypt and in Ireland. Small wonder that the book closes on the note that the outlook is obscure, and that we can only hope for the best.

---

* "Some Personal Experiences." By Sir Bampfylde Fuller. (John Murray. 12s.)

The representatives of India at the September Session of the Assembly of the League of Nations will be His Highness the Maharaja of Bikaner, Nawab Sir Zulfiqar Ali Khan, and Sir William Ewart Greaves, with Sir Deva Prasad Sarvadhicary, Sir Denys de Sumarez Bey, and Sir Jehangir Coyajee as substitute delegates.

School of Oriental Studies, London Institution

PERSONAL AND GENERAL

TO-DAY

July 31, 1930 (New Style).
July 18, 1930 (Old Style).
Rabia I. 5, 1349 A.H., of the Muslim Calendar.
Ab 6, 5690, of the Jewish Calendar.
Amordad 9, 1309, of the Persian Calendar.

Lady Irwin left Bombay for England on July 26.

Sir Maneckji and Lady Dadabhoy will leave London at the end of August for Bombay.

The Dowager Lady Boyle, Mrs. George Halahan, and family have left 64, Queen's Gate for the Continent and will remain abroad until the autumn.

King Faisal, who is the guest in London of the British Government, had luncheon with the Prime Minister on July 23, and was attended by the Prime Minister of Iraq, Nouri Pasha al Said.

Air Chief-Marshal Sir John Salmond (Chief of the Air Staff) and Brigadier R. G. H. Howard-Vyse had the honour of being received by the King at Buckingham Palace on July 24.

The King received at Buckingham Palace on July 24 Major V. E.W. Simpson (Officer in Charge) and the King's Indian Orderly Officers, and took leave of them upon their return to India.

Lord Meston has left for the United States, where he will conduct a number of conferences at Williamstown in connexion with the Indian situation. He expects to be back in England early in September.

H.E. Dr. Hafez Afifi Pasha (who presented the Letters of Recall of his predecessor and his own Letters of Credence as Envoy Extraordinary and Minister Plenipotentiary from the King of Egypt) was received in audience by the King at Buckingham Palace on July 24.

Mr. Justice Spyro Mavromati, of Cyprus, is on a visit to England, and during his stay in London will study the organization of London Courts of Law. On July 26 a reception in his honour was given by the London Cyprus Brotherhood.

Lieut.-Colonel Sir Francis Humphrys (his Majesty's High Commissioner for Iraq) had an audience of the King at Buckingham Palace on July 22. King Faisal of Iraq visited their Majesties and remained to luncheon. Lieut.-Colonel Sir Francis Humphrys and Lady Humphrys also had the honour of being invited to luncheon with the King and Queen.

The Hellenic Minister was present at the centenary celebration of Greek independence which was held at 49, Haverstock Hill, Hampstead, on July 29, by invitation of Mr. and Mrs. Victor Fisher. Lord Danesfort presided, and Professor E. A. Gardner delivered an address on the Greek struggles for liberty. The Right Rev. Archbishop Germanos also spoke.

Lord Lamington presided at the meeting of the Near and Middle East Association on July 24 at 19, Grosvenor Square (by permission of Lady Beecham), to hear Mr. Waris Ameer Ali speak on "The Muslim Point of View in India." Among those who accepted invitations were: Lord Danesfort, Lord and Lady Headley, the Count de Salis, Count Capponi, Lady Beecham, Sir Robert and Lady Holland, Sir James Heath, Sir Ernest and Lady Bennett, Sir Ganen and Lady Roy and Miss Roy, General Sir Herbert and Lady Wilberforce, Sir James MacKenna, Lady Hewitt, Sir Basenda and Lady Mullick, Sir Ibrahim Rahmitula, Rai Bahadur B. Sethi, the Hon. Mrs. Spencer-Graves, Srinivasa Sastri, Dr. and Mrs. van Scherpenberg, Colonel and Madame vitez Beldy, Mrs. L. Cobham, Professor Rushbrook Williams, Madame Izzet Pasha el Abed, Sirdar Ikbal Ali Shah, Mrs. Arthur Laye, Mrs. Margaret Hasluck, Commander and Mrs. Hare, Miss Hilda Spalding, Mrs. Gibson-Smith, and Dr. E. H. Griffin.

KURDISTAN AND IRAQ.

We have received the following telegram, dated July 24, from Kurd Tofik, of Sulaimaniyah:—"Your article reviewing the new Anglo-Iraq Treaty and revealing negligence regarding rights of Kurds and your benevolent efforts for protection of same were received by Kurds with great appreciation and heartfelt thanks. This philanthropic action of yours is a fine support for the rightful Kurdish cause. Kurds are dissatisfied with the Treaty, as no mention is made therein of the right of the Kurds, which is the formation of a Kurdish State under mandate of the League of Nations. Officials of the Arab Government intimidate us and press us to renounce our rights. Kindly publish these realities in your courteous columns."

THE LATE LADY POYNTER.

A correspondent in Australia sends the following appreciation of Lady Poynter, whose death at Narrmee, New South Wales, was recorded in THE NEAR EAST AND INDIA of June 12:—

Lady Poynter (formerly Miss Mary Augusta Mason) was the daughter of a distinguished American. She spent many years of her early life in Constantinople, where she married Sir Hugh, who was then Assistant Comptroller of Technical Services, a position which he resigned on the outbreak of the Great War. With her husband she had travelled extensively, and had resided in England, France, Canada, and Australia. She was a writer of distinction in prose, as well as in verse, and was a welcomed contributor to periodical literature in England and in the United States. Her publications consisted of two books of verse and two of prose, the latter including "When Turkey was Turkey," a volume that graphically portrayed the land and its people. Lady Poynter was a profound lover of nature, and took a keen interest in archæology and in music. Her kind and sympathetic nature made for her a host of friends in the many parts of the world in which she had lived, friends who regarded her as the possessor of a rare mind and lovable nature that will be missed and mourned by many.

Memduh Shevket Bey, who has been Turkish Ambassador in Teheran since April, 1926, has resigned. Ridsanbegoghlu Husrev Bey, late Minister in Sofia, has been appointed to succeed him.

Lieutenant-Colonel the Hon. Cuthbert James, who died on July 21 at Betteshanger, Kent, had had many years' experience of both military service and administration in Egypt before the War, and was formerly Assistant Director of Personnel and Accounts to the Egyptian Ministry of the Interior. He was gazetted to the 2nd East Surrey Regiment in 1894, joined the Egyptian Army in 1899, and served in the first White Nile Expedition against the Khalifa. He was then for some years in turn Arministrator of Wadi Halfa, Deputy Assistant Civil Secretary to the Sudan Government, and Assistant Financial Secretary to the Egyptian Army.

THE WEEK AT HOME

London, Tuesday Morning.

"Plus ça change."

The world does move, I suppose, but it always amazes me how, after an absence from London and the missing of everything that is "going on," one returns to work to find nothing changed. In other words, people still seem to be wondering how long the Government will last, and whether there is any real chance of the Conservatives' defeating them, either this year or next; the unemployment figures creep inexorably up; the journalistic "stunts" of Lords Beaverbrook and Rothermere continue mercilessly. The only thing which really excites interest is the Test Match. On that subject alone you may hear everyone—even young and old ladies—talking; and Bradman, I should say, is better known than Beckett, for, after all, the young Australian has broken a "record," whereas Beckett had been anticipated years ago by Cromwell.

If there is a really visible change, it is that people are not so well off this year, and are largely forgoing the holidays in which, in more prosperous times, they regularly indulged.

Politics.

It is extremely difficult, if not impossible, to make English people take an active interest in politics in mid-summer. Mr. Ramsay MacDonald may point to the achievements of the present Administration, and Mr. Baldwin to the lack of them—the effect is largely the same. Not even the Press Lords, with their mighty slogans, can move the unwilling populace: it might be a good thing if propaganda on behalf of Empire Free Trade and the United Empire Party were given a rest until the winter begins.

As far as one can judge, there is neither the fact nor the likelihood of immense popularity for any party. It is as plain as a pikestaff that the Empire Crusaders will not sweep the country; it is almost as plain that many Conservatives have "little use for" their leader, Mr. Baldwin; and visibility is fairly good over the decline in the prestige of the Labour Party. Whether anyone has bothered to look at the prospects of the Liberal Party I do not yet know.

With a sense of relief, therefore, the country will see Parliament rise in a day or two; and for a few blissful weeks (did not Rousseau say that such recesses were the only time when we were truly represented?) people will try to forget the existence of our Snowdens and our Churchills.

The Limits of Parliament.

The idea that the present form of Parliament had rather outlived its day is, of course, by no means a new one, but I have the impression that during this last period of office of the Labour Party the deficiencies of Parliament, as a means of getting national duties performed, have sunk deeper into men's minds. From all sides now you may hear the suggestion that special institutions, offshoots of Parliament itself, should be formed to deal with this or that aspect of our Imperial life.

Quite certainly the congestion in Parliament is terrific: the machine is clogged. That considerable changes may take place is, therefore, by no means impossible; but in what direction it is difficult, indeed, to guess. What the ordinary man undoubtedly would like to see is the freeing of national decisions from party ties: he would have a Council of State, composed of all parties, certainly, but treating subjects from an independent standpoint, not under the influence of party catch-phrases.

One thing is almost certain: that Parliament, if it is to survive—and there is not much doubt about that in England—must develop, and the general line of development must be in the direction of allowing special questions to be decided in the main by specialists. Syndicalism as a political philosophy may be put to many uses yet.

Electoral Reform.

Most observers appear to be pleased at the failure, which was announced a day or two ago, of the Ullswater Committee on Electoral Reform to come to any agreement, because, in their view, it means that the Liberals as an independent party are doomed—in other words, a return to the two-party system. The fact that neither the Labour nor the Conservative Party was willing unconditionally to support Proportional Representation can, however, scarcely have been a surprise to the Liberals, who alone stood to benefit immediately by electoral reform. It is, presumably, the object of both the larger parties to eliminate the Liberals.

Whether, in the present very uncertain circumstances, with no clear-cut party lines on various questions, such as Protection, such elimination would be a good thing for the country, is an arguable point. Possibly the Liberals will survive until the transition period—until England regains her prosperity, that is, and the national life is on a stable basis—and then, with both Labour and Conservative parties to some extent "Liberalised," quietly disappear.

Pronunciation.

Few questions are more fascinating than that of the pronunciation of words, and the description given of "the ideal accent," in a lecture the other day by Mr. F. G. Blandford—that it should reveal neither the birthplace of one's mother nor the income of one's father—has aroused very wide comment. People are incorrigibly snobbish about accent, of course, though often enough they forget that pronunciation changes from generation to generation. As Mr. Blandford said, the King speaks in a different accent from that used by the Prince of Wales.

It is difficult to be dogmatic about the matter. One knows what one likes, still better what one dislikes, but such preferences have no effect at all on the trend of accent. For myself, I hate, for instance, the modern pronunciation of the long "i," but that it is gaining ground is obvious everywhere.

Whether we are tending to a standardised speech, as is often asserted, it is difficult to say. There are many who deplore the passing of provincial dialects who would never be found guilty of using them—they want someone else to do the "peasant" work of preserving the picturesqueness of regional speech.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

THE SITUATION IN EGYPT.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I find the following passage in your "Notes of the Week": "The Egyptian Government might conceivably be informed that it could count on British co-operation if it found itself unequal to the task of maintaining law and order." Any Government *de facto*, whatever its legality? Pushed to its logical conclusion, this would involve the protection of a successful Communist *coup d'état* against the "forces of re-action." How are we to judge which are the rulers of Egypt in whose interests we are "maintaining law and order?" Are they the spokesmen of the party with an overwhelming majority in Parliament or the Cabinet of the moment, invested with an authority which is *de facto* but certainly not *de jure*, since no one can pretend to find any adequate support for Sidky Pasha's claim not to have broken the Constitution when he advised His Majesty not to summon Parliament as requested by two-thirds of its members.

Again, which party is to be given the "moral support" of the British Government; the overwhelming majority which, taught by bitter experience, wishes to lay down specific penalties for specific breaches of the Constitution, just as for other infractions of the law, or the small majority which wishes to be allowed to break the law with impunity?

And who is the real instigator of riots; Sidky Pasha, the experienced statesman who accepted the Premiership in circumstances which he must have known would inevitably lead to disturbances, or the Wafdist students who provoked the actual outbreaks?

It is all very difficult. Perhaps Mr. Henderson's Note was not so entirely uncalled for, and may even be of value in promoting Anglo-Egyptian relations when affairs are once more normal in Egypt, and a Cabinet is in office possessed of a Parliamentary majority.—I am etc.,

London, July, 25. C. H. GRAY.

[The situation in Egypt, as our correspondent points out, is very difficult, and the only alternative to taking sides in Egyptian party politics is to hold strictly aloof or to deal with the Egyptian Government of the day. By the terms of the Egyptian Constitution the King appoints and dismisses Ministers. When the Government of Nahas Pasha resigned, it was strictly in accordance with the terms of the Constitution that the King appointed his successor and that the session of Parliament was adjourned (by the King: Article 39). Before the expiry of the month during which Parliament stood adjourned—with the Sidky Pasha Ministry as *de jure* Government—disturbances had broken out in the country. From that point theories of constitution-breaking or keeping are apt to become involved—with the spectacle of an ex-Prime Minister challenging the fundamental basis of all constitutions—maintenance of order and public security—by driving his car through police cordons—inasmuch as British experience offers no precedent. In the circumstances it seems better to regard the *de facto* Government as also *de jure*, as the point is one for the Egyptians alone to determine.—ED.]

TAXATION IN PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The Annual Palestine Report to the League of Nations shows that during the year 1929 the revenue has exceeded the expenditure by £183,540, and in view of this substantial increase it may not be out of place to give a few facts to show how this surplus is partly made up.

At the time of the *Tanzimat* (Reforms) granted by Sultan Abdul Mejid after the Crimea War, a general rate of 4 per cent. was imposed as a tax on the capital value of all immovable property. There are a few exceptional instances in which this rate was modified in some places, but this was the general basis rate approved by the Powers.

Up to the date of the War, after which Turkey repudiated the Capitulations, 4 per cent. was the rate that ruled throughout the Empire, including Palestine, but when war broke out a law was passed authorising the rate to be increased in order to provide funds to defray the expenses of the War, or, in other words, a War Tax.

This war rate was in force in Palestine when the Mandate was granted, and it has been maintained there ever since; but when the War ceased and it was supposed the pre-War rate would be reverted to, an alteration was made, but in the opposite direction, in the following manner.

An Ordinance was promulgated in 1928 by which the urban property tax has been fixed at 10 per cent. of the net annual value, which is equivalent to 10 per cent. on the capital value, or 6 per cent. more than the rate fixed with the consent of the Powers.

This increase brings this tax in Palestine to the same rate as that in London, and the result has been, as shown by the revenue returns, highly satisfactory to the Palestine Treasury as, taken together with a closer assessment and collection, the receipts have increased by £20,000 in 1928 and £52,000 in 1929.—I am, etc.,

Devonshire Club, S.W.1. F. ONGLEY.

"JUMADA-AL-AKHIRAH."

To the Editor of THE NEAR EAST AND INDIA.

Sir,—It is time that British officials and Iraqi officials knew a little more of the Arabic language, for I notice them speaking in the new Treaty of *Jamadi-al-Ukhra*, whereas that month is called in classical Arabic *Jumada-al-Akhirah*.—I am, etc.,

Hampton Wick. July 27. A. SEFI.

THE PERSIAN PRETENDER.

With reference to the declaration recently made by "Prince Hassan," ex-Persian Crown Prince, to the Persian people, that appeared in the Press, the Persian Legation in London makes the following official statement:—

"The end of the Qajar Dynasty was announced by the Persian Parliament on October 31, 1925. The Constituent Assembly which was convoked shortly afterwards conferred the Crown of Persia on His Imperial Majesty Reza Shah Pahlavi and his descendants. It modified, moreover, Articles 36, 37, 38, and 40 of the Constitution to confirm the end of the Qajar Dynasty, and of the accession to the Throne of the House of Pahlavi. The Persian people having definitely and finally settled this question, no member of the Qajar family can to-day claim to have any right to the Throne which the late Sultan Ahmad Mirza lost in 1925. The pretensions of Mohammed Hassan Mirza, brother of Sultan Ahmad Mirza, are, therefore, groundless, and the Persian people to whom he has recently appealed pronounced their decision in the matter five years ago."

SIMKO THE KURD.

We have received the following communication from the Persian Legation in London:—

"As it was recently reported in the Press that the notorious bandit, Ismail Agha Simetghou (Simko), who had returned to Persia, was attempting to incite the Kurds to acts of violence, the Persian Legation in London is officially informed that the Persian Government immediately caused him and his followers to be surrounded by Persian forces at Ashirneh, with the result that the notorious bandit was killed. This shows that the reports appearing in the Turkish papers, that the Persian Government had connived with the Kurds in the recent frontier trouble, are without foundation, and that, for from any Persian assistance having been rendered to the Kurds, they were, on the contrary, severely punished."

NEWS IN BRIEF.

Five hundred mounted Kurds from Iraq are reported to have attacked Turkish frontier posts.

Captain Crabbe, the new Senior Naval Officer in the Persian Gulf, left the Shatt-al-Arab last week on his first official tour in the Gulf.

A clan of Kizil Bashes and other clans in the neighbourhood were reported last week to have joined the insurgents in Turkish Kurdistan.

Prince Ali, son of the Aga Khan, has gone to Sofar, in the Lebanon, with his grandmother, who came from Bombay expressly to see him. On his arrival at Beyrout numerous members of the Ismailieh sect were on board to venerate and touch his sacred person.

H.M.S. Devonshire arrived at Volo, Thessaly, at the end of last week on a visit. The captain deposited a wreath on the grave of the British sailors who lost their lives near there last year in a shell explosion.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Anglo-Roumanian Trade.

It is eminently satisfactory to learn that the negotiations for a commercial treaty between Great Britain and Roumania, which have been in progress in London for the past three weeks, have resulted in an agreement, and it is understood that the treaty will be signed at the Foreign Office to-morrow. The respective heads of the Roumanian and British delegations who have been conducting the negotiations are Dr. V. V. Tilea, a member of the Roumanian Parliament, and Sir Henry Fountain, of the Board of Trade. The treaty, which will replace the provisional agreement of 1927, will provide most-favoured nation treatment for British imports into Roumania, and it is believed that regulations will be introduced to prevent the products of other countries from appearing in the Roumanian market as British goods. It is a regrettable fact that the trade between the two countries, while showing a tendency to develop, has hitherto been on a small scale. Thus for 1929 the value of British exports to Roumania was £2,319,000, while that of the imports from Roumania was £2,983,000. It would be idle to pretend that these figures cannot be considerably improved, particularly in view of the developments which may be expected in Roumania in the near future. Roumania's needs in the shape of machinery of many kinds are very extensive, and while a treaty by itself can accomplish nothing in the way of trade development, its negotiation in the friendliest spirit on both sides is an earnest of a mutual desire to develop closer ties of commercial interest.

A Yugoslav Loan.

It is probable that the next Near Eastern loan will be the long-expected one for Yugoslavia, but despite the fact that preliminary negotiations have been begun both in London and New York, it may be taken for granted that its appearance in the near future will depend entirely on a marked improvement in the general financial situation, which at present is very unfavourable for any such operation. Indeed, it is certain that the authorities here would discourage a loan in the existing circumstances, and it is not likely, in view of the conditions in America, that a different view would be taken there. The loan is required for two purposes—the long contemplated stabilisation of the dinar and an extensive programme of public works. It is scarcely necessary to remind my readers that the stabilisatiton operation is in Yugoslavia's case a purely nominal transaction, as the dinar has been stabilised for all practical purposes for a very long time. Still, it is an operation that must be carried out, and there is naturally no desire to delay it longer than necessary or to postpone the public works schemes. But it is naturally in Yugoslavia's interest that the loan should be floated in the most favourable circumstances, and she has everything to gain, therefore, and nothing to lose by the short delay that may be necessary. By the autumn it is quite probable that things will have taken a turn for the better, and then will come the time for a loan of this importance.

An Economic Entente.

It has required the world economic crisis and the serious fall in grain prices to bring home to the Balkan countries the wisdom of supplementing political understandings with an economic entente. For a long time it has been clear that in post-War conditions no country can hope to stand alone, and if the lesson has taken longer to absorb in the Balkans than in some other regions, it is now evident that the first serious steps are in train for the formation of an economic *Bloc* in South Eastern Europe. At the beginning of last week, a conference of representatives of Roumania, Yugoslavia, and Hungary regarding the formation of a joint organisation for the sale of these countries' agricultural produce was opened at Sinaia. The meeting was convened as a result of the proposal of Poland for the union of eight associated States. Evidently, however, the view is taken in Yugoslavia that the more hopeful basis for an economic entente would be found to begin with in the existing Little Entente, and a memorandum which has just been sent by the Yugoslav Foreign Minister to the Yugoslav Minister in Bucharest emphasises the need for an economic organisation of the countries of the Little Entente. It is pointed out that owing

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms.
The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfers on all its Branches, at the exchange of the day.
The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.
Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.
The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — **SOFIA** — Founded in 1865

CAPITAL & RESERVE FUND, 617,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roser is made under the control of the Bank in all rose-growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

Digitized by Google

to the similarity of their economic structures it is necessary that an agreement should first be made between Yugoslavia and Roumania, while the industrial character of Czechoslovakia, it is suggested, would make a tripartite agreement an easy matter subsequently. Once this economic entente is accomplished it would be open, it is stated, for all other countries to join it either on the industrial or the agricultural side. It will be interesting to see how far this attempt at the establishment of a Balkan economic entente is successful.

Markets for Jaffa Oranges.

We give some further extracts this week from the very interesting report of Mr. Goldwater on economic conditions in Palestine, dealing more particularly with agriculture. Naturally the position with regard to the orange crop, which up to the present has proved the basis of the country's economic position, is the subject of detailed reference, and Mr. Goldwater discusses particularly the marketing problems which the growers are endeavouring to solve. It is not so much now, when the exports may be just over two million cases, that the problem is serious, but the fact that within about six years the amount of fruit available for export may be four times what it is at present, owing to the new plantations coming into bearing, makes it incumbent to look well ahead and develop markets in advance. The development in Germany of an important orange market indicates the possibilities in other European countries which have not hitherto been prominent as purchasers of the fruit. It is quite clear, however, that if Palestine is to obtain the markets she requires it can only be by following the examples of other countries and advertising on an extensive scale. So far the publicity accorded to the Jaffa has been limited, and much more is required if satisfactory results are to be forthcoming.

A New Rupee Loan.

The announcement was made last week of the issue by the Government of India of a rupee loan in the form of short term bonds bearing interest at 6 per cent. Subscriptions are being received until August 6, and may be in the form of cash or Indian Treasury Bills or 6 per Cent. Bonds due 1930. The bonds will be repaid at par on August 15, 1936, but the Government reserve the right to repay the whole or part of the bonds at par on or after August 15, 1933. The Six per Cent. Bonds which are due to be repaid this year will be accepted as the equivalent of cash at par. Indian Treasury Bills will be accepted as cash at their face value less discount at the rate of 3 per cent. per annum on the unexpired portion of the currency of bills maturing up to August 31; bills maturing in September and October will be accepted at their face value less discount at the rate of 4 per cent. per annum on the unexpired portion of the currency of the bills; and bills maturing on or after November 1 at 4½ per cent. discount on the unexpired portion. The London office of the Imperial Bank of India is prepared to receive subscriptions in cash or in Six per Cent. Bonds, 1930. Cash subscriptions should be made at the sterling equivalent of the purchase price of the bonds applied for at the rate of exchange for immediate telegraphic transfers on Calcutta on the date of payment. The previous rupee loan was issued last summer at 5 per cent., the yield being roughly about 5⅓ per cent., and the fact that the Government is raising the present loan on dearer terms is, of course, to be attributed to the adverse developments in the last few months.

COMMENTATOR.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 29.

Markets remain listless, and such business as is taking place is very largely of a professional nature. In some cases prices have drooped to the lowest levels of the year and the long three weeks' account has opened in disappointing fashion. Gilt-edged stocks, in the absence of special support, have been more susceptible to monetary influences and the continuance of French gold withdrawals. A rise in the new Austrian loan to par following the success of the issues in Switzerland and Austria helped the foreign market, but the reduction in the interim dividend announced on Thursday by the London, Midland and Scottish Railway from 2 to 1 per cent. was worse than the home railway market had anticipated, and the passing of the Second Preference dividend in addition to the Ordinary by the L.N.E.R. came as a still greater shock. The G.W.R. interim of 2¼ per cent., against 2¾ per cent. last year, accorded with expectations. Southern stocks were inclined to improve on the declaration of the usual 5 per cent. on the Preferred Ordinary stock. Industrials were irregular and neglected, and in the more speculative markets oil shares alone have shown any signs of resistance to the general *malaise*.

Argentine Rails.

The annual accounts of the leading Argentine railways will not be available until October next. The periodically published returns and well-known facts about Argentine trade, however, enable some estimate to be formed of the dividends likely to be paid for the current year on the ordinary stocks of these companies. Revenue has decreased, but, with smaller traffic, expenses have also decreased. On this basis it may be estimated that the following dividends will be paid:—Great Southern, 6 per cent., as against 8 per cent. last year; Central Argentine, 6 per cent., as against 7 per cent.; B.A. Pacific, 5 per cent., in place of 7 per cent. If these dividends are in fact paid, then at present prices these ordinary stocks will give the following returns:—Great Southern, £5 10s. per cent.; Central Argentine, £6 9s. per cent.; and Western, £5 4s. per cent. These do not appear to be very good returns on ordinary stocks of this kind. Present prices appear to be based in relation to last year's higher dividends. On the other hand, taking the long view, Argentina is a rapidly developing country, and when the trade depression passes, the railways' profits should mount up. For those who can afford to hold stock giving only a moderate return at present, Argentine rails are worth buying for their future prospects.

Some 1929-1930 Industrial Profits.

The analysis made by the *Economist* of the accounts of 577 companies published in the second quarter of this year shows aggregate net profits (after paying debenture

interest and redemption) of nearly £79¾ million, compared with nearly £73½ million net profit which the same companies declared in the preceding year. These total results show these companies to have increased their profits by 8.6 per cent. in their financial year during 1929-30, compared with 1928-29. In view of the trade depression which became accentuated towards the end of last year, these results are very gratifying, but unfortunately the improvement is very largely due to an increase of £5 million in the profits of three oil companies. When this is deducted the total increase in profits of the other companies compared with a year ago is only 2.4 per cent. A more detailed examination of the accounts shows that the largest increase of profits, compared with the preceding year, was made by nitrate companies, with an increase of 126.0 per cent.; in coal and steel, 45.7 per cent.; oil, 41.5 per cent.; canals, 11.9 per cent.; tramways, 11.5 per cent. The least increase was made by shipping companies, and profits were lower for textiles by 30 per cent., tea companies 24.5 per cent., land and mortgage companies 5.8 per cent. It was only towards the end of the period covered by these accounts that the present trade depression became as severe as it is; therefore annual accounts now being published may perhaps show declines rather than advances in profits.

Is Pessimism Exaggerated?

It was rather refreshing last week to find chairmen of important joint stock companies looking on the brighter side of things. At the meeting of the British Steamship Investment Trust, Sir Austen Harris, who is also Vice-Chairman of Barclays Bank, said: "Pessimism can be exaggerated . . . and should be combated. . . . I look hopefully for a turn in the tide in the not too distant future." On the same day the Chairman of Furness, Withy and Company, Sir Frederick Lewis, said that existing conditions "are part of the stage setting for the trade revival which will come as surely as anything which is possible to predict." Time alone can show whether these gentlemen are right or wrong, but while the unemployment figures unfortunately increase it would be wise to remember that we have come successfully through periods of bad trade before. This is not to say that we can afford to fold our arms and wait for the manna to fall from heaven. It is equally futile, however, to take up an attitude of defeatism, for, as Lord Melchett has recently said, too much pessimism destroys initiative. Initiative both in seeking orders and in jettisoning old ideas and old plant where they impede progress is our greatest need. As the figures given in the preceding note show, many companies are still triumphing over difficulties, and investors should discount the prevailing "bearishness" of the Stock Markets which undoubtedly undervalues many sound industrials. The positions of such leaders as Bass (yielding £7 5s. per cent.), Guest, Keen (£6 13s.), Ever-Ready (£8 12s.), or Tate and Lyle (£7 13s). merit consideration.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

GREECE.

Water Pipes and Fittings.—The Société des Eaux-Athens invites tenders for the supply of copper and lead pipes and fittings. August 11. (D.O.T.)

EGYPT.

Vaccine Anti-diphteric.—The Egyptian Department of Public Health invites tenders for the supply of 142,850 dozes of vaccine anti-diphteric (diphtheria anatoxin). September 6. (D.O.T.)

20 H.P. Electric Motor.—The Ministry of Public Works invites tenders for the supply and erection of one 20 H.P. d.c. motor. August 19. (D.O.T.)

Various.—The Egyptian State Railways, Telegraphs and Telephones, invite tenders for lead red genuine, mild steel equal angles, lead covered cables, switchgear, carriage and wagon axles, cast steel axleboxes, carriage and wagon tyres, corded sheep wool, buffers, bolts and nuts, truck weighbridges, felt, tools for telegraphs and telephones, and wires.

Hand Carts.—The Sub-Director-General, Customs Administration, Alexandria, invites tenders for the supply of 20 two-wheeled hand carts and 5 four-wheeled hand carts as standard samples. August 16.

Calculating Machines.—The Central Stationery Stores, Ministry of Finance, Cairo, invites tenders for the supply of calculating machines. August 26.

Compressor Sets.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for the supply and erection of four electric air compressor sets for Egyptian Army Barracks drainage at El Arish and Mankabad. September 14.

Stoneware Pipes.—The Director-General, Main Drainage Department, No. 2, Sharia El Melaka Nazli, Cairo, invites tenders for the supply of stoneware pipes required during 1930-1031. August 16.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Tarantia for Bombay (Birkenhead, August 2); s.s. Circassia for Bombay (Glasgow, August 18; Manchester, August 23; Birkenhead, August 29). (For passenger sailings and dates see advertisement.)

Bibby Line.—S.s. Gloucestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, August 6); s.s. Cheshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, August 20).

British India Line.—S.s. Trewyn for Bombay, Port Okha, and/or Bedi Bunder (Jamnagar), and Karachi (London, August 2); s.s. Merkara for Colombo, Madras, and Calcutta (London, August 9).

Cunard Line.—S.s. Bactria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if inducement (Glasgow and Swansea, August 1; Liverpool, August 2); s.s. Sea Rambler for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, Fiume, and Shushak, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if inducement (Liverpool, August 16; Swansea, August 19).

Johnston Line.—S.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 9); s.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 13).

P. and O. Line.—S.s. Ranpura for Bombay (London, August 1); s.s. Behar for Calcutta (London, August 1); s.s. Ranchi for Bombay (London, August 15); s.s. Novara for Calcutta (London, August 15).

Prince Line.—S.s. Korean Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, August 2); s.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, August 16).

Ellerman and Papayanni Line.—S.s. Mardinian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, August 2; Swansea, August 7); s.s. Egyptian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, August 14); s.s. Oporto for Gibraltar, Algiers*, Oran*, Patras, Syra*, Smyrna, and Constantinople (Liverpool, August 16; Swansea*, August 16); s.s. Lesbian for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, August 30; Swansea*, August 30); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, September 1. *Subject to sufficient inducement. Cargo taken on through Bills of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Messageries Maritimes.—(From Marseilles.)—S.s. Lotus for Alexandria, Jaffa, and Beyrout (August 5); s.s. Lamartine for Naples, Piræus, Istanbul, Izmir, Rhodes, Larnaca, and Beyrout (August 12); s.s. Angkor for Alexandria, Jaffa, and Beyrout (August 19); s.s. Pierre Loti for Naples, Piræus, Istanbul, Izmir, Rhodes, Larnaca, and Beyrout (August 26).

Engineering Topics

(By An Engineering Correspondent)

Water Purification.

From time to time attention is called to the reduction of the death rate and remarks, certainly well founded, are frequently made as to the increased length of human life. I have not the figures by me, but I understand that records show that the average life of a man to-day is three or four years longer than it was a quarter of a century or so ago. The increase is commonly attributed to improved sanitation, more sensible habits of living, and a greater use of fresh air. Possibly, could one give credit where it is due, it is the pioneers of water purification and those who have followed in their footsteps who ought to be thanked.

When we remember that even to-day, in certain rural districts a good deal of water is used that is not really fit for human consumption, one is able to understand what the position was as regards water supplies at about the end of the last century. At that time rain water, in an unfiltered state, was often the only water available in many isolated homesteads; surface water, even pond water, was often used, and there was a deeply rooted belief, which even yet is not completely eradicated, to the effect that all water from an underground source was, from the very fact that it came from underground, perfectly sweet and wholesome. The most that was done in many country districts was to collect water in large ponds, called by courtesy "reservoirs" in hilly districts, and pipe it off to the villages in the valley after it had been cleared, by settling, to remove living and inorganic materials. Improvements in methods of sedimentation are of comparatively recent introduction, and a score of years ago no one would have thought of stirring such material as ground burned clay into catchment basins in order to render the water completely turbid.

Apart from the rejuvenation of used coagulating matter and the introduction of new materials for that purpose, the most important advances made in that phase of the art of water treatment, is a better understanding of the mechanism of coagulation, with the resulting economies and higher efficiencies attainable thereby. It was in 1911 that use was made of ferric chloride as a water cleanser; prior to that time ferrous sulphate and lime were practically the only materials used. Ferric chloride, made by the action of chlorine gas on scrap iron, almost immediately became popular, and it was probably only the greater cheapness of alum that led to its more general use.

Attempts have been made to give a complete list of the modifications in and additions to coagulants which have taken place and been made during the past ten years, and whilst one would be on tolerably safe ground if one started by mentioning the suggested application of sodium aluminate there are many, almost equally important if not of greater importance, that one might easily forget to mention. Something would certainly have to be said about treatment with chlorinated copperas by oxidation of ferrous sulphate solution with chlorine, which was first used in dewatering sewage sludge and afterwards, with modifications, employed for clearing badly coloured water. Actually, a number of substances have proved of value in dealing with water, and whilst a number of new processes of coagulations are now in use, these new processes all rest on the foundations laid by early research workers. Some of the new coagulants have come into use because their production costs are lower than those of others, and there is no doubt that water treatment, on the huge scale on which it is necessary to-day, has to be carried out as economically as possible. Just now the water engineer has at his disposal a vast variety of coagulating materials and in making a selection he has to be guided by local considerations, of which economy is not usually the least important. It is true that, leaving that factor out of account, the trend of the use of coagulants is in the direction of complexity. That is to say that the better we come to understand this phase of water treatment, the more likely we are to develop processes of coagulation which will be specific for certain waters, and which will be regulated with a higher degree of information and scientific understanding than has hitherto been the case.

Efficiency of Small Steam Boiler Plant.

The fact that considerable economies, often with very little capital expenditure, are waiting to be effected in even the smallest boiler plant, especially such as used in plantation work for example, with wood and general refuse vegetable material available as fuel, is well indicated by four examples, the details of which are just to hand from Lancashire, Canada, and Assam respectively, equipped with "Turbine" forced draught steam jet furnace installations. The first is at the works of Messrs. Entwistle and Kenyon Ltd., of Accrington, makers of the well-known "Ewbank" Carpet Sweeper, as well as other appliances. In this particular case the furnace was installed on a guarantee of saving, and the firm were so satisfied with the results that they paid for it considerably before the period agreed upon, the plant being one "Lancashire" boiler. In a recent letter they point out that if the furnace is used intelligently there is no excuse for any boiler attendant turning out black smoke. The fuel is wood chips, sawdust, shavings, and other material from the works mixed with coal, and formerly much trouble was experienced with shortage of steam and black smoke, forced draught being particularly valuable for burning mixed fuels on these lines. The first Canadian installation is at the Britannia School, St. James, Manitoba, and careful fuel records have always been kept. After installing a "Turbine" furnace the total fuel cost for the season 1928-29 was 776.77 dollars, whereas the previous season, with ordinary bars, it was 1,477.74, that is a saving of 700.97 dollars, about 50 per cent. of the total fuel bill, and presumably in this case lignite is being used, further details not being available at the moment. A second Canadian installation is at the works of the Hart Battery

Co., of St. John's, Quebec, burning Welsh anthracite dust and smalls, an extremely difficult fuel, almost impossible to use under ordinary circumstances.

Finally, the installation in Assam is at one of the tea plantations of the Assam Company Ltd., who have seven plantations fitted on two "Lancashire" boilers. The forced draught enables coal dust, cinders, and other low grade fuel to be used to the fullest extent, resulting in substantial economy, a considerable amount of steam being required for such plantations. As indicated, the effective utilisation of all kinds of refuse material is one of the greatest advantages of this type of furnace, since the forced draught blast is merely adjusted as required to burn every description of fuel, from the lowest to the highest quality, while the equipment is also easily operated with unskilled or native labour.

The Largest Boilers in the World.

At the beginning of the present year three very large "Double-Ladd" boilers, installed at the East River Power Station, New York, were set in operation, and they have greatly exceeded anticipation as regards evaporation, 1,250,000 lb. per hour having been actually obtained, with 1,000,000 in easy normal running. These figures constitute the boilers the largest steam generating units in the world, and the chief dimensions are 60,706 square feet heating surface for each boiler, 7,345 square feet in the steel tube water-cooled walls, 13,900 square feet for the superheater, and 82,721 square feet in the air heater. Also the normal steam pressure is 425 lb. (500 lb. maximum) with operation by pulverised fuel firing and air heating, and the superheated steam temperature 725 deg. F., the feed water being 360 deg. F. while the superheaters are of the "Elesco" inter-tube single-pass, multiple-loop type, which is widely adopted for semi-vertical boilers. Interdeck superheaters of the same make are also operating at this station in six "Springfield" cross drum boilers each of 150,000 lb. evaporation per hour, having been installed in 1926. All these superheaters were designed and constructed by the Superheater Co., of New York, the design being known in Great Britain as the "M.L.S." made by the Superheater Co., Ltd., of London at Trafford Park, Manchester. The single-pass arrangement employs multiple loop elements formed by joining length of tubing by a machine forging process. Oxyacetylene or electric welding, in which the permanence of the weld and the smoothness of the interior of the pipe at the joint cannot be guaranteed, is thus avoided, and a true forge weld point obtained of perfect uniformity and strength. These multiple loop elements are connected in parallel between the saturated and superheated steam headers to which they are attached by a "ball" type of joint secured by a clamp and bolt, so that no expanded joints are necessary. By this means the total number of joints in the superheater installation is reduced to a minimum because of the increased length of the elements and also because handholes are not required. Also the design is extremely flexible in the sense that the arrangement and position of superheaters can be specially adapted to any type of boiler or conditions of operation. Whenever practicable both headers are outside the boiler setting, giving maximum accessibility for inspection and adjustment, and for conditions of high steam temperatures, where a practically constant final steam temperature is required, the elements are located in the high pressure gas current as near the furnace as possible, so that a combined radiant and convection effect is obtained. The design has also proved that 750 to 850 degrees F. can be obtained with element tubes of low carbon steel, the widely held opinion that 750 degrees F. represents the maximum safe figure being now regarded as obsolete, as proved by the experience of a considerable number of installations of which one of the most striking operating at 855 deg. F. is the new high pressure boiler plant of Synthetic Ammonia and Nitrates Ltd., Billingham-on-Tees.

ADVERTISING IN
"THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of ***all*** classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

THE NEAR EAST AT THE POULTRY CONGRESS.

Very few exhibitions can be said to have a world-wide appeal, but every country has a more or less important poultry industry, and thus it is that 60 countries have been participating in the Fourth World's Poultry Congress and Exhibition at the Crystal Palace, among them being Bulgaria, Cyprus, Egypt, Greece, India, Palestine, Roumania, Turkey, and Yugoslavia. Only three of these countries were actually exhibiting at the Crystal Palace, these being India, Bulgaria, and Yugoslavia, but the representation of the others speaks of the interest that is being taken in the developments of poultry farming, and no doubt at the next show the Near Eastern exhibits will be much more comprehensive. As an indication of developments, it may be mentioned that it has been decided in Turkey to specialise on Leghorns, and eggs of this type are to be distributed by the Ministry for National Economy among poultry farmers in the autumn.

The exhibits of India, Bulgaria, and Yugoslavia are all small, the last named country have the most extensive display. In the Indian section a few Aseel are to be seen and a pair of Indian Jungle Fowl. The Bulgarian exhibit consisted of three entries of trios, but at the beginning of the show only one bird was on view. The Yugoslav exhibit which was distinctly interesting, comprised four White and Partridge Styrians, and three White and Partridge Capouns. The Partridge Capouns were remarkably fine specimens. Yugoslavia also had a national stand illustrating the work of local selection of breeds and the development of poultry farming. On the walls of the stand were charts and diagrams showing the production of poultry, and also photographs and pictures of the rural products and the natural attractions of the country.

A cyclone swept over Adrianople on July 26, causing loss of life and damage to mosques and houses.

The following candidates have been selected as probationers in the Sudan Political Service:—G. W. Bell, B. J. Chatterton, J. H. Dick, R. G. Dingwall, A. D. Dodds-Parker, R. A. Hewins, B. A. Lewis, K. S. P. McDowall, A. T. D. Pritchard, M. E. C. Pumphrey. For Education.—W. F. M. Lang.

The Greek Government received information on July 25 from Constantinople that after the exchange of the ratifications of the Greco-Turkish Agreement the Turkish Government had raised the sequestration of the properties of Greeks in Constantinople and their bank deposits. Corresponding measures have already been taken by the Greek Government.

THE ECONOMIC SITUATION IN PALESTINE IN 1929.*

BY A. GOLDWATER, A.R.S.M.

(Continued from page 109.)

Government Revenue and Expenditure.

The budget estimates for the year, which provided for increased revenue in expectation of a general improvement in trade and industry consquent upon the large Government construction programme and further development and extension of operations by private enterprise, were fully justified by the results achieved. The figures for December are not yet available, but those published for the 11 months ended November 30 show that the ordinary revenue was then only £P69,070 short of the whole year's estimate. The amount was exceeded, and probably by a substantial sum, in the last month of the year, as the revenue from customs alone, according to the report for the full year, issued by the Director of Customs, amounted to £P123,720. Expenditure showed that all items had been kept within fair limits of the estimates, as, with only one month left to complete the year, the ordinary expenditure, as the published figures show, was £P106,893, or about two-thirds the average monthly expenditure below the estimates, which might be exceeded therefore by approximately £P50,000.

Ordinary expenditure for the eleven months amounted to £P1,713,351 as against £P2,514,480 for the corresponding period in the previous year, expenditure on railways having been excluded in each case. From the 1928 figures, however, two extraordinary items, totalling £P856,550, must be deducted for the purpose of comparison—£P650,000 under Public Debt and Loan Account expended in settlement of the Ottoman Public Debt, and £P206,550 under miscellaneous expenditure paid to the British Government to cover the deficit incurred up to 1920 by the Military Administration—leaving a balance of £P1,657,930, so that ordinary expenditure was higher in 1929 by £P55,421. The principal contributory fact was the large increase of £P97,398 in the miscellaneous item, which amounted to £P211,152 as against £P113,754 in 1928 (after deducting £P206,550 already referred to) probably due to extraordinary expenditure incurred in restoring order after the August riots and in the campaign against the locusts, which threatened Palestine throughout the year and became serious in the latter part of the year, when they actually reached Palestine territory in the south and in the Jerico Valley.

Revenue for the eleven months amounted to £P2,079,791, including a Grant-in-Aid of £P20,000 but excluding railway receipts which for the first time have been separated from the General Revenue. For the purpose of comparing this figure with the corresponding period of the previous year, a sum of £P343,333 in respect of railway receipts must be deducted from the revenue in that period, namely, £P2,284,725 (which includes also a Grant-in-Aid of £P19,495) leaving a balance of £P1,941,392. After allowing in each period for the Grant-in-Aid, the corresponding figures for revenue in the eleven months would be—1928 £P1,921,897, 1929 £P2,059,791, or an increase of £P137,894.

Taking the figures given above, which include Grant-in-Aid, namely, revenue £P2,079,791 and expenditure £P1,171,351, there was in the eleven months a surplus of revenue over expenditure of £P366,440 or, after deducting £P100,267 extraordinary expenditure on posts, telegraphs, public works, etc., a net balance of £P266,173, as compared of £P65,000 in 1928 (reported last year approximately £P185,000 including £P121,292 earned by the railways). As regards revenue, increases are shown in all items with the exception of revenue from Government property, which showed a slight decrease of £P460 as compared with the previous year, but the revenue for the eleven months ended November 30 exceeded that for the same period in 1928 by £P138,399.

Agriculture.

Plentiful and timely rains raised the hopes of farmers for good harvests and a recovery, partial if not complete, from the losses suffered by them through the drought of the previous year. Their expectations were realised so far as the harvest was concerned, but this time world conditions were against them and once again farmers had to face adversity. Crops were undoubtedly abundant, but prices slumped under the influence of the persistent downward trend in other parts of the world as a result of unusually heavy crops, in the case of barley and wheat, for example, to a level at which farmers could sell only at a loss. Prices showed a rising tendency during the first quarter of the year, but this was purely a result of shortage of stocks and brought little or no advantage to the farmers since they had no disposable stocks. Rather on the contrary, large purchases from abroad were made, and exports were negligible. In the second half of the year, however, that is, when the winter and summer crops were harvested, the position was reversed. Imports fell while exports rose.

The exports of cereals and pulses for the whole year were relatively low having regard to the abundant crops. Wheat exports, for example, duly exceeded the exports of the previous year by 700 tons, while exports of barley amounted to only 50 per cent. of the 1928 figures; exports of sesame and lupins on the other hand were substantially increased and compared very favourably with the record figures of exports in 1927, a year also of abundant crops. Imports of cereals and flour were substantially higher in all cases, kersennal excepted, than in the previous year. These, as already stated, were imported largely during the first half of the year at high prices, while the exports were shipped chiefly in the second half of the year at the lower prices then ruling, increasing thereby the adverse trade in these commodities to an amount greater than any for the past three years. Flour imports, as shown, reached a record of 28,365 tons, having a value of £P390,000, while exports reached the low record of 87 tons value £P1,136, reflecting the depressed state of the milling industry. The two principal mills in Haifa and Jaffa worked in fact only on part time for the greater part of the year owing to the shortage of local supplies of wheat.

Citrus Fruits.

Exports of these during the year totalled only 1,841,000 cases, showing a reduction, therefore, of 310,000 cases from the number exported in the previous year and a reduction of 800,000 cases from the record figure of 1927. These comparative figures are remarkable in view of the fact that a number of citrus groves which were planted around the year 1925 came into bearing this year, many of them yielding exportable fruit—both oranges and grapefruit. The area in bearing must therefore have been greater than in 1925, nevertheless, the exports this year were lower by 6,000 cases than the exports in 1925. The actual crops may be estimated approximately from the export figures by allowing for culls and damaged fruit, the amounts of which vary with weather conditions but probably never exceed 20 per cent. of the crop, and also fruit of an exportable quality consumed locally, which naturally is limited in quantity and may be taken at another 5 per cent. of the present crop.

Although there has been a decline in the exports, and presumably also in the crops for the past two years from the high figure reached in 1927, higher aggregate yields may be expected under normal conditions from year to year as the new groves planted during the past five years (having an area reported to be about 35,000 dunams) come into bearing. During 1929, further areas were put to citrus cultivation, the number of trees planted according to the statistics provided by the Department of Agriculture and Forests having been 1,020,000, representing approximately an area of about 15,000 dunams, and bringing the total area under citrus cultivation to at least 80,000 dunams. The quantity exportable may vary from year to year, depending upon conditions, but with the increase the problem of marketing—already a serious one for the grower—will become accentuated, unless sound remedies are applied to the present defective system under which the grower is entirely dependent upon the merchant and the broker, whether he disposes of his fruit individually or through the existing co-operative societies. Another problem for the grower will be the disposal of his culls, which are bound to increase in proportion to the crop and leave him with surpluses which cannot be disposed of in the local market. In connexion with this a start has been made by a small concern which was recently established for the preparation of orange juice, for which the culls and fruit not up to export standard are being used. The success of this concern may help materially to solve this not unimportant problem for the grower.

The actual marketing of the crop, however, still presents difficulties, but chiefly in connexion with selling arrangements, as much progress has already been made in the preparation of the fruit for the market through Government intervention and also through the enterprise of some of the orange exporting firms. For example, under the Fruit Inspection Ordinance, the export of fruit is restricted both as to date and place of shipment; date ensures ripeness, and appearance colour; no fruit may be shipped earlier than November 1 unless the grower has received special authority to do so after inspection of the grove by the Fruit Inspection Service, and place of shipment facilitates control and confines the fruit inspection to certain points only. Sizing and classification of the oranges is enforced by limitation of the sizes to not more than two in any one case, but not more than one class of orange is permitted in any one case. The Fruit Inspection Service is empowered to refuse the export of any consignment of cases if 10 per cent. of them are found unfit. Again, an Agricultural Council was recently formed under the control of the Government Agricultural Department, the object of which is to co-ordinate the work being done by official and unofficial institutions, growers, and others interested in orange growing. Under this Council there are special committees composed of a number of experienced orange growers, who are devoting special attention to the scientific development of orange groves and prevention of disease. Thus there is every reason to believe that on the one hand a higher standard of grove cultivation will be attained and on the other that the good condition of the fruit when exported will be assured.

Improved communications, which enable the use of motor transport for the dispatch of fruit from the groves, have stimulated the establishment of central packing houses by exporting firms, and growers who avail themselves of these have given up their primitive packing houses for the scientific grading and classification of their fruit in these packing houses. One of these was completely equipped with mechanical grading and packing machinery so as to assure uniformity in the size of oranges packed in each case, and owing to its success the erection of packing plants were under contemplation also by two other important exporters of oranges. The packing house marks a distinct advance in the methods of preparing the oranges for the market, and among its many advantages is the reduction in the costs of grading and packing over the present costs of hand labour.

The growers themselves have not been idle during the year—the younger ones more particularly—in their search for a solution of the marketing problems, as they realise that success lies not only in the reduction of the cost of production—and this will, no doubt, be reduced as the industry progresses—but also in the cost of distribution, the two main items in which are transport charges by sea, and brokerage and commissions on sales. The only immediate remedy against these high costs is the rationalisation of the industry, or at least the amalgamation of all orange growers into one central body, which would, no doubt, get better terms and better service for the growers than they receive to-day from the merchant, broker, and others through whom at present growers ship their crops to be sold on the markets abroad. The formation of co-operative societies—one or more for each region—for dealing with the crops of their members was under consideration by them, as well as one for the whole country, for dealing exclusively with the grapefruit crop. These co-operative societies, if they succeed, will no doubt in the course of time be in a position to establish their own marketing organisation. Such an organisation will, no doubt, at once limit the number of brands under which the Jaffa orange would appear on the market. These have been increased to such an extent year by year with the increase in number of merchants, brokers, etc., that the origin of the orange has become almost obscured; this in itself undoubtedly makes it difficult to sell the fruit, and the charges made to-day by merchants are no doubt influenced by the high expenditure incurred by them in advertising their particular brand.

The expansion of markets would also be an urgent matter for the organisation. In the past and with restricted outputs the growers found little or no difficulty in disposing of their crops in the United Kingdom. Whether in the future and with increasing crops they will still be able to do so is problematic. The dangers, however, of relying upon one market have not been lost sight of and growers who find the Continental markets open to them will have to thank the Pardess Co-operative Society, who took the initiative, and, as a result of their efforts, succeeded in disposing of increasing quantities of oranges yearly since 1926, when the first relatively small shipments were made to Continental countries.

(To be continued.)

The Messageries Maritimes draw attention to the reduction in the ordinary rates by the Nairn Eastern Transport Company from Beyrout to Baghdad on August 1. From that date until further notice the rates will be as follows:—First class, £17 10s.; second class, £15. In consequence the special through rates from London to Baghdad will be proportionately less for passengers who will be travelling by the Nairn cars from Beyrout after August 1, namely:—£3 first class, and £1 second class. These new fares will continue to include provision of food on the desert journey, but food and hotel accommodation at the Rutba Rest House will no longer be included.

Company Meetings.

FURNESS, WITHY AND CO.

The Shipping Depression.

Sir Frederick W. Lewis's Speech.

The thirty-ninth annual general meeting of Furness, Withy and Company, Ltd., was held on July 23 at the registered office of the company, Furness House, Leadenhall Street, London, E.C. Sir Frederick W. Lewis, Bt., presided.

The Secretary read the notice convening the meeting. Mr. Ralph T. Warwick, of Messrs. W. T. Walton and Son, read the auditors' report.

Sir Frederick W. Lewis, Bt., in moving the adoption of the report and accounts, said:—Turning to the accounts before us, as you will have observed, there are some changes in form which have been made necessary by the new Companies Act which has come into force since our last meeting. On the liability side the only change is that we have shown separately the amount due to subsidiary companies—namely, £1,003,990, which was previously partly included in sundry creditors and partly dealt with by way of deduction from items on the other side of the balance-sheet. In consequence sundry creditors now stand at a reduced figure—namely, £1,922,652—which, as I have mentioned on previous occasions, includes full provision for taxation, as well as for the Preference share dividend which was paid on May 1 and for the Ordinary share dividend which we propose now to declare.

The most important alterations appear on the assets side, as our shipping property, investments in subsidiary companies, general and British Government investments and freehold property, etc., are each shown separately. Shipping property, from which ample depreciaton has been written off, stands at £1,211,847. Investments in subsidiary companies, which in fact number 16, stand at £5,288,216—namely, at cost less depreciation. General investments, which include British Government securities, and also our investments in associated companies which are not subsidiaries, as well as outside investments, stand at £2,212,714, this figure again being cost less depreciation. Freeholds, office buildings, dock warehouses, wharves, etc., both in the United Kingdom and abroad, figure at £261,339 15s. 5d. after writing off depreciation from the original cost. The only other change is that there is shown separately the amount due from subsidiary companies—namely, £145,401. Sundry debtors at just over £1,000,000 show an increase of about £250,000 over last year's figure, and finally there is the usual cash item including Treasury Bills and Bills of Exchange on hand—namely, £538,644, which is about £100,000 less than in 1929.

Altogether the balance-sheet is one which I feel perfectly sure will be regarded by all shareholders as entirely satisfactory.

I cannot say quite the same of the profit and loss account, but I can at least say that it is satisfactory having regard to existing conditions. The account is in the same form as in previous years and shows a reduction in profit of about £58,000, a fact for which I have no doubt you will have been well prepared by the more or less general experience of commercial undertakings during the past year.

Notwithstanding this reduction in profit, we are in a position, after paying our Preference share dividend, to maintain the Ordinary dividend at 10 per cent. per annum, and to put aside for depreciation the same amount as a year ago—namely, £250,000—leaving the amount to be carried forward to the current year at £236,171, which is approximately £28,000 less than the amount brought in. I hope these figures will be satisfactory to you having regard to the difficult conditions which governed last year's trading.

I make no apology for again putting aside £250,000 for depreciation. We consider it is in keeping with our past conservative policy that we should do everything we possibly can to maintain the company in its present strong position, particularly in view of the present unsettled conditions. I feel sure this policy will have your full approval.

Notwithstanding the satisfactory financial statement which we are able to place before you to-day, and which is the result of careful husbandry in the past, I think it is common knowledge that the shipping industry is passing through a most difficult period. The simple and elementary cause—namely, the excess of supply over demand—is equally common knowledge and common to a good many other industries to-day, but the fundamental reasons for this state of affairs are both difficult to elucidate and impossible—so far as shipowners are concerned—to control. Our business is the oversea carriage of commodities, and in the ordinary way heavy production, whether it be of crops, raw materials, or of manufactured articles, might be expected to lead to greater activity in the movement of those commodities between the nations of the world. So far as my knowledge goes there is at present no lack of production, either of foodstuffs, raw materials, or manufactured articles. Yet there is no active movement. It may therefore be fairly assumed that, to some extent, the trouble lies in the contraction of buying power brought about by the contraction of credit. In consequence of this contraction of credit and buying power, commodity prices have been falling for some time past, and similarly the price of shipping services has fallen for the same fundamental reasons.

While I have made reference to some of our current problems—and I am quite sure the shipping industry is not alone in having its difficulties to solve—I would not have it thought that I am weighed down by existing conditions. On the contrary, I view the future with a greater measure of optimism than I have felt for some time past, and if I may take a lead from one of Dickens' characters I would say with Mark Tapley that there is a great deal of merit in being cheerful in the face of such conditions as at present exist. My optimistic outlook is justified by the belief that existing conditions are part of the stage setting for the trade revival which will come as surely as anything which it is possible to predict. It will come as far as shipping is concerned, because oversea trade has constantly developed and expanded ever since the nations of the world first commenced to trade together, and there is not yet any known method by which the oversea trade of the world can be transported as efficiently, and as cheaply, as by shipping. If we accept this view, I think we may go a step farther and take satisfaction from the fact that our company, by reason of its well-spread interests in most of the important routes of the world, coupled with being equipped with a most efficient fleet and organisation, will be well placed to take the fullest possible advantage of the revival when it does come.

The motion was carried unanimously.

EGYPTIAN DELTA LIGHT RAILWAYS.

Improved Results.

Sir Montagu Sharpe's Speech.

The annual ordinary general meeting of the Egyptian Delta Light Railways, Ltd., was held on July 25 at Winchester House, Old Broad Street, E.C. Sir Montagu Sharpe, K.C. (Chairman of the Company), presided.

The Secretary (Mr. F. J. Horne) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—From the agricultural and commercial point of view, Egypt has suffered severely from the world-wide depression, and I think there is reason for congratulation in the results of our working as shown in the accounts before us. At the last general meeting I was able to report that our aggregate traffic receipts at that date showed an improvement over the corresponding period of the previous year. I am glad to say that this improvement was maintained in a manner which may well be classed as satisfactory under the adverse conditions

BANQUE FRANCO-BELGE ET BALKANIQUE

experienced—namely, the very low price of cotton and the resultant financial stringency, the total gross earnings from all sources being £360,970, as compared with £337,668 the previous year, an increase of £23,302.

The main factors to which we may confidently attribute this improvement are those to which I referred in my last speech—namely:—The continued use of "Sentinel" tractors, which enable us to run a greatly improved and more efficient passenger service. The general reduction of passenger fares to pre-War levels. The employment of motor lorries with which cotton and other goods are collected from villages and carted to our stations, thus enabling quick delivery and cheap goods rates.

During the year under review two records have been established. First, in the number of passengers carried, which was 12,331,266, an increase of 949,181 over the highest number for any previous year, and, second, in goods tonnage (carried for the public), which was 768,133 tons as compared with 762,690 tons carried in 1914, the previous highest figure.

It is perhaps too much to anticipate that this satisfactory state of affairs will continue should the existing adverse conditions be prolonged, but I give these facts and figures as items of interest, and because they tend to show:—

That the policy of the Board as regards the introduction of tractors and motor lorries, and the reduction of rates and fares, has been justified; that the popularity of the railway is increasing; and that the number of omnibuses and lorries running in opposition to our service is on the wane.

We now have 50 tractors in service, and it is anticipated that a few more may eventually be required to meet the increasing passenger traffic. During this year five motor lorries have been added to our fleet, making 44 in all, and further additions are contemplated.

You may, however, rest assured that the most careful considerations will be given to the subjects of our requirements and of the conditions generally in Egypt before further expenditure in these directions is undertaken.

With regard to our capital account, the balance-sheet shows that the total capital expenditure to date, including general stores and caution money, deposited with the Egyptian Government, amounts to £2,272,459, and our capital resources, including reserve funds, amount to £2,286,187—in effect, that we have an available balance of £13,728 to meet capital commitments.

I must again impress upon you that the small balance is inadequate, and that capital expenditure must be largely met from revenue. The directors have, therefore, decided to transfer from the profits of the year under review a sum of £15,000 to reserve.

We have found it necessary recently to construct an addition of 80 goods wagons to meet the increasing traffic demands. There is also the question of increasing our fleet of motor lorries, to which I have referred above, and the possibility of requiring a few more "Sentinel" tractors to meet the heavier passenger traffic.

During the year work on the construction of the Berreyit-el-Assifar line, to which I have upon more than one occasion referred in my previous speeches, was, after further delays, recommenced, and it is anticipated the line will be open to traffic in October next.

The negotiations to which I referred last year towards an arrangement under which the Government will provide funds and construct new lines, which this company will work, have, in consequence of political and financial conditions, made no progress, and may, I fear, be deferred for a considerable period. This is disappointing, but we must hope that, when more staple conditions are established in Egypt, the subject will receive prompt and sympathetic attention from the Government, as such an arrangement is of considerable importance in the development of the country, and it is quite impossible for this country to raise the necessary capital for the works contemplated. I will now turn to the net revenue account.

After all fixed charges and Government's participation in profits have been met, the net revenue for the year amounts to £51,051 19s. 4d. Of this sum we have transferred the sum of £15,000 to "Reserve against capital expenditure," and have recommended the payment of a dividend of 3½ per cent. on the Preference shares, which will absorb £36,427 6s., leaving £524 13s. 4d., which, with the £42,138 12s. 4d. brought forward from the previous year, makes a total balance of £42,663 5s. 8d. to carry forward into the next year.

With regard to the current year, conditions prevailing in Egypt have already to some extent reacted upon our traffic receipts, which at July 10, the latest return received, showed a decrease of £2,872.

The latest reports received from Egypt are not reassuring. We are informed that there is great scarcity of money in the hands of the fellaheen; that, in consequence of the heavy stocks of cotton from past seasons' crops held by the Government, the disposal of the new crop is likely to prove difficult, and to accentuate the already very heavy fall in prices; also that the uncertain political situation will doubtless affect trade generally.

These factors must, I fear, have an adverse effect upon our traffics.

Before submitting the formal resolutions I must again express our great appreciation of the excellent work done by Lieut.-Col. J. R. Marryat, our agent and general manager, and his officials in Egypt, and of the care and attention paid by our secretary, Mr. F. J. Horne, and the staff in the London office.

The motion was carried unanimously.

IVORY IN BETTER DEMAND.

Messrs. Hale and Son report that the quarterly ivory sales, held on July 22, comprised 24 tons (against 37 tons at the same time last year and 37 tons in April last), viz., 14¾ tons Zanzibar, Bombay, Mozambique, East African, Rhodesian and Siam, ¾ ton Abyssinian ½ ton Egyptian, 4¾ tons West Coast African and Congo, ¼ ton Lisbon, and 3 tons land carriage, also 10½ tons mammoth tusks, ¾ ton sea horse tusks and boars' tusks, and 3 cwt. rhinoceros horns; total, 41 tons 8 cwt.

There was the usual attendance of buyers, and the competition was well maintained throughout, the tone being distinctly better than at the preceding auctions. The quantity catalogued was smaller than usual owing to the restricted new imports from all quarters, the bulk of the quantity offered being lots held over from the last sales. America and the Continent bought freely and the Home trade took their usual proportion. Soft large and medium tusks were in good supply, but the quantity of ball ivory was small. A feature of the sales was the large supply of mammoth tusks, some of which were exceptionally fine both in size and condition.

Egyptian was in very small supply. Soft, large, and medium tusks were £3 to £5 per cwt. lower. Hard, none offered.

The Egyptian State Railways have purchased a site for the construction of a goods station at Sidi Gaber, near Alexandria.

It is reported that the denunciation by the Roumanian Government of the provisional trade agreement with Denmark of May 8, 1923, is not to take effect until September 1.

The traffic receipts of the Manchester Ship Canal for the half-year ended June 30 amounted to £683,800, as against £745,169 for the corresponding period of last year.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended June 30 amounted to £E6,805, making the total from April 1 £E60,044, as against £E71,324 for the corresponding period of the previous twelve months.

Trepca Mines is offering to shareholders 400,000 5s. shares at par in the proportion of one new share for every ten shares held. The shares are part of the 500,000 created by resolution on July 23, increasing the capital to £1,125,000. The objects of the issue are to provide funds for the further development of Meljenitza and Trepca Hill, the examination of the Breskovo areas, and the driving of the deep adit to the Stantrg mine.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 23 :—

Egyptian Futures.

Sakel Contract.—There has been no increase of activity in this contract since we last wrote, rather the reverse in fact. The recent rise in American contracts was, of course, reflected to a certain extent in Sakels, and, in addition to this, the reports of leafworm trouble in the Delta appear to have attracted rather more attention, causing a better offtake for the raw material, and, possibly, inducing a small amount of tentative buying of the contract, but on the whole trading has run on very quiet lines. The political disturbances in Egypt, about which some apprehension was felt at one time, have caused very little dislocation of the ordinary business routine in Alexandria and the market has been scarcely affected at all. The situation now appears to be well in hand, and, as a market factor, can be, apparently, disregarded. Local differences have shown little change, and at the moment the near position is very steady at a premium of 3 points over November, after being 3 points under at one time. The rise early in the week took Novembers up to 11.57d. at the top, but this advance has not been held and on balance values show little change on the week.

Apart from the leafworm damage previously reported, we have heard nothing further to the detriment of the crop, which appears to be progressing, on the whole, satisfactorily. Spinners have been showing more interest recently in new crop cotton, and if this inquiry continues the effect is sure to be reflected sooner or later in the Alexandria new crop months. At the moment, however, opinions in that market appear to be somewhat two-sided, within a narrow compass, and minor fluctuations continually occur which ultimately leave little change on balance.

Upper Contract.—A falling off in the inquiry for actual cotton has been reflected in this market by the quieter tone prevailing, and during the week, when American contracts advanced up to 7.14d. for October, this contract followed in only a half-hearted manner; in fact, not for some time have we seen so little interest shown as we have this week. The near position has been particularly devoid of interest, and one or two small offerings which appeared had the effect of depressing it slightly in relation to the more distant months, but a very substantial premium of course still remains. In spite of this sensitiveness to small dealings a tender of three contracts passed practically unnoticed. Present conditions appear likely to continue for the time being.

Egyptian Spot.

The inquiry for actual cotton has been on a somewhat smaller scale, and quotations have been irregular. Spinners are still following the market very closely, but so far their requirements have not been much more than retail in character. Less demand has been experienced for the Upper and Pilion varieties, but more interest has been shown in Sakel and its kindred growths. The explanation for this lies possibly in the fact that serious reports of leafworm damage in the Delta have recently been received.

Sakel.—A much improved inquiry has been in evidence. All qualities have come in for attention, from the lowest to the best. The selection of cotton grading Good Fair and above, however, has been of an indifferent character, and buyers have found difficulty in fulfilling their exact requirements.

Uppers.—Less interest has been shown, and, although the basis has remained firm, prices have eased slightly on the week.

Pilion has been in only quiet request and sales have been few and far between.

Nahda.—A fair amount of interest has been shown in this cotton, but buyers are still holding off and the basis continues to ease. Latterly, there has been more inquiry for the lower qualities at from 9½d. to 10d.

Maarad Cotton.—A small business has been done in this cotton at rates which favour buyers.

White, Fouadi, Farouki, etc.—Only very retail sales have taken place in these qualities.

Sudan Sakels have continued in good request, but sales have been disappointing.

Tokar Sakel.—The inquiry for this cotton still appears to be on the increase, but new crops still monopolise attention to the detriment of the old, in spite of drastic reductions in basis.

C.i.f. business.—More interest has again been shown in new crops, and we are inclined to the belief that a fair business has been done.

Forwardings.—These have been returned at 2,891 bales Egyptian and 808 bales Sudan.

Spot Sales.—These have been estimated at 1,100 bales Egyptian and 250 bales Sudan Sakel. Quotations of Sakel show an advance of 20 points, those of Upper and Pilion a reduction of 7 and 20 points respectively. F.G.F. Sakel to-day, 12.50d. F.G.F. Upper to-day, 9.59d. F.G.F. Pilion to-day, 10.45d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended July 17 :—

Our market has been steady during the week, with rather limited fluctuations. The week's summary of price movements is as follows :—Sakellaridis : July, 28.00 dollars, unchanged; November N.C., 22.98 dollars, 0.08 dollars down; January N.C., 23.20 dollars, 0.04 dollars down; March N.C., 23.68 dollars, 0.04 dollars down; May N.C., 24.08 dollars, 0.08 dollars down. Ashmouni : August, 15.97 dollars, 0.22 dollars down; October N.C., 15.45 dollars, 0.20 dollars down; December N.C., 15.71 dollars, 0.11 dollars down; February N.C., 16.06 dollars, 0.11 dollars down; April N.C., 16.38 dollars, 0.15 dollars down; June N.C., 16.75 dollars, 0.10 dollars down.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows for the month ended June 30 :—

Arrivals in Kordofan Stations and Tendelti amounted during June to 1,388 tons, which is only about 100 tons less than the preceding month. Arrivals except for the second market week and the last two days of the month showed a decline. Thus arrivals were : 1st week, 357; 2nd, 405; 3rd, 330; 4th, 204 tons (remaining two days 92 tons).

The month's prices at El Obeid have been characterised by violent and almost daily fluctuations. The price paid on June 1 was 11d. up as against the closing price of May 31. Prices continued to rise up to the 9th, the rise amounting to 6s. 8d. One the 10th they suddenly fell 5s. 7d. and continued gradually to fall up to the 19th, the fall amounting to 4s. 2d. From the 20th to the 29th prices took an upward move, the rise amounting to 7s. 11d., but on the 30th the price paid was 3s. 9d. down. The net increase during the month was, therefore, 2s. per cwt.

It has been noticeable that during the first ten days of the month when prices were rising demand was quite good, but when prices started to fall buyers overseas stopped buying and preferred to wait for still lower prices.

Talha prices have gone up during the month 2s. 6d. per cwt.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended July 19:—

Grain.—The better feeling which characterised our market this week, and was due to a steady improvement on consuming markets, could not be taken full advantage of by shippers owing to the comparatively small arrivals of grain due, as we have previously explained, to the peasants being still busy in the fields. Shipments of grain, therefore, were very restricted and the fulfilment of old sales have been put off until the end of the month, in the expectation of local grain prices falling through larger arrivals of grain. A few odd parcels were shipped to the U.K., whilst Antwerp and Rotterdam seem to have absorbed what little grain was available daily. Mediterranean markets remained inactive. In spite of the above situation, chartering continued fairly actively, and several steamers were fixed at improved rates both for end July and August: 14s. Antwerp/Rotterdam, 14s. 6d. Antwerp/Hamburg, with 15s. to 15s. 6d. one port U.K. full terms. Spot rates were inclined to recede slightly, but, owing to a reduced supply of spot tonnage, were maintained at about 11s. For U.K. destinations 13s. to 13s. 6d. was paid for July and August shipments.

Timber.—No fresh engagements of any importance have been concluded, but negotiations are proceeding for important parcels to Oran and some ports of North France. Business for Alexandria is handicapped by fresh arrivals there of Russian timber. Freights remain practically unchanged, but a gradual downward tendency is noticeable for Near Eastern ports.

Weather and Crops.—Thunderstorms have again scattered varying amounts of rain over more or less wide areas, chiefly in the west and north, in some cases doing considerable damage at places under the centre of the storm; but a good general rain is badly needed in many districts, especially for the late sown maize, whereas the early sown maize is reported to be in good condition, but conditions vary considerably in widely spread districts. The temperature was moderate for mid-summer till yesterday, but it is now again hot. According to the Meteorological Office the temperature to-day may reach 36 degrees Centigrade, equal to about 97 degrees Fahrenheit. According to Government estimates the exportable surpluses of grain on July 1, 1930, including the remainder from 1929 and that anticipated from the crop of 1930, with the exception of maize, which cannot yet be estimated for 1930, amount to about 4,300,000 tons, as follows:—Wheat, 800,000 tons; maize (1929), 1,000,000; barley, 1,900,000; oats, 500,000; rye, beans, etc., 100,000: total, 4,300,000 tons.

Sulina.—The bar depth remains at 24 feet, the last official sounding reports being satisfactory, and we do not anticipate any change in the depth. Progress is being made with the building of the north pier and the operations have generally been favoured with calm weather. The last reports received show a fall in the depth of the water at the 41st and 43rd mileposts of one foot, i.e., to 23 feet, vessels being allowed to cross drawing 22 feet. The bucket dredger Percy Sanderson has been sent to restore the depth. Whilst writing we learn that the depth has been restored to 24 feet.

Bulgarian Report.

Bourgas, July 12.—Although prices on consuming markets have improved slightly, the local market remained lifeless, producers in the hope of a further improvement, being still disinclined to part with their grain. Heavy thunderstorms causing local damage to crops have occurred in several districts, but generally the weather has been dry and hot.

Notes of the Week.

The British Government and Egypt.

The debate in the House of Commons on July 29 regarding Egypt served the useful purpose of enabling Mr. Ramsay MacDonald to correct certain impressions that had inevitably followed from his previous reference to the position in that country. Speaking on July 16, he stated that the High Commissioner had been instructed to make it quite plain to the Egyptian Prime Minister that the British Government "did not intend to be used as an instrument for an attack on the Egyptian Constitution. In consequence, they could be no party to an alteration to the electoral law, even if precluded by their Declaration in 1922 from actual intervention in an internal issue of this nature." The meaning at once attached to those words was that Sidky Pasha had been warned that he must not tamper with the Electoral Law or with the Constitution, and in a quarrel between Wafdists and non-Wafdists the British Government proposed to throw the whole of its weight on the side of the Wafdists. Last week, in spite of the rambling character of his remarks, Mr. MacDonald made it clear that, whatever may have been the Government's intention a fortnight earlier, it was now committed to a much more dispassionate attitude. For the purpose of the ratification of the draft treaty they had pointed out to Mahmoud Pasha the unwisdom of giving his political opponents, by an attempt "to cook the register," the chance of saying that the agreement had been effected behind the backs of the Egyptian people. In the more recent instance the British Government claimed to have been more concerned to prevent itself from being "used as tools for the alteration of the Constitution;" and "that it was not to be given out that it was done with our consent or our connivance, or with our approving knowledge." That, it will generally be admitted, is a very different matter; and, to leave no room for doubt on the subject, Mr. MacDonald stated that it (i.e., the changing of the Constitution or the electoral law) "was purely an Egyptian question; it belonged to that field of Egyptian political activities where Egyptian will ruled without interference by us; it was their own affair." So rambling and laboured, however, was the Prime Minister's effort to correct the impression that his previous words had inevitably conveyed, that Mr. Lloyd George, who spoke immediately after him, may be excused for not having appreciated the full extent of Mr. MacDonald's recantation. Accordingly he stressed what he termed one of the primary rights of any country, to determine on what kind of franchise parliament should be elected.

The Inwardness of the Egyptian Situation.

Not the least useful part of Mr. Lloyd George's contribution to the debate was his final request that the British Government should not seek directly or indirectly to impose a basis of election upon the Egyptian people which "their wisest leaders" believed to be thoroughly inapplicable to them. In this reference to the "wisest leaders" the Liberal leader touched upon the real issue in Egypt. Not unnaturally the Wafd makes the most of the will of the people and of its right to represent that will, and for the consumption of a constitutionally-minded British public it claims to be fighting the battle of constitutionalism against autocracy. Yet it is a fact that the Constitution, of which it now comes forward as the devoted champion, was drafted and passed in the face of the Wafd's non-co-operation. If it were the case that the Liberal-Constitutionalist Party, with which both Mahmoud Pasha and Sidky Pasha have become identified, and which can claim to be primarily responsible for the Constitution, is now anti-constitutional, some explanation of the change would be needed. The issue in Egypt, however, as Mr. Lloyd George hinted, is not a conflict between constitutionalism and reaction, but one between reasonably good government and an administration at once demoralised and demoralising. If Egyptian political parties, as the Wafd is now doing, are going to make the British public their High Court of Appeal in their internal quarrels, the basis of their appeal must be past records of administration and service in Egypt's interests and not mere bandying of catch-words. The Wafd were in office in 1927-28 and again at the beginning of this year. If they could point to actual achievements during these periods, they would be using arguments of a more convincing character than insistence on a desire to protect a Constitution which is in danger only owing to their own actions.

The McMahon Pledges.

On the last day of the parliamentary session, August 1, what was presumably the last official statement on the

Digitized by Google

famous "McMahon Pledges" to ex-King Husain, made during the War, was made by the Under-Secretary for the Colonies. Dr. Drummond Shiels explained that there are reasons, which may retain their force for many years to come, and which are entirely unconnected with the question of Palestine, which "render it in the highest degree undesirable in the public interest to publish the correspondence." The present Government, of course, adopts the same attitude as previous Governments have adopted, namely, that this correspondence did not pledge Great Britain to the inclusion of Palestine in the projected Arab State. The only possible comment is that the Government, being alone in full possession of the facts, certainly ought to know. But no one can possibly be blamed, in the light of what is known of the matter, for supposing that Palestine was so to be included, and, indeed, Dr Shiels himself admitted that "the ambiguous and inconclusive nature of the correspondence may well have left an impression among those who were aware of the correspondence" that His Majesty's Government did intend to include Palestine in an Arab State. So may be said to have ended a story that, viewed from whatever angle, cannot be described as edifying.

The Arabs of Palestine.

According to reports of a special meeting in Jerusalem of the Palestine Arab Executive, the idea is being toyed with that the Palestmian Arabs should imitate certain other Eastern peoples, and institute non-o-operation and civil disobedience. We sincerely hope that so foolish an idea is not being taken seriously. When the crying need of the situation in Palestine is some constructive proposal for the peace and development of the country, when, moreover, the Arabs are awaiting eagerly the return from London of the High Commissioner—because they hope that he will bring with him a new constitutional scheme, which will give the Arabs a greater share in the administration of the country—to adopt, or even to threaten to adopt, a Gandhi attitude, would be the height of folly. It is to be hoped, therefore, that out of their own wisdom the Arab Executive may discountenance such a course. They may profitably regard, also, the pitiful failure of the Wafd in Egypt to make anything of this particular instrument of protest.

INDIAN NOTES

The Round Table Conference.

Any remaining doubts as to the nature of the British representation at the Round Table Conference have been finally settled. The Government have made up their minds to adopt the only reasonable and statesmanlike course in inviting the leaders of the two Opposition parties "to nominate representatives to attend the Conference from both Houses." It is no secret that some members of the Cabinet were at first strongly disposed to adhere to the view that the Conference must have the character of a consultation between the Government alone, on the one hand, and the delegates of the various bodies of Indian opinion and of the Indian States on the other hand. They were, no doubt, in part at least influenced by the belief, sedulously cultivated by Indian politicians, that the step involved departure from the terms of Sir John Simon's original proposal, and by the talk of Indian abstentions, if the British representation should be given an all-party character. But reflexion has led to the tacit abandonment of such ill-advised protests; even, it may be, to a better understanding of the advantages, from the Indian point of view, of the deliberations of the Conference being fully representative on both sides, or as nearly so as may be found possible. It was, therefore, we think unfortunate that the Opposition parties should have pressed for the inclusion also of representatives of the Statutory Commission, or at least its Chairman. The arguments for this addition to the membership of the Conference was strongly put, and this course was evidently favoured by Sir John Simon himself, but the objections to it are serious and, in our judgment, conclusive. If the Report is, as it must be, the main evidence as to the facts of the Indian situation, it would undoubtedly contravene a plain and well-recognised principle that its authors should not be among those sitting to form a judgment upon it. The plea that the presence of the Commissioners is desirable in order that they may elucidate or explain various passages in the Report is obviously untenable, unless the Conference is to degenerate into a Court with Sir John Simon and his colleagues in the witness box all the time. Their testimony on any subject may be sought by the Conference at any time without their being placed in a position which in any circumstances would be an invidious one, and we are glad that the Prime Minister decided to adhere to his original decision.

The Floods in Sind.

The recent very destructive floods in Sind are a reminder that the River Indus, on which the whole cultivation of the Province depends, can be a very destructive benefactor. Floods in Sind are no novelty. Formerly they crossed the country regularly from Kashmir to the Manchar Lake, and their wide extent prevented the construction of permanent towns and villages. This diffusion, however, also prevented their being a concentrated danger at any one place, and the ancient city of Shikarpur, so long the mart for the trade of Afghanistan and Central Asia, was never in any serious danger. The fact, however, that the country has been so largely embanked and canalised renders the risk all the greater when in a period of excessive flooding the embankments are breached and overtopped, and for the first time Shikarpur is in danger of total destruction. Almost equal danger seems to threaten Larkana, which, though a smaller and a newer town, is of greater importance as the headquarters of a thriving district, the richest part of the Province. It may be hoped that the two towns will escape, and some recompense for the devastation caused by the floods will be found in the crops that will be grown in the spring on every piece of land which the water has reached. The problems which such floods raise are, however, very complicated. If the river cannot be trained and embanked so that such floods cannot occur, the prospects of a settled regime on the Canal of the Sukkar Barrage are rendered uncertain. If, on the other hand, the river is chained by embankments, there is the possibility of the river bed being so raised by the alluvian brought down by it that it may prove as dangerous a captive as the Mississippi. So necessary, however, are the canals to the country that no doubt, engineers will devise a way of safety.

IRAQ AND THE MINORITIES.

Whatever certain observers may think about the bloodlessness of Geneva, there is general agreement upon the competence of the Commissions which the League of Nations appoints from time to time to investigate certain disputes. In so far as the Middle East is concerned, at any rate, the reports drawn up by such Commissions have been both able and shrewd; they are historical documents, which must be the basis of any future discussion upon the countries or places involved. At the moment we are thinking primarily of the Report of the Commission instituted by the Council (of the League of Nations) Resolution of September 30, 1924, to delimit the frontier between Iraq and Turkey. That Commission did its work thoroughly, and it may be timely, in view of the fact that application is to be made for Iraq's entry into the League of Nations in 1932, to recall the conditions which it attached to a recommendation that the "Brussels Line" be adopted as the frontier. These conditions were: (1) The territory must remain under the effective mandate of the League of Nations for a period which may be put at twenty-five years; and (2) Regard must be paid to the desires expressed by the Kurds that officials of Kurdish race should be appointed for the administration of their country, the dispensation of justice, and teaching in the schools, and that Kurdish should be the official language of all these services. The Report went on to urge the necessity of the protection of minorities, notably of non-Muslim minorities —that is, Christians, Jews, and Yazidis. Now it may reasonably be claimed that the contribution which any State makes to the general cause of civilisation can be gauged by, may even be derived from, its treatment of minorities. Quite certainly such treatment is one of the first factors which the League of Nations would take into account in considering an application by any particular State for membership of the League. Even more certainly must this be so in the case of Iraq, for whom the Teleki Commission drew up such definite conditions. How has Iraq carried out her obligations to her minorities?

If the present conduct of the Muslim and non-Muslim minorities in Iraq is a safe criterion, the Iraq Government would be well advised to pay stricter attention to this matter before allowing her claim to membership to come before the League. As everyone knows, the population of Iraq's northern province is predominantly Kurd, and of recent months there have been signs that all is not well as between the Kurds and the Government at Baghdad. A note of militancy, for some time foreign to Southern Kurdistan, has during the last year or so crept into Kurdish Nationalism, which appears to be no longer the comparatively mild, cultural urge that it used to be when based on Sulaimaniya. How it came about that the Kurds were thus roused is, perhaps, irrelevant, though the event will still be fresh in the minds of Syrian Arabs in Iraq. True, the Iraq Government not long ago took the very wise step of making Kurdish the official language of the northern liwas; but why has this excellent step not been followed up? Why, for instance, is there still such an absence of books in Kurdish that teaching in Kurdistan has to be made through the medium of Arabic? Surely the Government could demonstrate with greater thoroughness its good will to the Kurds—an invaluable element in the State—even were it only because of its determination to satisfy the League of Nations on all points in 1932? And if the Kurds are alarmed at the non-provision in the new Anglo-Iraqi Treaty of any special privileges for them —they surely expected that something would be done for them in that Treaty—what shall be said of the Assyrians, that sorely-tried and doughty people who have gained the admiration of every Englishman who has known them? Something approaching despair, it seems, is overtaking these battered folk, who, deprived of their homelands in the mountains of Hakkiari, have found no real home in Iraq, and seem as likely as not to seek through France and Syria what has, so far, been grudged by Great Britain and Iraq. Already in Christendom, both Catholic and Protestant, considerable sympathy has been aroused on their immediate behalf. The antipathy of certain Arabs for the Assyrians is notorious, but is this not something to which the Iraq Government, whose eyes must until 1932 be increasingly on the West, might rise superior? Nor is there any indication that the Yazidis feel reassured of their future under an independent Iraq Government. Even yet it is uncertain whether they would not prefer the ægis of the French Mandatory Power to that of Iraq.

There is, therefore, much to be done in King Faisal's State before it can be regarded as certain that the League of Nations, with such Powers on the Council as France, who, having wide material interests in the Middle East, may in addition at any moment resume her traditional rôle of Protector of the Christians in the East, and Italy, who may in the future have oil interests in Iraq, will at once look upon Iraq's application for membership with favourable eyes. There is reason to believe, indeed, that France has already taken alarm over the possibility of Great Britain's early relinquishing of her obligations as Mandatary; nor has rumour been slow to credit Turkey with official expression of the desire that the guiding hand may not so soon be withdrawn from Iraq. There is, in short, sufficient evidence, from both inside and outside Iraq, to warrant the suggestion, which we hope will be all the better received in that it comes from the most friendly critic, that the Iraq Government should more scrupulously set its house in order. The difficulties of the situation, admittedly, are formidable enough, what with reports of a separatist movement at Basrah, of unrest in the Middle Euphrates, of threat of boycotting the elections in Sulaimaniya, and so forth; but the task must be resolutely tackled. It is in the peculiar interests of Iraq, as it is in the interests of the whole world, that the basis of the misgivings which we have briefly indicated, on the part of the minorities in Iraq, be speedily removed. That the people of Iraq, who but a few years ago were the subjects of a backward Power, should have advanced as far as they have advanced, is a most creditable achievement, for which they deserve every credit. It is sincerely to be hoped, therefore, that, the initial stages towards independence having been so meritoriously passed through, there will be no faltering at the last lap. The Iraq Government has satisfied the official British authorities: let it now make every endeavour to satisfy the League also upon its fitness for complete independence in 1932.

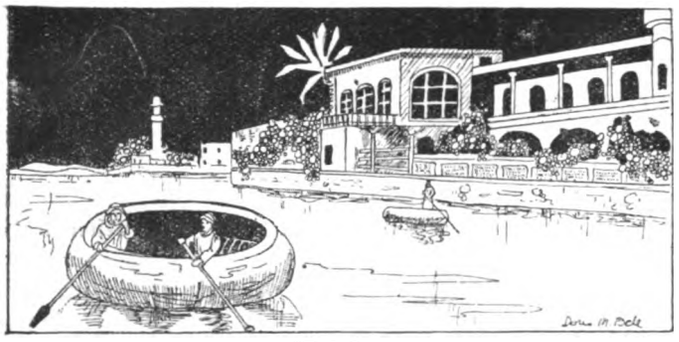
From Our Own Correspondents.



IRAQ.

Baghdad, July 18.

The New Treaty.

The new Anglo-Iraq Treaty was received with hesitancy by the local Press. The organ devoted to Nouri Pasha, that is that which supports the present Cabinet, was loud in praise. Other Nationalist papers, whose lives are punctuated by frequent suspensions and changes of name, on the first publication of the so-called "basic points" on which the full Treaty not yet published was founded, refrained for one day from all comment—presumably in imitation of the attitude of the Egyptian papers when Mohammad Pasha Mahmoud's treaty was published in the local Press. Twenty-four hours, however, exhausted their patience, and the following issues revealed an invective running on all too familiar lines. The criticism is purely destructive; helpful or penetrating suggestions are lacking. The main attack of the journalists is directed to the following points:—

(1) The sincerity of Great Britain in the whole transaction.

(2) The fact that the Treaty is in any case not to come into force before 1932.

(3) The probability that Iraq's admission to the League of Nations will never take place, and the uncertainty that would then supervene, with digressions on the theme that the League is a mere tool of England and France.

(4) The provision of three air bases west of the Euphrates, to be guarded by Iraqi troops paid from British funds, for safeguarding Imperial communications: this provision has been more bitterly attacked than any other, and is read as meaning in effect the military domination of the country.

(5) The suggestion that Iraq's perfect freedom to control its external affairs shall be in a manner consonant with the terms of this Treaty. As the latter is still unpublished, the significance of this phrase is dubious, but patriotic journalists naturally fear the worst.

Concurrently with all this, a much fuller and stronger but less articulate flood of criticism comes from moderate opinion in town and tribe alike, which fears, not without good reason, the early end of that period of real security and comparative prosperity which Iraq has enjoyed for fifteen years.

Politics.

The Progressive Party has submitted to King Faisal a protest against the suspension of Parliament, as contrary not only to the spirit but also to the letter of the Organic Law. It requested His Majesty either to convene Parliament at an early date in order to discuss the Budget and maintain control over the actions of the Government, or to dissolve it so that the nation might elect a representative Majlis which would assemble within the period stated in the Constitution. If the present Government should persist in its own interpretation of the Organic Law, the King was requested to establish a High Court that should give a more definite wording to the articles which the Progressive Party believes to have been contravened.

In a Press interview, Naji Pasha as Suwaidi, ex-Prime Minister and leader of the Progressives, stated that King Faisal had expressed his desire to settle the points raised by the party before his departure for Europe.

The decision of the Government to depute the Prime Minister on a special mission to London for discussion of the proposed amendments to the concession of the Iraq Petroleum Company has been severely criticised, on the ground that the Company's representatives should come to Iraq, instead of the head of the Government leaving his post to go to them. The official *communiqué* states that the Premier will make use of this opportunity to settle with the British Government several outstanding questions, such as those of the Port of Basrah and the Iraq Railways.

King Faisal's European Visit.

King Faisal left Baghdad on June 23, travelling by air to Amman in a special R.A.F. aeroplane. He was accompanied by Rustam Beg Haidar and Tahsin Beg Qadri, Private Secretary and A.D.C. respectively. At Amman the King spent a night with his brother, Amir Abdulla, ex-King Ali of the Hijaz being also a guest. His Majesty intended to go direct to Alexandria, staying while there at the Iraq Consulate. Whether he would go to England was not decided at the time of his departure, but it was announced that he would spend some time in Switzerland and at the summer resorts of Southern Europe.

Ex-King Ali left Amman on the following day for Baghdad to take up the duties of Regent during his brother's absence. He was accorded an official welcome here, and was sworn in as Regent the next morning. The royal *iradah* appointing him stated that the Regent should exercise all the rights of the King as provided for in the constitutional law, except the acceptance of the resignation of the Prime Minister, the selection of a new Prime Minister, and the ratification of treaties (except with the concurrence of the King).

The heir-apparent, Amir Ghazi, was sworn in as Regent at Baghdad for the short interval between the departure of his father and the arrival of his uncle. The Amir, who is now eighteen years old and a student at the Iraq Royal Military College, is to spend the remainder of his summer vacation in the northern liwas of Iraq.

Registration of Foreign Companies.

Considerable disquiet was caused in the commercial world of Iraq by a judgment given in the Basrah Court on June 18, exacting heavy fines under the Indian Companies Act from two foreign companies which were found not to have been registered in Iraq. The penalties laid down being Rs. 500 for non-registration, and Rs. 50 for each day of non-compliance, the Motor Union Insurance Company

***Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania Turkey Cyprus, Palestine, Iraq, and Persia.**

Digitized by Google

and the Mesopotamia-Persia Corporation were each held liable to a fine totalling Rs.19,480. The Judge, Mr. Hooper, who is one of the legal experts of the Ministry of Justice, said that he had reached his conclusion after very careful examination of the Article in question, but added that "if every non-registered agency in Iraq were to be prosecuted, the results would be disastrous for commerce in Iraq."

The crux of the question seems to be whether the appointment of an agent constitutes the establishment of a "place of business." The opinion of the Registrar of Companies, an Iraqi, was lately stated to be that it does not.

Mr. Hooper has asked the Court of Appeal for instructions on a legal point, in view of the fact that his powers as a first-class magistrate do not allow him to inflict a fine exceeding Rs.2,000.

The Baghdad, Basrah, and Mosul Chambers of Commerce held a joint conference in Baghdad in the last week of June, twenty-four delegates being present. The object of the conference was to study the causes of the prevailing economic depression, and to offer suggestions to the Government for its alleviation. A banquet given in honour of the visiting delegates was attended by the Minister of Finance, who said that the Government was prepared to give sympathetic consideration to any such suggestions and recommendations.

Sir Hilton Young.

Owing to an urgent telegram recalling him to London, Sir Hilton Young left Baghdad a week earlier than he expected, and before the expiration of the time allotted by him to his mission of inquiry into the financial condition of Iraq. His report is awaited here with the greatest interest, and in the meantime provides, like that of Sir Ernest Dowson, a useful excuse to Ministers for the postponement of awkward questions. In a speech made at a dinner given in his honour by the Minister of Finance, Sir Hilton remarked that he could see a marked improvement, in stability and in economic development, since his last visit to Iraq five years ago.

Development at Latafiyah.

The Latafiyah Estates, Ltd., hope to sow their first crops in the autumn of this year. The excavation of the head-works of the canal is now finished, and the concrete foundations are being laid. The earthwork of the canal itself has not progressed so fast as was anticipated, but seven miles have been fully excavated, and some progress has been made over the whole fifteen miles which the Company proposes to dig this year. The programme for next year includes the excavation of a further six miles, with subsidiary canals. The main system of irrigations is being carried out by the Iraq Government, at a cost of £60,000, all of which is to be repaid by the Company before 1938.

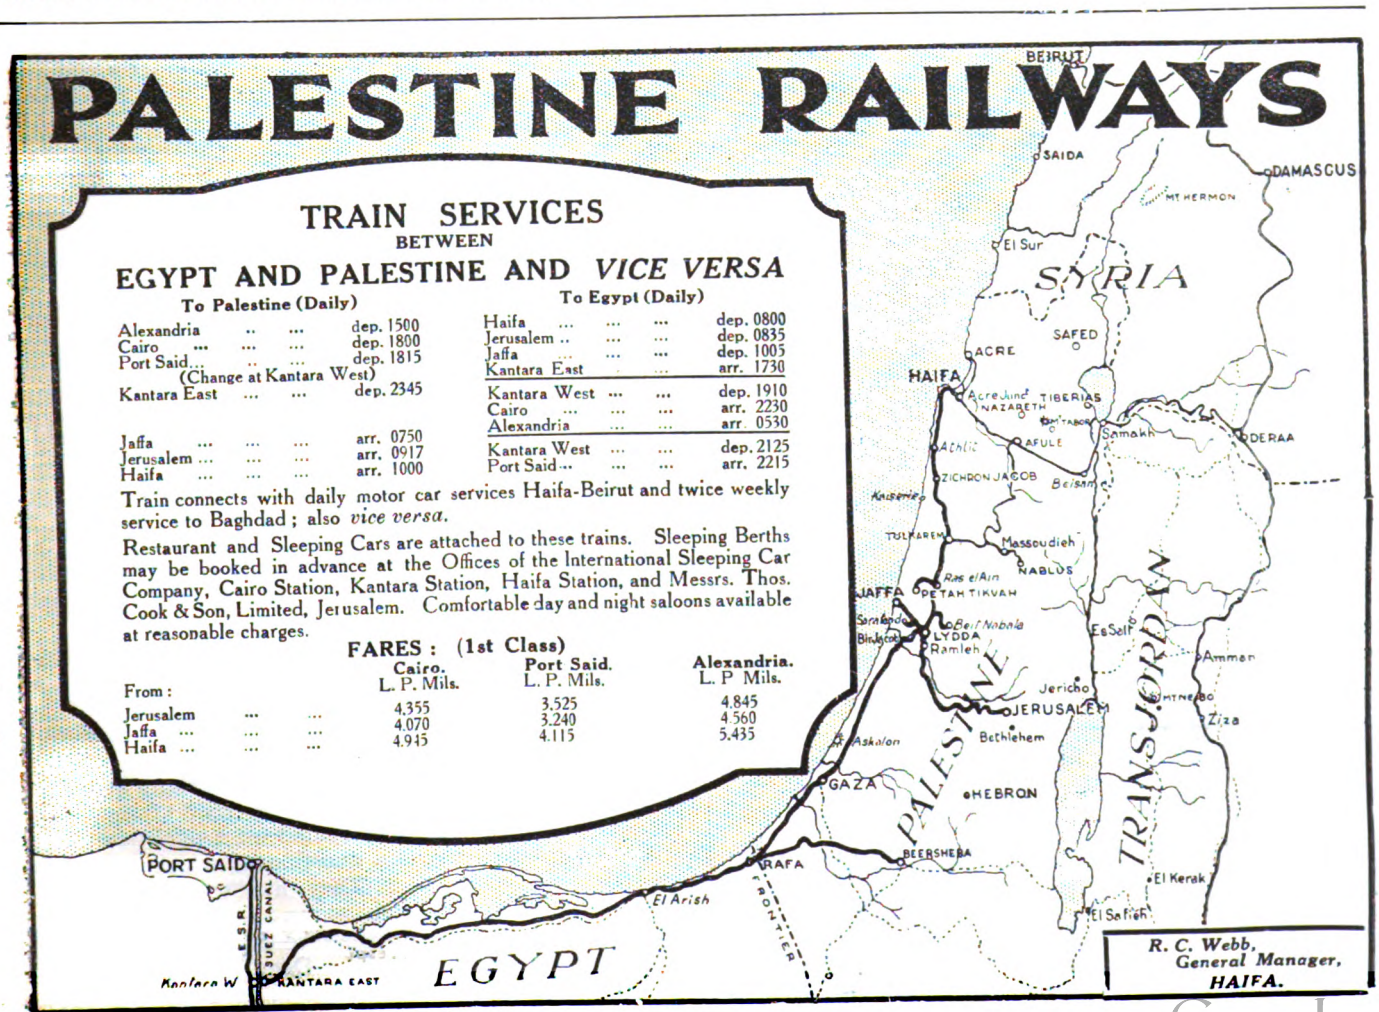
The headquarters of the Company are situated about 12 miles from the head-works on the Euphrates, and have the advantage of being on the Baghdad-Basrah main railway lines as well as on the Baghdad-Hillah road. A halt for all trains has been established by the railway authorities at Latafiyah, where the estate offices have already been erected.

General News.

The King's Birthday was celebrated at the Residency by a garden party. The High Commissioner left Iraq to go on leave to England on July 3.

The summer so far has been an unusually mild one, 112 degrees having been the highest shade temperature registered at Baghdad up to the middle of July.

The Government's failure to take any organised or sweeping measures for dealing with the locust menace has resulted in the loss of great areas of crops. Having terminated the contract of Mr. Rooke, the Agricultural Officer who for several years has been employed in conducting efficient locust campaigns in the northern liwas, the Government has taken no steps to carry on his work or to reap the fruits of his valuable experience in this



Digitized by Google

country. In this connexion the energy of the Egyptian Government, which employs foreign experts and makes use of the police force in an organised effort to destroy the pests, might well be taken as an example.

King Faisal presented the prizes at the annual sports of the Iraq Royal Military College on June 21, the High Commissioner being also present. In spite of the heat, the greatest energy and keenness were shown by the cadets in the races and competitions.

The students of the Iraq Royal College of Medicine entertained their professors, Iraqi and British, at a garden party on the evening of June 10.

THE HIJAZ.

Jidda, July 20.

Hijaz-Najd Air Force.

It is understood that arrangements have now been made for the transfer of the headquarters of the Hijaz-Najd Air Force from its present habitat on Darain Island near Qatif to Jidda. It will be remembered that, while the Duwish rebellion was still in being, King Ibn Saoud made arrangements with the British Government for the purchase of four aeroplanes and the engagement of certain British pilots and mechanics. It was then considered best that, as the King himself was at the time on his eastern frontiers, the machines and personnel should be at hand on the Persian Gulf Coast. They duly arrived at Darain towards the end of last year, and have been there ever since. The force is under the command of Chief Pilot Morris, formerly of the Royal Air Force, who will now bring over the four machines on their own wings to this side of Arabia; and I understand that, by arrangement with the proper authorities, the journey will be made from Darain via Kuwait to Baghdad and thence to Amman and Maan, whence the flight will be continued via Aqaba, Wajh and Yanbu to Jidda. It should prove a pioneer flight of great interest. The organisation of the force on a desert island has itself been something of a feat and many difficulties have been met and overcome, with but a single hitch in the shape of unsatisfactory conduct on the part of one of the pilots, whose services have now been dispensed with by order of the King.

The Iraq-Najd Treaty.

King Ibn Saoud has apparently intimated his unwillingness to ratify the treaty initialled at Baghdad on March 10 last while certain of the rebels remain at large under the protection of the Iraq Government. I understand, however, that this obstacle is in a fair way to be surmounted and that the leading rebel chief still at large, namely, Farhan ibn Mashhur of the Ruwala, is likely to arrive here in the company of the Air Force. King Faisal is reported to have interceded with King Ibn Saoud on behalf of Farhan, and the latter has been pleased to accept his surrender on generous terms. Like Duwish and others already in custody, he will be spared the extreme rigour of the laws of treason. It is hoped that, with Farhan's submission, the lesser men of the rebellion will hasten to make their submission, and that thus the way will be cleared for the ratification of the Iraq-Najd treaty and the establishment of cordial relations between the two countries.

Diplomatic News.

At last I have the pleasant task of recording the decision of the Turkish Government to place its diplomatic representation here on the same basis as that of other Powers. The Turkish Diplomatic representation now becomes the Turkish Legation, and Abdul Ghani Bey Sani, who is shortly proceeding on leave, becomes for the time being Chargé d'Affaires.

Negotiations continue between the Hijaz-Najd Government and the Governments of France and Italy respectively for treaties of Friendship and *Bon Voisinage*. Such negotiations always seem to take an unconscionably long time, the causes for which a mere layman may be pardoned for failing to understand or appreciate. It can, however, now be said that the recent visit to Jidda for a week's sojourn of the acting Minister of Foreign Affairs has advanced both treaties a further stage, but it would be premature to say that they are really near to the stage of definite maturity. Fuad Hamza's visit also provided other diplomatic representatives with a welcome opportunity of performing their diplomatic functions; and it is to be hoped that the reorganisation of the local Foreign Office on a basis more satisfactory to the representatives of the various Foreign Powers here will not be long delayed.

The French Chargé d'Affaires held a reception on the morning of July 14, which was very well attended by a gathering of some fifty persons representing the Hijaz-Najd Government, the Diplomatic Corps and local notables. The doyen of the Diplomatic Corps, the Soviet Minister, conveyed the congratulations of his colleagues and of all those present to M. Maigret, who replied feelitously. The acting Qaim-maqam also said a few words on behalf of the Government and the local notables.

General News.

The British sloop, H.M.S. Clematis, with Captain E. B. C. Dicken, the new Senior Naval Officer, Red Sea, on board, visited Jidda for two days during the week. The British Minister entertained a small company to dinner, including the acting Minister of Foreign Affairs, to celebrate the occasion; and the following evening the acting Minister of Foreign Affairs entertained the British Minister, Captain Dicken, and others to dinner at the Foreign Office.

The Italian gunboat, Lepanto, also visited Jidda for a few days during the week and was visited by the acting Minister for Foreign Affairs, who was honoured with a salute of nineteen guns.

The Qaim-maqam and many other of the local notables have been away at Taif for some weeks, where they have been engaged in consultation with the King on various matters connected with the reorganisation of the local administration. They are expected back some time next week.

Much sympathy is felt with King Ibn Saoud on the untimely death of his son, Talal, at the age of only two years. His death was apparently due to bronchial pneumonia supervening on an attack of dysentery.

The total number of scholarships (each involving the expenditure of about £115) now held by Hijazi and Najdi scholars studying in Egypt is 25. Some of them are back here for a short holiday and appear to have greatly benefited from their courses.

The climate continues fairly reasonable though humid.

EGYPT.

Alexandria, August 1.

Peace?

Peace has apparently descended once again on Egypt. How long it will last is a question to which only a few people know the answer. They, needless to say, are not inclined to broadcast their plans.

An even greater Wafdist fiasco than the July 21 riots took place last Friday night Deputies and Senators all met at the Saadist Club at five minutes after midnight,

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY

Digitized by Google

Nahas Pasha declared that, as King Fuad had refused to sanction an extraordinary meeting of Parliament for that day, it would then be held at the Club. Despite the advice of the Wafd's legal advisers that such a meeting would be null and void, according to the Constitution, the meeting was held, and a vote of non-confidence in the Government passed. The meeting also declared the Wafd campaign of non-co-operation open and that it would take the form of non-payment of taxes, on the pretext that, as the Government was unconstitutional, it had no right to levy and use the nation's money. By orders of the Ministry of the Interior this decision was not published in the local newspapers, for, as it is criminal, any paper publishing it will be guilty of incitement to commit a crime. As, also, anyone circularising the country to this effect will also be guilty, the news has been confined to a very few people, and consequently has had little or no effect on the country. Those who do know of the decision are wondering whether the Wafd Deputies and Senators will practise what they preach. If they do—a most unlikely event—they will rapidly find themselves in prison. Ismail Sidky Pasha has stated that the Government will not lose a piastre through the Wafd's decision, and that view is generally shared in authoritative circles.

In any other country than Egypt it would be amazing how rapidly Sidky Pasha's prestige has advanced in so short a time. When he first took office, although it was realised that he was an exceptionally able man, few people imagined that he would prove strong enough to retain office for more than a few days in the face of the violent Wafdist antagonism. For most Wafdists cordially hate Sidky Pasha personally, quite apart from Sidky Pasha the Prime Minister. He has, however, completely subjugated the Wafd and has amply proved his boast, that he could always think two moves ahead of his opponents.

The Cabinet's Programme.

The Cabinet is now working on its programme. The recent troubles have retarded publication considerably, for Ministers have been far too busy dealing with affairs of the moment to be able to put in sound constructive work for the country's future. It is stated that the programme will be issued in a week or so's time. It is not thought, however, that such a programme will be a complete one. Undoubtedly the matter of electoral reform is receiving attention, particularly after the debate in the House of Commons on July 29, but it is improbable that the Cabinet's plan in that respect will be issued much before next winter. Sidky Pasha, as Minister of Finance, has an enormous amount of work to do, since, owing to the partiality of the previous Minister, Makram Ebeid Bey, for political meetings and tours, the amount of work left unattended to when he quitted office was sufficient to keep his successor fully occupied for about one month. An official *communiqué* was issued this week to Government offices calling the officials' attention to the habit of shelving work. Orders were given that a book was to be kept by each office in which were to be registered all documents entering each week and on the Thursday an explanation was to be added in any case when a question had not been dealt with. These books will be inspected regularly by the Cabinet's secretariat.

Miss Amy Johnson in Egypt.

Miss Amy Johnson arrived in Egypt on July 29 on her way home from Australia to London. The famous airwoman was expected to land at Suez last Sunday, and a party of enthusiasts went down to meet her. When Miss Johnson saw Suez, however, she resolutely refused to land, and went on to Port Said. She eventually arrived in Cairo on Monday afternoon. A large crowd assembled at Cairo station to greet her, and a representative of *Al Mokattam* presented her with a magnificent bouquet on behalf of the Arabic Press. Miss Johnson attended few receptions in Cairo, as she had not fully recovered either from her reception in Australia or from her sea voyage, during which very bad monsoons had been encountered. She did, however, dine at the Gezireh Sporting Club as the guest of the committee. Yesterday morning she flew from Cairo to Alexandria, and in the evening was entertained to dinner by the Rotary Club of Alexandria, at the Casino San Stefano. In reply to a few words of welcome, Miss Johnson made a most admirable little speech. To-day she was entertained to luncheon by the Egyptian Government and was presented with a gold medal on behalf of King Fuad. In the afternoon the High Commissioner gave a tea party in her honour in the lovely Antoniades Gardens. To-morrow morning at 5 a.m. Miss Amy Johnson will leave by the Imperial Airways liner, arriving in London at the same time as this letter, on Monday evening.

Humid Weather.

The weather in Alexandria during the past week has been almost unbearable owing to the extreme humidity. Many people who regularly come to Alexandria from Cairo especially for the summer are expressing their intention of staying in Cairo next year. They say that the dry heat of Cairo, if a little more intense, is much preferable to the dampness in this city, despite the attractions offered by the sea.

THE KURDS OF IRAQ.

The following is a copy of a telegram, dated July 26, sent to the Secretary of the League of Nations at Geneva, to the Colonial Secretary in London, to the High Commissioner and Prime Minister in Baghdad, and to the Mutasarrif and Administrative Inspector in Sulaimaniya:—

"In order to maintain a sound and permanent brotherhood between Arabs and Kurds the latter, on all occasions, and ever since they consented to live with (Iraq) have demanded fulfilment of their national rights, which were admitted by League of Nations, but in no case were enforced. In connexion with the new Treaty we demanded an Autonomous Régime from the Arabs. Regrettably it was understood that the administrative and executive officials of Kurdish districts, the majority of whom are Arabs, began to press and intimidate the Kurds so as to disclaim their legitimate rights. Judging from the behaviour of officials of the Arab Government at a time when the Mandate still exists, we should think that the present administration will be worse than that of Turks if Mandate is ended. The treatment of Arab officials is in no way better than the actions of Turks against Kurds, in past and present times—which treatment resulted in hostility and eternal separation of Kurds from them. In view of the facts mentioned above, the final and definite decision of Kurds is to demand formation of a Kurdish Government under supervision of League of Nations. We beg assistance and realisation of our legal ideals."—Signed:—Azmi Beg Baban, Hama Agha Aurahman Agha, Shaikh Qadir Hafid, Ramzi Effendi, Izzat Beg Uthman Pasha, Hama Salih Beg, Faiq Beg Baban, Abdulrahman Agha Ahmed Pasha, Majid Eff. Haji Rasul Agha, Tofiq Qazzaz.

The Hungarian-Roumanian negotiations for a commercial treaty, which were adjourned some weeks ago, were resumed on July 31 in Budapest.

Sarajoglou Shukry Bey, Turkish Minister of Finance, left Ankara on July 31 for Europe. He is meeting M. Charles Rist, the French Financial expert, in Switzerland. The latter, at the request of the Turkish Government, has been examining the financial and economic state of the country.

The members of the Yugoslav delegation to the Conference of Sinaia, M. Dimitrovitch, Minister of Commerce, M. Shibenik, Minister of Agriculture, and MM. Kumanudi and Frangesh, Ministers without Portfolios, met Roumanian delegates there on July 30 to discuss closer economic collaboration between the two countries.

EGYPTIAN GOVERNMENT.

EGYPTIAN UNIVERSITY, FACULTY OF LAW.

APPLICATIONS are invited for the post of PROFESSOR OF COMMERCIAL LAW from October 1, 1930.

The salary offered is £E1,140 (about £1,168) a year, and the appointment will be on contract for three years and renewable. The language of instruction is English and French.

A Transfer Allowance equal to one month's salary will be paid on arrival at Cairo if the successful applicant is resident in Europe.

Applications, with a statement of qualifications and copies of publications, should be addressed to the Dean of The Faculty of Law, Egyptian University, Giza, Egypt, so as to be received before the 7th September, 1930.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 17.

The Situation in India.

To say what the situation in India now is, it is necessary to go back a little, and to set out history. From the moment when the Viceroy made the announcement of November 1 of last year, there ceased to be any chance of India's being ready to accept the main features of any constitution that the Statutory Commission could be expected to recommend: for from that moment India began to dream of the Round Table Conference meeting, with the deliberate intention of framing a Dominion Status constitution, with safeguards for the period of transition. There was, too, no chance of India's agreeing to the safeguards that any Statutory Commission could be expected to recommend; for when the Indian leaders spoke of safeguards, they had nothing definite in their minds. The safeguards that the Statutory Commission has recommended have all been contumeliously rejected that the Central Government should not immediately be responsible to any legislature; that the defence of the Indian frontiers should be accepted as an Imperial obligation; that the expenditure on the Civil Service and the police should be non-votable; that the relations of the Indian States should not be with the Governor-General-in-Council, but with the Viceroy acting for the Crown. The Statutory Commission has been attacked on the score of all those safeguards. It is, nevertheless, difficult to think of any safeguards that would be such in fact, and not merely according to some polite fiction.

Rallying India.

A further consequence of the November announcement is now surely seen to have been that, if the Viceroy was to rally Indian opinion in favour of a settlement at a Round Table Conference, he must go as near to saying what India was dreaming as constitutional practice made possible. If he did not do that in any speech, we should only be told that the speech did not add anything to the November announcement. What he must say must be this in effect: "Those who have hitherto taken a hostile attitude to the proposed Conference will be persuaded to join with you; you will meet in London, and confer, "with liberty unimpaired by the Report of the Statutory Commission;" you will "reach solutions that both India and Great Britain, and all parties and interests in them, can honourably accept;" and what you agree to "will form the basis of the proposals which His Majesty's Government will submit to Parliament, and which Parliament will accept." In the speech of July 9, the speech that for the moment has gone far to reconcile India, all that is said in other words, or even in those actual words.

The Response.

The *Manchester Guardian* has been reported by telegram as saying: "The Viceroy has implied that the Simon Report will be an important part of the data before the Round Table Conference. . . ." That is not what India has understood. What the speech has encouraged India to say are such things as: "India is in no mood to enter into a discussion as to her fitness and readiness to be self-governing, nor is she willing to have self-government doled out to her by stages." That has just been said by Sir Chimanlal Setalvad, not a Congressman either, mark you, but a Liberal. He said this also: "It would have a tremendous moral effect, and would make the Round Table Conference a great success from the Indian point of view, if the Congress would call off the civil-disobedience movement, and join the Round Table Conference, accepting the assurance given by the Viceroy on behalf of the British Government that the Conference will meet untrammelled by the Simon Report, and that the representatives of India and England may reach a solution that both countries and all parties and interests can honourably accept, and that the agreement arrived at at the Conference will be the basis of the proposals to be laid by His Majesty's Government before Parliament." You see the method? India repeats what the Viceroy has said, but making it just a little stronger. The word untrammelled is stronger than with liberty unimpaired.

The Next Stage.

Another leader will say (it was Sir P. Sivaswami Iyer who said this): "I do not think it is possible for the Viceroy or the British Cabinet to go further at this stage." The Indian leaders have recognised that: it was not possible for the Viceroy to go further on July 9; but they know that, just as they have him with them at this stage, so they can count on having him with them at the next stage and the next. The Viceroy is of a nature confiding and trustful; he is one capable of deep sympathy; as one surrounded by such men as Sir Chimanlal Setalvad, Sir Phiroze Sethna, Sir P. Sivaswami Iyer, it is his nature to wish to please, and that makes him prone to think, and even to feel, as those men do.

The Stark Truth.

The stark truth all the time is something utterly different from the picture of the future in the Viceroy's mind, and in the mind also, one may assume, of the Secretary of State for India. Those men that I have just named, they and their peers, know the Viceroy's nature so well, and how it can be worked on, because their own natures are the same. I have said before that any political group or party in India will always say what is as near as possible to what the extremist party is saying, while retaining some recognisable difference. Mr. Gandhi and Pandit Motilal Nehru know that they can always use the other Indian parties to ask for any definite thing by asking themselves for a little more. So they lead them in just the same way as the Liberals are leading the Viceroy. Therein lies the greatest danger to the peace of India. It is better for Mr. Gandhi to put up Sir Chimanlal Setalvad and the rest to ask for something than to ask for it himself. Sir Chimanlal Setalvad and his party men are sound and honourable men. The statesmen on your side would feel that they could be trusted to work a new constitution for India in the same spirit that the statesment of Great Britain work the British Constitution. But the conspirators in India are determined that they never shall work it; they themselves are going to have the working of it. The conspirators will be in hiding in gaol, while the men who look and sound so trustworthy are asking in London what the conspirators put them up to ask for; to wit, by first asking themselves for a little more. When the delegates to the Round Table Conference return from London, bringing their sheaves, and hoping to play their parts in a self-governing India, the conspirators, now released from gaol, will thrust them aside. You need have no doubt that that is what is intended.

"Saying the Next Nearest Thing."

That it is true that Mr. Gandhi can always count on the other parties saying the next nearest thing to whatever the Congress has said, is illustrated by another passage in Sir Shimanlal Setalvad's speech: "While the Liberal party has openly and consistently declared its disapproval of the civil-disobedience movement, as calculated to prejudice the best interests of the country, on the main issue of the right of India to self-government, to be mistress in her own house, there is no difference between ourselves and the Congress. Indeed, on that main and vital issue there is no difference among all sections of the people—

Hindus, Muslims, Brahmins, non-Brahmins, Sikhs, Depressed Classes, Parsis, Christians, and others. . . . Our difference with the Congress group is as regards the methods by which the objective is to be obtained."

The Round Table Conference.

One's remaining hope might lie in the belief that the Round Table Conference will break down, ending either in a clash between the British delegation and the Indian over the safeguards regarding the Army, foreign relations, and the Indian States, or in a clash between the two sides of the Indian delegation, divided against itself over safeguards for the minorities. There has by this time been hardly the mind of a man in India that has not been visited by the thought that the Round Table Conference will break down. One has said this week: "As regards the London Conference, I am prepared to grant that it may break down, that our hopes may be shattered, . . ." Or take this: "None of us can be fettered as to the course to be pursued in case the Round Table Conference does not yield such results as we hope for and expect; . . ." This is even more outspoken: "The truth is that the proposal of a London Conference came two years too late. Had such a conference been held before the Nehru Report was prepared, there was an even chance that an agreement on some scheme of self-government might have been reached. But the Nehru Report opened the eyes of the Muhammadans, and they have had two years to think about the blessings or evils of complete self-government from a communal point of view. I have it on the assurance of a leading Muhammadan politician that a very large body of Muhammadans have arrived at the conviction that no 'safeguards' that have any chance of being accepted by their opponents could provide against this eventuality. The Muhammadan objection to 'reserve powers' being vested in the Central Government, and not in the Provincial Governments, is based on the belief expressed above."

"Hindu Rule."

The writer that I have just been quoting has this at the end of his article: "If instead of seeking a monopoly of government, the Hindu politicians would strive for a constitution which would give the Muhammadans the status of partners in the Government, it should not be difficult to reach agreement on a constitution far in advance of the Simon proposals, which both communities repudiate. But this view found no support in the All-Parties Committee, for their memorandum says, 'The Committee did not favour any fixation of proportion of the Muslim community's representation in the Cabinets.' There can be little doubt that without some agreed form of constitution, neither the Hindus nor the Muhammadans have any chance of getting that freedom from outside control that would put them in the position of a Dominion; and unless they both moderate their claims, it does not need the gift of prophecy to foretell what the outcome of the London Conference will be."

The History of the Movement.

An Indian has already written a brief "history" of these days. I should like to quote this for its truth and picturesqueness: "A fatality seems to mark the policy of the Government. And the searchers after historical tragedies may derive what satisfaction they can from noting that the Viceroy is personally perhaps the greatest conciliatory force we now have in the country. By some extraordinary obliquity of outlook the Government allowed the Mahatma a far longer start than he really needed; for by all the adroit arts of publicity of which he is so great a master, the Mahatma had by his letters, his interviews, and the slow, painful trudging along the dusty roads of Gujarat marshalled all the discontented and economically backward elements behind him. And by the time the Government took action against him, the country was really ablaze, and the immurement of a leader hardly mattered."

THE FRANCHISE IN INDIA.

By P. R. Cadell, C.S.I., C.I.E.

The main object of all electoral reform in India should be to obtain a government broad based upon the people's will, and the recognised method of ascertaining that will is by the casting of votes, though it may be observed that such voting is entirely western in its origin. The Montagu-Chelmsford Report laid down the proper democratic principle that the franchise should be as broad as possible, and the Franchise Committee did their utmost to follow their instructions. Yet they could enfranchise six and a half millions only, or less than three per cent. of the population. Even the small proportion of voters thus obtained was unsatisfactory in its constitution. In the first place the majority of the voters were illiterate. The banner of each candidate bore a strange device, and the voters were, in the place of supporting principles or even individuals, adjured to cast their suffrages for the umbrella or for the elephant.

The distribution of votes was, moreover, singularly uneven. The depressed classes in Madras, numbering over one-seventh of the population, contribute about one-twenty-fourth of the voters; the Brahmin and the Bania in the Central Provinces have individually one hundred times the voting power of the Mahar. The constituencies were equally unsatisfactory. It was possible for a candidate to seek to represent an electorate of three million people, or an area of seven thousand square miles. It is generally agreed, and the Statutory Commissioners concur in the view, that the present franchise is too limited to justify any claim that a Government founded upon it can be said to be representative. Yet such are the difficulties of extending it that out of the eight Provincial Governments four are unanimously, and the other four by a majority, against any increase in the number of voters; and most members of the Provincial Committees are of the same opinion.

The Nehru Report, indeed, provides for immediate adult suffrage, but, like several other of its proposals, this does not appear intended for practical adoption. It would mean one hundred millions of voters, nearly 90 per cent. illiterate, and without any machinery for recording of votes or maintaining electoral lists. The members of the Simon Commission, impressed by the difficulty of the problem, can only suggest the appointment of a Franchise Committee, who should endeavour to bring the number of voters to ten per cent. of the population, thus more than trebling the present figure, and should also endeavour to alter the qualifications so as to bring the voting ratio into a closer approximation to the population ratio, without, however, laying down different grounds of qualification for the different communities. The difficulties of this task are obvious, and it would seem possible to suggest a method, simpler and more consistent with the customs of the East.

The Commission has recommended that the Federal Assembly should be chosen by electoral colleges, and it would seem possible to apply something of the same principle to the Legislative Councils. From time immemorial questions of local interest have been decided in India by village or by caste panchayets. It would seem possible, at least in rural constituencies, to allot votes to communities, and to allow these communities to decide among themselves how the votes should be cast. This would avoid the cost and difficulty of maintaining registers and of recording the votes of millions of electors; it would also avoid the difficulties of canvassing, a task particularly repugnant to Indian candidates of good position. Finally, it would greatly reduce the facilities for corruption. It would be much more difficult to bribe with hard cash a community than individual members of it. A legislative body elected by communities would certainly be more truly representative than one chosen by the votes of illiterate and rural individuals.

REPRESENTATION AT THE ROUND TABLE CONFERENCE.

As foreshadowed in THE NEAR EAST AND INDIA, all the three political parties will be represented on the British delegation to the forthcoming Round Table Conference. An announcement to that effect was made by the Prime Minister in the House of Commons on July 29, in reply to a question by Mr. Baldwin. In view of the importance of the issues involved in the Government's decision, the text of Mr. Ramsay MacDonald's reply must be quoted in full.

"The House," Mr. MacDonald said, "will remember that the suggestion of a Conference was first made in a letter addressed to me by the Chairman of the Indian Statutory Commission on October 1. He suggested that 'in this Conference H.M. Government would meet both representatives of British India and representatives of the States.'

"H.M. Government have been considering how, without changing the character of the Conference, as indicated in this letter, it can be used so as to give an opportunity to the representatives of India and this Parliament for exchanging and discussing views on the problems with which they are dealing, and for understanding each other, and H.M. Government are impressed by the advantages which would result from the presence in the Conference of representatives of the other parties in Parliament. Thus we believe that difficulties and differences will be removed, and that the legislation to be undertaken here will be facilitated. For these reasons H.M. Government propose to invite the leaders or the other two parties to nominate representatives to attend the Conference from both Houses.

"But I must make it clear that H.M. Government cannot throw off their constitutional authority, and must retain complete freedom in regard to the proposals which they will subsequently lay before Parliament, as the outcome of the Conference, to advance the purpose announced by the Viceroy after consultation with H.M. Government."

In reply to a series of supplementary questions the Prime Minister indicated that three or four members would probably be selected from each of the Opposition parties and that they would enjoy exactly the same status and facilities as the other delegates. The question of the separate representation of the Statutory Commission, in view of its Parliamentary nature, was receiving consideration, Mr. MacDonald added, but the Government were provisionally of opinion that it would be a great mistake to have the Commission represented by delegates. The suggestion of Sir Austen Chamberlain that the Chairman of the Commission (Sir John Simon) should be invited to represent his colleagues, with the consent of all parties, in view of the fact that the Indian Central Committee would, no doubt, be represented on the Indian delegation was understood, however, to be receiving attention. The Government was in communication with the Viceroy on the whole subject and further discussion at that juncture was undesirable.

The Government, the Prime Minister concluded, had taken into serious consideration the probable serious reaction which the announcement would have upon Indian nationalist opinion, but believed that it was for the good of India, as well as for their own good, that the discussion which would take place at the Conference should be "very full and representative," and that the Government should have the benefit of listening to the most thorough threshing out of all the problems that would arise and would have to be dealt with later by legislation.

A similar statement in the House of Lords was made the occasion for an important declaration of Conservative and Liberal policy. Both Lord Salisbury and Lord Reading, speaking on behalf of their respective parties, emphasised that, if any settlement which the Conference may reach is to possess the element of durability, it must be the outcome not of a party, but of a national, agreement. Both accepted the invitation extended to the Opposition to participate in the Conference and were agreed in interpreting it as according freedom to submit plans of their own. At the same time they were also unanimous in holding that the Report, which represented "the greatest constructive contribution which has yet been made towards the carrying out of the policy laid down and agreed to by all parties in this country in August, 1917," must claim the chief attention of the Conference. Any alternative proposals must satisfy the same test to which the Commission had voluntarily subjected their own proposals—namely their practical applicability in the special circumstances of India. Lord Reading added that the Report had been intended to advise and not to decide, and was not, therefore, sacrosanct, although it must carry the greatest weight. He also openly regretted the Government's unwillingness to invite representatives of the Commission to the Conference—a point to which Lord Salisbury made no reference.

The subsequent debate in the same Chamber on Lord Burnham's motion calling for a more explicit assurance that the Report "will form the main subject of consideration and discussion at the Conference, on the ground that the Viceroy's speech of July 9 had completely mystified British and Indian opinion" proved somewhat in the nature of an anti-climax. The suggestion that the Conference would not confine itself to the Report was, Lord Burnham thought, a mistake. What other agenda could the Conference have, if it was to produce the necessary concrete propositions? The mover was on much surer ground when he suggested that the British delegation should number at least twelve members, but it was not easy to see how the question fulfilled his declared purpose, namely, "to clarify a situation that had become dangerously opaque and complicated."

Lord Russell evidently regarded it as the reverse of helpful. While promising to consider the number of the delegation in the light of Lord Burnham's warning he saw no necessity of prefacing the Conference with debates in Parliament on the ground that the latter could always pronounce on the Report of the Conference, which would contain suggestions, but not decisions. He could, however, make it clear that the tendency to ignore the Report was not shared by the Government, which on the other hand could not bind the Conference any more than the Conference could bind Parliament. He therefore deplored suggestions either that the Report would be ignored or that it would form the only basis of discussion at the Conference. Lord Peel, the only other speaker, urged that Sir John Simon should be appointed a delegate, but his warm acceptance of the remainder of the Government's programme showed that, as Lord Salisbury and Lord Reading had earlier indicated, the parties are unanimous on the main issues. The following day the Prime Minister announced that the Government, after exhaustive consideration, in consultation with the Government of India, had decided not to enlarge the British membership at the Conference, but that the most expert and well-informed advice would be available to the delegates. Sir John Simon having now acquiesced, albeit somewhat reluctantly, in the decision the personnel of the British delegation will be awaited with interest.

ROYAL COMMISSION ON LABOUR IN INDIA.

The Royal Commission on Labour in India, under the Chairmanship of Mr. J. H. Whitley, expects to complete its sittings in London by the middle of August, 1930. According to present arrangements the Commission will leave England at the end of September next, travelling to Rangoon via Colombo and spend a few days *en route* in a study of the working of recent legislation in the tea estates of Ceylon.

Some three weeks will be devoted to touring and taking evidence in Burma, and the Commission anticipate that about the middle of November they will reach Delhi, where they intend to write their report. The engagements of the Chairman and others of the members make it necessary that the Commission should complete its work in time to allow those members who are returning to England to leave by the mail steamer of March 21, 1931.

PERSONAL AND GENERAL

TO-DAY

August 7, 1930 (New Style).
July 25, 1930 (Old Style).
Rabia I. 12, 1349 A.H., of the Muslim Calendar.
Ab 13, 5690, of the Jewish Calendar.
Amordad 16, 1309, of the Persian Calendar.

Colonel Weston Jarvis has been elected Chairman of the Royal Empire Society.

Lady Irwin, wife of the Viceroy, will arrive in London on August 9 from India.

The Yuvaraja of Mysore arrived at Marseilles from Bombay on August 1 in the P. and O. s.s. Naldera.

The Ranee of Pudukota sailed in the Union-Castle liner Armadale Castle on August 1 from Southampton for Madeira.

Lord and Lady Sydenham left 101, Onslow Square on July 31 for The Priory, Lamberhurst, where they will spend the summer.

Sir Herbert Samuel and Lady Samuel left London at the end of last week for the Western Mediterranean. They will return to England towards the end of August.

Sir John Simon left Southampton on August 5 for Canada and the United States, accompanied by Lady Simon and Mr. Gilbert Simon.

Mohamed Pasha Mahmoud, formerly Prime Minister of Egypt, who has recently undergone an operation, arrived in England last week, and will make a short stay in London.

The Marquis of Reading, the Earl of Inchcape, and Sir Ronald and Lady Storrs had the honour of dining with the King and Queen on board the Royal yacht at Cowes on August 1.

Dr. V. V. Tilea, head of the Roumanian Delegation which has been in London to negotiate a commercial treaty with Great Britain, leaves this week for Karlsbad, where he will stay for two weeks before returning to Roumania.

King Faisal was expected to leave London yesterday (August 6). He is proceeding to Berne to undergo a cure. Afterwards he will visit Berlin, where he will be received by President von Hindenburg. The King will then continue his journey to Baghdad early in September.

The King has authorised the wearing of the following foreign decorations:—

Sir John Loader Maffey, K.C.V.O.,, C.S.I., C.I.E., Governor-General of the Sudan, the Grand Cordon of the Order of the Ismail, conferred by the King of Egypt.

Mr. Reginald William Knollys, the Insignia of the Third Class of the Order of the Nile, conferred by the King of Egypt.

Mr. Richard Dunston John Scott, A.M.I.C.E., the Insignia of the Fifth Class of the Order of the Brilliant Star of Zanzibar, conferred by the Sultan.

Colonel W. E. Hume-Spry, D.S.O., has been appointed Inspector of Indian A.S.C. services in the Northern Area in place of Brigadier I. M. C. Poole, D.S.O.

Brigadier I. M. C. Poole, D.S.O., has been appointed Deputy Director of Supplies and Transport at Army Headquarters and officiating director.

Major W. F. Haynes has assumed command of the 3rd Battalion, 14th Punjab Regiment.

Lieutenant-Colonel E. M. Hobday has assumed command of the 10th Battalion, 17th Dogra Regiment.

Colonel J. Morrison, Deputy Director of Artillery, has been granted eight months' leave and furlough from July 29.

NEWS IN BRIEF.

Mr. William M. Jardine, ex-Secretary of State for Agriculture, has been appointed United States Minister to Egypt in succession to the Hon. Franklin Mott Gunther, who has been transferred to Ecuador.

M. Venizelos left Athens on July 25 for a French watering-place, whence he will go to Geneva in September. M. Michalakopoulos, Foreign Minister, will act as Prime Minister during his absence.

His Majesty the King has been graciously pleased to allow the forthcoming Indian Round Table Conference to take place in St. James's Palace.

Major T. E. Coggon, R.A.M.C., who died suddenly at the military hospital offices at Gibraltar on July 24 from heart disease, served during the Great War on the Western Front, in Macedonia and the Balkans, in Gallipoli and in Egypt.

The Air Ministry announced that as the result of an accident at Khormaksar, Aden, to a Fairey III F. machine of No. 8 (Bomber) Squadron, Khormaksar, on July 26, Flying Officer Geoffrey Norman Pilcher, the pilot of the aircraft, and No. 507,505 Leading Aircraftsman Robert Angus Laidler were killed.

M. Marko Trifkovitch, President of the Central Committee of the Serb Radical Party, died in Belgrade on July 26. He was born in 1864, and studied law at Belgrade University. He was a Judge until 1906, when he was first elected Deputy of the Skupshtina. In the same year he was made a Minister, and thereafter held office almost continuously in various Cabinets. During the retreat of the Serbian Army, M. Trifkovitch seceded from Pashitch, but soon rejoined him, and became one of his most faithful supporters. After the War he was Minister in various Cabinet until 1925, when he was elected Speaker of the Skupshtina. In 1927, during the elections conducted by M. Voukitchevitch, he was not re-elected.

THE WEEK AT HOME

London, Tuesday Morning.

Unemployment.

The figures for unemployment march with inexorable sadness towards the predicted number of two millions. At the moment the figure is only 27,000 short of that enormous number—a total far higher than that reached even in the dark days of 1926, when we had the coal stoppage. Obviously the causes of such a depression must be very deep.

It is all very well for politicians to blame it on the Government, though no doubt there is a certain lack of confidence among some employers. The causes of this depression are apparently world-wide, for even in closely protected countries similar symptoms can be seen. Whether we have reached the bottom of this curve cannot yet be told, though many business men appear to think that things cannot get any worse.

That this unemployment must react on the Government's chances of securing a majority at the next election, unless it is soon decreased, is obvious, and one has found in Conservative quarters a confident feeling that the next Administration will not be a Labour one. But the Conservatives are really all at sixes and sevens, and no impartial observer can say that the battle for Protection is really won. The whole position is far too fluid for dogmatic comment.

The Parliamentary Session.

There seems to be general agreement, even among those favourably disposed towards the Government, that at the end of the Parliamentary session, last Friday, the Administration found itself not nearly so strong as at the beginning. Earlier on, of course, the Government won a great name for itself over its handling of foreign affairs, and in that particular sphere, at any rate, it cannot be said to have lost ground; but more and more the shadow of unemployment has been casting itself over men's judgment, and it is on that account that the prestige of the Government has declined.

In other words, the fears (among certain people) that the Government would administer badly have been unfulfilled, but equally have the fears (among other people) that the Government would legislate well. What is there to show? A Coal Bill, admired by no one, a Pensions Bill and an Unemployment Insurance Bill (which aim at charity rather than cure), a Slum Clearance Bill, a Land Drainage Bill, and a Traffic Bill. It is a surprisingly poor list, and no one can wonder at the discontent, sometimes latent, sometimes openly expressed, in the Labour Party itself.

That there are excuses and explanations for not having grappled boldly with the various problems is admitted. The most amazing—because it is set out in the greatest Liberal journal—is to the effect that the failure of the Government is the failure of Parliament. There must, it is argued, be something substituted for the "antique procedure," something that can really cope with the vastly increased volume of business that has to be done.

Conservatives' Troubles.

At last the official Conservatives have come boldly out against the Empire Free Traders, who, indeed, long ago came out boldly against the Conservatives. Apparently the decision of the Empire Free Traders to run a candidate against Mr. Baldwin himself at Bewdley was the last straw, and his criticism of the lack of intelligence manifested in the Empire Free Traders' programme was sharp and refreshing. One presumes that the official Conservatives have now made up their mind that, speaking generally, the Empire Crusade has made little headway, and that these fellows who would "stab the party in the back" can now safely be told to go to the devil.

Yet it cannot be denied that there is a sneaking admiration for the policy, and the energy with which it is being conducted, of Lord Beaverbrook—just as there is a certain dismay at the cautious policy of Mr. Baldwin. The Conservatives, as I read the other day, would really like to have Mr. Baldwin (who is personally loved) without his policy, and the Beaverbrook policy without his lordship!

A Parliamentary Scandal.

The scandal which ended in the censure of Mr. Sandham, who had publicly imputed to certain, unspecified members of the Labour Party drunkenness and corruption, did not appear to be taken very seriously by the country at large. The high talk about the "honour of the House" and the rest of it was, of course, very natural, but surely a little quaint when one thinks of the Foxes and the Pitts, the Marconi scandal, and so on.

Either no notice should have been taken of what turned out to be a rather irresponsible statement, or else pettifogging precedent should have been forgone and the affair probed to the bottom. One does not imagine that anything very sensational would have been revealed. As the matter stands, certain curious and credulous people may be imagining that things are far worse than they are.

All that is proved is—what was known perfectly well before—that certain members of the Labour Party are far too fond of imputing evil to others, without giving those others the chance to justify or clear themselves. Not, of course, that the affair can be made a party one, for drunkenness and corruption are temptations confined to (and in the past indulged by) no one particular party.

The Holiday.

The superficial observer might have judged from the way in which the Bank Holiday week-end was spent that England's prosperity is as great as ever. For everyone was bent on pleasure; all public vehicles seemed full, the roads were one incessant stream of traffic, and the railways, I should imagine, did "record" business.

This spectacle, however, was illusory. For it is perfectly evident that this year much less money will have been spent on holiday-making, for the simple reason that it does not exist. We are told, very rightly, not to be pessimistic about the condition of the country, that all this talk about our decline is defeatist and unworthy. So it is; but no sensible man can blind himself to the immediate position, which is really unhappy.

It was probably the shadow of unemployment, of bad business, of uncertain future, and so on, which made people fling themselves into this holiday with even more zest than usual: they did not know whether it might not be their last for some time.

THE PERSIAN ARMY.

(From a Correspondent.)

In 1925 a general conscription law was passed by the Persian Parliament and, by its provisions, every male Persian citizen over the age of 21 becomes liable to perform two years' military service in the army with seventeen years' subsequent service in the reserves. In practice many exemptions are granted, especially to students, and, as yet, it has been found impossible to introduce conscription among the nomadic tribes. This law was the foundation upon which the Shah Riza has built up the present new-model army, which is entirely of his creation and which is superior in discipline, training and armament, to anything that has preceded it in the last half-century or more.

The present régime in Persia is a military autocracy modified by a form of parliamentary government; but, whereas the power of the military elements is steadily increasing, that of the Parliament is steadily diminishing. The Shah retains in his own hands a supreme and effective personal control over the Ministry of War and the army, in which he performs the duties of Commander-in-Chief and Army Council. The army in general and the officers in particular occupy a superior and privileged position. A good illustration of this has recently been supplied by the new Income Tax law under the provisions of which the incomes of the military officers have been exempted from all such taxation. The Shah has gathered round him a corps of officers whose fortunes and careers are entirely dependent upon his will. At the head of this is to be found a small number of senior officers, some of whom are engaged in civil administration, who certainly constitute the most powerful and ambitious group in Persia to-day.

At present, the Persian army is organised for internal security only and the general training is based on French methods. The chief and ever-present military question lies in the control of the various nomadic tribes, who number approximately three million persons and are to be found in all the wilder mountainous and desert tracts. These tribes, almost without exception, have been consistently hostile to the Pahlevi rule on account of the increasing control which the Central Government is exercising over them and the consequent gradual diminution of their former independent or semi-independent status. They possess definite military advantages over the plainsmen and townsmen who fill the ranks of the regular army in their perfect knowledge of the locality, their hardiness and stamina, their good marksmanship, their mobility and their ability to take cover. On the other hand, the present Central Government is in a stronger position in respect to the tribes than any Government in the past, for the following reasons. Gun-running is becoming every year more and more difficult, consequently all the tribes are short of arms and ammunition; the construction and yearly extension of a system of main roads together with the use of motor transport have greatly facilitated military operations; the introduction of such modern means of warfare as armoured cars, machine-guns, and aeroplanes is largely helping to break the resistance of the tribesmen. As in the past, the various tribal groups show no signs of taking combined and concerted action against the Government.

The main military difficulties may be briefly summarised as follows. the intense ruggedness of much of the tribal country, the lack of accurate maps, the want of cross-roads passable for wheeled traffic and, with the single exception of Khorramabad in Luristan, the absence of large cantonments situated in the heart of tribal country. The most striking contribution towards the subjugation and pacification of the tribes has been the construction of the Dizful-Khorramabad road, which runs right through the centre of Luristan. Extensive stretches along this road are strongly fortified with block-houses, and it has had a remarkable effect in checking the activities of the Lur tribes who, from time immemorial, have always been a thorn in the flesh of the Central Government in Persia.

Since the beginning of the present reign five separate military operations against the tribes have been undertaken, and a fair measure of success has been achieved in each case. Whenever the opportunity occurred disarmament has been carried out and, during the last twelve months, several thousand families belonging to the more refractory Lur elements have been deported from Luristan and settled on the land in different parts of central Persia. Various measures of control have also been introduced, though it may be doubted whether the methods employed were always of the wisest, and a number of the leading tribal chiefs are being detained as hostages in Teheran. When the present scheme of re-arming the Persian army has been brought into effect, it is possible that the next few years will see the end of all serious tribal troubles; but, it is probable that the road system will have to be considerably extended before this object can be completely achieved.

The total strength of the army may be assessed at 38,000 men. The three main Divisions are stationed at Teheran, Tabriz, and Meshed; of these, the Teheran Division is the most important and is under the direct control of the Ministry of War. There are also five independent brigades and a special Field Force in Luristan, with headquarters at Khorramabad. The Air Force possesses some thirty machines of which a third are in good flying condition; nearly all the modern machines and equipment are of Russian manufacture. Junkers Luftverkehr Company, which holds a monopoly concession for civil aviation in Persia, is under contract to organise an aviation school in Teheran and negotiations are proceeding; but, as yet, no agreement has been arrived at. Aeroplanes have been successfully used in operations against the tribes. The strength of the Amnieh or Road-guards is being steadily increased. This corps is mostly recruited from old soldiers and is used for patrolling roads and guarding bridges and buildings.

Considering local conditions in Persia, it would appear that the two most important branches of military training are hill-warfare and mounted infantry work. But, although the army is certainly hard-worked on the barrack-squares and much attention is being paid to schools for cadets and non-commissioned officers, there are few outward and visible signs of higher specialised training, and manœuvres on a large scale are almost unknown. The main deficiencies visible to the ordinary observer lie in the technical and auxiliary services. No corps of military engineers exists, and the want of this is particularly felt during all tribal operations, because the tribesmen invariably commence hostilities nowadays by breaking down all bridges and blocking the roads, where they run through passes and defiles, with huge stones. Medical and sanitary services appear to be provided on a very meagre scale. But, undoubtedly, the most serious deficiency is to be found in the almost complete lack of military motor transport. This necessitates the constant arbitrary seizure of motor vehicles belonging to commercial companies and private individuals. In Luristan this practice has been carried to such extremes that commercial traffic is often paralyzed for long periods thereby.

During the past two years much attention has been paid to the question of armament, and in March, 1929, a contract of over £1,000,000, for the purchase of rifles, machine-guns, artillery, ammunition, and other military material, was signed by the Persian Government and

CENTRAL ASIAN SOCIETY
(in which is incorporated The Persia Society.)
Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published.
The subscription of £1 per annum entitles members to a copy of each issue of the Journal, tickets for all meetings, and the loan of books from the library.
Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W.1

Digitized by Google

the Brunn-Skoda armament factories in Czechoslovakia. With the material supplied under this contract it is proposed to re-arm the infantry with one pattern of rifle, and to increase the number of machine-guns and mountain batteries. The funds for this non-recurring expenditure are being borrowed by the Ministry of War from the reserves held by the Persian Government in Europe, which represent several years' accumulations of the Royalties paid by the Anglo-Persian Oil Company. In Persia, the arsenal at Teheran is in active operation and, at a point about twenty miles south-east of the capital, an extensive small-arms and explosives factory covering several acres of ground is being erected. Both these establishments are being controlled by a German technical staff.

During the past five years the annual cost of the army and roads-guards has never been less than 39 per cent. of the total Budget expenditure, and in some years considerably more than this. In the current year 1309 (March 21, 1930, to March 20, 1931), the Budget provision for the army and road-guards amounts to 138,684,600 krans or approximately £2,311,410, and this sum includes one item of 25,000,000 krans for arsenals and aviation, and another item of 673,000 krans for the expenses of the military students who are undergoing training in France. This total amount represents 39.3 per cent. of the national expenditure for the year in question. Taking into consideration the strength of the present conscript army in Persia and the quality and scale of its armament and equipment, it is somewhat difficult to understand why it should cost such a formidable sum, and it is, perhaps, open to doubt whether the nation is getting full value for the money thus expended.

The Dowager Queen Marie of Roumania, the Queen of Yugoslavia, and Princess Ileana of Roumania arrived last week at the Hotel Tirol, Innsbruck.

The first Turkish Minister to Brazil, Ali Bey, formally presented his credentials on July 30. Turkey has hitherto had no Diplomatic Representative in Brazil.

Karakhan, Second Deputy Commissar of the Soviet Union, and the Turkish representative in Moscow on July 29 exchanged ratifications of the protocol dated December, 1929, prolonging the Turkish-Soviet agreement of 1925.

A Note to Persia pointing out that Kurds are still raiding from Persia into Turkish territory, and that in these circumstances Turkish troops will be ordered, if necessary, to advance into Persia in their pursuit, has been drafted by the Turkish Government.

An Imperial Airways liner carrying Indian mails, which left Croydon on July 26, made a forced landing in the desert on July 29 five miles outside Cairo. Nobody was hurt, and the 'plane and mails were undamaged. A relief 'plane at Cairo took the mails on again within half-an-hour.

During excavations for the erection of a refugee settlement in Thebes, Greece, on July 30 the ruins of a house of great archæological interest were discovered. This house is believed to be one of those burned down by Alexander the Great's army in 336 B.C. (i.e., 2,266 years ago) in revenge for the hostility shown to him by the Thebans during his attempt to force Greece to follow in his great expedition for the conquest of Asia.

Colonel Sir George Samuel Abercromby Harvey, K.B.E., C.M.G. (late 42nd Royal Highlanders), of Harrington Gardens, S.W., and of Cramond House, Mid-Lothian, who saw service in the Sudan War, afterwards Commandant of Police successively at Alexandria and Cairo, and during the Great War Provost-Marshal for Cairo and Upper and Middle Egypt, who died on April 11, aged 75, left unsettled personal estate in Great Britain valued for probate at £875.

Commander Reynolds, who toured various parts of the British Empire last year to enrol new members of the Royal Empire Society, will visit Ceylon, Egypt, the Sudan, and Palestine on a similar mission in the coming winter. Early next year he will proceed to Buenos Aires to enrol members of the British communities in South America who attend the British Empire Exhibition, which is to be held there in March and April. He will later cross the Andes, visit British communities in the Pacific Coast cities, and on the return journey will call at the West Indian Islands.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

CANCER RESEARCH.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—There is now staying in London Dr. Evagoras Georgiou (of the Athens and Berlin Universities), the distinguished doctor and biological researcher of Cyprus, whose name has been identified for the last two years with an original theory on the "pineal gland" in connexion with the nature and pathogeny of cancers. This theory, the outcome of long research work and successful experimentation on white mice, engaged the earnest attention of the highest scientific circles in Berlin, where some time ago Dr. Georgiou made a communication before the Medizinischen Gesellschaft, following an introduction by Prof. Hahn, the Director of the Berlin Institute of Microbiology and Hygiene. At the same time Prof. Blumenthal, the Director of the Berlin Cancer Research Institute, referred to the theory of the Cyprian doctor as valuable (*wertvoll*) and had the communication published in the official Journal of the Institute, the "Zeitschrift für Krebsforschung" (28, Band. 6. Heft. 1929).

Dr. Georgiou was persistently called upon to carry out his further scientific work in Berlin, but, coming from Cyprus and well aware of the co-ordinated efforts of the British Empire against the disease, he thought it advisable to connect the further stages of his work with this great scientific centre.

It is to be hoped that the various cancer research laboratories in the British Metropolis will see their way to give the theory of the Cyprus scientist a thorough scope of experimentation and test. A co-ordinated scientific effort aiming at the conquest of a great plague of humanity has, as a rule, no predetermined plans or lines of a successful attack, nor does it hold, or should hold, *a priori*, any preferential attitude in favour of certain particular views as against others. Experimental success is the only criterion of truth and the only test of value. Any sustained theory, therefore, throwing new light or offering new standpoint of view on the object in question should be a welcome contribution to the general effort, in the interests of suffering humanity.

It is a happy coincidence that Sir Ronald Storrs, Governor of Cyprus, is now in London. He is personally acquainted with the Cypriot researcher and he is understood to have taken a keen interest in the latter's work. It may be taken for granted, therefore, that he will do all that his exalted position and scientific zeal empower him to do for putting into the scales of test a scientific contribution not only striking in its conception and solicitous of the most earnest attention on account of the results which it has already yielded, but also fraught with important inferences as to the possible explanation of scientific phenomena yet unexplained and unaccounted for.

There is every scientific reason to believe that the success which crowned Dr. Georgiou's experiments on white mice will also attend experiments on human beings.—I am, etc.

C. S. HOURMOUZIOS.

TAXATION IN PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In his letter published in your issue of July 31, Mr. Ongley, writing with reference to the new Urban Property Tax in Palestine, states that "the tax has been fixed at 10 per cent. of the net annual value, *which is equivalent to 10 per cent. of the capital value.*" I do not quite understand the latter statement. How can 10 per cent. of the net annual value be equivalent to 10 per cent. of the capital value?

I am raising the point in a purely interrogative, and not in any argumentative, spirit.—I am, etc.,

LEONARD STEIN.

30, Palace Court, W.2.

[Owing to an unfortunate printer's error, the symbol for per cent. was confused, in Mr. Ongley's letter, with the symbol for per mille. The word mille, not cent, should have been used in lines 7, 13, 24, and 25. This rectification will answer Mr. Stein's very natural query. The sentence about which he writes should read: "An Ordinance was promulgated in 1928 by which the urban property tax has been fixed at 10 per cent. of the net annual value, which is equivalent to 10 per mille on the capital value, or 6 per mille more than the rate fixed with the consent of the Powers."—ED.]

The battleship Revenge, flagship of Vice-Admiral W. A. Howard Kelly, Second-in-Command in the Mediterranean, on July 30 concluded her visit to Athens, where she had been since July 19. She proceeded thence to rejoin the Queen Elizabeth, flagship of Admiral Sir Ernle Chatfield, Commander-in-Chief, at Spetsai. Between that date and August 8 the ships of the Fleet were to be at various anchorages, the Royal Sovereign at Port Kappari; the Ramillies at Poros Bay; the Royal Oak at Nauplia; the Eagle at Valika Bay; the Sussex and Devonshire at Erissos Bay; the London and Shropshire at Problaka Bay; and the Curacoa, Curlew, and Calypso at Skiathos. The destroyers are also divided up, chiefly between Navarino, Skiathos, and Patras; while the submarines are at Skiathos. Between August 9 and 18 the entire Fleet should be off Argostoli.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Anglo-Roumanian Commercial Treaty.

The new Commercial Treaty between Great Britain and Roumania is due to be signed to-morrow. When the details of this Treaty are available, it will be found, I believe, that Roumania has been at pains to show her friendship for Great Britain in the most practical way possible. In negotiations of this nature it is usual to work on lists of articles of joint interest to the two countries, as exported from one and imported by the other; but under existing conditions the advantage in this respect rests with Great Britain, which has a longer list of goods sent to Roumania than of those received. By availing themselves of the minimum Roumanian tariff on all goods before the Roumanian Government has completed its tally of commercial treaties, British manufacturers and merchants will have a special opportunity of gaining a footing for their goods in the Roumanian market. By the new year a new commercial treaty between Germany and Roumania will be in existence, unless, indeed, the differences of opinion between the two countries on a variety of subjects prevent them from coming to an agreement. This is, however, the less likely, because the value of the Roumanian market is fully appreciated in Germany, and we may expect the German Government to be ready to make considerable concessions, in order not to be handicapped in re-establishing Germany's hold on the economic life of Roumania.

Roumanian Market Potentialities.

In the present condition of our export trade it ought to be an axiom that no market to-day is too small for an organised attempt at exploitation For this reason it would seem to be well worth while for steps to be taken by means of a Commission to examine the potentialities of the Roumanian market. The demand for cotton goods is at least higher in Roumania than in any other Balkan country, and even though it be per head of the population only two-fifths of the demand in Great Britain and France, it is certainly not to be ignored. Moreover, it might well be worth while to explore the possibilities of an exchange of products in kind, between the cotton-goods required by the Roumanian peasant and the cereals which the latter produces. One of Roumania's difficulties is to market her agricultural produce, and although the ultimate basis of exchange must necessarily be a monetary one, it might be found that a system of barter, concentrated in a single clearing organisation, would simplify at least in one direction, Roumania's problem of finding outlets for her harvests, and facilitate the purchase of British manufactured products. A point that is probably not yet fully realised in Great Britain is the thorough-going manner in which the present Roumanian Government is undertaking the economic development of the country. Hitherto Roumania has not made the most of her resources. From now onwards there will be a steady improvement in this direction. Advantage is to be taken of her geographical position so that the communications of the country can be brought into an improved scheme of trans-European traffic, both for passengers and goods. It will be a great misfortune, if British manufacturers hold back from the Roumanian market, owing to ignorance or lack of enterprise.

A Roumano-Yugoslav Agreement.

The first fruits of the negotiations for an economic entente in South-East Europe are an arrangement for co-operation between Yugoslavia and Roumania with regard to wheat, cattle, pigs and other agricultural products exported by the two countries. Offices are to be set up in the two capitals for the collection of surplus produce for export, and the two offices will work together so as to obviate competition. It is proposed to enlarge this dual entente by the inclusion of Czechoslovakia, who, it is suggested shall receive equal amounts of the produce of Yugoslavia and Roumania, and, being an industrial country, will, no doubt, receive a *quid pro quo* in the shape of an undertaking by the two countries to purchase a corresponding amount of manufactured goods. Once this Little Economic Entente is established the way will be open to other neighbouring countries, it is stated, to join the combine. Thus, though by a different road, the same end may be reached that was aimed at in the Polish scheme. It remains to be seen how the other countries will take to the idea which is bound to tie their hands to a very considerable extent. It was clear, however, that some drastic step had to be taken to counteract the effect of the fall in prices.

Palestine Conditions.

One of the features of the past year in Palestine was the revival in tobacco cultivation, the area under the crop being 20,770 dunams, or about three times that of the previous year. Tobacco cultivation in Palestine has been marked by considerable vicissitudes, and Mr. Goldwater points out in his report on economic conditions in the country in 1929, the concluding extracts from which are given this week, that this revival is remarkable in view of the large stocks available at the end of 1928. The present increase in planting is probably more justified, however, than on previous occasions, in view of the steadily increasing production of the tobacco factories in the country. Discussing the industrial position, Mr. Goldwater expresses the view that there is still scope for local industry. He analyses in detail the existing industrial establishments, and shows by means of a table that the

Jewish enterprises have increased from 215 with a capital of £P513,972 in the pre-War period to 898 with a capital of £P1,844,707, while non-Jewish undertakings have increased from 1,021 with a capital of £P543,015 to 1,371 with a capital of £P613,092. These figures show plainly, of course, the extent to which the Jews have put capital into the country, but in other ways besides the establishment of new industries their influence has been important. Thus a much higher standard in agriculture generally has been introduced as a result of their endeavours. Two examples of this may be given. The average crop yield of a dunam in one area under Jewish cultivation is estimated at 100 kilos., while the yield of a dunam under Arab cultivation has been no more than 60 kilos. Then the average annual yield of milk of an Arab cow has been about 700 litres, while that of a pedigree cow in a Jewish settlement is estimated at 3,000 litres. The effect of this higher yield has been to raise the standard of dairy farming among the Arabs, and the average yield of their cows is now put at over three times what it was.

Turkey's Difficulties.

One of the outstanding events of the past year in Turkey was the introduction of the new customs tariff. The chief object of this departure was, of course, to further the Government's designs to develop the growth of industry in the country, but, as Colonel Woods points out in his report on Economic Conditions in Turkey, extracts from which are given elsewhere in this issue, Turkey is primarily an agricultural country, and that being so it follows that efforts to promote industries are likely to take a long time before their object is achieved. One unexpected result of the tariff was to impose on the exchange a further serious strain, which, in conjunction with other factors which have been already referred to in these columns, helped it on its downward path which ultimately led to the crisis witnessed in the present year. Admittedly Turkey has been very unfortunate in the series of bad harvests which have been experienced in succession; she has also been unfortunate in the fact that agriculture, which must in the circumstances remain the chief economic foundation of the country, has not received the attention it deserved on the part of the authorities. Irrigation schemes now under discussion suggest that the lesson of past years has not been lost on Ankara, but it is unfortunately uncertain when it will be possible to carry them out owing to the financial position.

COMMENTATOR.

International trials of tractors and other agricultural machinery are to take place at the Agricultural School at Kragujevatz, Yugoslavia, commencing on October 20. Application to participate in the trials may be made up to September 15.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August 5.

The Stock Markets have shown the same tendencies as those to which we have become accustomed in recent weeks, namely very restricted business and a slight downward trend in prices in most markets, gilt-edged stocks being the only outstanding exception. With holidays in full swing, little change is likely in the absence of any big and unexpected development in the trade situation.

In the monetary sphere the week has been more satisfactory, especially welcome being the improvement of sterling exchange against both the franc and the dollar. At the same time rumours emanate from usually well-informed quarters to the effect that the policy of the American Federal Reserve Board is tending towards maintenance of cheap money even at the cost of considerable gold shipments to this country. This sounds surprising, but, if true, would have a profoundly favourable effect on the monetary position in London.

Railway Dividends.

The poor traffic returns of the first half of the year prepared the public for the lower interim dividends recently announced. There is unfortunately little prospect of improvement during the second half of the year, and the final dividends may be expected to be lower than those of last year. Naturally stocks have fallen to a low level. It is interesting to observe that the decline in the value of railway stocks has been taking place since the amalgamations. Compared with 1923 L.M.S.R. Ordinary has has fallen from £118½ to £38, equivalent to an aggregate fall in stock values of £76 million. Other stocks have not lost value to the same extent but the decline has been quite serious, as in the case of Southern preferred which since 1923 have moved down from £89½ to £69, or L.N.E.R. preferred from £89 to £19. Broadly speaking, the L.N.E.R. and the L.M.S.R., serving the depressed areas are the worst off, while the Great Western, thanks to a better financial position at the time of amalgamation and to the revival of the South Wales coal trade is in a less sorry plight, and so is the Southern because of its suburban electric lines traffic and its command of Continental traffic. One must take a very long view to perceive any large scale improvement in the income of the two north country railways.

Prosperous Breweries.

Despite the very bad state of trade in some parts of the country and the poor state of trade in most, brewery companies for the most part continue to show good trading results. Thus Arthur Guinness and Son and Co., have declared a 15 per cent. final dividend plus 5 per cent. cash bonus, which, with the interim dividend of 15 per cent. paid in March, makes 35 per cent. for the year. The total dividend is therefore maintained on the same level as last year. The accounts this year are not yet available in full, but it is none the less apparent that better profits have been made. The amount placed to reserve at £200,000 is double the allocation of last year; £35,000 is again placed to depreciation account, and £807,438 is carried forward, being £165,079 more than the year before. The indicated profits are £2,474,466, very nearly a record for the company, and there can be little doubt that it was achieved very largely as a result of a vigorous

Digitized by Google

Press and publicity campaign. Another company showing increased profits is Watney, Combe, Reid and Co., which, besides paying a total 20 per cent. dividend, the same as last year, paid an additional one per cent. bonus dividend. Dividends have been going up since 1926 when 17 per cent. was paid. In addition to these national concerns, two provincial brewers—Mitchells and Butler and Threlfalls—have also maintained their dividends. Guinness Ordinary stock returning £6 11s. per cent., and Watney, Combe, Reid deferred shares (on which the yield is £6 6s. per cent.) merit consideration among investments in the brewery industry.

Scottish Banking Developments.

Following the announcement of its alliance with Williams Deacon's, the Lancashire Bank, the Royal Bank of Scotland figured in another interesting piece of banking news last week. This was that it had acquired the business of the Western Branch of the Bank of England, situated in the West-End of London, in which the Royal Bank already had two branches. Both announcements were well-guarded secrets, and both indicate a continuance of the enterprise which the Royal Bank of Scotland has shown in recent years under the management of Sir Alexander Wright. This policy has benefited its stockholders, for, without an impairment of the usual substantial margin of cover for the dividends, the latter have been raised to 17 per cent. from 11 per cent. in 1918-19. The merger with Williams Deacons should prove of tangible benefit to stockholders, for the two banks' operations do not clash, their main interests being in different areas. In view of the depression in the cotton trade, and the pessimism, which, as we suggested last week, is perhaps too prevalent, it is of interest that a Scottish bank should be willing to extend into Lancashire at the present time. Royal Bank of Scotland shares may appear somewhat highly valued, as the immediate return is only about £4 18s. per cent. This high valuation is a result, however, of the steady rise in dividends, coupled with conservative finance, reserves and carry-forward amounting before the development to £2,910,320 compared with a capital of £2,500,000.

The traffic receipts of the Egyptian Delta Ligh Railways for the ten days ended July 10 amounted to £E7,463, making the total from April 1 £E76,507, as against £E79,304 for the corresponding period of the previous twelve months.

All passengers (with certain exceptions) embarking or disembarking at Egyptian ports are now subject to a tax, named "Quay Dues," as follows:—1st class, piastres 50 (10s. 3d.); 2nd class, piastres 20 (4s. 2d.); 3rd class, piastres, 10 (2s. 1d.). The exceptions are:—Diplomatic agents who enjoy Customs franchise, including their wives and families; officers and men of the British Army in Egypt; children under the age of seven years; transit passengers, i.e., those passengers remaining for a period of less than ten days in Egypt; pilgrims travelling in the second-class or in lower classes to the Hijaz and those returning therefrom, and persons who disembark from a ship for the purposes of recreation and return to the same vessel.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

SPECIAL NOTICE. New T.S.S CALIFORNIA, 17,000 Tons, carrying FIRST CLASS and THIRD CABIN passengers, sails from LIVERPOOL Oct. 21, MARSEILLES Oct. 27. All 1st Class state rooms are fitted with Punkah Louvres and with fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.) (D.O.T.)

EGYPT.

Towels, etc.—The Ministry of War and Marine, Cairo, invites tenders for the supply of the following:—36 towels, barber h.p.; 4,244 pairs shoes, red G.S.; 2,025 caps, cotton white. September 10. (D.O.T.)

Vaccine Anti-diphteric.—The Egyptian Department of Public Health invites tenders for the supply of 142,850 dozes of vaccine anti-diphteric (diphtheria anatoxin). September 6. (D.O.T.)

20 H.P. Electric Motor.—The Ministry of Public Works invites tenders for the supply and erection of one 20 H.P. d.c. motor. August 19. (D.O.T.)

Various.—The Egyptian State Railways, Telegraphs and Telephones, invite tenders for lead red genuine, mild steel equal angles, lead covered cables, switchgear, carriage and wagon axles, cast steel axleboxes, carriage and wagon tyres, corded sheep wool, buffers, bolts and nuts, truck weighbridges, felt, tools for telegraphs and telephones, and wires.

Hand Carts.—The Sub-Director-General, Customs Administration, Alexandria, invites tenders for the supply of 20 two-wheeled hand carts and 5 four-wheeled hand carts as standard samples. August 16.

Calculating Machines.—The Central Stationery Stores, Ministry of Finance, Cairo, invites tenders for the supply of calculating machines. August 26.

INDIA.

Electric Lamps.—The Indian Stores Department invites tenders for the supply of electric lamps during the year 1930-31. August 19.

TURKEY.

Manganese Dioxide, etc.—The Turkish Department of Posts, Telegraphs and Telephones invites tenders for the supply of manganese dioxide and graphite. September 15. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Circassia for Bombay (Glasgow, August 18; Manchester, August 23; Birkenhead, August 29). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mathura for Calcutta (Birkenhead, August 12).

Bibby Line.—S.s. Cheshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, August 20).

British India Line.—S.s. Merkara for Colombo, Madras, and Calcutta (London, August 6); s.s. Mandra for Bombay, Port Okha and or Bedi Bunder, and Karachi (London, August 23).

Cunard Line.—S.s. Sea Rambler for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, Fiume, and Shushak; also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if inducement (Liverpool, August 16; Swansea, August 19); s.s. Bosnia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza; also at Volo if inducement (Glasgow, September 4; Liverpool and Swansea, September 6).

Johnston Line.—S.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 9); s.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 13).

P. and O. Line.—S.s. Ranchi for Bombay (London, August 15); s.s. Novara for Calcutta (London, August 15).

Prince Line.—S.s. Italian Price for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, August 10); s.s. Egyptian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, August 23).

Ellerman and Papayanni Lines.—S.s. Dido for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, August 14); s.s. Oporto for Gibraltar, Algiers*, Oran*, Patras, Syra*, Smyrna, and Constantinople (Liverpool, August 16; Swansea*, August 16); s.s. Serbino for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, August 21; Swansea, August 18); s.s. Lesbian for Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, August 30; Swansea*, August 30); s.s. Gerano for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, August 30; Swansea, September 4); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, September 1). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Messageries Maritimes.—(From Marseilles.)—S.s. Lamartine for Naples, Piræus, Istanbul, Izmir, Rhodes, Larnaca, and Beyrout (August 12); s.s. Angkor for Alexandria, Jaffa, and Beyrout (August 19); s.s. Pierre Loti for Naples, Piræus, Istanbul, Izmir, Rhodes, Larnaca, and Beyrout (August 26); s.s. Lotus for Alexandria, Jaffa, and Beyrout (September 2).

Motors and Motoring.

(By Our Motoring Correspondent)

The Road Transport Bill.

The chief topic in motoring circles just now is, of course, the Road Transport Bill, and there is a good deal of nervousness being felt as to the penalties which will be inflicted upon those who, hitherto in the habit of doing very much as they pleased on the road, will now come under the lash of the new legislation. Probably their worst fears will be more than realised unless they mend their ways. The authorities seem determined to stamp out road-hogging and bad driving. Whether they will succeed or not remains to be seen, but, during the time in which they are making the attempt, drivers who do not pay great attention to observing the amenities of the road will suffer heavily.

The New Austin.

The second topic of conversation has been the new Austin, the latest and most beautiful of Sir Herbert's cars. The new model is clean in line, and its appearance is all that can be desired. Its design has been the object of much technical skill, and, from an engineering point of view, it is an exceedingly fine production.

The chassis itself has been altered but slightly, as that already in service has proved so satisfactory. The important alteration is an improvement in the braking. The former model, like the new production, was fitted with four-wheel brakes, but hitherto these were operated independently in pairs. I am not quite certain as to why that idea has been scrapped, but in the new model both the hand lever and the foot pedal operate the brakes on all four wheels. Other changes are in the radiator, which has been made much higher and the shell much narrower. The bonnet is higher as a natural result of the radiator alteration, and its length has been increased, this being rendered possible by shortening the scuttle. It will be remembered that the earlier Austin Twelves and Sixteens had a shorter bonnet and a fairly long scuttle, and that a reduction was made in the length of the latter and an addition to the length of the former, with the result that the cars looked a good deal smarter. Probably the success of that change influenced the new alteration in the Seven.

In the new model the windscreen has a slight cant, which, it is claimed, improves the visibility. That may be and probably is the case; as I have not tried out the new model I cannot say. But the appearance of the body is improved by the change. I am informed that the new windscreen has a locking device which is easily and simply operated and which makes the screen rattle-proof. So far as the body is concerned, the new design is very clean, the sharp lines being accentuated by a belt moulding which runs the complete length of the car from radiator to rear panel. This line gives a most pleasing appearance, apparently adding length to the car and generally enhancing its smartness. This line will probably be painted in a sharply contrasting or harmonising colour, and there is, of course, a large range of colours for line and body from which the purchaser may make a selection. The official description of the new model emphasises the fact that it has a low, racy appearance which is partially accounted for by the low centre of gravity and partially by the new carriage work. The line of roof has a rather nice curve, which loses itself in the graceful lines of the new rear quarter panel.

The designers are proud of the fact that the alterations made, whilst adding so greatly to the appearance of the car, have not entailed any sacrifice of comfort. As a matter of fact, the new model "Seven" is actually more roomy than any of its predecessors, and four adults may now be carried with room to spare. The leg room, for one thing, is greater and the seats are now fitted with pneumatic upholstery. The large windows ensure ample light, and careful attention has been given to the important subject of ventilation. The door windows may now be raised and lowered. The doors, also, are so wide that even the tallest or most portly person can now get easily into or out of the car. Access to the rear seat is made through either door, as both front seats are designed to tip. The bucket type front seats are readily adjustable and quite comfortable.

Something may be said regarding touring radius. This has been increased, as the tank capacity is now five gallons of petrol. There is also an emergency tank and a connecting tap by means of which it can be put into commission. The two-level tap is a thing which owner-drivers who have once experienced running short of petrol on the road will appreciate. The new model is fitted with a dial oil pressure indicator gauge, so that pressures may now be read with the same ease and by the same means as with the larger models.

Motor-cycle Police.

It will not be long before motor-cycle police will be patrolling a number of our main roads. They will not be provided, as in the United States, with the power of administering fines themselves, nor will the same means as are used in that country be adopted for ensuring the attendance of alleged offenders in court. They will, however, have fairly wide powers and it is by no means certain that they will have to wear an official uniform when on duty. Amongst other things, they will be provided with cameras, so that cars which trust to speed to escaping their attentions may be photographed. That proceeding will, doubtless, be followed by a "hue and cry" until the offending car is located. Another police move is the detailing of uniformed men to patrol the roads in order to ensure that drivers pay due regard to driving on their own side and are not hugging the crown of the road.

THE IRAQ MARKET FOR MOTOR VEHICLES.

[*We take the following extracts from a comprehensive survey of the market for motor vehicles in Iraq by the United States Consul at Baghdad, Mr. Alexander K. Sloan, in the American "Commerce Reports."*]

Despite unsettled economic and financial conditions in the Kingdom of Iraq during 1929, the automobile market improved; imports and sales increased, and several new makes of machines were introduced or reintroduced. During the year several expensive showrooms were constructed; 'bus lines to suburbs of Baghdad or to villages in the vicinity were established; taxicabs became so numerous that to a great extent they replaced horse-drawn vehicles. The census of automobile registrations, as of January 1, 1930, shows that in the total of 2,991 passenger cars, American makes account for 2,727; in the total of 872 lorries, 741 are American; of the 53 buses, 48 are American; but of the 79 motor cycles only 1 is American.

There is no market in Iraq for high-price cars; medium-price vehicles sell slowly. The demand is for the small car. The market for automobiles has been established in Iraq in very recent years, so that as yet there is no used-car problem. In Baghdad there is a somewhat small demand for used vehicles for taxicab service in outlying districts; even here, however, the cars must be offered at very low prices.

The demand for motor lorries is at present limited in Iraq. In the first place, the roads beyond centres of population are not good enough to permit successful and continuous operation; in the second place, motor lorries can be operated over only 2½ miles of streets in Baghdad proper, over about 12 miles of roads leading to centres of population in the vicinity, and over a much less mileage in other cities of the country. Materials, which in an American town would be moved on a light lorry, in the narrow, winding streets of Iraq cities must be carried on the backs of burros or human beings. As it is not likely that Iraq cities will be able to widen their streets within the next few years, it is improbable that lorries will replace the burro, the camel, or the porter within the near future.

The Iraq Petroleum Co., is the only enterprise in Iraq that has imported heavy or medium lorries, being able to use them because of its improved roads leading to different parts of the oil territory on which it is operating. The Iraq general demand, however, is almost exclusively for the light one-ton vehicles, though a few one and a half ton lorries have been sold. It is estimated that 80 per cent. of the lorries sold are of the one-ton type, 10 per cent. of the one and a half ton type, and the rest divided between the two, three and five ton types.

Motor buses were not used in Iraq until 1929. During the course of that year certain firms and individuals, encouraged by the construction of better roads to the suburbs of Baghdad, and to small population centres in the vicinity, initiated a bus service to those places. At first this service was not very popular because it was offered at such a low rate as to attract the poorest of the labouring classes, and those who considered themselves as belonging to a higher social order hesitated to ride in the buses. Moreover, Baghdad women, accustomed to seclusion, were not pleased with the idea of utilizing such a public vehicle. However, these prejudices have been overcome and the buses are now well patronised. During 1929 three bus routes were established, and on them 53 buses were operated.

Baghdad is the only city in Iraq in which buses are used, and as there is but one street in that city (New Street) that is wide enough to permit motor-bus operation, and as police authorities have decided that traffic is already congested enough on that street, regulations have been issued permitting only 60 buses to be operated in the city. It is probable that as soon as other streets are opened that are wide enough to permit motor bus operation or as soon as new suburbs are constructed, these regulations will be amended to permit the operation of more than 60 buses. While plans for city improvement are being considered, it is very doubtful if they will be carried out in the near future.

The cities and towns of Iraq cover very small areas, in comparison with European or American towns of the same population. Houses are built one against the other, and streets are mere winding passages so narrow that a loaded burro will crowd wayfarers to the wall. Prior to the War the longest street in Baghdad, the metropolis of the Tigris-Euphrates Valley, was half a mile in length and the broadest street had a width of only ten feet. Conditions have now been improved in Baghdad by the opening of one long, wide street, but the other cities and towns have not changed from pre-War conditions, so far as city traffic is concerned. It is manifest that motor-bus routes cannot be profitably established in other centres of population in Iraq until buses can be operated in the business sections of those centres.

Moreover, many members of the large foreign colony of Baghdad have refused to live in the congested quarters of the city, but have established residential districts in the outskirts. Their example has initiated a movement on the part of the Iraqi towards wider spaces, and homes are now being built along the river banks beyond the city limits. The growth of these residental suburbs will inevitably encourage the extension of bus routes, but it is not at all probable that this movement will reach any proportions within the next few years.

On account of travel conditions the demand for motor cycles is not at all brisk in Iraq. While motor cars and lorries can be driven across the desert lands with little trouble, except for bogging down after a rain, motor cyclists find the rough, stony desert uncomfortable travelling. Motor cycle trips have been made from Baghdad to Persia and to Beyrout, but these were in the nature of stunts and, so far as is known, were not repeated. The Iraq Army uses a few motor cycles, but on desert trips utilizes its motor lorries or its camel corps.

Motor cycles were introduced into Iraq by the British Army of Occupation. When the troops were withdrawn, many of the army cycles were sold as surplus stores. The public has thus become used to the British makes and dealers import no others. The British cycles used in the country are B.S.A., Douglas, Triumph, P. and M. There are few cycles of any other make in the country and, so far as can be learned, only one cycle of American manufacture. It is not at all probable that the demand for motor cycles for private use will increase to any extent in the near future on account of the difficulty of traversing Iraq roads on such a light machine. It is quite possible that, as the forces of the Iraq Army and the Iraq Police Department increase, the Government may purchase some few more motor cycles, but these undoubtedly will be British makes.

THE ECONOMIC SITUATION IN PALESTINE IN 1929.*

By A. Goldwater, A.R.S.M.

(*Continued from page 130.*)

Revival in Tobacco.

There was a distinct revival in tobacco planting during the year, which was all the more remarkable because of the large stocks of local tobacco apparently available at the end of 1928; but those stocks probably consisted chiefly of tobacco grown in the southern district which proved to be of a very inferior quality, and there must have been a shortage of the better quality tobacco produced in the north, as about 98 per cent. of the tobacco output during the year was grown in that region. Tobacco growing was also stimulated, perhaps, by the credit facilities to growers given by the principal consumers, who made advances during the planting time against which the grower contracted to deliver certain quantities of tobacco; in other words, the consumers made purchases in advance of the crop. The area planted to tobacco was 20,770 dunams, or almost treble that of the previous year, and about 75 per cent. of the area planted in 1924, the year of the tobacco planting boom. The crop also showed a corresponding increase over the previous year, but apparently the yield per dunam at 50 kilos., although slightly higher than in the previous year, was below the average, which is estimated to be 60 kg. to 70 kg. per dunam.

The foreign trade in tobacco shows that imports at 185 tons were lower by 26 tons than in the previous year. There has been, in fact, a reduction in the imports yearly from 1925, when imports at 273 tons were at their highest, so that it would seem that the country is becoming yearly less dependent upon foreign tobacco. The outputs from tobacco factories in the country have, however, increased yearly until this year they reached the record total of 653 tons, as compared with 593 in 1928 and 513 in 1927. Exports, on the other hand, show only a slight increase over the previous year. Of the total area—20,772 dunams—planted during the year, 20,227 dunams—that is, all but 545 dunams, or about 2½ per cent.—were planted in the northern district chiefly in Upper Galilee and also in the Acre district north of Haifa, 18,700 dunams with Turkish tobacco, which yielded 939 tons, or, say, 53 kg. per dunam; 1,222 dunams with Baladi or native tobacco yielding 75 tons or 62 kg. per dunam; and 305 dunams with tombac yielding 9.7 tons or 32 kg. per dunam. The remaining 545 dunams were distributed equally between the Southern and Jerusalem-Jaffa district and planted with baladi or native tobacco.

Other Agricultural Products.

The wine industry has been depressed over a number of years, as, although production has fluctuated from year to year, exports upon which the industry largely depends have decreased annually during the past six or seven years. The industry recovered slightly, however, in 1928, but this year once again it had a lean year, exports of wine having been only 1,028,000 litres, compared with 1,156,000 litres in 1928. Exports of other alcohol products also fell.

The production of honey was probably slightly higher than in 1928 and exports were higher, having reached 24 tons, valued at £P1,625 f.o.b. Palestine ports, as compared with 16 tons in 1928, value £P1,000, 11 tons in 1927, and only 5 tons in 1926. The limited production has always been readily sold at unusually high prices, chiefly to Jews, who purchased the honey for reasons of sentiment and its use for ritual purposes. Since, however, the number of growers has increased and the crop also, growers are beginning to realise the limitation of sentiment and the value of a regular market. A small consignment of one ton was sent to England and disposed of at a price of £P90 a ton, while the price for honey coming from all other countries in the world ranged from £P50 to £P60 per ton. The quality of the honey, however, was said to be superior to any other honey on the market, but, nevertheless, growers could not dispose of any further honey except at ruling prices.

Although further progress was made during the year in the development of dairies, and the quantities of milk, etc., produced were higher than in any previous year, at any rate as far as is known from statistics supplied by Jewish-owned dairies, production still apparently falls much below normal requirements, as in 1929; imports of butter and eggs showed substantial increases over the previous year, butter having reached the high record of 172 tons, value £P33,693, while the quantity of eggs, 11¼ million, and the value of them at £P29,780, were almost double those for 1928. The agricultural co-operative society for the sale of products from the Jewish Workers' Settlements in Palestine ("Tnuvah Limited") in their report for 1929 show that market and dairy products, eggs, vegetables, etc., sold by them for their members had a total value of £P96,210, which compares with £P70,380 in 1928, and only £P545 in 1921, when the Society was first established under the name of "Hamashbir." The milk sold during the year by the Society totalled 1,055,000 litres, value £P29,320, representing about 30 per cent. of their total sales of all farm products for the year, and compares with 1,030,000 litres in 1928 and 1,037,000 in 1927.

Scope for Industry.

Having regard to the depressed condition of agriculture and the low purchasing power, in consequence, of by far the largest section of the population—since almost 70 per cent. of the population is engaged in agriculture—and also the course of events in the last part of the year, already briefly referred to, industry on the whole did not suffer any serious check. That production from industry has generally grown is evident from the increase in exports of local manufactures; nevertheless, production in many cases covers only a small portion of the domestic needs, even in some cases where an export trade has been developed, and the country still continues to import heavily goods which are manufactured locally. There would seem to be, therefore, still much scope for local industry, and capital for expansion will no doubt become available when public security is restored to the high level enjoyed up to the time of the riots. Typical examples of enterprises whose products figure in both the imports and exports are cement, leather, stockings and hose, confectionery, carpets. In other cases, however—wine, soap, edible oils, for example—production is far in excess of the country's needs and is exported, and constitutes in fact about three-quarters of the total exports of manufactured products.

Production and trade in some instances were higher during the year than at any previous time, having been stimulated by the large amount of development work in progress, as a result of which manufacturers of building materials of all descriptions, quarries, foundries, and the electrical and engineering trades were fully occupied throughout the year. The tobacco industry was exceptionally flourishing, and is now by far the largest single manufacturing industry in the country. The total output for the year at 653 tons had a retail value of approximately £P750,000. In other instances, however, in the case of the textile group in particular, progress was undoubtedly arrested in the last part of the year, when the local market was practically closed to Jewish manufacturers, and although there was some revival noticeable in the last month of the year, the industries affected had an accumulation of stocks on hand at the end of the year which will probably influence production this year (1930). The restrictions thus placed on trading by the boycott of Jewish goods caused the almost complete isolation economically

Digitized by Google

of the Jewish from the Arab sections of the population, and trading in the Arab section of the population became quite artificial, to the detriment alike of the consumer and the merchant. For the Jews, however, adversity acted as a unifying force, and the manufacturers, alive to the situation, made an organised effort to establish new markets, and lost no time in dispatching trade missions to foreign countries. If these missions succeed, then some benefit will have accrued to the Jewish manufacturers, who will have emerged all the stronger from the troublous times during the latter part of the year.

Development of Industry.

Some idea of the development of industry is conveyed in a Census of Industries, the first of its kind, compiled up to May, 1928, by the Trade Section of the Department of Customs, Excise and Trade. The Census was a purely voluntary one, that is to say, the department had no power whatsoever to demand or verify information, but based upon the figures supplied the Census shows that at May, 1928, there were in operation 3,505 small and large producing factories and workshops having an invested capital of £P3,515,000 employing 17,955 workers and having an output for the year 1927 totalling £P3,986,000.

Since the date of the Census a number of concerns have been established, the total capital employed by which will be about £P2,000,000, and the number of workers correspondingly increased as their work proceeds. Mention need only be made of the two electrical concerns—the Palestine Electric Corporation, the capital of which is reported at £300,000 only in the Census and has since been increased to £1,000,000, and the Jerusalem "Electric" and Public Service Corporation, with a capital of £500,000, the Palestine Potash Ltd., and the Palestine Hotels Ltd. Large as is the number of enterprises shown by the Census there are but few of any magnitude if measured by present-day standards of plants and outputs. Those few are based almost entirely on the natural resources of the country and include among others the cement works of Haifa, which employ the limestone and clay found on the site and gypsum mined from the deposits occurring at Melhamia in the Jordan Valley; the soap works and oil mills, flour mills, wine and alcohol distilleries established in Haifa, Nablus and Jaffa; perfumery at Benjamina, tanneries, tobacco manufacturers, all of which employ local agricultural products such as the olive, sunflower seed, sesame, linseed, herbaceous plants, local hides, tobacco, etc.; the salt works at Athlit, which utilise the brine from the sea; the Palestine Electric Corporation, which is utilising the Jordan river for the development of power; the Palestine Potash Ltd., which will exploit the brine of the Dead Sea. Next in importance come the medium-sized industries, numbering probably 150, with a capital ranging from £3,000 to £20,000. They include chiefly the textile and furniture factories, foundries, manufacturers of building materials, foodstuffs, the raw materials for all of which are to a large extent imported. The remainder are essentially small enterprises and include the primitive flour milling plants, and oil presses, common in the rural districts, and various workshops in the town.

The geographical distribution of the enterprises, as extracted from the Census and particulars at December 1927 of their capital invested, numbers employed, and the average monthly wages and salaries paid, were as follows:

	No. of Establishments	Total Capital Invested £P.	Total Number Employed	Average Monthly Wages and Salaries £P.	Output £P.
Jerusalem ...	834	374,677	3,890	10,280	527,600
Jaffa ...	259	338,559	1,523	5,600	591,000
Tel Aviv ...	284	706,873	2,800	14,050	538,000
Southern sub-district ...	605	315,461	2,256	3,920	467,000
Haifa ...	321	1,228,370	2,808	12,750	1,002,600
Northern sub-district ...	1,202	450,946	4,678	7,400	758,700
	3,505	3,514,886	17,955	54,000	3,884,900

It will be seen from the foregoing: (1) For capital investment Haifa holds first place with 321 enterprises, having a total capital of £P1,228,000, while Tel-Aviv holds second place with 284 enterprises, having a total capital of £P706,870, the number employed in these being 2,800 or only eight less than in Haifa. (2) That for the number of enterprises the northern sub-districts holds first place with 1,202. As the northern sub-district embraces Nablus, Nazareth, Tulkarem and other places exclusively Arab, it is possible to compare industrial condition in that region with, say, Tel-Aviv, a town exclusively inhabited by Jews. There the table shows that the monthly pay-roll was £P14,050 for a total number of 2,800 employed or an average pay-roll of £P5 per person. In the northern sub-district there were 4,678 persons employed who received a total monthly of £P7,400, or only £P1,600 per month. If the owners and others not included in the pay-rolls are deducted from the total number of employed then the position would be (the figures are taken from the Census) as follows:—

	Daily Wage Earners.	Average wages paid per month. £P.	Per worker. £P.
Tel Aviv	1,568	9,518	6
Northern sub-district ...	2,139	4,120	1.900

In regard to post-War development, the Census shows that the number of post-War establishments was almost double and their capital almost 2½ times the pre-War establishments, as follows: Pre-War establishments 1,236, capital £P1,058,000; post-War establishments, 2,269, capital £P2,457,000.

How much of this expansion is due to Jewish post-War enterprises can be seen from the following classification of pre- and post-War which shows that pre-War establishments were equally divided in regard to capital which was, Jewish £P514,000 (for only 215 establishments) and non-Jewish £P543,000 (for 1,021 or almost five times the number of Jewish establiishments). In post-War development the non-Jewish capital invested was almost treble the amount of non-Jewish capital while the number of enterprises was 898 Jews and 1,371 non-Jews.

NUMBER OF ESTABLISHMENTS AND CAPITAL INVESTED.

	PRE-WAR. JEWISH		PRE-WAR. NON-JEWISH		POST-WAR. JEWISH		POST-WAR. NON-JEWISH	
	No. of Establishments	Capital £P	No. of Establishments	Capital £P	No. of Establishments	Capital £P	No. of Establishments	Capital £P
1. Quarries (stone and salt, including salines)	—	—	—	—	6	51,350	126	9,220
2. Metal Works	30	54,907	71	40,399	107	43,559	119	18,955
3. Jewellery	8	5,405	12	1,920	20	848	20	1,655
4. Textiles	2	5,913	166	1,803	28	120,055	161	4,130
5. Dress and Toilet	69	11,522	97	5,089	304	52,937	343	15,702

10. Timber Trades	33	20,105	57	16,678	160	43,373	147	14,339
11. Brick, Stone and Clay	3	4,600	49	34,183	36	465,220	60	13,103
12. Miscellaneous	1	300	9	290	15	10,125	12	503
13. Public Utility (Electric)	—	—	—	—	6	303,056	4	2,800
	215	513,972	1,021	543,015	898	1,844,707	1,371	613,092

Digitized by Google

The extent to which the non-Jewish section of the population, in other words the Arabs, have directly benefited from the general post-War progress is evident from the above figures. They have developed quarries, for example, to meet demands created for stone in all its forms—as dressed stone for building, crushed stone for use in concrete or road surfaces, and burnt as lime. The capital invested is negligible because all quarry work (the Government harbour quarries at Athlit excepted) is done with hand tools. The increase in the timber trades is partly due to the demand created by building and partly to the demand for furniture and other household amenities. In metal works the number of post-War Arab enterprises exceeded the Jewish—although their capital is smaller—but the motor car, mechanical flour mill and the general use of machinery in orange groves, etc., have created openings for Arab machine and repair shops, blacksmiths, foundries, etc. The increase in the number of dress and toilet establishments is undoubtedly an index of Arab social advance, but the Arabs seem to have lagged behind in the printing trades, which embrace also book publishing, in which the Jews in proportion to their numbers have engaged rather extensively.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended July 26:—

The first arrivals of new grain at the shipping centres have had the effect of relieving the tension which characterised our market last week, and which was due to improving markets abroad encouraging the local grain holders to ask exaggerated prices. The principal buyer was Antwerp, for which port large shipments have been and are still being effected, but other destinations were rather quiet, with U.K. showing practically no demand. The Mediterranean market continues to remain inactive. Chartering continues fairly brisk both for August and September loading, and several steamers have been fixed at 13s. 6d. to 14s. full terms Antwerp/Rotterdam, 14s. to 14s. 6d. Antwerp/Rotterdam range. Berth rates were maintained at 11s. Antwerp/Rotterdam, 11s. 3d. to 11s. 6d. Hamburg/Weser. A few shipments took place at Constantza, mostly for the Continent, at rates which were maintained at 8s.

Timber.—The only noticeable feature in the market is an inquiry for South Italian ports, but the parcels being small and for different destinations, it is not easy to combine cargoes. Freights for Italy are about £7 to £7 5s. per wagon, but one steamer accepting five ports obtained £7 15s. Other destinations are rather neglected. Only very few forward sales and of little importance are taking place, and no immediate revival of business is at present foreseen.

There was a heavy thunderstorm here on Saturday evening last, accompanied by a deluge for about half an hour and followed by several hours' steady rain which penetrated well into the ground, greatly benefiting the maize where it was not too late. The rain appears to have been well spread over the eastern and central districts which were most in need of it, but as the Meteorological Office does not issue reports on Sunday, full particulars are lacking. Some local showers have been reported from the northern and western districts during the week, and a north-east wind brought thunder clouds and a light shower here this morning, although this is not in accordance with the meteorological forecast, which predicts fine weather, and the barometer is undecided. There was a 50 per cent. fall in the thermometer after last Saturday's thunderstorm, and cool weather prevailed for a day or two, after which the temperature rose steadily, reaching 38 degrees Centigrade in the shade (over 100 degrees Fahrenheit) yesterday, and more excessive heat is predicted.

Constantza, week ended July 23.—About 7,000 tons of grain were exported during the week, mostly to the Rotterdam/Hamburg range. Fifteen vessels loaded about 55,000 tons of petroleum products, and four took oil fuel for bunkers.

Bulgarian Report.

Bourgas, July 19.—The grain market continues lifeless. As the peasants are hoping for a further improvement in prices, and are also busy threshing the straw crops, they are selling only small quantities of grain to cover their immediate needs of ready cash. Torrential rain fell on Sunday and Monday, causing some damage to crops and vineyards. Threshing of the straw crops continues actively. The maize plants are reported to be in excellent condition.

The traffic receipts of the South Indian Railway Company for the week ended July 5 amounted to Rs.12,02,422, making the total from April 1 Rs.1,74,55,580, as against Rs.1,80,14,103 for the corresponding period of the previous twelve months.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows for the week ended July 31:—

The past month has been characterised by a lack of interest rather than by any heavy fall in values. There has not been any striking change in market conditions. Unfortunately the signs of awakening interest experienced in the closing days of last month did not develop, and business on some days was practically at a standstill. Evidently the depressed industrial conditions throughout the world are greatly curtailing purchasing power, and it is doubtful if in any month since the beginning of the year fewer sales were recorded than has been the case during that now closing. The imminence of the August holidays will not encourage buyers to anticipate their requirements.

Currants.

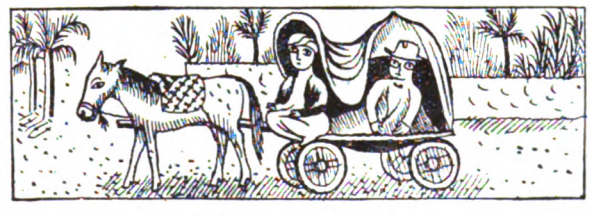
Greek.—The continued anxiety of holders to make progress and sell their remaining small stocks, while demand continues so negligible and with no sign of immediate improvement, has acted detrimentally. Prices have moved in a downward direction and we close the month with a slightly lower range of values. S.s. Oporto, Bantria, Esneh, and Gerano arrived with 574 tons. Sales comprised:—Pyrgos, 35s. 6d. to 36s.; Amalias, 36s. 6d. to 37s.; Patras, 37s. 6d. to 38s.; Zante, 36s. 6d. to 37s. 6d.; Gulf, 37s. to 42s.; Vostizza, 46s. to 52s. Quotations are:—Pyrgos, 35s. 6d.; Amalias and Patras, 36s. 6d. to 38s.; Zante, 36s. 6d. to 37s. 6d.; Gulf, 37s. to 42s.; Vostizza, 46s. to 52s.

Sultanas.

Smyrna and Cretan.—Although crop reports coming to hand are not favourable, buyers show absolute indifference to spot parcels and to offers of good average Smyrna on the basis of 25s. c.i.f. September shipment, and fine Cretan 58s. to 60s. c.i.f. The little movement on the spot has been in rain-damaged at 27s. to 28s., Good qualities at 42s. to 45s., with a few Fine up to 50s.

Figs.

Genuines, old crop, are pushed for sale, and although as low as 10s. has been accepted the response from the trade is negligible. New Crop Genuines are offered at 18s. c.i.f., but buyers are showing no desire to operate.



Travellers in Iraq

THE CONVENIENCE OF THE CHEQUE

For those who know beforehand where they will be likely to require money, the system by which the Westminster Bank can arrange for a customer to cash his own cheques abroad is an undoubted attraction. Any local branch manager will be pleased to arrange with the Bank's agent in Basra, say, Hillah, Baghdad, and Mosul, to cash a customer's cheques within any pre-arranged limits. Nothing but a cheque-book need be carried, and the utmost ease and safety are enjoyed

British Consular Reports

I.—TURKEY.

Colonel H. Woods, O.B.E., Commercial Secretary, H.M. Embassy, Istanbul, in his report on economic conditions in Turkey for the period ended April last, discusses the difficulties with which the country is confronted. We give the following extracts :—

Notwithstanding that in the early spring of last year there was every hope of a bumper crop, various events combined to disappoint these hopes, and therefore another year must be added to the series of lean years snce 1925. Turkey is primarily an agricultural country, yet agriculture has not been the Government's main consideration, as a glance at the Budgets for the last few years will show.

Owing to a series of bad crops production has declined year by year, and as the result a gradual decline in exports has naturally followed, thus increasing the adverse trade balance so prejudicial to the prosperity of the country. The extent to which Turkey's exports have fallen behind the imports may be seen in the preliminary customs statistics for 1929, in which year exports amounted in value to PT155 millions only, as against imports to the value of £T255 millions, thus leaving an adverse trade balance of £T100 millions, and there are no appreciable "invisible" exports to offset this formidable deficiency. The average annual adverse trade balance during the past four or five years has been approximately 50 million lira. As things are at present, owing to heavy commitments for public works undertakings and for national defence, the Government's resources may be insufficient to meet its liabilities, and with the steady yearly depreciation of Turkish currency the outlook is not encouraging.

The Government has introduced measures for the control of exchange and has thereby effected an artificial check on further depreciation, but, on the other hand, this control is dislocating normal commercial transactions and these measures need to be handled with care. The authorities are beginning to realise that the country is going through a serious economic crisis and that measures such as the control referred to, and protective tariffs in a country where industry is negligible are unlikely favourably to affect the adverse trade balance to any great extent.

The Cabinet is engaged on the examination of an economic programme drawn up by the Ministry of National Economy which provides for the allocation of important credits for agriculture and production in general, a simplification and extension of the operations of the Agricultural Bank and other measures of material assistance to the peasant. Measures such as a general reduction of railway and maritime tariffs, of port dues and octroi, and the grant of subsidies with a view to encouraging the development of the textile industry also form part of the economic programme. It is, however, difficult to see how some of these projects can be put into force in the present state of Government finance. Before any real and immediate improvement in the situation can be effected something more than an economic programme is required.

Government Finance.

In August, 1929, the Ministry of Finance published a national balance-sheet of revenue and expenditure for the financial year 1928-29. According to this official account rendered revenue collected during the year exceeded estimates by over £T5,000,000, and, this being the case, there was every reason to believe that the Ministry of Finance had been successful in constituting a sound basis for the establishment of the revenue side of its Budget. It remains to be seen whether in estimating its revenue for the forthcoming financial year the Ministry of Finance has taken into sufficient account the effect that the growing economic crisis may have on revenue; it does not seem to have been taken into consideration that by the application of a new and protective tariff customs receipts would drop, not only as the result of prohibitive rates, but in consequence of the introduction of abnormal quantities of merchandise before the new duties became applicable.

Total imports during the months of July, August, and September of 1929, immediately before the application of the new duties, amounted in value to just over £T100 millions, whilst during the following three months the total dropped to £T33 millions. The recent anxiety shown by the Turkish Government in connexion with the financial situation and exchange is no doubt due to a realisation of these factors and to the fact that in applying a protective policy there would necessarily be a demand for sterling to meet commitments arising from abnormal trade purchases before the new tariffs were applied.

Economic Policy.

An outstanding feature under this heading was the application in October last of a new customs tariff representing a general increase in rates on manufactured articles and prohibitive duties on articles of luxury. It is impossible to say at this juncture how far this tariff will affect the volume of trade with Turkey. In elaborating the tariff, Turkish economists hoped to give a great impetus to the creation of new industries. There is no doubt that with the law for the encouragement of industry and the adoption of a protectionist policy there will be a gradual and progressive increase in industrial development, and it is generally believed that every effort will be made by the Turkish Government to encourage the development of a cotton industry and improve, modernise and extend the existing cloth factories.

Marked progress may be delayed owing to the present scarcity of capital in the country, and in the meanwhile, owing to high and protective tariffs, customs revenue may be seriously affected, but the Turkish Government are bent on developing industry, and although there may eventually be many modifications in customs rates, the Government will no doubt continue to maintain protective duties in respect of any article which can be manufactured from raw materials in the country.

Development Works.

An effort has at last been made to start irrigation. It was intended to devote the sum of £T250,000,000 to this purpose to be spread over a period of 20 years. The law, however, of May 29, 1929, did not provide for so ambitious

Digitized by Google

a scheme and, therefore, £T100,000,000 was voted for these public works.

It is doubtful whether, under the present financial stress, any immediate additions to the contracts already adjudicated will be made. The following works have been contracted for:—Izmir region: Canalisation in the plain of Nazili, £7,000. Bursa region: Work on the Nilufer and the Deli-Cay (Deli Tchai) and tributaries, £20,000. Ankara region: A barrage on the Cibuk (Tchibuk-Tchai) at klm. 12 on the Ankara-Cangri (Tchanghiri) road, £28,000. Native contractors are carrying out these undertakings. The Menderes-Gediz and Berdan river irrigation schemes have been postponed, as well as the irrigation of the Susurluk valley.

A port construction scheme has been elaborated on the following lines. The Ministry of Public Works was authorised in 1929 to expend £T45,000,000 on the construction of ports at Mersin, Samsun, and Eregli, and of breakwaters at Trabzon, Amasra, and Ineboli. Of this amount £T17,000,000 is earmarked for the port of Mersin, £T13,000,000 for the port of Samsun, £T10,000,000 for the port of Eregli. Nothing has been done to carry these schemes into effect, and with the Government's financial commitments in other directions it is improbable that the question of ports will be seriously tackled in the immediate future.

There is a rapidly increasing demand in the provinces for truck chassis, which are being equipped with locally built 'bus bodies and turned into popular and cheap vehicles for passenger and freight transport in the interior. A service of motor transport between Samsun and Carsamba has proved a serious competitor to the light railway serving this district.

The Turkish Red Crescent in Izmir is contemplating the organisation of a motor coach service between Izmir and Cesme, a spot some 90 kilometres distant by road from this town, which it proposes to develop as a seaside resort. Should there be many visitors to the thermal baths at Kouri, which are being modernised, arrangements will doubtless be made for the institution of a regular service of 'buses between Yalova, at the entrance to the Gulf of Ismid, and Kouri, a distance of about 7 kilometres.

Aviation.

Civil aviation in Turkey is non-existent, but Istanbul is the terminus of the air services of the Compagnie Internationale de Navigation Aerienne and of the Italian Societa Anonima Aero Espresso Italiana between Istanbul and Paris and Istanbul-Piræus-Brindisi and *vice versa* respectively. It is believed that the Turkish Government is disposed to hand over the Kayseri aeroplane factory to a foreign consortium provided that it is prepared to erect assembling and repair stations, and as compensation the consortium would be granted the sole right to establish air services under the control of the Ministry of National Defence and Aviation League. The scheme is in embryo and is not likely to mature for some time, but it comprises, so it is believed (*a*) the manufacture in Turkey of aircraft and aircraft engines, (*b*) the establishment of air lines as stated above, (*c*) the exploitation of natural resources, ores, oil, etc., necessary to the local manufacture of aircraft. The consortium would, therefore, constitute a virtual monopoly of the manufacture and supply of aircraft and aircraft material, equipment of hangars, civil flying grounds and repair shops.

Barclays Bank (Dominion, Colonial and Overseas) have received the following cable from their Cairo office:— The Statistical Department of the Ministry of Finance announces that the total imports for Egypt for the month ended May 31 are £E2,704,070, against £E4,287,410 for the corresponding month last year and exports £E2,527,388, against £E4,153,628 for May, 1929. Cotton exports amounted to £E1,822,653, against £E3,248,791 last year.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 30:—

Egyptian Futures.

Sakel Contract.—Business has been even quieter this week than last. The drought question in America still remains the salient feature in the cotton situation as a whole, and when it was seen that American futures were unable to maintain their recent advance a wave of pessimism appears to have swept over the market. Transactions in the Sakel contract have been limited for the most part to transfers from one month to another, and to the restricted operations of jobbers. The only exception occurred yesterday, when new business, in the shape of Continental buying of March contracts, took place. Probably this purchase owed its origin to the reports of leaf-worm damage to the Sakel crop, of which, up to date, very little note has been taken, so much is the trade overshadowed by the general lack of business and the drought question referred to above. Nevertheless, it is interesting to bear in mind that some reliable authorities place the extent of the damage as high as 250,000 kantars. Even allowing for the fact that reports at this season of the year are liable to exaggeration, it would seem that the Sakel crop has undoubtedly sustained a severe blow. Of course, if the present unsatisfactory conditions continue the effect of this damage will not be much felt; but should conditions change a good deal more is likely to be heard of it. Owing to the general lack of interest Liverpool contracts have sagged this week in comparison with Alexandria, and we should not be surprised if the process was continued in the near future. This straddle is always worth watching; unfortunately, we cannot, at this stage, give any indication as to what we would consider a reasonable difference at which to commence operations.

The belief here appears to be growing that Sakels still stand at too high a premium over American contracts (November Sakel and October American 440 points) and, as a matter of comparison, it is interesting to note that at the bottom of the great slump in 1921, when American contracts stood at 6.80d., Sakels maintained a premium of 330 points. But in the season 1926-7, when the largest American crop ever grown was produced, and American contracts dropped to 6.26d., the premium stood at 584 points. Our own opinion is that Sakel cotton in the neighbourhood of 11.00d. a lb. is not unattractive as a spinning proposition, provided a reasonable amount of trade is forthcoming, but under existing conditions, with the present poor offtake, and with spinners everywhere seeking for cheaper substitutes amongst the outside growths, a totally abnormal shrinkage may easily occur.

We do not like to be pessimistic in writing these reports, but it is admittedly very difficult to see any immediate change in the present conditions. Summing up, in the absence of any general forced advance in prices, owing to the drought in America becoming really serious, we feel that still lower prices may be seen before long.

Upper Contract.—There is really very little to say about this contract. Fresh business appears to have been entirely absent, and the weaker tone of American contracts has reacted to the full on Uppers. At one time, something in the nature of a squeeze of the July position had been anticipated, owing to the very small local stock available, but recent heavy offerings of Upper cotton by Continental spinners, and others, has eased the situation, with the result that the near month has been left severely alone.

Egyptian Spot.

The inquiry for spot cotton at the beginning of the week still maintained the healthier tone to which we referred in our last report, and one or two merchants were again observed to be buying Sakel cotton, probably owing to the leaf-worm damage reported from the Delta. During the latter half of the week the demand has fallen painfully flat, and business has come almost to a standstill.

Sakel.—A fair inquiry was experienced at first, but latterly the demand has evaporated. Any spurt of inquiry, such as we have recently witnessed, only serves to accentuate the smallness of our stock, and as there are still nearly three months to get through before new crop supplies arrive, the situation must be regarded with some anxiety by consumers who are short of cotton.

Upper.—The demand for Upper has again been on a low scale, and there seems to be a tendency for the basis to ease. There is no doubt that recent offerings here by Continental spinners have had their effect, and there is no longer quite the same anxiety shown by spinners to pick up cotton, particularly in view of the fact that the new crop is so near at hand.

Pilion.—There has been little inquiry for this cotton, and very little business has transpired.

Nahda.—Less interest has been shown for this cotton, and very little business has transpired.

Maarad Cotton.—No business has been reported in this variety.

White, Fouadi, Farouki, etc.—These growth have been neglected.

Sudan Sakels have also suffered from neglect this week, but there is still an undercurrent of inquiry, which should come to a head on any general improvement in the demand.

Tokar Sakel.—A certain amount of interest has been shown, but few sales have been reported this week.

C.i.f. business.—Some inquiry for new crop has been received here and there, but business has been very difficult to arrange owing

Digitized by Google

to the anticipation of lower prices. Forwardings have been returned as 1,042 bales Egyptian and 383 bales Sudan. Very low figures even for this time of the year, and a very disquieting indication as to the state of trade. Quotations of Sakel show a reduction of 15 points on the week, those of Upper 26 points, and those of Pilion 30 points. F.G.F. Sakel to-day, 12.35d. F.G.F. Upper to-day, 9.33d.

Egyptian Cotton by Air.

Manchester Trade Report.—A minor sensation has been caused, not only in cotton circles, but in the Press, by the arrival by aeroplane of some Egyptian overland samples. This cotton was grown in the Assiout district and called Farouki, after Prince Farouk, the eldest son of King Fuad. It was picked on July 23, ginned on the 24th by the Alexandria Commercial Company's agency at Miniah, hence by rail to Alexandria, and then by Imperial Airways via Vienna to Croydon, arriving in Manchester on the 28th, a saving of over a fortnight in time. Yesterday, before an interested crowd of spinners and reporters, the case was broken out. The cotton was found to be of a very desirable quality, and great satisfaction was expressed all round at this speeding up process. It is hoped that in the not too far distant future it will be possible to bring over American overlands in the same way, and thus let Lancashire know the quality of the American crop sooner than it is possible at the moment.

EGYPTIAN FUTURES STEADIER.

The Alexandria Commercial Company report as follows for the week ended July 24:—Our market has been steady this week with very limited fluctuations. The week's summary of price movements is as follows:—Sakellaridis: November N.C., 23.11 dollars, 0.13 dollars up; January N.C., 23.33 dollars, 0.13 dollars up; March N.C., 23.77 dollars, 0.09 dollars up; May N.C., 24.16 dollars, 0.08 dollars up. Ashmouni: August, 16.37 dollars, 0.40 dollars up; October N.C., 15.42 dollars, 0.03 dollars down; December N.C., 15.65 dollars, 0.06 dollars down; February N.C., 16.02 dollars, 0.04 dollars down; April N.C., 16.36 dollars, 0.02 dollars down; June N.C., 16.72 dollars, 0.03 dollars down.

CYPRUS CROPS.

The report on Cyprus crops for July states:—

Harvesting of wheat is over, and threshing is in full swing. In certain areas the damage caused by rust has been heavy, but on the whole production is fair both in quality and quantity. Market conditions show no improvement. Prices are 4s. 6d. to 5s. per bushel.

Threshing of barley is well advanced. The crop is rather poor. The market is stagnant; prices are 1s. 2d. to 1s. 6d. per bushel.

The oat crop is poor and practically no stock will be available on the market.

Harvesting of the new crop of potatoes is over. Some shipments have been made to Greece and other destinations, but prices are low, £2 10s. to £3 per ton.

The progress of the new cotton crop is very satisfactory. The area under cotton this year is well up to the average. No stock is available.

Gathering of new tobacco leaves has started. A considerable amount of old stock is still available. There is no demand.

Notes of the Week.

Egypt's Electoral Law.

With the peace of Egypt once more restored, and having every prospect of being maintained, the ground is cleared for the consideration of the larger problem, a lasting solution of the country's difficulties. As far as is known, all political parties are agreed that the solution must rest on a constitutional basis, in other words, that parliamentary government must continue. The point at issue between the Wafdist leaders and their political opponents is the kind of electoral law best suited to the conditions of the country. At the time of the voting of the Constitution the electoral law, while being based on adult male suffrage, contemplated two-degree elections. This method was subsequently altered at the instance of Zaghloul Pasha to direct elections, as a result of which the Wafd has secured overwhelming majorities in Parliament. Its opponents would have no ground for challenging its success, if they were not able to point to abuses of the system. They claim, however, that the Wafd takes advantage of the enormously high percentage of illiteracy among the electorate to "make" the elections in ways rendered familiar by Balkan practice, including impersonation and the use of violence or extreme pressure. Clearly the controversy is one for the Egyptians themselves to settle; and it would not be necessary to point out that the two-degree electoral method, practised by so many States, is just as "constitutional" as the method of direct elections, if Mr. Ramsay MacDonald had not made his unfortunate reference to Great Britain's being no party to a change of Egypt's electoral law, as though a reversion to the method originally associated with the Egyptian Constitution was to be regarded as a breach of that Constitution. If the electoral law, as is claimed, was modified to suit the Wafd, the latter will have cause for disappointment, though none for legitimate complaint, when the law is changed back to the form originally contemplated that of two-degree elections. The essence of the parliamentary system is that there should be an Opposition, and there is something at fault in the working of the system where, as in Egypt, Turkey and elsewhere, all opposition can be eliminated. Egypt is still very young and inexperienced in the matter of parliamentary government; and no harm can be done by her giving a trial to the two-degree electoral system, which will also be based on adult male suffrage, as provided for by the Constitution. Experience has shown that the other system produces Parliaments whose sole conception of legislation is confined to measures calculated to promote political crises every few months—an intolerable situation for any country.

The Fate of the Draft Treaty.

When questioned on the subject of the Draft Treaty with Egypt, it is difficult for the British Government to give any answer other than that its offer still remains open. Insistence upon this point has caused Mr. MacDonald's Cabinet to be credited with a lively desire—which in the circumstances would not be altogether unnatural—to have the Treaty accepted and duly ratified by both countries. From this stage it has proved an easy step for the Wafd's leaders to convince themselves that a promise on their part to ratify the Treaty must enlist the British Government's influence on their side in their political struggle with Sidky Pasha. It is to be hoped that no specious arguments of any kind will deflect the British Government from an attitude of strict neutrality in regard to Egypt's internal affairs. A year ago there was some excuse for the British desire to have the Treaty submitted to the electorate, on the principle that an Anglo-Egyptian agreement ought not (in Mr. McDonald's words) to be effected behind the backs of the Egyptian people Experience, however, has proved that any such precaution is a farce. So ignorant of political affairs is the illiterate Egyptian electorate that it evinced no intelligent interest in the Draft Treaty, and was content that there should be no reference to it at the elections. This attitude was reproduced in the candidates returned to Parliament, who also showed no desire to discuss the Treaty, with the result that the effect of the British Government's "advice" to Mahmoud Pasha was to remove the fate of the Draft Treaty out of his Cabinet's hands into those of a Cabinet presided over by Nahas Pasha. It is true that the latter could produce a Parliament prepared to do his bidding, to ratify or to reject the Treaty as he might decide; but, if the British Government's idea was to see an Anglo-Egyptian Treaty broad based upon the will of the Egyptian people, it is obvious that there is no more virtue in the assent of a couple of hundred deputies compelled to do the bidding of one set of a dozen leaders than in the assent of another dozen leaders, expressed without the echo of a subservient Parliament. The desire to see a Treaty endorsed by Egyptian public opinion is entirely sound, and the natural

Digitized by Google

corollary is that there should be no question of ratifying the Treaty until there is some Egyptian public opinion with sufficient intelligence to know what it is doing when it does endorse it. One-degree elections under adult male suffrage have proved incapable of producing such a public opinion. Egypt should, therefore, be left free to experiment, if she wishes, with two-degree elections, to see whether more satisfactory results are obtained.

Great Britain and the ex-Khedive.

It is symptomatic of the misgivings aroused in Egypt by Mr. MacDonald's references to the Egyptian electoral law that attention should be directed at this time to the ex-Khedive's anxiety not to be left out of the picture, if any dynastic changes should be contemplated in Egypt. A political party that does not shrink from fomenting riots as a possible means to regaining power may be expected to coquet with any potential ally; but there is no need to suppose that a British Government, however much disposed to doctrinaire constitutionalism, is going to carry interference with the internal affairs of Egypt to the point of saddling itself with dynastic problems in addition to the handful that the Reserved Points already provide. The ex-Khedive, Abbas Hilmy II., complains of having been misunderstood, and in recent publications has made the most of the opportunity provided by Lord Cromer's inability to reply and by the advocacy of a loyal British friend. There is no need on anyone's part to challenge the correctness of the ex-Khedive's present attitude towards Great Britain and the British; but any bid for the Egyptian Throne that Abbas Hilmy Pasha may be contemplating can be made direct to the Egyptians and does not need to be forwarded *via* London. No doubt the desire to rehabilitate himself with the British public and Government took the present state of affairs in Egypt into consideration; but the ex-Khedive is too shrewd to expect a British Government that has offered Egypt a Treaty of Friendship and Alliance to take a step in regard to Egypt that would be possible only if the country were still under a British Protectorate.

Turkish Politics.

The launching of Fethi Bey's new political party has to be regarded as an accomplished fact; and the future course of politics in Turkey will be watched with much interest. Up to the present the President of the Republic has also held the post of President of the one and only political party, known as the People's Party. No other party has been tolerated, and before the empty formality of electing the only candidate in a constituency could take place the candidate had to be approved by the President. The new party is understood to have the blessing of Mustapha Kemal Pasha, but it is hardly to be expected that he will insist on selecting its candidates as well. The leadership of Fethi Bey is a guarantee that the members of the party will be loyal republicans and devoted to the person of the Ghazi, and, as they appear to have been recruited from existing Deputies, it is possible that the next Assembly will bear a strong family likeness to the present one, while engaged in cancelling measures that they had previously voted for.

Affairs in Kurdistan.

One of the difficulties in estimating the dimensions of the trouble in Kurdistan is the fact that most of the "news" published emanates from Turkey. It is, however, beyond doubt that the present revolt is a really serious one, and that the Kurds in Turkey, so far from being deterred by memory of the way in which Shaikh Said's rebellion in 1925 was stamped out, have taken steps to ensure that this ebullition find, for them, a happier ending. That they command the sympathy of their fellows outside the confines of Turkey is very probable, and although the recent report to the effect that mounted Kurds from Iraq had attacked Turkish frontier-posts may be doubted, there is little reason to disbelieve the report that there has been, from the Syrian side, an incursion into Turkey of Kurds under Hatcho. This particular shaikh has more than once proved a thorn in the side of the Turks; his previous activities, it may be recalled, led to a certain tension between the Mandatory Power for Syria and the Turks. As for the international situation, it does not appear that Persia is willing, any more than she was a few years ago when there was fighting around Ararat, to accept responsibility for Kurdish activities, and it would appear highly improbable that, for the convenience of Turkey in her management of the Kurdish problem, the Shah's Government would accept a rectification of the frontier between Persia and Turkey that was drawn up in 1914. Quite obviously the whole Kurdish problem is still in the melting-pot, and it may be that complications are in store for those Powers which are intimately concerned with it.

An Autonomous State.

Ever since the Treaty of Sèvres, in which an autonomous Kurdistan was provided for, the Turks have looked with the utmost suspicion upon every move made by other people in regard to Kurds. Now that Treaty is as dead as mutton, and if there is one thing certain in the Middle East, it is that no Western Powers will aid and abet the formation of an independent Kurdish State. Kurdish leaders will only deceive and hurt themselves if they think there is the slightest chance of arousing sympathy in the West for the creation of such an artificial State. The belief is now general that the Kurdish people have not in themselves the unifying qualities necessary to the preservation of a State. Yet it cannot be denied that the sympathies of the West, during the Kurdish rebellion of 1925 and of subsequent years, were not with the merciless Turkish overlords: the conviction is profound that Turkish treatment of the Kurds has been unenlightened, repressive, and unworthy of a State which seeks to find itself in line with civilised States. That the Kurds should, in October, 1927, have created the *Hoyboon,* or a Kurdish national government, have designated Kurd Ava, by Agri Dagh, as the provisional capital of Kurdistan, and should have expressed a determination to wage relentless war against the Turks, until their demands should be granted, was, in the circumstances, only to be expected. That the Kurds are prepared, in this struggle, to co-operate with other non-Turkish peoples in Turkey, is a symptom that has its counterpart elsewhere in the Middle East, and one that cannot fail to bring additional embarrassment to the Government of Ankara. The story of Kurdish revolts against Turkish or other suzerainty is a thousand years old. It would be a striking manifestation of the new spirit alleged to be at work in Turkey if the statesmanship of Mustapha Kemal Pasha succeeded when that of Sultan after Sultan failed.

INDIAN NOTES

The North-West Frontier Problem.

In unwelcome contrast to the improvement manifest in the situation in British India, which at the end of July is officially described as more favourable than for several months past, the trend of recent developments on the North-West Frontier is, to say the least, disquieting. For the second time this year the hill tribes have been tempted by the Congress and other seditious propaganda to invade the non-tribal territory, and although the threatened attack on the city or cantonments of Peshawar has not materialised the raiding parties have penetrated much further than on any previous occasion. While the present position is not in any way menacing, the censored reports of the fighting suggest that the lesson which was administered in June has not sufficed and that the possibilities of much more vigorous military action must be frankly faced. The Frontier has been held, since first it was drawn, by the tribes' respect for the military force at the command of the British authorities. The latest dis-

DEVELOPMENTS IN TURKEY.

Mustapha Kemal Pasha would forfeit much of his claim to greatness, if History had to write of his career that he raised Turkey out of one rut, in order to force her into another. How real is the latter danger has been clear to all who have followed Turkish affairs during recent years. For a people naturally subservient and lacking in initiative to accomplish anything, it is necessary that it should be disciplined and led with a strong hand. Everything will then depend on the character of the leadership. In Turkey's case the danger has been that the very strength of the Nationalist movement might deprive the country of the advantages which could come only from the adaptation of foreign experience to Turkish needs. Unfortunately, the methods which had won Turkey her independence were at first supposed to provide all that she required to enable her to take up among the nations the position to which the national pride aspired, and the country has been threatened with the fate of settling down to a stereotyped state of self-sufficiency, which could only bring disillusionment and dissatisfaction in its train. All efforts to look outside the Ankara Government for inspiration or knowledge were discouraged; independence of thought or expression was forcibly suppressed; the only political school of thought that was tolerated in the country was the one evolved by the Government, and no criticism of its policy was allowed. Sooner or later, even the most brilliant nation must become atrophied under such a system. For a period it might be possible under various forms of activity to create the impression of progress achieved by the national momentum; but, if the system be followed too long, the inevitable bankruptcy of ideas must reveal itself. That Turkey has rapidly been heading towards this stage was apparent to many foreign observers, and, happily, to some of her own people. As her fate could not be influenced from outside, interest has centred in the reaction of the hard facts of everyday experience on the one man responsible at the present time for her destinies.

For some time past there have been signs of a stirring in the political waters of the Turkish Republic. Last April considerable excitement was caused by the publication in a Constantinople newspaper of a series of articles severely criticising the financial policy of Ismet Pasha's Government. At first it was supposed that no paper would make itself responsible for such a step, unless it had reason to believe that its views met with approval in high places; but when in due course those responsible for the articles were tried and convicted, it was seen that their publication might prove even more significant for Turkey, if lacking the highest support. Whatever the explanation of the sudden bolt out of Turkey's political blue, it has been followed within four months by what would be regarded in any other country as a political crisis. The form that it will take in Turkey is not yet clear, but the earliest indications suggest that the significance of any changes that there may be will lie in the making of the country and people more accessible to alternative views on State policy. Consultations have been taking place between the President and his advisers, at which Fethi Bey, Turkish Ambassador in Paris—a former Prime Minister—has been present. It is noticeable that even the Turkish Press, which carries the process of self-deception to lengths that in any other country would qualify the responsible leaders for admission to mental homes, has been unable to ignore the seriousness of the financial and economic crisis through which Turkey is passing, and is beginning to realise that the principle of cause and effect may possibly apply to economic affairs. It is, therefore, safe to conclude that the deliberations which the Ghazi has initiated during the last week at his new summer resort, Yalova, have turned on the present economic situation in Turkey, and that, if there is any question of Fethi Bey's re-entering politics, it will be to introduce changes in the fiscal and economic policy which has hitherto been regarded almost as sacrosanct as the republican régime itself.

It will be entirely in keeping with the Ghazi's character, if, having made up his mind as to the need for a change, he acts quickly and decisively. During the past twelve months several foreign financial experts have been invited to examine the situation in Turkey, but no disposition has been shown by the Turkish authorities to put their recommendations into practice. Last week, however, the report of two German investigators into the state of Turkish finances in 1929, which the Government has hitherto kept to itself, appeared in the Press, and its publication may well be intended to prepare the Turkish public for coming political changes. The main theme of the German report appears to have been to stress the need for a carefully devised, comprehensive financial policy, which would take into consideration all the factors in the Turkish situation. The investigators, it must be supposed, decided that in the past Turkey had relied too much on a hand-to-mouth policy, with no attempt made to correlate its various features. More recently an elaborate economic programme has been drawn up by the Ministry of National Economy, and was at once acclaimed by the newspaper chorus as the solution of all Turkey's difficulties. Admirable as the suggestions are, many of them can be nothing more than pious aspirations in the present state of Turkish finance. It is on the question of finance that the Government seems to be in most need of guidance. The belief has been encouraged that a State Bank has only to be created to remedy the whole situation, and the Government has been duly authorised by a subservient Assembly to proceed with the formation of one. The German experts, however, were of opinion at the time of their inquiry that the moment was not suitable for the creation of a State Bank of Issue, possibly because they saw difficulties in raising the necessary capital. They considered that certain preliminary conditions ought first to be fulfilled in regard to production, trade and State finances. It will be of interest, therefore, to see whether any pending political changes indicate an intention to break with the policy of tinkering with the financial situation, and whether the President and his chief advisers are big enough to rely on foreign advice and supervision in all that concerns the country's financial policy.

GREECE.

Athens, August 2.

Condition of Universities.

The interesting report of M. Caratheodoris, a Greek professor at the University of Munich, who had been summoned by the Greek Government to investigate the chaotic situation of studies in the Universities of Athens and Salonika and to suggest remedies, has revealed the fact that between the years 1921 and 1926 the number of students at the University of Athens increased from 3,200 to 10,829. All these entered the University without any entrance examination, and most left it with degrees given on such easy terms as to have little value. The faculties most frequented were and are naturally Law and Medicine. Since 1926, owing to the introduction of an entrance examination, the number of students in the whole University had fallen one half. M. Caratheodoris thinks that it should be fixed at 3,000. The University, however, is not, as is wrongly supposed, rich or well-endowed, but depends largely for its revenues on students' fees. If the number of students is reduced, the revenues will be reduced too. The fees must, therefore, be increased. The professors, too, are obliged to supplement their inadequate salaries by outside activities. The report suggests that the salaries should be raised of only those professors who engage to confine themselves exclusively to University teaching and duties. The most essential requirement, however, the report says, is that any scheme of reform adopted should be applied systematically for a term of at least ten years, one of the greatest hindrances to improvement in the past having been the number of different theories and experiments partially applied and quickly abandoned. All this will, of course, require assistance from the State, demands on which increase daily and are bound to increase.

Archæology.

Nowhere is the need for State assistance more apparent than in the Archæological Service. Greek archæologists are badly paid and receive very small subventions for their work. The wonder is that they obtain such good results as they do. The most urgent need is increased Museum accommodation. Foreign archæologists who brings their finds to Athens for study, repair, and so on, cannot always be accommodated with rooms for that purpose, nor can they obtain the services of trained menders (indispensable where pottery is concerned), although it must be acknowledged that everything possible is done to help them; space, moreover, is not available in which to exhibit their finds. Permits to dig are given with the greatest liberality to authorised persons, but one sometimes wonders whether, in view of the congestion of the principal Museums, it would not be a wise policy to limit the number of excavations until such time as the Museum accommodation has been enlarged.

The official excavations of the British School of Archæology took place at Perachora promontory, below the lighthouse, familiar to travellers arriving in Greece by the Gulf of Corinth. An archaic temple and a large settlement of the VIIth and VIth centuries, as well as numerous small bronzes, some of great beauty, and many fine examples of Proto-Corinthian pottery were found. Secondary excavations were carried out by Mrs. W. Lamb at Therme, in Mytilene, where she continued the clearance of the prehistoric villages which she began last year. Mr. W. A. Heurtley, Assistant-Director of the School, continued his exploration of prehistoric Macedonia, the object of which is to obtain evidence for the relations of Greece with her northern neighbours from the earliest times and for the ethnology of Macedonians and Greeks. Some significant finds were made, which point to tribes of Central European origin as entering Thessaly *via* Western Macedonia about 2,300 B.C. The excavation of Ithaka, associated with the name of Sir Rennell Rodd, and also under the auspices of the British School, will shortly begin.

The Greek and Anglican Churches.

The Lambeth Conference seems to have aroused only a mild interest here, but it gave the *Messager* an opportunity for one of its attacks on the Latin Church, and for admitting to its columns a certain amount of acrid correspondence on the same theme, and was also, perhaps, indirectly responsible for a fresh outburst of Uniate-baiting. As regards the Conference, the outside observer is left wondering: How are the Orthodox going to be made to swallow: (1) The South Indian scheme. (2) The technically heretical status and the wholly heretical *ethos* of the Church of England. (3) Individual heretics from the main heresy, all in high places, viz.: Bishop Barnes, Bishop Hensley Henson, Dean Inge, and Bishop Headlam, the last of whom, having recently denied Apostolic succession in its traditional sense, is yet, if newspaper reports are true, President of the Anglo-Orthodox Committee which is preparing the way for union? Conversely, how is the average member of the Church of England, of which the glory and to some extent the *raison d'être* has always been protest against Mariolatry, Cult of the Saints, ceremonial, and so forth, going to be made to swallow Orthodoxy, where all these things flourish to a greater degree than in the Church of Rome?

Adversity makes strange bed-fellows. Can it be that this unnatural union is inspired less by friendly feelings than by a common dislike of a third party?

BULGARIA.

Sofia, August 5.

A Conference of Journalists.

Yesterday, at Varna, a conference of Bulgarian, Turkish, and Polish journalists was held. Bulgarian journalists organised this special meeting, for the purpose of securing closer collaboration between the Press of Bulgaria and that of Turkey and Poland.

Such collaboration was rendered possible by the existence of cordial friendship between the three countries—a fact emphasised by every speaker at this conference. The meeting passed off extremely well. M. Bouroff, who happened to be in Varna at the time, added to the cordiality by a speech of welcome to the Turkish and Polish journalists. He expressed the great joy that he felt at the conference being in a Bulgarian town, and encouraged the periodical holding of such meetings between the journalists of the three countries. Then, speaking to the

Turks, he recalled that Turks and Bulgarians had had tragic moments in the past, but that the past was behind them, and that from all the historic struggles between the two peoples there remained now only sentiments of esteem and reciprocal goodwill. Turning to the Poles, he said that historical ties from time immemorial had bound together the Poles and the Bulgarians, two Slav peoples who had always had the deepest attachment for each other.

The Polish and Turkish journalists afterwards toured through Bulgaria and ended their visit by going to Sofia, where they were warmly fêted by the Bulgarians.

Belgrade, August 1.

The Proposed Economic Union with Roumania.

The calling of an economic conference, proposed to Yugoslavia by Poland on July 16, was followed, five days later only, by an offer of the Yugoslavs to the Roumanians to proceed at the earliest date to the economic organisation of the two agrarian States, which would be followed by an arrangement with Czechoslovakia for the interchange of their foodstuffs, especially cereals, with the manufactured goods of Czechoslovakia. M. Marinkovitch's note of July 22, proposing this arrangement, mentioned that this agreement between the three States, members of the Little Entente, would be easier than any other initial agreement of States, that it would serve as model for any subsequent arrangement of the kind, and that later it would be open to any State to adhere to it to protect its agricultural or its industrial interests.

The effect of such an arrangement, asseveration of complete unity notwithstanding, would be that economically the Little Entente will be divided into two parts; one agricultural—Yugoslavia and Roumania—and the other industrial, Czechoslovakia. As a matter of fact, in spite of the excellent political relations with the Czechs, strengthened during the recent Sokols *Slet*, Yugoslavia has various grievances against the economic policy of Czechoslovakia. The Czechs have never ceased to claim concessions for their manufactured goods -textiles, sugar, beer, etc.,—but, as soon as Yugoslavia tried to obtain equivalent facilities for the export of her cereals and pigs, they claimed that Czechoslovakia was an agricultural country as well and could not allow Yugoslav competition to impair her agriculture. This double structure of Czechoslovakia—agricultural and industrial—is certainly an outstanding fact, but it does not help the settlement of relations with foreign countries to which the Czechs export their produce mainly in the form of manufactures, and not as raw materials. The Yugoslavs say, and quite rightly, that they have made many economic concessions to their political ally, and that for the sake of the Entente they have impaired their trade with other countries, with whom natural conditions are very favourable for an exchange of goods, for instance, with Italy.

At present Yugoslavia obviously wants to remedy this state of things, which gave her an adverse trade balance with Czechoslovakia. Accordingly, immediately after the proposal of Poland to call a conference of States "agricultural" only in a very broad sense—that is to say, having either an export of manufactured raw produce (sugar, beer, etc.), or an export of such raw produce as timber—Yugoslavia suggested that, before effect was given to the Polish proposal, an arrangement should be made first between her and Roumania for the protection of corn, and subsequently between the two States and the Czechs for the exchange of this corn against manufactured goods. M. Marinkovitch's proposal to the Roumanians was accepted with unusual speed—a week after the sending of the Yugoslav note—and the conference with the Roumanians is already sitting at Sinaia to consider the best methods for a Customs union dealing with certain kinds of produce.

This formal conference at Sinaia was preceded by a less formal one, at Bucharest, which was held from July 21 to 25, between economic experts not only of Yugoslavia and Roumania, but also of Hungary. The Yugoslav delegates to this first conference are also members of the second delegation, which is sitting at present at Sinaia, and it would seem that the findings of the first semi-official conference are to be, more or less, the basis of the further discussions on corn prices and corn export.

France as a Factor.

As far as can be judged by the steps now being taken, France, in her efforts to organize Central and Eastern Europe in the economic sphere, as she has done it politically, is departing from a very sound standpoint, that is, that agreement is easier between those States which formerly belonged to one single Customs complex. These States the Succession States of Austria-Hungary however, include an ex-enemy, and precisely the one of the ex-enemies which has not accepted the post-War political position particularly well. This is Hungary. But for any economic student it is clear that it would hardly be possible to standardise prices for wheat and maize—or for any other produce—in Central Europe without including Hungary in the arrangement. That is why a conference of Yugoslavia, Roumania and Hungary—the three main corn growing countries - was called in Bucharest on the pretext of replying to economic questions put to various States by the League of Nations. This meeting of experts provoked unusual interest in Prague, because although economically agreement among Yugoslavs, Hungarians and Roumanians is the first sound thing to be done for the raising of corn prices, the Bucharest meeting seemed, from the political point of view, rather peculiar, inasmuch as it initiated a joint discussion of two members of the Little Entente with Hungary (against whom the Little Entente was formed) with the object of devising means for protecting the agrarian interests of all three against such industrial countries as Czechoslovakia, the third member of the Little Entente which is by no means favourably disposed towards Hungary.

As things stand at present, everything points to the formation of what may be termed a corn cartel between Yugoslavia and Roumania. Reports of a Customs Union are certainly an exaggeration, because to obtain this, it would be necessary first to denounce all the commercial treaties of the two countries, as these are based on the most-favoured-nation clause. These treaties are for various periods, and it would be a long business to get rid of them.

If a corn cartel is made between Yugoslavia and Roumania (with or without the adhesion of Hungary), the next step will be to try to secure the placing of a minimum consignment of wheat and maize in Czechoslovakia from these two countries at standard prices.

In all these arrangements of an economic character, politics are so closely intermixed with the economic elements, that the whole problem seems to acquire an

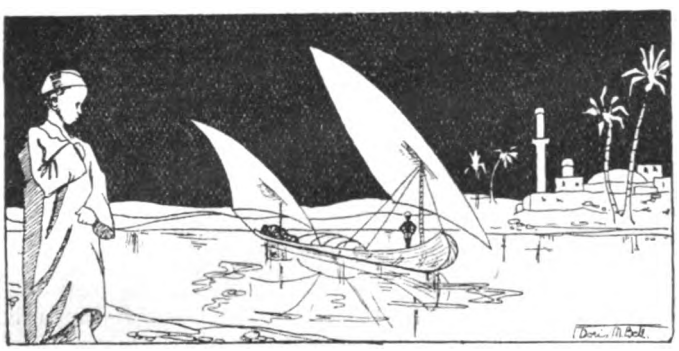
unusual complexity. The questions whether a wheat and maize cartel is or is not the resurrection of M. Briand's plans of a Danubian Union, and whether this latter is or is not the economic resurrection of the late Austro-Hungarian entity cannot be discussed, before the political effects on the Little Entente of the economic collaboration of two of its members with Hungary are known. It is, however, certain that to France an economic agreement of the Central European States, without a link with the Baltic States, would be less profitable than the Polish scheme.

But both the Polish plan, and still more the Yugoslav scheme, now under discussion at Bucharest, seem to indicate that the Pan-Europe of M. Briand, will not be as "*pan*" as it looked at the beginning, and that the present adjustments in economic matters cannot fail to have their political repercussions.



EGYPT.

Alexandria, August 8.

A Wafdist Film.

A very interesting entertainment was provided for the Press this week. At the invitation of the Ministry of the Interior, Cairo journalists assembled at the Ministry to witness a cinema film which the Wafd had arranged with Messrs. Kodak to take during Nahas Pasha's visit to Mansoura. This film was presumably intended for propaganda purposes in London, but when the Government heard that Wafd agents had been attempting to have certain episodes removed, they availed themselves of the censorship of films regulations to confiscate the film.

The first part of the film shows the train on its way to Mansoura with hundreds of fallahin in galabiahs sitting on the roof. The next scene shows Mansoura Station Square with the cars moving off and Nahas Pasha's car being stormed by a crowd of roughs. There is here a little comic relief in the figure of a well-known correspondent of a London paper sitting on the back of the car pushing off unwanted intruders. Another scene shows the body of a dead boy lying on the ground with the crowd gathering round and soldiers with fixed bayonets guarding a side street. More light relief in the form of Nahas Pasha eating his luncheon—a remarkably fine meal considering that he had, according to him, only just escaped being assassinated. Then came more scenes of the crowds in the Sharia el Mudiria, where two mounted policement were killed by a telephone wire stretched across the street. The crowd are seen throwing stones and everywhere great confusion reigns. The film is interesting rather than important, and it is difficult to imagine how the Wafdists thought they would be able to make propaganda out of it.

CENTRAL ASIAN SOCIETY

(in which is incorporated The Persia Society.)

Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published.

The subscription of £1 per annum entitles members to a copy of each issue of the Journal, tickets for all meetings, and the loan of books from the library.

Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W.1

Helping Local Industries.

Now that peace has again descended upon the nation, the Government is finding time to attend to economic matters. The question of improving local industries has received very careful study, and a circular has been issued to the various administrations requesting them in all cases to give preference to local products over those of foreign origin, where conditions of price, quality and delivery are the same. The Government has since gone even further and recommends the choice of local products even when the price is slightly higher. An instance of this scheme in practice is that of the supply of cotton-wool. Preference has been given to the product of the Société Misr and Messrs. Southall Brothers and Barclay, Ltd., who maintain a factory in this country, provided that the cost is not more than ten per cent. in excess of the imported article.

The Ministry further recommends that Government Departments should modify their conditions for the submission of tenders by deleting everything tending to indicate that tenders must be of any particular brand of goods or only for goods of foreign origin, and that, whenever supplies are required of an article which is manufactured in Egypt, they should be obtained, if possible, through an adjudication limited to local products.

The "Moulad al Nabi."

Moulad al Nabi, the Feast of the Prophet Muhammad, the Muslim equivalent of Christmas Day, was celebrated all over Egypt on August 6. In Cairo a particularly imposing ceremony was held. A huge marquee was erected on the Slade Barracks Square at Abbassia, and there the Prime Minister, representing King Fuad, the Ministers, the Inspector-General of the Egyptian Army, and other senior officers witnessed a march-past of contingents of the Egyptian Army.

Then leaders of the religious sects, about seventeen in number, assembled in front of the Royal Marquee with huge banners of gay colours. A Shaikh from each sect came forward and recited a special chant, while all the others afterwards joined in. The Shaikhs were presented to the Prime Minister. The Prime Minister then proceeded to the tent of the Supreme Shaikh of the Religious Tarikas, where a Shaikh from Al Azhar University, sitting cross-legged on a high chair, recited the story of the life of the Prophet Muhammad.

After these ceremonies a meal was given to the poor. From 2.30 p.m. until late at night thousands of people streamed into a huge marquee, where a succession of meals was provided. Mountains of rice and bread, seas of soup and hundreds of sheep were consumed; people often had a feed, and then, surreptitiously, came back for more. The only real restriction was that no food was to be taken away. Several times indignant old women were caught trying to steal out of the tent with pieces of meat hidden in their skirts. There was also a huge fair, where sideshows of an amazing nature were enjoyed by the multitude. The proceedings, which in some quarters were viewed with alarm owing to the supposedly excited state of the nation, were entirely peaceful, and no disorders occurred.

In Memory of Zaghloul.

On the 23rd of this month the third anniversary of the death of Saad Zaghloul Pasha will be observed. This is always an occasion for giant demonstrations, and fears have again been expressed that this year's may be the sign for disorders. The Government is, however, quite confident of its ability to maintain order, and in view of recent events, many people are inclined to believe in the Cabinet.

CYPRUS.

Nicosia, July 29.

The Trade Mission.

The Government Mission has concluded its work, it is understood, with very satisfactory results, both as regards

Digitized by Google

a prospect of increased trade with Syria, Palestine, Greece, and Egypt, and of promise of participation in the Exhibition to be held in Cyprus next year. At Athens, according to the Greek paper *Patris*, quoted by the *Phone* of Nicosia, the Mission was received by the Vice-President of the Chamber of Commerce of the Piræus and many merchants, discussion being of a satisfactory nature. The visit to Egypt was equally encouraging.

The Swedish Archæological Mission.

The work of exploration and excavation by the Swedish Archæological Mission is continuing with much success. In the recently discovered remains of a temple to Isis and Aphrodite, mentioned by Strabo, various objects of antiquity have been brought to light.

The New Bishop of Papho.

His Eminence the newly elected Greek Bishop Leontios is expected to arrive in Cyprus on July 31. It is understood that, according to arrangements approved by the Archbishop, the Bishops of Kition and Kyrenia will be present at the inauguration of His Eminence as Bishop on August 6, following that of his admission as priest on August 3. He will proceed to Papho as soon as possible. Very great interest is taken in the coming arrangements.

Mr. Zeno Rossides.

The return of Mr. Rossides, who acted as Secretary to the Greek delegation to London, is welcomed. He has left many friends in London. The Archbishop has received a letter from the Acting Governor, Mr. Henniker Heaton, stating that his recent telegram has been received by Lord Passfield. His Eminence has also received from the Governor a letter expressing the satisfaction of His Majesty on the receipt of his congratulations on the occasion of the King's Birthday.

NEWS IN BRIEF.

M. Titulescu concluded on August 11 his visit to the King of Roumania and Cabinet Ministers at Sinaia.

Captain W. Davies, of the Strick Line steamer Kohistan, died from the effect of the heat at Basrah on August 11.

Dr. Kantcho Milanoff, Minister of Justice in the Bulgarian Cabinet, has ordered proceedings to be taken against Ivan Mihailoff, the Macedonian Revoluitonary leader.

Three cases of non-payment of the *Ghaffir* tax in Egypt are reported as a result of the Wafd's campaign for the non-payment of taxes.

Ex-King Amanullah of Afghanistan visited the Acropolis on Friday while passing through Athens on his way back to Rome from Ankara.

It is announced from Beyrout that M. Ponsot, High Commissioner for Syria, has issued a decree ordering the expulsion of Badr Khan, the well-known Kurdish leader, who is alleged to have been conducting propaganda against Turkey. Badr Khan is said to be in possession of an Egyptian passport.

An agreement was signed on August 6 between the Turkish Minister for Public Works and a German group for the supply to the Government of a large quantity of railway material until the end of 1934. The value of the contract, including interest at the rate of 6 per cent. per annum, is a little over 10,000,000 dollars (£2,000,000), of which 3,000,000 dollars will be paid during 1930 and the two following years and the balance during 1934-5-6. Provision is thus made for the rolling-stock required for existing lines and for the completion of the Kaisarieh-Ulu-Kishla, the Irmak-Filios, and the Fevzi-Pasha-Arghana lines, which are being built at Swedes.

The Index for Volume XXXVII (January 2—June 26) is now ready, and can be had on application to the Manager, The Near East and India, 170, Strand, London, W.C.

THE RECENT DISTURBANCES IN EGYPT.

In order to determine the question of responsibility for the recent disorders in Egypt the Egyptian Government ordered an investigation to be carried out by the Parquet of the disturbances at Mansourah on July 8. The following summary of the Attorney-General's report on the subject contains the main points of the Parquet's findings: —

Some members of the Wafdist Committee in Mansourah notified the Governor of their intention to hold a private meeting, at which Nahas Pasha would deliver a speech on the present political situation, and that prior to the meeting Nahas Pasha would be entertained to luncheon in the house of Shinaoui Bey. The Governor considered that the meeting was in reality going to be a public one, owing to the large number of people invited and to the nature of the speech to be made by Nahas Pasha. Under the description of a private meeting, it would be possible, in this manner, to hold a meeting at which thousands of persons would be present. The meeting was accordingly prohibited, and the Wafd and Nahas Pasha were informed of this decision. The reply to the Governor was that the meeting would be held and that the Government would be regarded as responsible for any trouble which arose. The luncheon party was, however, permitted; but the number of the guests was limited to 200, and the cars taking them to 10, and the condition was laid down that those persons proceeding to the luncheon must be bearers of cards of invitation, and that no one would be allowed to ride on the outside of any of the cars.

The officers in charge of the troops at Mansourah stated that, at first, some cars and coaches proceeded according to instructions without any trouble. At about 1.30 p.m. a car arrived which was driving at between 30 and 40 km. per hour. It was crowded with a mob of people. When this car saw the cordon of police it did not stop, but, on the contrary, accelerated its way through. When it arrived at the first line of the Army, some officers called to the driver to stop. He refused. In conformity with military regulations the soldiers levelled their bayonets at the car; but, in spite of the officers' orders and the threat of force by the soldiers, the driver still kept on. He forced his way through the line of troops. As a result some of the persons riding on the car were struck by the bayonets, and the impact was so great that some of the rifles of the soldiers were broken.

On this, some of the mob started to throw stones at the soldiers from neighbouring houses, which were at the time not occupied by their rightful owners. The Commandant of the force advised the crowd to cease the stone-throwing, and threatened them that they would be fired upon, if they did not desist. His orders being ignored by the mob, the Commandant, according to military regulations, ordered the soldiers to fire on the ground. Nineteen bullets were fired; but no one was harmed. The throwing of stones increased in intensity from the neighbouring houses, and the Commandant was compelled to order the Cavalry to charge in the alleys in order to disperse the assailants. Part of the crowd were able to tear down the telephone wires and to stretch them across the streets, so that the cavalry were entangled in the wires. Horses were injured and soldiers thrown. Two soldiers were killed and three seriously injured. Several other officers and men received injuries. Four of the crowd were also killed.

The inquiry established that many of the casualties were accidental or were not caused by the presence of the troops. One man had been injured by falling off Nahas Pasha's train; another by falling off his car. A third was killed by being run over by the car.

Nahas Pasha said that, when his car approached the police and the troops, the first two lines opened the way for it. It was only when they approached the third line that the soldiers presented their bayonets at the car. The car stopped and the soldiers surrounded it, and started attacking those in the car with their bayonets. He, therefore, accuses the Prime Minister, the Governor of the Province, and the Commandant of the Army of an attempt to assassinate him.

Nahas Pasha's statement was not borne out by the evidence of witnesses, with the exception of one, who pointed to a wound that he had received from a bayonet. Medical evidence, however, established the fact that the wound in question had been caused by a safety-razor. The report concludes by saying that there was no foundation for the accusation made by Nahas Pasha against the Prime Minister, the Governor of the Province, and the Commandant of the forces; that this was clear from the evidence of the witnesses, especially those on the car with him to the effect that the driver forced his way through, after being requested to stop, that the car was travelling at a high speed, which it was admitted was between 40 and 60 km., and that there was a large number of persons on the car, riding on the back, front and sides—contrary to the arrangement made bteween the Government and the Wafd Committee. Moreover, the report added, "had the intention of the soldiers been to injure the occupants of the car, their hurts would certainly not have been so slight and so few."

The Attorney-General added that the accusation of attempted murder was so groundless that he did not thing it worth while to carry the investigation beyond that point.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 24.

The Sapru-Jayakar Mission.

Three or four days ago the Secretary of State for India referred a questioner in the House of Commons to the correspondence between the Viceroy and Sir Tej Bahadur Sapru and Mr. Jayakar on the subject of their approach to the Congress leaders. That mission, the course of which has been interrupted by a regretted domestic occurrence in Mr. Jayakar's family, has undoubtedly been the outstanding event of the week. Opinion regarding the mission appears generally to be that it will fail in its immediate object: that is to say, that the immediate answer of Mr. Gandhi and Pandit Motilal Nehru and Pandit Jawaharlal Nehru will be a refusal to call-off the civil-disobedience movement; but that is not to say, men add, that the Round Table Conference may not yet answer the hopefullest anticipations about it of such as Sir Tej Bahadur Sapru. One reads in that the faint expression of the opinion that the civil-disobedience movement, though not formally called off, will slowly peter-out; will be a thing little regarded, or even little remembered, by the time we reach October 20. It may prove so. The Maharaja of Mahmudabad, the father of the Lucknow Pact of 1916, predicted to me before the civil-disobedience movement was launched, as long ago as last January, that the Congress leaders, Mr. Gandhi included, would inevitably have to retrace their steps, and come again into line with the workers on what are called constitutional lines; lines so called to distinguish them from Mr. Gandhi's revolutionary tactics.

The Bishops' Appeal.

Another "mission" of the week, but the process of it different, has been the letter of the Bishop of Calcutta, and other Bishops with their dioceses in India, to *The Times*. Men, it has been seen, would now try the way of conciliation. If only enough men would try it—the Maharaja of Bikaner and the Maharana of Udaipur have added their suffrages at this time too—that way might prove the way of success. If only enough men of influence would try it, and if only the masses of men would not act in ways that counteract the good that the men of influence would be doing. The Bishops have said in their letter to *The Times* that "it is only by men of sincerity and sympathy like Lord Irwin that India's heart can be won." One might answer to that, that, if the mass of Europeans in India *will* go on feeling and showing the quantities of race-prejudice that they have felt and shown in the past, far more men of "sincerity and sympathy like Lord Irwin" will be needed in India, to win India's heart, than ever will be found. Indians talk among themselves of the race-prejudice that Europeans in India show, far more than self-reassuring Europeans suspect. Indians tell each other stories. If an Englishman they are with is one they do not care what they tell, they will tell even him those stories. They are intensely bitter about that race-prejudice. If the British want to keep India within the Commonwealth, they must learn to tread-down that prejudice, and let no more of it be seen.

Date of the Round Table Conference.

Some voices have been raised lately, in Great Britain rather than in India, favouring a postponement of the date of the Round Table Conference. What cannot be fully realised is how much the time factor has already been against peace. When you have to deal mainly with lawyer-politicians, with at the best no strong touch with realities, no undertaking should ever be given until just before the event. How much strife would it not have saved us, if the Viceregal announcement of last November had not been made then, but had been deferred until the echoes of the reception of the Report of the Statutory Commission had begun to die away? How much better would it not have been, if the announcement that there would be a Round Table Conference had not been made till now, when we have arrived within three months of the date proposed for it? If you were to promise a Conference to a group of British politicians a year later, the group would quickly decide what its attitude should be at the Conference, and would hold pretty closely to that during the twelve months. Indian politicians are different. They are constantly "talking themselves away, and talking the others away," to put it so, from the attitudes once adopted. An instance of that has been India's gradual change of attitude regarding the safeguards that it is still recognised there must be for the "transition period." Six months ago men were very much readier to agree to the safeguards that any reasonable British-Indian official would say were necessary, than men are now. It is because there has been so much time for talk, and so much talk. We have traversed all the ground between speaking of "such safeguards as are necessary for a *short* period of transition and are *inoffensive to national self-respect*." Those words have so far, to my knowledge, been used by only one speaker (one of the speakers of this week), but you will find that they will catch on. And men, if still more time is given, will talk themselves into the position in which they must refuse to agree to any safeguards whatever. That is all of it the normal course that things take.

The Hindu-Muslim Problem.

One's reading of the situation, in the matter of the Hindu-Muslim problem, is that it has been this same tendency of the politicians "to talk themselves farther on," that has prevented their reaching a solution of that problem, or, for this even appears true, has brought them all to an unwillingness to try to solve that problem. They know how acute a problem it is; they know and have known that Hindus and Muslims *must* agree about it before the London discussions begin, and yet the end of each month sees the country just where it was about the problem at the beginning, unless during the month the unwillingness to look steadily at it has grown. What the problem is, in one aspect of it, has been more nakedly stated by Dr. Srafaat Ahmud Khan at a Muslim Conference this week at Allahabad than one had ever before seen it stated; and I have thought I ought to give his words. "Nowhere," said Dr. Khan, "were public servants, under Government as well as local bodies, so exclusively looked up to for guidance, for control, and for active help as in India, and for good or for evil the Services, ever since the end of the indigenous self-governing institutions two or three centuries ago, had directed and controlled the nation's destiny, and had executed its policy almost exclusively. The struggle for, and bitterness over, the representation of the different communities in the Services had thus a very much deeper meaning and a nobler significance than merely that of loaves and fishes."

United Provinces Muslim Conference.

I should also like to quote this from the speech of the President of the most Muslim Conference that Dr. Khan addressed, Maulana Shaukat Ali: "Having formulated a clear demand, we must organise ourselves as early as possible. Mahatma Gandhi and Pandit Motilal Nehru, our erstwhile co-workers, have given us the cold shoulder, and have deserted us after putting their own house in order. We Muslims must organise ourselves, not in a fighting spirit, but with the intention of consolidating our position; so that, when they realise the mistake they have made, they might come round, and show us the respect we deserve." Another passage in the Maulana's speech of unusual interest is this: ". . . we begged Mahatma Gandhi to hold a Round Table Conference of our own in India; so that we could face the British people with a united demand, having the support of the Princes and all sections of people in India. Mahatma Gandhi and Pandit Motilal Nehru made a fatal mistake when, on December 23, they refused the offer of Lord Irwin, who sincerely

Digitized by Google

desires to serve the country, and bring about real peace between Britain and India. Let us pray that, after a demonstration of strength on both sides, wiser counsels will prevail." There is the note of conciliation there too.

The Elections.

There are to be elections held in September all over India. No certain indication has yet been given, whether the Congress Party will take part in them. The decision as to that will doubtless be involved in the decision, what to say to Sir Tej Bahadur Sapru and Mr. Jayakar. If they fall in with their pleading that a united India should assist in the London discussions, they will naturally want to contest the elections as a serious trial of strength. If they are not to go to London, they may abstain altogether from the elections, or they may seek — it is rumoured they will—to make them farcical. They would do this by procuring the election of illiterate men—barbers, sweepers, bhistis. They would not stick at that, if they thought it would serve their ends.

Indian Finance.

With trade conditions in India as deplorable as they have now become, no one can think of next year's budgets without the prayer that they may not be as bad as it is now feared they must be. The Finance Member had occasion to address the Legislative Assembly the other day. He was moved to say: "Sir, I do not wish to enter upon a controversial field, but, as I contemplate the difficulty and the distress into which the country is now plunged, I cannot refrain from some comment on how things might have been. My honourable friend, Mr. Chetty, has asked us to take into account the hope that they may be better in the future. I am oppressed by the certainty that they would have been infinitely better at present, if the present disturbances had not been started. I venture to say that Bombay at least would have been enjoying a boom. The cotton mills, with the new protective duties, would have been prosperous. Government, with a low borrowing programme, would have encouraged confidence in Government securities, and we should have seen a rise of at least five points all round. The Banks then would have recovered the losses which they have been suffering on capital depreciation in their holdings, and a general feeling of confidence and cheerfulness would have prevailed." The unfortunate thing is that few of the lawyer-politicians have any head for public finance.

Other Wrong Thinking.

It is unfortunately not only from Indians that loose, or wrong, or perverse thinking comes. Little as one would have expected any newspaper written and published by Englishmen to assert that "the basic principles of democratic government have been assimilated by India," that has also been done—"It need not be feared that the general impression the British electorate will get from the report will be one unfavourable to India's advance towards self-government. On the contrary, the weight of the evidence put forward by Sir John Simon and his colleagues is on the side of progress, for it goes to show that the basic principles of democratic government have been assimilated by this country, and that it but wants a certain adjustment of the system for it to function more freely than it has hitherto."

One who will say that only "a certain adjustment" is needed to make parliamentary institutions function other than disastrously in India, will say any mortal thing.

The Secretary of State for India in Council has granted Sir Charles Alexander Innes, K.C.S.I., C.I.E., Indian Civil Service, Governor of Burma, leave of absence, on medical advice, for urgent reasons of health for four months with effect from August 16, 1930.

The King has been pleased to approve that Sir Joseph Augustus Maung Gyi, Member of the Executive Council of the Governor of Burma, shall act as Governor of Burma during Sir Charles Innes' absence.

INDIAN NOTES

(Continued from page 170.)

turbances represent the temporary triumph of the revolutionary agents from India who, as already noted, have not scrupled to play upon the fanaticism of the tribes by spreading the most grotesque stories of the massacre and persecution of their co-religoinists by the India Government. The most daring defiance of authority that has been witnessed in the past few days suggests that the saultary fear of the consequences, which has been the main deterrent to raiding attacks from time immemorial, has lost at least some of its force, and that nothing short of another punitive campaign of the old familiar sort will restore the lost prestige of British arms. But before that is undertaken we hope that every effort will be made to inflict the most condign punishment on those, whether styled Nationalists or Communists, who are primarily and directly responsible for the loss of life already involved and for the still greater sacrifices that will be entailed before order is restored.

*'Through Fifty Years."**

The Surma Valley Light Horse is known to all who have lived in North-eastern India. The valley of the Surma is the smaller of the two great tea-producing divisions of Assam, and the Light Horse is the planters' regiment. It did not, in fact, come into existence under that name until 1886, but it really dates from 1880, when the Sylhet Volunteer Rifle Corps was constituted. In 1883 Cachar, the other district of the valley, followed the lead of Sylhet and established the Cachar Mounted Rifles. These two regiments amalgamated in the following year as the Cachar and Sylhet Mounted Rifles, which title they changed, two years later, to the Surma Valley Light Horse. In a book recently published in Calcutta, the Rev. W. H. S. Wood has traced the history of the regiment "Through Fifty Years." It is an inspiring record, showing, as it does, how successive generations of planters have loyally and cheerfully borne the burden of military duty. The first event of outstanding importance after the amalgamation was the chance of active service which came in 1891. The second was the announcement, on January 9, 1900, that the Government had accepted the offer of Lieut.-Col. D. M. Lumsden, formerly of the Assam Valley Light Horse, to raise a body of two hundred mounted volunteers for active service, and to give a sum of Rs.50,000 towards their equipment. The planters of the Assam and Surma Valleys most strongly supported the movement, as indeed did the whole European community in India. Colonel Lumsden was appointed Commandant, and the corps was styled Lumsden's Horse. The greatest enthusiasm was aroused and, as Mr. Wood says, Lumsden at once became "the man of the hour," particularly in the planting districts. He was in Australia when he made the offer, but he promptly left for India where, from an enormous number of applicants, he selected two companies comprising in all 251 men. All parts of the country were represented in the corps, of which a detachment of the Surma Valley Light Horse was a prominent feature. We need not follow Lumsden's Horse through the war further than to say that it served with much distinction. Its best work was done in the van of Lord Roberts' march to Pretoria, but its whole record was admirable. To the years intervening between the South African campaign and the Great War Mr. Wood devotes a chapter. And, coming to 1914, he mentions that on the outbreak of war the strength of the Regiment was at once increased materially. Its services were immediately placed at the disposal of the Government of India; but the offer, although it was appreciated, could not be accepted. Mr. Wood recognised that there were excellent reasons why

* "Through Fifty Years. (A History of the Surma Valley Light Horse.)" By the Rev. W. H. S. Wood. (Calcutta: The Assam Review Publishing Co. Rs.10.)

Digitized by Google

the regiment as such, or a detachment from it, could not serve in the War. But all the same, he regrets that such should have been the case, seeing that it had done so well in Manipur and in South Africa. He also records, somewhat regretfully, "the end of the Volunteers," and the formation of the Indian Defence Force, in which the Surma Valley regiment became a unit. After explaining the position under the Auxiliary Force scheme, he comes down to the present year—the fiftieth in the life of the regiment. This jubilee year has been signalised by the presentation to the regiment of its colours—a fitting recognition of its long and excellent record. Once again also it has been called out upon active service, the occasion being the raid, in April last, on the Auxiliary Force and Police Armouries at Chittagong.

H. H. THE MAHARAJA OF BIKANER ON THE ROUND TABLE CONFERENCE.

Ordinarily the Indian Princes very properly refuse to intervene in any way in the public discussion of the purely domestic affairs of British India. That their silence is in no way due to a lack of sympathy with the reasonable aspirations of politically minded India has been demonstrated on more than one occasion in these columns recently. But, as his Highness the Maharaja of Bikaner observed in an interview during last week, the times are not normal. "Tremendous issues are at stake and never has there been greater need than to-day for bold statesmanship and courageous action. If the Round Table Conference is to do good and satisfactorily to solve the problems of India, including the Indian States, it is of the utmost importance that the problem should not be considered on any pre-conceived lines and that it should be handled on absolute non-party lines, by which alone can we, under God's Providence, hope to see India and Great Britain once again firmly united and standing shoulder to shoulder for all time and against all foes—to the mutual advantage of both."

The descendant of a long and distinguished line of soldiers, and one who himself has served three successive British sovereigns, both in peace and war His Highness can legitimately claim to speak, not as an alarmist or a dilettante in politics but rather as the head of a State with a very real stake in the country, a true friend and well-wisher of Great Britain and the British Empire and with the full sense of responsibility of one who has never departed from the traditional loyalty of his House and belongs to an Order to whom treaty obligations and the plighted word are of paramount importance. "Wise statesmanship and the interests of India, as well as of the Empire," the Maharaja added "demand that every avenue possible should be explored and every opportunity wisely, tactfully and sympathetically taken advantage of to bring about more cordial and closer relations between the Government and the people." At the same time he was equally emphatic that "any challenge to the supremacy of a Government—whether it be the British Government or the Government of an Indian State—must inevitably be taken up. Revolution, or forces moving towards revolution, must be put down; and no Government worthy of the name can abdicate its functions." While therefore it was obviously impossible for the British Government to approach the Congress leaders for a cessation of the non-co-operation movement, he had for some time past favoured private negotiations such as those now being undertaken by Sir Tej Bahadur Sapru and M. Jayakar.

As he had previously stated, "if all the Indian parties and communities concerned unitedly put forward reasonable and legitimate claims at the Conference and if they were advanced with sagacity, moderation, decorum and restraint, they would really prove irresistible. Should happily for India a suitable response be made by the Congress leaders to the efforts of Sir Tej Bahadur and M. Jayakar it is inconceivable," His Highness concluded, "that the response by the Viceroy and the British Government would not also be generous and such as would satisfy all reasonably-minded people."

VEERASWAMY'S INDIA RESTAURANT

(ENTRANCE SWALLOW ST.)
Specialists in any variety of NEAR EAST, INDIAN and ENGLISH dishes. Served in an artistically Eastern atmosphere.

THE PEASANTS OF THE PUNJAB.*

Mr. Darling is already well known to students of Indian rural problems by a former book, "The Punjab Peasant in Prosperity and Debt," which, published five years ago, forthwith became a classic, and is now quoted by all respectable Royal Commissions. The present work deals with the same subject, but on somewhat different lines. The bulk of it is in the form of a tour-diary, recording from day to day what peasants said on a great variety of topics, cauliflowers and landlords, if not "cabbages and kings," sewing machines and birth control, motor buses, or rather lorries, and spiritual preceptors, and all the other boons and banes of the Punjab villager. It is a fascinating record, not to be sampled or quoted, but to be read and digested at leisure; treated in this way, it will be found to furnish just the nourishment which students need.

The latter portion of the book contains Mr. Darling's summary of his observations, and the conclusions which he draws. His argument may be stated as follows. There is now in the villages a conflict between religion and economics, or, as the peasants themselves say, between the old light and the new. The quarrel has been fought out in many other countries, where it has usually ended in divorce, and where strenuous efforts are now being made to bring the parties together. Can the Punjab benefit by this experience, so that, learning by the mistakes of the West, it may avoid the extremity of the conflict, and work out a reasonable synthesis? The thing can be done only on the basis of the existing ideas and practices of mutual help, so well known to everyone who has studied Indian villages from within. Take this part of the old life as foundation, and build on it an organised system of co-operation, so that the new economic forces may not be left to work blindly, but may be directed along lines leading to a better, not merely a richer, peasantry. Such is Mr. Darling's argument, and, to the reviewer at least, it seems to be beyond dispute: it will be terribly hard work, but it is the thing most worth doing just now, for the Punjab, and through the Punjab, for the rest of India.

One point in the presentation of the argument calls for a word of criticism. On page 370 Mr. Darling writes that "in Hinduism religion and economics are fused into one"; and on page 385 he quotes with approval the observations of another writer on "the deep penetration which the Hindu religion has made into every part of the social fabric." Such remarks suggest that, at some time in the past, the Punjab peasant "got religion," to use the American phrase; but surely the historical truth is that Hinduism is a way of life, embracing from the outset all the manifold activities which we class as religious, social, or economic. There has been no fusion nor penetration, in the past; but there is now in progress the differentiation which is a normal characteristic of social growth, and the problem is how to control that inevitable progress so as to secure its undoubted benefits and minimise the coincident evils which have developed elsewhere.

CARMEL BY THE SEA.

By Frances Creswick.

I could scarcely believe it was Carmel jutting out into the sea, a low hill, long and slug-shaped, the grey of wild thyme leaves in the early morning. The lighthouse at the point was still burning, and it twinkled; the cool sea reflected the half-pink shade of the sky.

This was the Carmel of Elijah.

It seemed hardly the theatre, I thought, for anything so majestic as the Prophet's famous contest with the priests of Baal. Was it here that he had taunted them throughout a long, hot day, until at evening had come in the great silence a fire from God? Here that his servant had stood looking for rain until he saw a cloud over the sea, the size of a man's hand? It seemed too small a place for such great happenings, with its slow curves, and lazy lines like moors or the South Downs.

And yet, what romance it still held! At its foot the priests of Baal were slain; Sisera kept his nine hundred chariots of iron nearby; this way St. Paul had come; ships of Tyre; Crusaders. Richard Cœur de Lion must have seen Carmel like this as he walked the deck with Queen Berengaria when they, too, were at anchor in Acre Bay.

Carmel is really a long cape, forming the south side of the Bay of Acre. Haifa lies at its foot, near the Brook Kishon, Haifa, new and commercial. It was the Sycamenum of New Testament times, and was taken by Tancred in the First Crusade. Otherwise it has no history, for it scarcely existed before Roman times. As places go in Palestine, therefore, it is young. But it was thrilling to me when I landed, for it was the first place where I smelt the East; the first time I saw camels lurch, jingling down the street.

I stayed at Carmel six weeks after my first glimpse of it, in a house among the pine trees on the top of the hill. There was a not too cultivated garden round the house, full of freezias and stocks; and beyond, across the blue water, the Bay of Acre, we could see Hermon, guardian-like and rather remote, and the snowy Lebanon.

We could see Acre, too, white in the sun, or at night picked out with a few steady lights. I used to stand on a balcony in the moonlight—there was a full moon when I was there—and watch it, while the pines waved, their needles catching the light. The scents were divine. One used to laugh at me, for before I went in I used to blow a kiss to that town over the water: "Good-night, Acre."

One day I felt the old urge of Elijah—"Go up and look towards the sea." So I went out and took the track that leads down Carmel on the south-west. The sea and the sun were before me, and I have never walked among such flowers. I could have sung aloud with sheer *joie de vivre*. There were pink rock-roses and blue pimpernels, anemones and little oxeyes. The grey rocks were a fittting foil to their beauty—above and around them hovered the bees.

Suddenly I heard piping. It might have been Pan among the rocks and pine trees, but instead I saw a shepherd in fluttering black rags, and he was playing to a flock of sheep and goats. He was like a Corot come to life.

Below me, where the gentle slope ended in sea, was Athlit.

These ruins of the old Castra Peligrinorum of the Crusaders hold the romance of all decayed castles which have once been great. Here knights and even kings had been entertained; those days passed, and Athlit was the only place left to the Crusaders in all Palestine. Then it, too, was taken, and now for centuries it has remained, decaying by the lonely sea. From Carmel you can see one tower and one crumbling sea wall. I wonder whether the owls call about the ruins at night, and whether it is haunted.

At sea level I accepted a lift from a cement lorry. It took me to the point, and there, round the corner was the familiar view of Acre Bay. I sat on the sea shore playing with the shells, and over the water the boats sailed "like swans asleep."

I had never realised what a small country Palestine was until I stood on the hills above Nazareth and could see right across the country from Carmel and the sea on one hand, to Gilead over Jordan on the other. It is there that one gets Carmel in its true perspective.

A long low ridge on the skyline, I was wrong about the slug; it is more like a whale, except for the unaccountable hump near the landward end, which is the Place of Sacrifice.

Our Lord Himself must have known this view of Carmel, for it can be seen at several points on the road to Jerusalem. Saul could have seen it that day on Mount Gilboa when he "leaned upon his spear, and the chariots and the horsemen followed hard after him." Ahab, that wicked king, must have known Carmel well, for Elijah ran before his chariot thence all the way to Jezreel.

Yet Flecker has said the best word about Carmel, even though he wrote it at Brumana, beyond the Ladder of Tyre. He said:

> Beneath me in the valley waves the palm,
> Beneath, beyond the valley breaks the sea;
> Beneath me sleep in mist and light and calm
> Cities of Lebanon, dream—shadow—dim,
> Where kings of Tyre and kings of Tyre did rule
> In ancient days in endless dynasty.
>
> . . . . .
>
> 'Tis ever sweet to lie
> On the dry carpet of the needles brown
> And though the fanciful green lizard stir
> And windy odours light as thistledown
> Breath from the lavdanon and lavender,
> Half to forget the wandering and the pain,
> Half to remember days that have gone by,
> And dream and dream that I am home again!

The Rev. R. P. S. Waddy, curate of St. Peter's, Leicester, will sail for India early in October, having accepted an appointment in the diocese of Nasik.

Orphali, the only Jew under sentence of death following the disturbances in Palestine in August of last year, has been reprieved, and his sentence has been commuted to 10 years' imprisonment. The case was twice tried before the ordinary Courts and twice before the Court of Appeal.

The contract to complete the northern section of the Trans-Persian Railway from Bandar-i-Gez to Aliabad at a cost of £183,000 was signed in Teheran on July 31 with the representatives of the German group, which comprises Julius Berger, Philipp Holzmann, and the Siemens Bau-Union.

PERSONAL AND GENERAL

TO-DAY

August 14, 1930 (New Style).
August 1, 1930 (Old Style).
Rabia I. 19, 1349 A.H., of the Muslim Calendar.
Ab 20, 5690, of the Jewish Calendar.
Amordad 23, 1309, of the Persian Calendar.

The ex-King and ex-Queen of Greece, who are at present in London, are staying at Brown's Hotel.

Sir Edward and Lady Boyle, who are on the Continent, will return to London about August 26.

Mr. H. C. Luke left London on August 8 to take up his new appointment as Lieutenant-Governor in Malta.

The Maharaja of Mysore has sent £50 to the Ross Award Fund.

Lord Lloyd left London last week for the Continent, and will be away another two weeks.

King Faisal of Iraq, travelling *incognito* as Prince Usama, arrived in Berlin on August 8 on a short visit.

Mr. S. P. Waterlow, British Minister to Bulgaria, is staying with Monsieur and Madame Dimitri Stancioff at the Villa des Trois Sources, Varna.

Colonel Sir Robert Johnson returned last week to London from Ceylon, where he has spent the last three months.

Sir John Chancellor, High Commissioner of Palestine, and Lady Chancellor are staying with Sir Kay and Lady Muir at Blair Drummond, Perthshire.

M. Evangelatos, Mayor of Missolonghi, Greece, laid a wreath on Lord Byron's statue in Hyde Park on August 7, and left the following day on his return to Greece.

Mirza Seyed Hassan Taqizadeh, who until recently was Persian Minister in London, has been transferred from the Ministry of Communications to the Ministry of Finance.

Lady Irwin, wife of the Viceroy of India, arrived at the end of last week at Garrowby, Buckthorpe, Yorkshire, where the Hon. Anne and the Hon. Charles Wood, her son and daughter, had already arrived.

The Afghan Minister in London will hold a reception next Thursday (August 21) from 4.30 to 6.30, at the Royal Afghan Legation, to celebrate the twelfth anniversary of the Independence of Afghanistan.

M. V. Minorsky, the eminent Russian Orientalist, is now in London in connexion with the Persian Art Exhibition which is to be held at the Royal Academy, Burlington House, next January.

King Faisal of Iraq left London on August 7 for Berlin, travelling from Liverpool Street Station by Harwich and the Hook of Holland. At the station the King was represented by Earl De La Warr, Lord Passfield (Secretary for the Colonies) by Mr. S. Robinson, and the Prime Minister by Mr. N. M. Butler. There were also present the Turkish Ambassador, Sir Francis Humphrys (the High Commissioner for Iraq), Mr. I. V. H. Campbell (representing Lord Thomson, Secretary of State for Air), General Nouri Pasha (Premier for Iraq, who is staying on in London for a few days), and the Chargé d'Affaires (Husain Beg Afnan).

A PERSIAN STATESMAN.

We are informed that the Persian colony in Egypt are organising the presentation of a souvenir to Prince Arfa Mirza Riza Khan, the eminent Persian statesman who resides at Monaco. This souvenir is designed to commemorate the anniversay of the Prince's fiftieth year of service in the cause of his country and of world peace. The presentation, which owes its initiative to Mirza Mehdi Bey Rafi Mishgui, President of the Cairo Chamber of Commerce and of the Société Persane de Bienfaisance, will take place in Monaco next January.

NEWS IN BRIEF.

Yugoslavia and Roumania propose to form a Customs union.

Bucharest Municipality has decided to build an underground railway.

Earthquake tremors are reported to have been felt on the Shatt-al-Arab and in lower Iraq on August 5 and 6.

The death has occurred of the Rev. C. J. R. Berkeley, formerly Organising Secretary of the Jerusalem and East Mission.

The Central Committee of the Communist Party of the Uzbek Autonomous Socialist Soviet Republic (Uzbekistan) has decided to transfer the capital of the Republic from Samarkand to Tashkent.

Qaimmaqam Henn Bey, who has been acting as Commandant of Police at Port Said since the departure of Teall Bey, has been confirmed in the appointment, and the rank of Miralai will be conferred upon him.

Insurgent Kurds last week made fresh raids on the Turkish frontier near to the Syrian frontier, and manifestos in favour of the independence of Kurdistan have been distributed among the tribes near the frontier.

The steamer Krakow, carrying 500 tons of Polish rifle ammunition and armaments for the kingdom of the Hijaz, left Gydnia on August 4. Special permission for the transport of the consignment was granted by the League of Nations and the British and French Governments.

Mr. J. I. Craig, Financial Secretary to the Egyptian Ministry of Finance, left Cairo on August 1 on leave, part of which will be taken up in attending the International Congress of the Statistical Institute, which is to be held in Tokyo on September 15. Mr. Craig and the Egyptian Consul at Kobe will represent the Egyptian Government.

During the past week at Basrah, the temperature in the shade each day mounted to nearly 130 degrees Fahrenheit. There were many cases of prostration there. The R.A.F. doctors took precautions. The heat wave was general throughout Iraq, and at Baghdad there were 57 cases of heat stroke and two members of the R.A.F. stationed there have died from the heat. Deaths of Europeans are also reported from Abadan and Muhammarah.

THE WEEK AT HOME

London, Tuesday Morning.

Liberal Protectionists.

As the main repository of men of ideas, the Liberal Party was bound sooner or later to discover among its ranks someone to question the infallibility of Free Trade. That so impious an act of heresy should have fallen to the lot of Mr. E. D. Simon, however—one of the most doughty and expert of the Manchester School—has terribly shocked the for-ever-Orthodox Liberals. Mr. Simon did not, indeed, express any conversion to the principles of Protection, but he did very seriously question the sacrosanctity of Free Trade.

His attitude—which, in a nutshell, expresses the necessity for a comprehensive survey of the whole fiscal question, not, as Mr. Ramsay Muir put it, to re-confirm the eternal principles of Free Trade, but to discover the existing truth—is shared by many young Liberals. The tide is turning, slowly, terribly slowly, but surely. There is still groyne upon groyne of Free Trade dogmatism—the doctrinaire quality of the typical Liberal is probably his worst quality—but it looks very much as if a certain measure, at any rate, of Protection may ultimately find itself in all the party programmes. There is an erosion at work that no party can resist and survive. But where will the difference between Tory and Liberal be then?

Spoken English.

Nobody, I think, always agrees with the B.B.C. Advisory Committee on Spoken English, but there is no doubt at all that their decisions are sensible and really helpful. In the most recently published list, for instance, they explode the snobbery which occasionally surrounds the pronunciation of such words as "comrade" (first syllable rhymes with "Tom"), "fanfare" (fanfair), "levee" (levvy), and "harem" (hairem). I do not so much like "gibberish" with a hard "g," or "nescience" as "nessience," and I consider "questionnaire" as "kwestionnaire" perfectly abominable.

But who am I, or who, dissenting reader, are you? We, who know our own minds, or, rather, ears, shall go our own way; but for the sake of those who really do not know how words should be pronounced we ought to bless the B.B.C. Committee.

There will be more fun among the pundits when, a few weeks hence, a handbook on the pronunciation of English place-names is published. Don't you remember the storm that arose over the B.B.C.'s decision to pronounce "Daventry" as it is spelt?

The Forestry Commission.

We do not often think of the Government, still less do we think of thanking it, when we walk through the countryside. But if there is one Department which does deserve praise, it is the Forestry Commission. I have often in this column referred to the excellent work done by this Commission, particularly in East Anglia, where our woodlands, largely denuded during the War, are being rebuilt. There, especially in West Norfolk and East Suffolk, one can see plantation after plantation which would rejoice the heart even of a Cobbett.

This Commission has just published a report on its ten years' work, and very interesting reading it is. During the next ten years, it is hoped to plant 350,000 acres at a cost of some £11,000,000. That there will be an ample return for the nation in this is as certain as anything can be, and one hopes that the example thus officially set will be followed up by private landowners.

The Lambeth Conference.

On August 10, the Lambeth Conference, which had been sitting for five weeks, came to an end. It was a tremendously important meeting, in which the issues discussed were by no means confined to strictly ecclesiastical matters. Peace and war, race, sex and marriage, education—such was the kind of topic on which the finest minds in our Church were expatiating. Their main decisions are to be published on Thursday, and it is certain that they will be scrutinised most eagerly, so keen is the desire of the ordinary man to see whether or not religion has something to offer him other than the platitudes of the pulpit in the church to which he has long ceased to go.

Some observers, indeed, affect to make out that this Conference is in effect the last trial of the Anglican Church as something which can minister to the real needs of the nation: more than that, that it is a gauge of whether our whole civilisation is to survive or not. For it is felt that, unless religion can open up new vistas—not merely the "correct" paths which have, largely as a consequence of the War, been generally abandoned—we are doomed. Will the Lambeth Conference have discovered a living religion? It is for each individual man to answer.

The "Promenades."

Concerts, one was saying a few years ago, were doomed, with all this mechanically reproduced music; no one would trouble to go to a hall to hear music when all he had to do was to turn on the "juice" or put a record on a gramophone. One was wrong—or at least largely so. For though recitals have been thinly attended, and although some orchestral concerts have been heard mainly by unseen listeners, the popularity of certain kinds of concerts has remained.

Of these, incomparably the most well known are the "Proms" of Sir Henry Wood at Queen's Hall. They began on August 9 and continue until October 4. The orchestra is now, of course, run by the B.B.C., and it is said to have the makings of a fine organisation. Terrific enthusiasm is reported to have been shown on Saturday night, but the experts, of course, deplore the undiscriminating quality of the audience's appreciation.

The scheme of the programmes appears to be the familiar one—Wagner on Mondays, miscellaneous on Tuesdays and Saturdays; Bach and Brahms alternately on Wednesdays; British composers on Thursdays; and, of course, Beethoven on Fridays. No doubt it will work as well as ever, though there will be those who want a greater representation of Mozart, Haydn, and the Russians. But if anyone knows the public taste, it must be Sir Henry Wood, who has been at once forming and serving it for I do not know how many years. Quite certainly the "Proms" are one of the most delightful features of London's autumn season.

Hobbs' "Record."

It seemed incredible that anyone should exceed the aggregate of runs that W. G. Grace scored, so long did the irascible "Doctor" dominate English cricket, and it is something for our humble times that Hobbs should just have done it. But in this achievement the post-War generation really cannot take part, for Hobbs' technique is wholly a pre-War technique. Every Englishman is praying fervently that it may not fail him in the all-important Test match which begins at the Oval next Saturday.

And while on that subject, one is bound to take notice of some recent comments by the greatest bowler of all time, I mean S. F. Barnes. He is reported to have said that he could pick from English cricketers eleven men of over 40 who would beat any younger eleven. That, however, must be put side by side with the confession of A. C. MacLaren that when he, at the age of 36, was captaining England in the Tests, he went to bed each night dog-tired. Most people, I think, will be with MacLaren in his advice not to employ the veterans—Parker, Freeman, Rhodes, and so on—in the last Test. If Test matches were but County matches writ large, it would be another matter. Unfortunately, they will never be, so long as the resolute Australians are our opponents. Meanwhile, we hope for the best and rather fear the worst at the Oval.

Book Reviews

MOGHAL RULE IN INDIA.

"MOGHAL RULE IN INDIA." By (the late) S. M. Edwardes and H. L. O. Garrett. Illustrated (Oxford University Press. 15s. net).

This book wisely confines itself to the period during which the Moghal Emperors ruled India, not only in name but in very stern reality. It ends, therefore, with the death of Aurangzeb, reserving to itself an epoch which is singularly self-contained and, therefore, specially suited to the treatment which the authors have given it. It makes no claim to original research, but is a well written and sound compendium of facts contained in the books of many writers, most of which the ordinary reader could scarcely be expected to possess or to have the leisure to digest. It strikes us, however, that the study of this work might well tempt normally curious persons to seek for further information on this subject or that. For this purpose, a good annotated bibliography would have been useful.

As this is the only serious criticism which we find it possible to make, we may now return to the matter of the book. Of its 365 pages, 157 are taken up by an excellent summary of the main political and military events of the period, with sound appreciations of the character of each of the Emperors. This is the work of Mr. Garrett. This is a miracle of compression, for it omits little of importance. The rest of the book is a masterly essay by Mr. Edwardes on Moghal administration in all its branches, on the economic and social features of the age, Moghal architecture and other arts and the causes of the decline of Moghal powers. The first two chapters, of course, owe most of their value to the works of Mr. Moreland. Indeed, it is certain that they could not have been written without this aid. They are thoroughly sound and perfectly lucid, and should be studied carefully by every budding Indian Civil Servant. The other chapters are, in their own way, equally good. We like the helpful way in which we are pulled up, when inclined to compare Moghal administration with our own in India, by brief reminders of the actual state of similar affairs in contemporary Europe, not always to the advantage of the latter. Without occupying space with examination of details, we may say quite shortly that, if any reader is sufficiently interested in the subject to have made it worth his while to glance at this review, he will be well advised to take our advice and go straight to the book itself. It is a pity that an ideal text book like this could not have been published at a somewhat lower price.

As so often happens after the study of a careful book on history, we are left wondering what lessons it conveys to us for the future, or how far circumstances have altered, so as to make prophecy futile. Or, indeed, how far we are right in attributing certain results to certain causes. If, however, one thing is clearer than another from the narrative before us, it is that there was produced in India by the great Moghal Rulers some kind of unity and that there were in their time comparative order and peace in the land. But this lasted only so long as these Rulers had a sufficient number of non-Indians at their disposal to fill most of the important administrative posts. As the supply of these alien officials gradually dwindled, their places were more and more taken by Indians. There can be no doubt whatever that chaos followed. Was this a true case of cause and effect? If it was, can we hope for better things now when "Indianisation" is so much in the air? This is no place to discuss a very difficult question, but, at all events, we have here food for reflexion.

C. S-W.

POLAND'S ROMANTICS.

"POLISH ROMANTIC LITERATURE." By Julian Krzyzanowski.—Allen and Unwin Ltd. Price 7s. 6d. net.)

Our own small acquaintance with the curious romantic literature of Poland in the days of her bondage has been entirely derived from German translations, and we were surprised to learn, from the author's bibliography, that many of them have also appeared in an English dress, though, to judge from specimens given, that dress seems usually to have been very inadequate. It is certain, however (and here the bibliography bears us out) that very little attention has been paid in England to the phenomenon as such, and, indeed, this statement could well be amplified, for there is, so far as we know, no really helpful book in English towards the understanding of modern Polish literature of any kind. This scholarly essay is, therefore, very welcome.

We trust that it is the author's intention to use his undoubted gifts in exploring the larger field. Polish literature did not end where he breaks off and much that follows his period is far more likely to interest the English reader than the wonderful but curiously parochial achievements of the "great" romantic age. When Dr. Krzyzanowski turns to this larger field, we trust that he will treat his interesting subject with a lighter hand than we find in the book before us. The learning and knowledge are there, but the presentation is, we cannot but think, unnecessarily arid. After all, the Polish Romantics were very live men and their works deserve to be treated as the works of such men, while application of the author's present treatment to many of their successors would give an altogether false idea of their writings. While, however, we feel it necessary to say so much in deprecation of what, we fear, may give the ordinary English reader an inadequate idea of the immense patriotism, spiritual depth and real poetry of these masterpieces, we are not without gratitude for the book as it stands. It should open the eyes of Englishmen to the existence of a literature of which most are quite ignorant, and will certainly move many who cannot read it in the Polish to get the best translations available for further study.

LEVANTINE INTRIGUE.

"NORTH OF SUEZ." By William McFee. (London: Heinemann. 7s. 6d.

There are, one supposes, still those people who can be thrilled by the familiar mixture of a romantic, or at any rate an exotic city (Port Said in this case) with spies, air raids, dope runners, and the rest of it. The lure and the fascination of the East, particularly of the Eastern or Levantine woman, are here represented to the *n*th degree. For those who like this kind of thing, who believe that Englishman should triumph over every intrigue, and so forth, this book may be the very thing.

But to the more placid observer it is all a little unintelligible, if not unintelligent. For there is no subtlety, no humour, no insight displayed. Perhaps, however, the truest melodrama should contain no such features. It may be sufficient that the language should be direct and strong, that nervous tension should be constant and terrific.

It is reported that Russian anti-cholera serum available in Kabul was found to be defective, and British help was sought to combat the epidemic. Anti-cholera serum and other aid was immediately sent from Peshawar to Kabul, and the outbreak was successfully overcome. Kandahar and Ghazni still remain partially affected.

NOTES AND NEWS

170, *Strand, London, W.C.2,*
Tuesday Morning.

The Roumanian Treaty.

The gesture of friendship that Roumania has made to us in the negotiations on the commercial treaty is fully appreciated in business circles in this country, and there is, I believe, a keen desire to take adequate advantage of the opportunities for increased trade thus presented. The details of the treaty are discussed in an article which appears on another page, and it is shown that the terms are very favourable from the point of view of the British trader. Thus in every case we are to get the benefit of the minimum rates of the Roumanian tariff, while that bugbear of our commerce—faked trade marks—a compliment to the quality of British goods which, strange to say, we have never appreciated—is guarded against by stringent regulations. There has all along been a preference for British goods in Roumania, and it is now up to our traders to see that Roumanians, whether peasants or townfolk, are able to "buy British," if they so desire. As shown in the article to which I have referred, efforts to develop business with Roumania, to be successful, must be accompanied by new methods. I have sufficient confidence in British traders as a whole to believe that this time they will rise to the occasion.

Openings in Roumania.

Naturally a much wider development is looked for of our relations with Roumania as a result of the treaty than would be covered by what may be termed the wholesale trade. One of the most vital features of the treaty is that British capital and commercial enterprise are now placed on an equal footing with local capital and enterprise. This is in accordance with the well-known policy of the Maniu Administration to encourage as far as possible the participation of foreign capital and initiative in the development of the country. As a result of the *laissez-faire* policy pursued before the advent of the present Government Roumania needs to-day machinery of all kinds, while the railways, ports, and roads all require to be developed. A British firm is now carrying out an important road contract which will necessitate the supply of a considerable amount of machinery from this country, and this notable success should be followed in due course by others, while, as in the case of Yugoslavia, there will be in the future many useful opportunities for the employment of British capital in Roumania.

Markets for Cyprus Products.

The trade mission which Sir Ronald Storrs, the Governor of Cyprus, sent to Syria, Palestine, Egypt, and Greece, with a view to the development of the Island's trade with those countries, returned to Cyprus at the beginning of this month, and it is gathered that the results of the tour have been quite successful and that in due course the Island can look for increased commerce with these outlets. The decision to send the mission was due to the incidence of the trade depression in Cyprus, and this praiseworthy departure is to be followed up by an exhibition to be known as the Cyprus and Near East Agricultural and Industrial Exhibition, which the Cyprus Government is to hold at Nicosia in October, 1931. It may be noted that of the four countries visited by the mission two are among the largest customers of Cyprus at the present time. Thus in 1929 Egypt was second to the United Kingdom in the list of countries importing from Cyprus with £248,945, or 15.22 per cent. of the trade, while Greece was fourth with £195,763, or 11.97 per cent. For the same year the Island's imports from Egypt were valued at £60,005, or 3.02 per cent., those from Greece totalling £132,515, or 6.68 per cent. In 1929 the principal items exported by the Island to Palestine were potatoes, of the value of £P26,955; cattle, £P1,148; and gypsum, £P290; while the Island's chief imports were cement, £P2,356; and sesame, £P1,580. As a result of the mission's investigations it has been ascertained that a considerably larger market can be developed in Palestine for potatoes, onions, and cattle, while there are possibilities in regard to other commodities, notably tobacco, samples of which are to be sent to Palestine for investigation as to its suitability as a substitute for the blending tobaccos at present in use.

India at the Poultry Congress.

Our report on the recent World Poultry Congress scarcely made clear the comprehensive character of India's representation at it. Besides showing fowls of various types, India had a very important exhibit in the Empire Marketing Board Section arranged by the United Provinces Poultry Association. A life-size representation of an Indian poultry farm was shown, also specimens of eggs and the improved eggs that have resulted from cross-breeding. There was, further, a photographic display of the poultry demonstration train which does poultry propaganda work in India. Among the birds shown were a pair of Bussorah fowls, and it is interesting to note that seven hens of this breed are at present competing at the National Laying Test at Milford. This is the first time that Indian poultry have competed in a national test, though India sent a team of White Leghorns to compete in a South African test in 1927.

The Aeroplane in Commerce.

The aeroplane is rapidly coming into its own as an instrument of commerce. A bale of new crop cotton has been brought from Egypt to Liverpool by Imperial Airways two weeks earlier than it could have been received in the ordinary way. Recently, also, a consignment of Egyptian cabbages, tomatoes, and fruit arrived in London by air. The question of weight limits the utility of the aeroplane in commerce at present, but it has been made quite clear that it has already achieved an important rôle in the carrying of samples and such commodities as flowers and fruit, and he would be a bold individual who would set a limit to future possibilities.

The Indian Rupee Loan.

Launched as it was at a most unpropitious moment, it is eminently satisfactory to record the fact that the new Indian Rupee Loan, which closed on August 6, has been a distinct success. As was to be expected, efforts were made by the intransigent elements in India to make the loan a failure, but while the attempts to bring about a boycott of it may have had a little influence in one or two centres, notably Bombay, the results of the loan show that the move was a complete failure to all intents and purposes. It has thus been demonstrated very satisfactorily that the influence of the would-be boycotters is not the powerful thing that they would like the peoples of India to believe, while the volume of the subscriptions to the loan has further testified to the confidence imposed in the policy of the Government of India. The loan totalled approximately 30 crores, the actual amount of cash subscriptions to the loan being 13 crores, slightly below the total for last year's loan, but quite as much as could be expected in the circumstances. The conversions of Treasury Bills were on a satisfactory scale, in view of the large amounts believed to be held abroad, while the conversions of 1930 Bonds, which are, of course, also the equivalent of cash, totalled about half the amount of the bonds outstanding.

COMMENTATOR.

CYPRUS TRADE DEPRESSION.

The report on Cyprus trade for June shows that, as compared with the same month last year, there was a decrease in imports of £76,610, and in exports of £55,892, and both were considerably below the quinquennial average. Exports exceeded imports by £8,891. For the first half of the year the following are the values of imports and exports as compared with the same period last year :—

1929	£956,241 ...	£851,750
1930	£745,264 ...	£605,074
Decrease ...	£210,977 ...	£245,676

Among imports the principal decreases, as compared with June, 1929, were in coffee, cotton goods, flour, iron and steel, machinery, motor cars, sacks, and timber. In exports there was a considerable drop in asbestos, carobs, potatoes, raisins, wine, and wood. There were small increases in almonds and cuminseed.

NEWS FROM ALL SOURCES.

Traffic receipts of the Suez Canal from August 2 to 8 amounted to 16,460,000 francs.

It is reported that the Yugoslav Government has placed an order wtih the Siemens and Halske Company to modernise the Belgrade telephone system.

The Egyptian Customs dues from May 1 to August 5 amounted to £2,803,233, a decrease of £295,747 as compared with the corresponding period of 1929.

The Yugoslavia Express Aency, Ltd., is arranging two tours for business men to the principal cities of Yugoslavia, leaving London on Ocotber 25 and November 8, respectively.

The Yugoslav Lloyd Shipping Company has purchased two vessels in England, one of them being intended for the tourist service from Shushak and Dubrovnik to Greece and Egypt.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended July 20 amounted to £E6,656, making the total from April 1 £E83,163, as against £E87,221 for the same period of the previous year.

The traffic receipts of the South Indian Railway Company for the week ended July 12 amounted to Rs.13,16,169, making the total from April 1 Rs.1,87,71,749, as against Rs.1,92,89,867 for the corresponding period of the previous twelve months.

A Forestry and Hunting Exhibition will be held on the Liubliana Fair premises from August 31 to September 15. Implements, machinery, etc., used in forestry and the timber industry, will be exhibited. The Exhibition will be first of its kind, and a large number of timber concerns will be represented.

Messrs. Dorman, Long and Co., of Middlesbrough, have obtained the contract for the new bridge over the Nile at Cairo, to replace the present Kasr-el-Nil bridge. The bridge will have a total length between abutments of 1,250 feet and a width of 66 feet. It will consist of eight fixed spans, and the work involves the use of approximately 3,000 tons of British steel.

The Commercial Treaty with Roumania

The commercial treaty between Great Britain and Roumania, which was signed on August 5, is rightly regarded as one of the most important developments since the War as regards British relations with the Near East. Under the Bratianu régime a policy of isolation and independence was pursued which is to some extent an explanation of the failure of Roumania to recover from the effects of the War, as it may be in part of the relatively small commerce between the two countries. The policy of the Maniu Administration, on the other hand, has wisely been to give the fullest encouragement to foreign enterprise and capital to assist in the development of Roumania, and the present treaty is a further indication of the spirit underlying this policy. Of course, a treaty by itself may be of no significance; it is the intention that matters, and it must be emphasised that the negotiations which have led up to the present development have been carried on on the most friendly terms, and it has been made quite clear by the Roumanian delegation, presided over by Dr. Tilea, that there is a keen desire in Roumania to bring about much closer relations with Great Britain. The ratification of the treaty will take some time, and it is an obvious indication of this friendly attitude that it was arranged to bring the treaty provisionally into force on August 7, thus giving an immediate preference to British goods imported into Roumania and relieving them from the incidence of the Roumanian general tariff, which it is understood will come into force on September 1. The details of the new treaty may be briefly summarised. Most-favoured-nation treatment is accorded to the goods of both countries. It is also provided that British goods shall be subject to the minimum Roumanian tariffs in all categories, whereas the imports of other countries only enjoy the minimum tariffs in certain categories. This concession is in return for the free admission of Roumanian agricultural products into Great Britain. As is well known, British trade-marks have been frequently copied in Near Eastern countries, and it is very satisfactory to note that the treaty provides adequate protection against such infringements. As regards shipping, most-favoured-nation treatment is provided in respect of coasting trade and national treatment regarding docking. Then British capital and commercial enterprise in Roumania are placed on an equal footing with Roumanian capital and enterprise. Provision is made for the application of the treaty to any British Colony, Protectorate, or Mandated area, and also for the accession to the treaty of any of the Dominions and India. Finally, in a protocol to the treaty it is agreed that goods produced or manufactured in Iraq shall enjoy most-favoured-nation treatment in Roumania so long as Roumanian goods receive most-favoured-nation treatment in Iraq.

Such, in short, are the main provisions of the treaty which means much for British trade and industry. It cannot be too strongly emphasised, however, that the treaty by itself can only open the way to improved commercial relations; it will now depend on the initiative and enterrelations; it will now depend on the initiative and enterprise of British merchants and manufacturers as to whether adequate advantage is taken of the opportunity that is now presented. Dr. Tilea, it may be noted, laid stress in a recent interview on the importance of the adoption of new methods by British traders. That is the lesson that THE NEAR EAST AND INDIA has been trying to drive home ever since the War, but, to judge by results, with as yet but indifferent success. However, now that the pressure of circumstances have brought about a situation in which it is imperatively necessary to exploit all possible openings for trade, it is probable that our traders will be more receptive of new ideas. Two requirements are emphasised by Dr. Tilea as regards the Roumanian market. Advertising is, of course, one of them, and experience has shown that this is an expedient which British traders, broadly speaking, have hitherto been only willing to adopt on such cheeseparing lines that the effect of what is done is to defeat the desired purpose. The second recommendation is that advertising should be followed up by the visits of representatives who can study the market's requirements on the spot and see exactly the types of goods needed for this particular market. If this advice is adopted, and our traders follow up likely openings with enterprise and initiative, we shall obtain our share of the trade of the expanding Roumanian market. In the past it has sometimes been urged as an excuse for not entering one or other of the Near East markets that the trade is small. That does not apply to Roumania. The market is there, and we are in a particularly favourable position to cater for it, as the Roumanian Government has decided to abandon the policy which has been followed of encouraging local artificial industries and will concentrate instead on the natural products of the soil and the sub-soil. It is not, however, in the fact that it opens the Roumanian market to us that the sole importance of the treaty lies. Roumania occupies a most important position in regard to navigation in South-Eastern Europe, and the important British interests in shipping on the Danube and in the Black Sea make close relations between the two countries most desirable. The provisions with regard to British shipping in Roumanian waters should help considerably to strengthen our position in the Danubian trade.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended August 2:—

Grain.—Last week's activity has unfortunately been followed by weak grain markets, which gradually degenerated into a slump in grain prices, and this had the effect of checking arrivals from the interior, with the result that the demand for tonnage ran short of the supply. At the shipping centres, however, notwithstanding the restricted extent of fresh business, old engagements enabled loading operations to be continued fairly steadily, and freights for July loading were maintained at 11s. Antwerp/Rotterdam, 11s. 3d. to 11s. 6d. Hamburg/Weser. It is expected that there will be a tendency for freights to weaken, unless the present grain situation improves in the near future. Chartering ahead has not been so active, and the rates paid for such tonnage as has been fixed for later August and September positions were the same as those quoted in respect of recent fixtures.

Timber.—Business has remained slack for all destinations, although some interest is still being shown in Greece and Alexandria, for which destinations rates of freight are about £6 per wagon. The rate for Italy is £7 10s., but no quotations are available for other destinations, all of which are at present neglected.

Weather and Crops.—Again last Saturday there was fairly good rain here for about an hour. Showers fell on July 30 in the north-west, measuring from 3 to 31 millimetres, and on the 31st over nearly the whole country, measuring from 2 to 38 millimetres, the heaviest fall this time being in Moldova, and further showers were forecast for the eastern half of the country. Recent official reports state that dry weather, lasting nearly a month, has had an unfavourable effect on the straw crops, as well as on the maize and root crops, whilst Drobruja and Bessarabia further suffered from drying winds. In the greater part of the country reaping of the straw crops is complete, and threshing is in progress, but hampered by lack of machinery and the poor condition of many of the old threshers in use. In the eastern districts the quality of the wheat is below expectations, but some western districts, more favoured by rain, report a record wheat harvest of excellent quality. In general, the maize has greatly benefited from the recent rain, but its condition is very varied, and rather poor in some areas.

Sulina.—Bar Depth: The bar depth is maintained at 24 feet, general conditions remaining normal and good. The dredgers continue working, and the calm weather during the last week has permitted rapid progress with the staging which is being erected to complete the north pier, the work of sinking fascine-mattresses to form the basis of the foundations having already been finished. The river depth has been restored to 24 feet.

Constantza, week ending July 30.—About 8,700 tons of grain were exported during the week, mostly to the Rotterdam Hamburg range. Fourteen vessels loaded about 52,200 tons of petroleum products, and five took oil fuel for bunkers.

Bulgarian Report.

Bourgas, July 26.—The better feeling on grain markets abroad has caused a slight improvement on the local markets, and producers are beginning to offer their grain more freely. A few small parcels have been booked for Antwerp at 9s. 3d. prompt shipment.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for July was 79,380 tons.

The Directors of the Bank of Abyssinia announce that arrangements have been concluded with the Ethiopian Government whereby the latter has agreed to take over the bank's business on terms which the Board considers to be to the advantage of shareholders. The details of the agreement will be submitted for ratification by the shareholders at an extra-ordinary general meeting to be convened in Cairo during September.

48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.) (D.O.T.)

EGYPT.

Structural Steel, etc.—The Egyptian State Railways, Telegraphs, and Telephones, invite tenders for structural steel for Santa station footbridge, standard lamp fittings, supply of spares for auto and half auto Lux lamps, high tension feeder cable, and tinned sheets double.

Ice-making Machines and Stills.—The Department of Public Health invites tenders for the supply of 11 small portable ice-making machines, output 2 kilo per hour, to be used in the desert where electric power is not available; 146 paraffin oil heated stills, complete with burners, output half gallon per hour; 57 paraffin oil heated stills, complete with burners, output 1 gallon per hour. October 8. (D.O.T.)

Sterilising Outfit.—The Ministry of the Interior, Egypt, invites tenders for the supply of sterilising outfits and gas apparatus. October 13. (D.O.T.)

Compressor Sets.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for the supply and erection of four electric air compressor sets for Egyptian Army Barracks drainage at El Arish and Mankabad. September 14.

INDIA.

Centrifugal Pumping Set.—The Indian Stores Department invites tenders for the supply and erection of a single or multi-stage horizontal centrifugal pump, slip ring induction motor complete with starter, piping, venturi meter. August 21. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Glasgow, August 18; Manchester, August 20; Birkenhead, August 29). (For passenger sailings and dates see advertisement.)

Bibby Line.—S.s. Cheshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, August 20).

British India Line.—S.s. Mandra for Bombay, Port Okha and/or Bedi Bunder, and Karachi (London, August 23); s.s. Margha for Colombo, Madras, and Calcutta (London, August 23).

Cunard Line.—S.s. Sea Rambler for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, Fiume, and Shushak; also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if inducement (Liverpool, August 16; Swansea, August 19); s.s. Bosnia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza; also at Volo if inducement (Glasgow, September 4; Liverpool and Swansea, September 6).

Johnston Line.—S.s. Kenmore for Piræus, Syra, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 16); s.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 13).

P. and O. Line.—S.s. Ranchi for Bombay (London, August 15); s.s. Novara for Calcutta (London, August 15); s.s. Viceroy of India for Bombay (London, August 29); s.s. Nagoya for Calcutta (London, August 29).

Prince Line.—S.s. Egyptian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, August 23); s.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, August 30).

Ellerman and Papayanni Lines.—S.s. Oporto for Gibraltar, Algiers, Oran*, Patras, Syra*, Smyrna, and Constantinople (Liverpool, August 16; Swansea*, August 16); s.s. Serbino for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, August 21; Swansea, August 18); s.s. Lesbian for Algiers*, Oran* Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, August 30; Swansea*, August 30); s.s. Gerano for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, August 30; Swansea, September 4); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, September 1). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Messageries Maritimes.—(From Marseilles).—S.s. Angkor for Alexandria, Jaffa, and Beyrout (August 19); s.s. Pierre Loti for Naples, Piræus, Istanbul, Izmir, Rhodes, Larnaca, and Beyrout (August 26); s.s. Lotus for Alexandria, Jaffa, and Beyrout (September 2); s.s. Lamartine for Naples, Piræus, Istanbul, Izmir, Rhodes, and Beyrout (September 9).

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August 12.

It would need a Mark Tapley to find much food for satisfaction anywhere in the business world this week. Among general external influences the rise of British unemployment above two millions was the chief and most intimately unpleasant, while those who scan the horizon for improvement initiating on the other side of the Atlantic found that glib talk of the corner being turned there was belied by well-informed news of a big rise in the American workless to five or six millions. Nor is the sharp rise in wheat and maize to be taken as a sign of the longed-for recovery of commodity prices, for it is due to the specific cause of the American drought, which is so serious that it will, if anything, tend to depress general price levels through a further curtailment of purchasing power.

The stock markets, if a trifle steadier than of late, have been very inactive, and the traditional dulness of the holiday season holds full sway, gilt-edged alone showing strength on the growing expectation of the indefinite prolongation of cheap money conditions. But even in this direction disappointment was aroused towards the end of the week by a turn in the Continental and New York exchanges against sterling, the recent sterling recovery thus being lost. In the money market early stringency due to removal of holiday money from the market was relieved as the week wore on, and there is evidence that the policy of the Bank of England, as well as of the Federal Reserve in America, is to maintain monetary ease.

Rubber Outlook.

The price of raw rubber, which has been declining slowly for several months and more rapidly in the last weeks, is now below 5d. per pound, the lowest price in its commercial history. And yet no one concerned has quite made up his mind what to do about it. Restriction of output was put into force during May, but no one is quite happy about it, although its results are not yet fully known. The Council of the Rubber Growers' Association have officially declared that neither they nor the British-Dutch Liaison Committee have yet considered any particular scheme. Attention is, of course, focussed on "restriction." The object of restriction is to reduce supplies in order to force up prices, and restriction plans aim at (1) making all producers reduce their output and (2) allocating individual reductions in output. If rubber plantations were entirely in the hands of Englishmen and Dutchmen it seems that a restriction plan could be carried out, as the two sets of Europeans are quite able to come to a working agreement, but a large area of production is in natives' hands, and this cannot be brought into a scheme. The European planters are therefore now appealing to their respective Governments to do something about it. Obviously it will be months before anything is done. Even if restriction is fully applied eventually it may still be doubted whether a rapid rise in prices is likely to occur if there is no increase in demand. Fluctuations in price will occur, but investors should not count on any spectacular recovery.

Rhodesian Copper Financing.

There seems ground for belief that a scheme is on foot to provide the Bwana M'Kubwa Copper Mining Company with additional resources of substantial amount. Nothing is said on the point in the annual report published during the past week; in fact, the accounts show that on March 31 nearly £600,000 remained to be received in respect of the last issue of some 900,000 (5s.) shares made at 15s. But the Directors announced a proposal to increase the capital by a million shares. This was taken in City circles as affording confirmation of the rumoured intention of making an issue of two or two and a half million convertible debentures. Upon being interviewed the secretary of the company stated that the balance on the last issue of shares had been called up, and intimated that the increase of capital had relation to a debenture issue. There is still outstanding some three quarters of a million of the former debentures, while the number of shares in issue exceeds nine millions—of which a large proportion has been subscribed at substantial premiums. Hence very large resources have already been provided for this enterprise. Whether an adequate reward will be reaped cannot be predicted with any confidence. At the moment the company is undoubtedly working at a loss. The Loangwa report also provided a reminder that whatever the potentialities of the Rhodesian copper area it must be some time yet before they can be fully exploited. The shares of the companies operating in these areas have attractions for those who can afford to lock up their money for a considerable period in speculative enterprise, but the ordinary investor would do well at present to enter into this market only with the greatest caution.

Mergers and Shareholders.

Looking back over the course of share prices during the last eighteen months it is clear that the public were as misguided in their estimate of the earning capacity of important groups as they were with regard to the wild-cat flotations of the boom period. A number of very important mergers between 1926 and 1929 attracted the attention of the investing public. Those associated with them either financially or as consulting experts, were of established reputation, and in recommending their proposals to the investing public the advantages of rationalisation leading to higher profits were pointed out. Very few at the time dared criticise the financial side of the proposals. Figures now compiled by "The Economist" show that for eight of these merger companies the capital value as assessed by the market in 1929 has now fallen by not less than 44 per cent. and by even as much as 90 per cent. in one case, while five of the companies made less than 7½ per cent. profit on total capital. Two things seem clear: first, that rationalisation is not going to perform wonders, at least not right away, and, secondly, rationalisation by itself does not bring immunity from serious effects of a trade depression. As rationalisation schemes are still materialising these facts should not be overlooked by investors while they bear in mind the undoubted necessity for rationalisation in many directions.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

Uganda

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms.
The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfers on all its Branches, at the exchange of the day.
The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.
Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches
The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — **SOFIA** — Founded in 1865

CAPITAL & RESERVE FUND, 617,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roser is made under the control of the Bank in all rose-growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

Engineering Topics

(By An Engineering Correspondent)

Public Works and Unemployment.

The repeated appeals made by various official departments to local authorities with the object of speeding up building, road-making, and other public works in order to mitigate unemployment are meeting with a somewhat inadequate response. There is not the alacrity to get on with the job that the Ministry of Transport, to mention only one Department, wishes to see. It is not that the appeals are falling on deaf ears, although there is in some quarters a growing tendency to regard the official attitude as an attempt, as our American friends would say, to "get someone else to hold the baby." It is quite true that the Government, should the relief work not be put in hand, might say that it had done all that was possible but had received little support from the municipalities and county councils. The reason for the delays is twofold: First, there is an uneasy feeling that the building of a number of new roads, with their attendant bridges, embankments, and cuttings, is not necessary; and in the second place, to put it bluntly, there is not the money available for the work. With over two million unemployed, with a stupendous weight of taxation, and a period of bad trade, we are not, as a nation, in a position to pay out scores of millions for work of a very doubtful value. We had far better cut down expenditure and conserve our resources. At any rate, that is the view of the majority of those connected with the administration of local and county affairs.

Concrete Engineering.

Concrete engineers, to use a phrase which has rather gone out of fashion, have been engaged for some time past upon research work which has shown that there is such a thing as autogenous healing of concrete, by which is meant the self-healing of concrete which has opened up to slight cracks which, in course of time rectify themselves, the concrete adhering again. This sounds an impossibility, and many engineers would require, rightly, convincing evidence before accepting the statement. This is, however, said to have been ascertained beyond any shadow of doubt, and probably many engineers, particularly maintenance engineers on concrete roads, have already breathed a sigh of relief at hearing that there is such a thing as the autogenous, or automatic, healing of cracks in concrete. The only thing they would need then would be the discovery of some form of asphaltic or bituminous road surface which would automatically level itself back into shape every night after the day's traffic had pushed it out of shape.

Asphalt Paving.

Cold-laid asphalt pavements are no longer experimental; they have shown themselves capable of standing up to really heavy work. In these the wearing course is of small stone, and in both the binder and the wearing course the object is to have an aggregate with as few voids and with as thick an asphalt coating on the stone as possible. The thickness of the coating is increased by the addition to the mixture of fine material, such as crushed rock screenings, sharp sand, and so forth. This fine aggregate is added in small proportions, to give bulk to the asphalt filler, and whilst avoidance of voids is aimed at, it is also endeavoured to keep the mixture fairly free, so as to allow of the evaporation of the vehicle carrying the asphalt. If a dense mixture were used and this vehicle could not escape, the pavement would move and give under the weight it was called upon to bear. Powdered hydrate of lime is often added, not so much as a filler, but because of its action on the asphaltic cement. It appears to facilitate the coating of the stone with the cement, and possibly produces a change in the inter-facial surface tension between the asphalt cement and the stone surface, thus giving it a better adhesion. For a considerable time it was a question as to whether hydrate of lime was essential, but it is now recognised that, whilst it can be dispensed with, its presence facilitates the mixing. It seems to make the asphalt cement adhere to the stone more readily.

Further improvements have been made in the liquifier or vehicle, and it is now recognised that a material which is only slowly volatile is preferable to one that evaporates out quickly. Where crude naphtha was used formerly, ordinary paraffin has taken its place. Recently another change has been made, which may add greatly to the strength of the pavement. That is the addition of rubber latex to the asphaltic cement. This material, when added in the small proportion of 1 per cent., materially changes the character of the asphalt cement, making it more adhesive and more ductile. It is thought that it will also add a degree of elasticity.

Something should also be said regarding the foundations for asphalt pavements. The primary purpose of a foundation under asphalt pavement is so to distribute heavy wheel load pressure that very little movement or deformation of the sub-grade will take place under the unit pressures to which it is subjected. Foundation design is thus complicated by the need for taking the sub-grade support into consideration, and further by the need for considering the character of the traffic. It must not be forgotten, also, that while the asphalt wearing surface affords some protection to the foundation, the behaviour of the foundation affects, and that very materially, the life of the wearing course. There are many factors to be taken into consideration in connexion with this class of work, and the foundation problem is far from simple when all its phases are considered.

Mechanical Sand Washing.

For towns' water supply and the use of sand filter beds generally, one of the most important inventions of the past few years is the "Peebles" sand washing machine, which was introduced in 1923 by Mr. James Peebles, resident engineer of the Ayr Waterworks in Scotland, and over 125 of these machines are now at work. The dirty sand from the filter beds is thrown into the hopper at one end of the machine and clean sand, mixed with water, is ejected continuously at the other, the only motive power

required being a supply of water at extremely low pressure, several pounds per square inch, while the machine may be of the "fixed" or "portable" type, in the latter case being wheeled about from one filter bed to another as required.

It has now been found that the machine has a highly important application in connexion with concrete, of which a striking example comes from Bombay. The local sand contains a percentage of salt and other impurities, and is not suitable for use in concrete work, with the result that in the Bombay area good grade sand free from salt has to be brought from a distance at considerable expense. Because of this difficulty trials were eventually made by the Bombay Port Trust with the "Peebles" machine, which has shown that the impure sand can be washed, rapidly and cheaply, at the rate of about 500 cubic feet per day, or 23 tons, producing a clean sand capable of giving exceptionally good results, the salt all having been washed out by the water. This, of course, represents a great saving, since it is no longer necessary to import sand, while valuable possibilities in other fields seem to be mining and the treatment of ores.

The general principle of the machine is that the dirty sand from the hoppers first passes over a small vibrating screen to remove pebbles and other debris and then falls out into a water chamber where it meets a series of powerful jets of low pressure water. As a result of the intimate mixing of the sand with this water, and the upward rush of the latter, all the dirt and the impurities are washed out immediately and overflow to a dirty water discharge, while the heavy sand sinks again by gravity to the bottom of the apparatus, and is finally spouted out in a continuous stream with a small amount of water. Obviously by this method salt or other impurity is at the same time dissolved, and it is possible therefore for two entirely different cleaning actions to be carried out within the same machine, that is the removal of dirt and other material on the gravity principle, and of any soluable impurity by the action of the water.

These "Peebles" machines are manufactured, as sole licencees by Messrs Glenfield and Kennedy Ltd., of Kilmarnock, Scotland, and they are available in three standard sizes, that is 4 tons of sand per hour, 8 tons of sand per hour (double tube), and 12 tons per hour (treble tube), the respective weights in the case of the "fixed" type being 14 cwt., 25 cwt., and 31 cwt., and for the portable type, 17 cwt., 27 cwt., and 36 cwt. Also as some indication of the performance, in the case of the 4 ton "fixed" machine with a water pressure of only 3 lb. per square inch, the duty is 2.55 tons (60 cubic feet) of sand per hour, whereas at 5 lb. pressure the figure is 4.15 tons of 98 cubic feet, while another feature is the low consumption of water, the 4 ton machine taking only 1,800 gallons per ton of sand.

The Bucharest Municipality has decided upon the building of an underground railway.

For the first five months of this year Bulgaria had a favourable trade balance of 585 million leva, exports amounting to 2,417 millions, and the imports to 1,831 millions. For the corresponding period of 1929 there was an adverse balance of 950 millions.

The Messageries Maritimes have recently acquired four steamers, which will be renamed Boussole, Astrolabe, Eperance, and Rechercre, and are intended for service on the Panama route. This addition to the company's fleet will enable them to promote further facilities for traffic to Tahiti, Suva, and Noumea. The Boussole is scheduled to leave Marseilles on December 3 and the Astrolabe on January 14, 1931.

The crude oil production of the Roumanian fields for the first six months of this year amounted to about 2,430,000 tons, as compared with 2,233,717 tons in the corresponding period of 1929. The production of the principal operating companies during the period was as follows (in tons):—Astra Romana, 570,072; Steaua Romana, 446,719; Creditul Minier, 326,340; Phœnix Oil, 206,414; Rom.-Americana, 219,804; Sirius, 215,803; Colombia, 147,494; and I.R.D.P., 143,021.

The two new passenger liners for the P. and O. Company's Straits-China-Japan mail service, for which orders were recently placed with Messrs. Alexander Stephen and Sons, Ltd., will have a length of 520 feet with a beam of 70 feet, with about 30 feet maximum draft. The gross tonnage of each ship will be about 14,000. Cabin accommodation is to be provided for about 154 first-class and 150 second-class passengers.

The death took place recently at Valmont, Switzerland, at the age of 44, of Lieut.-Gen. Harold J. Solomon, O.B.E., M.C., who was Director for Commerce and Industry in Palestine when Sir Herbert Samuel was High Commissioner, and subsequently was associated with several Palestinian organisations. He was a Director of the Palestine Potash Company, Ltd., a member of the Council of the Economic Board for Palestine, and a Governor of the Haifa Technical Institute.

British Consular Reports

I.—TURKEY.

(Continued from page 167.)

Industrial Developments.

Although industry is unimportant the Turkish Government has applied measures which should, especially when capital is available, encourage its development. Measures of outstanding importance were the new customs tariff, to which reference has already been made, and the law for the encouragement of industry, and, if, at any time, a free zone system is applied wherein certain industries can be established free of any restriction, there will be a further incentive to establishing industries.

In the course of 1929 the Ford Company established important assembly works at Tophané, covering some 273,000 square feet of ground, at the Galata end of the Istanbul quays under particularly satisfactory terms. They have been established under a free zone system and will serve as a distributing centre for ports in the Black Sea and Near East generally. It is the intention of the management to assemble Ford tractors as well as cars. The plant is capable of producing 80 cars per eight-hour day.

It is, however, to the textile industries that the Turkish Government is likely to pay most attention. Turkey's imports of cotton and woollen goods amount to about £T70,000,000 annually, and with the impetus given by protective tariffs and the material benefits conferred by legislation some extension of the existing textile industries is to be expected. In 1928 Turkey imported cotton, cotton yarns and tissues goods to the value of £T52,449,271, equal to 23.5 per cent. of her total imports. The share of the United Kingdom amounted to £T12,910,599, equal to 46.9 per cent. of her exports to Turkey. The cotton industry is undeveloped. The leading factories in Turkey do not possess over 80,000 spindles between them, and the total capacity of the looms in the country in factory and homestead is not sufficient for the requirements of the country in thread and tissues. For some years, therefore, Turkey will be dependent on foreign manufactures for a good portion of her supply; but it should be borne in mind that Turkey produces some 20,000 to 22,000 tons of cotton, of which her present factories only consume a small portion.

In 1928 the value of Turkey's imports of wool and woollen and worsted yarns and tissues from the United Kingdom amounted to £T2,917,789 out of a total import of £T15,767,238. The woollen industry in Turkey is more developed than the cotton industry. Thanks to legislation that has ordained that all soldiers, gendarmes and police of the Republic be clothed in home-made cloth, and to the present policy to "buy Turkish," the industry enjoys a measure of protection. Sixteen leading factories produce over 2,000,000 metres of cloth and serge per annum, which suffices to fulfil Government contracts and together with the primitive home spinning and weaving industries, to clothe a large proportion of the inhabitants of Anatolia. Anatolian wool is, however, somewhat coarse, and the cloth made by Turkish factories cannot yet compete with the better foreign cloths, but out of a production of some 12,000 tons of wool (sheep and goat) Turkey uses only about 4,000 to 4,500 tons in home industries and 3,000 tons in her factories, the remainder being exported. Old textile plant is being replaced by new. The firm of Hüsnü, Sinasi and Sons in Adana have effected important improvements in their ginnery. Improvements have also been made by the Société Turc de l'Industrie de Coton and des Huiles Végétales in their factory in Adana.

There has also been a considerable advance in the Bursa (Broussa) silk industry, where a Turco-Japanese silk factory is producting silk tissues of a remarkably good quality. Government textile factories are also gradually effecting improvements and are renewing plant.

In the mining industry progress can also be recorded. At Fetiye plant has been installed for the extraction of chrome and manganese, and modern material and washing plants have been procured and installed in the Black Sea coal basin by the numerous companies operating therein.

Important cement works are being erected by a Belgian group at Kartal on the Anatolian railway some few kilometres from Istanbul, which will produce an annual output of 70,000 tons, and a German group which has invested capital in the existing Arslan-Eski-Hissar factory is also constructing a factory at Bakirkoy, the output of which, it is said, will attain 70,000 tons of cement. The Turkish Government is also reported to have placed a contract with a German firm for the erection of steel works and rolling mills in Ankara (Angora) as a first step towards the creation of metallurgical industries in the country.

Few mines are working, and the reputed great mineral wealth of Turkey is almost untouched owing to lack of communications and want of capital.

The Agricultural Position.

The expectations entertained last spring were unfortunately not fulfilled. Early reports had been most encouraging, and it was hoped that the 1929 harvest would compensate for the failure of crops of recent years and particularly for those of the year 1928, which, owing to prolonged drought, were little short of disastrous. These hopes were, however, in a great measure disappointed. The situation as regards dried fruit was most satisfactory. Although up to the average, heavy rains fell when the fruit was already ripe, causing serious damage. The fig crop was also affected by bad weather, but fortunately the percentage of rejections by buyers abroad was less than that of the preceding year. The tobacco crop, although up to the average in yield, was of poorer quality owing to unfavourable weather conditions, and in the Samsoun district, which normally produces the best and most easily saleable leaf, the 1929 crop did not exceed 4,000 tons (and that of inferior leaf), as against 6,589 tons in 1928. The hazel nut crop failed almost entirely, as the nuts on the trees, which were estimated at 20,000 tons, were destroyed by insect pests, a state of affairs which ruined a number of growers and exporters. On the other hand, there were some brighter spots in this situation. The yield in wool, mohair, and opium was up to, or even exceeded, the average, and there was a very marked improvement in the yield of cotton.

In view of the paramount importance of agriculture, more attention might have been given to its intensification and scientific development. The country is essentially agricultural and its prosperity must therefore depend on the success or failure of its crops. An effort is at last being made to start irrigation works to which the Government attach importance, but a widespread use of modern methods is also necessary. The farmer cannot, in most cases, afford to buy machinery, nor does he know how to use it. The use of phosphates might be of enormous value, but up to the present its uses have not been appreciated, and unless the Government arranges with the Agricultural Bank or some other institution to lend money to farmers at a reasonable rate of interest, supply them on easy terms with modern equipment and provide expert advice for its use no great advance can be expected. Nor does the problem end here. The question of marketing to the best advantage is equally important.

Digitized by Google

According to present indications the general yield of this year's crops should be good, but in common with other countries Turkey is likely to be seriously affected by the general fall in world prices of wool, opium, wheat, etc. It is feared that even with a good average crop no very great alleviation of present stagnation and depression will follow. Confidence in the country must be restored, and the introduction of capital encouraged. Foreign business houses are necessary to the country and every effort should be made to encourage them to operate. It should be remembered that with their experience and knowledge of foreign markets they serve as the main channels for marketing Turkish produce.

Poor Trade Outlook.

It is difficult to see any rift in the black cloud of commercial depression which has settled over this country. Poor harvests, general poverty, heavy taxation and high customs duties have combined to reduce the purchasing power of the country and to cause a marked falling off in imports. Some idea of the extent to which the import trade has been affected by the new duties, which came into force on October 1 last, will be obtained from the following preliminary customs returns for the year 1929:— January, £T20,975,717; February, £T16,448,755; March, £T18,619,652; April, £T22,034,721; May, £T21,159,018; June, £T22,215,560; July, £T32,398,926; August, £T34,142,573; September, £T34,361,498; October, £T8,579,205; November, £T10,187,243; December, £T15,054,190.

The above shows that the value of imports fell considerably during the last three months of the year, though this reduction was due in a great measure to abnormally heavy buying before the new duties were applied. This shrinkage in the import trade has continued, though probably not to such a marked extent, during the present year, and whilst the general economic condition of the country continues to be unsatisfactory no revival in the demand for foreign goods can be expected.

The Turkish lira has depreciated year by year, and at the beginning of the present year the Government took steps to stabilise the exchange at about 1,030 piastres to the £. This stabilisation is purely artificial and has been brought about by a series of stringent regulations limiting the purchase of foreign exchange and forbidding banks to convert deposits in Turkish liras into foreign money or securities. These measures have fulfilled their purpose, at least for the present, and on the whole merchants have been able, after some preliminary difficulty, to obtain sterling to meet their commitments abroad.

In previous reports on trade conditions in Turkey emphasis has been laid on the necessity for caution in granting credit on this market. In an impoverished country such as this, with a fluctuating exchange, where prosperity and capacity for payment are entirely dependent on her crops and the success with which they are marketed, any unforeseen misfortune such as unfavourable weather, a marked fall in world prices, or over-production in other markets may prejudice the whole economic structure, lead to a falling off in the demand for foreign goods and leave importers, who have bought their goods on credit some months in advance of the buying season, with their stocks on their hands. The inevitable result is failure or delay in meeting acceptances at their maturity. On the whole, merchants have met their bills with commendable regularity, and if the need for caution is emphasised this recommendation is inspired not by any doubt as to the general desire and willingness of importers to maintain a high standard of commercial integrity, but rather to the realisation that in the majority of cases their ability to pay their bills depends, in the last resort, on circumstances beyond their control.

This state of unstable equilibrium is accompanied by the disadvantage, from the point of view of the foreign exporter, that credit is practically a *sine qua non* on this market. In certain branches of trade, such as manilla rope and cable and cereals, importers generally pay cash against documents, but in the majority of cases the general rule is for four to six months credit to be given, dating from the arrival of the goods at a Turkish port. Motor cars, lorries, gas and oil engines are generally sold at 9 to 18 months credit, but as regards other imports the general rule is:—

British firms: Four months credit dating from the arrival of goods in a Turkish port, with a discount of 2½ per cent. for cash settlement. Where credit of six months or longer is granted, interest at the rate of 7 per cent. is charged for the period in excess of four months. Such credits are in all cases only given against the importers' acceptances.

German, Czechoslovak, French, and Italian firms: The general rule is six months credit against acceptances, interest at 7-9 per cent. being charged in cases of extension of the bill. Italian firms, in particular, were at one time prepared to grant 9-12 months credit, but the effect of failures and the commercial depression on this market has been to restrict both the volume and the duration of foreign credits.

Market for Structural Steelwork, Etc.

Turkey has been of recent years, and still is, a fairly important market for structural steelwork, rolling stock and railway material generally. The demand for structural steelwork falls under two main headings:—(a) Steelwork required for private construction, i.e., houses, office buildings, etc. (b) Steelwork required by Government departments, principally by the Ministry of Public Works and by municipalities in connection with railway construction, bridges, irrigation works, etc.

As regards (a) the demand has been stationary, but it has recently shown some indication of a decline owing to the general adoption of reinforced concrete. There is at present a tendency to combine, for small and medium size buildings, reinforced concrete frames with floors built on steel joists, as this economises labour and reduces the use of timber for casings, which is costly here. The main source of supply at the present time is Belgium. According to the Turkish customs returns, imports of structural steel amounted in 1928 to 35,105 tons, of which 26,590 tons were imported from Belgium, 3,820 tons from France, 3,348 tons from Germany and only 206 tons from the United Kingdom. In 1927, 35,042 tons were imported, of which 21,616 tons were of Belgian manufacture, 4,772 tons were imported from Germany, 2,557 tons from France and 141 tons from the United Kingdom.

The primary consideration which governs the demand for structural steelwork from private contractors is that of price. Most of the constructional work carried out is not of the highest quality, and contractors turn to the cheapest market for their supplies. Importation is direct from manufacturers and local representation is by agents working on a commission basis of 5 per cent. The usual terms of payment are acceptance of bills up to six months against documents, with the addition of 7 to 9 per cent. interest per annum. Quotations are always c.i.f. port of delivery. All types of structural steel are imported, but there are no classified statistics showing the quantities in each category. "Bar iron" for use in reinforced concrete buildings is by far the most important item. All steel shapes required by this market are unworked. Constructional work is usually entrusted to contractors, who are responsible for the supply and erection of the steelwork.

The Goverment's programme of railway construction has given rise to a demand for structural steelwork for bridges, stations, etc. All supplies are put up to public tender, and the lowest offer has been accepted in practically every case. The majority of the orders have been placed with Belgian and German firms, the latter generally offering quicker deliveries. The technical specifications are those prescribed by the German State railways. The tensile strength of the steel to be used is 37 kilos per square millimetre (approximately 24 tons per square inch), which means ordinary basic steel by the Thomas process.

Digitized by Google

As regards locomotives, the annual demand in Turkey is 25. They are required exclusively by the Turkish State railways. Locomotives in the past have been purchased from German and Swedish firms. A Swedish firm have an order for 100 heavy goods engines in execution. About 50 per cent. of the order has been executed, and until this order has been completed it is very doubtful whether any further locomotives will be purchased. If the projected lines, viz., the Sivas-Erzerum, Hanli-Malatia and Eregli-Filios are taken in hand, further locomotives will be required. Previously purchases were effected by direct adjudication, but recently the large construction contracts concluded with the Swedish, German and the late Belgian groups, provided in their agreements with the Turkish Government for the supply of all material and rolling stock. Hence locomotives have been supplied from firms connected with the groups referred to above.

The terms of payment are usually 25 per cent. with order, 50 per cent. on delivery and 25 per cent. one month after delivery unless special provision has been made for payment in bonds. The following two examples give an idea of the class of engines purchased and the prices paid in each case:—(1) A heavy type goods engine, ten-wheel coupled, with electric turbo lighting plant and weighing about 126 tons with tender, has been supplied at £8,000. (2) Belgian locomotive, eight-wheel coupled, 2-8-0, heavy goods engine with electric plant and feed-heater, Westinghouse, etc., weighing 125 tons, including tender, was supplied in 1928-29 for £T.38,000-£T.40,000, Franco Sirkeci station, per locomotive.

The railway programme in course of execution by the Government offers little hope to British manufacturers as the material required is supplied in accordance with the terms of the contracts drawn up by the Swedish and German groups which are carrying out the work of construction, but the programme of future undertakings offers some possibility of British participation. The total value of the contracts connected with these undertakings is estimated to be about £14,000,000, of which £6,550,000 represents the actual cost of rails, rolling stock, steelwork, plant and equipment.

The question of payment is one that can only be decided by negotiation between the contracting firm and the Turkish Government, but, on the other hand, on the basis of the contracts previously entered into by the Government it is probable that payment would be on the following lines:—(a) a net profit of 8-9 per cent. on the cost of all material supplied; (b) a gross profit of 20-25 per cent. on constructional costs. The contracting groups actually carrying out public works undertakings in Turkey have found this system to work satisfactorily. A "unit" price is fixed by agreement with the Ministry of Public Works for all constructional work, excavating, ballasting, levelling, etc., and the contracting group then allots this work in sections to sub-contractors, generally at 10-15 per cent. below the "unit" price. There are a number of Turkish sub-contractors in Anatolia who have by now acquired a fair amount of experience in such work, and their standard of performance is stated to be satisfactory; (c) As regards the Swedish group, payment is now made by the Turkish Government quarterly, in dollars, and no bonds are issued. The question of credit does not arise as the quarterly payments are made in advance of the work they are intended to cover. The final payment under the contract, which is of a total value of 55,000,000 dollars, is to be made on September 15, 1934, and the contractors have undertaken to complete their work by December 31, 1934. (d) In the case of an American Corporation, who are constructing station buildings, sidings, sheds, etc., payment is made by Government bonds maturing in 3-4 years and bearing 7-8 per cent. interest. It has been found possible to discount a certain amount of these bonds locally.

As far as can be ascertained, the Turkish Government has paid foreign contractors regularly and punctually, and these latter have had no reason to complain of the financial side of their undertakings. The horizon has been somewhat overclouded, however, by the recent declarations of the Minister of Finance in regard to the possibility of the temporary suspension of payments of the country's external debt, but a formal assurance has been given that this suspension, if ever put into force, shall not affect the country's other financial commitments, but even a temporary cessation of the service of the public debt is bound to shake confidence in Turkey's credit abroad. Much will depend on the steps taken by the Turkish Government to meet its foreign debt and on the general economic and financial position. At the present time the situation is not too promising, and it is doubtful whether the Government is in a position to undertake further financial commitments.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended August 6:—

Egyptian Futures.

Sakel Contract.—We regret that we have no improvement to report during the past week, a week which has been broken into by our holiday week-end, thus leaving only four days for us to review. Basing ideas on past experience, one would have thought that the threat of a severe drought in the American cotton belt would have had a marked effect on values in all other cotton markets, as it is still an axiom that the American crop rules the cotton world. During the last week-end, whilst our markets were closed, a sharp rise occurred in the value of cotton contracts in America, but when we reopened yesterday morning, even our American contract failed to reflect anything like the full extent of the overseas rise. The Sakel contract actually opened down. This state of affairs is truly remarkable, coming after authentic reports of severe damage to the Sakel crop itself, and nothing could be clearer as an indication of the state of affairs here at the present time. To-day, Novembers contracts touched 11.00d., a low level, not only for this season, but also for several years past. The general tendency has been towards a still wider difference with Alexandria (shown chiefly in the January option), and, as we have pointed out in previous circulars, unless we receive immediate relief from an improved trade offtake, there is every reason to expect this widening process will continue. There is at the moment very little on which to base hopes of an early improvement. Lancashire at the present juncture is very much occupied taking stock of herself, a process which in time we feel confident will achieve very beneficial results, but our overseas markets are still in a state of turmoil, and we doubt very much if even a severe drought in America would have the effect of driving in customers, through fear of competition, as it would have done in days gone by. A factor which has not as yet received much attention is the development of a strike in the Lille district of Northern France. Stoppages are being enforced there and the outlook is, to say the least of it, uncertain.

With regard to the straddle referred to above, that is the difference between Liverpool and Alexandria, although at the moment the tendency is for Liverpool to fall still further below the overseas market, this state of affairs may receive considerable modification once hedging operations commence, as the Alexandria market, being the higher one, is most likely to attract the selling, and this possibility should not be lost sight of by those who feel tempted to operate. During July 825 bales of Sakel were tendered against the contract.

Upper Contract.—Little fresh interest has been noticed in this contract. Only a portion of the recent rise in America, due to drought news, was reflected here, and even that was speedily lost again. The Government figures published over the week-end aroused very little comment, as they were about what had been expected. The only feature of the week has been a decided tendency towards closing in with American contracts, and unless trade improves, with what looks like a record crop coming into sight, there is every possibility of a still smaller difference being seen. During July 264 bales were tendered.

Egyptian Spot.

The inquiry for spot cotton has remained a very poor one. Probably the holiday season has been largely responsible, for, in addition to the customary mill holidays, which are now taking place in various parts of Lancashire, the week has been interrupted by the annual August Bank Holiday week-end. Only four business days are covered by our remarks.

Sakel.—There has been rather an improved inquiry for Sakel cotton at about 200 to 250 on, but the term is merely comparative, and the quantity of actual business transacted has been a very small one. Apart from the quality mentioned above (200 to 250 on), the Sakel inquiry has been a very poor one.

Uppers have been in fair request at from 25 to 100 on November contracts. There is very little cotton actually on the spot here offering at these prices, but Continental spinners, who have surplus

Digitized by Google

stocks, have been making offers of shipments to Liverpool, and this has helped out matters somewhat. The better qualities at from 10d. to 10½d. have also been in moderate request, but little business has resulted.

Pilion.—The inquiry for this cotton has only been of moderate extent. In fact, spinners seem to have deserted this growth for the time being owing to the difficulty of obtaining exact requirements. No doubt, with the advent of new crop shipments, we shall see some improvement in the inquiry. In the meantime, those who are holding old crop Pilion have been much exercised as to how to dispose of it, and we constantly find Pilion offered on the market as best Upper.

Nahda.—Very little interest has been shown in this cotton.

Maarad Cotton.—Only a very moderate inquiry has been seen, and we cannot trace any active business.

White, Fouadi, Farouki, etc.—These have all suffered from neglect.

Sudan Sakels.—As compared with the ordinary Egyptian Sakel, this cotton has been in improved request, and more Sudan has been sold than Egyptian. Here again the figures are merely comparative and do not indicate anything more than a moderate business.

C.i.f. business.—The recently improved inquiry for new crops has apparently died away, and transactions have been isolated. Forwardings have been returned as 3,309 bales Egyptian and 504 bales Sudan. Sales have been estimated at 400 bales Egyptian and 500 bales Sudan Sakel.

Tokar Sakel.—Compared with the other growths enumerated above, this cotton has also met with a fair inquiry, and rather more business has been done, chiefly in this season's cotton.

Quotations.—Those of Sakel show a reduction of 20 points, those of Upper 10 points, and those of Pilion 15 points on the week. F.G.F. Sakel to-day, 12.15d. F.G.F. Upper to-day, 9.23d. F.G.F. Pilion to-day, 9.80d.

EGYPTIAN FUTURES QUIET.

The Alexandria Commercial Company report as follows for the week ended July 31:—

Our market has been very quiet this week with fluctuations in Sakel confined to a narrow range. Uppers have been weak. The week's summary of price movements is as follows:—Sakellaridis: November N.C., 22.97 dollars, 0.14 dollars down; January N.C., 23.11 dollars, 0.22 dollars down; March N.C., 23.50 dollars, 0.27 dollars down; May N.C., 23.95 dollars, 0.21 dollars down. Ashmouni: August, 15.07 dollars, 1.30 dollars down; October N.C., 14.80 dollars, 0.62 dollars down; December N.C., 15.02 dollars, 0.63 dollars down; February N.C., 15.37 dollars, 0.65 dollars down; April N.C., 15.69 dollars, 0.67 dollars down; June N.C., 16.10 dollars, 0.62 dollars down.

The production of crude oil in Roumania during June amounted to 517,575 tons, as against 535,811 tons in the preceding month and 383,341 tons in June, 1929. The output of the principal producing districts in June was as follows (in tons):—Phahova, 378,843; Dambovitza, 124,652; Buzau, 7,029; Bacau, 7,051.

In May 93 merchants ships of 350,822 net tons called at Port Sudan, as compared with 77 ships of 285,830 tons in May, 1929, and 88 ships of 311,911 tons in May, 1928.

Notes of the Week.

Paradox in Egypt.

There must be something in the atmosphere of Egypt that makes for inconstancy of purpose. When Great Britain occupied the country, it was with the declared intention of evacuating it at the earliest possible moment. That moment, as the world knows and as the Egyptians at one time were very fond of reminding the British, failed to present itself for over forty years. Then when the offer was made to hand the country back to the Egyptians, it was the latter who, on one pretence or another, refused to accept it, until a year ago an Egyptian Government, not representative of the people, but with the courage of its convictions, resolved to accept the offer, and the necessary treaty was drafted. As an essential part of the arrangement, it was agreed between the two contracting parties that the draft treaty was to be submitted to the Egyptian electorate. The elections were held, but no mention of the treaty or its terms was allowed to be made to the electors. Parliament, when elected, was also debarred from considering the treaty, and a Government that claimed that whatever it said or did carried the endorsement of the whole of Egypt transferred itself to London to discuss the treaty over again. Up to that point, and throughout the London negotiations, the Wafd had stood for the complete independence of Egypt and the termination of all intervention on the part of Great Britain in Egyptian affairs. As successive British Governments were obliged to point out that, until a treaty was ratified between the two countries, Great Britain could not help interfering in Egyptian affairs, as stipulated by her in the Declaration of February 1922, antagonism between the Wafd and Great Britain was an established factor in Anglo-Egyptian relations. The London conference failed, because the British Government would not meet in their entirety the Wafd's claims, but although neither party had budged to any material extent from its standpoint of eight years' standing, the Wafdist leaders, in the place of fresh denunciations of the wickedness of the British Government, announced its conversion to close friendship with the latter. In other words, all that was necessary in Anglo-Egyptian relations had been achieved, for there had never been any other party than the Wafd that had not been friendly disposed to Great Britain. The treaty, therefore, did not matter.

The Climax of Inconsistency.

Before there had been time to test the new condition of things in Egypt—a Government supported by the whole of Egypt and the self-declared friend of Great Britain—the Wafd Cabinet resigned. Its position in the country was above challenge and the resignation was entirely of its own contriving and inexplicable to any one not in its leaders' confidence, yet its Press organs at once launched an attack on Great Britain, as being responsible for the Wafd's finding itself—after it had resigned of its own volition—out of office. It seemed as if the loudly-proclaimed friendship had very rapidly worn thin. The next move, however, carried inconsistency still farther. After eight years of warning, carried to the point of violence, that Great Britain must not interfere in Egypt's affairs, a special organization has been formed to persuade a British Government that has gone out of its way to meet Egyptian aspirations in order to free itself from the necessity of intervention, to be guilty of grave interference with the internal affairs of Egypt. No other explanation is possible of the curious anomaly of the appeals now being made in the British Press and to British Members of Parliament. What has happened in Egypt is that the Party commanding a majority in Parliament has resigned office and refuses to accept power except on terms that no civilized country can accept. (The expression is not too strong for the Protection of the Constitution Bill, and it is not without significance that in its previous term of office the Wafd Government was also responsible for a measure that led to its undoing—the Public Securities Bill—because it proposed to introduce impossible conditions for a civilized country.) The King in the exercise of his constitutional authority has appointed another Government, and the object of the propaganda now let loose on Great Britain appears to be designed to induce the British Government to intervene between two sets of Egyptian politicians. The mere suggestion pours ridicule on the agitation for Egyptian independence. In the place of its slogan: "Hands off Egypt," the Wafd now raises the banner—perhaps without realizing it—of Interference-at-any-price. If the damage to Egypt's political development that is thus being deliberately courted is not incurred, it will be because a wise Government is in power in Egypt, and even a Labour Cabinet in England is ceasing to take some Egyptian politicians too seriously.

The Situation in Kurdistan.

The situation between Turkey and her Kurds is still obscure. While, on the one hand, we have assurances that relations between Turkey and Persia are perfectly friendly—it is even denied that Turkish forces have invaded and are occupying Persian territory—there is, on the other hand, the definite statement, which inevitably invites comparison with a similar situation three years ago, when Turco-Persian relations were undeniably strained, that the Turkish Ambassador to Persia, Memduh Shevket Bey, is being replaced at Teheran. It is true, however, that there seems no immediate likelihood of tension between Turkey and Persia over this question of the Kurds. Last week there appears to have been severe fighting between the Turkish regular forces and the Kurdish "rebels" in the Ighdir district, and it is hoped by the Turks that during the present week the three Army Corps under General Salih Pasha will finally subdue the Kurds still holding out in the Ararat massif. That estimate, we think, is likely to be proved optimistic. It is instructive, in the meantime, to note the very "correct" attitude of France and Great Britain, in the rôles of Mandatory Powers in the Middle East in the matter of the Kurds. The High Commissioner in Beyrout, M. Ponsot, has stopped the propaganding activities of Badr Khan in Syria, and the Acting High Commissioner in Baghdad—as well as the Acting Prime Minister of Iraq, who may be assumed to be more concerned with the domestic aspect of Kurdish unrest—has sternly discouraged any idea of Kurdish nationalism. In these circumstances, it is all the more strange that certain German papers should have published the wildest stories to the effect that the British, and particularly the ubiquitous Colonel T. E. Lawrence, are responsible for this Kurdish unrest. Such grotesque fables are a melancholy reminder of the suspicion with which a section of Germans regards Great Britain in the Middle East. If there is one thing of which British official circles would probably wish never to hear again, it is Kurdish nationalism. But facts may yet run counter to such desires.

The Kurds of Iraq.

As every observer of the situation in Iraq now knows, the Kurds of the Northern Provinces have taken alarm over the prospect of living under an independent Iraq State. This alarm, and the public protests to which it has given rise, have increased considerably during the last year, and particularly during the last few months. As a matter of fact, it was owing to the proportions which Kurdish unrest in Southern Kurdistan had assumed that the decree was issued, a few months ago, by the Iraq Cabinet, making Kurdish the official language of the northern liwas. That step, however, so far from quietening the situation, appears to have been regarded by the Kurds as a symptom of alarm on the part of the Iraq Cabinet, and the Kurds have since waited impatiently and in vain for further favours. So serious had the position become in Southern Kurdistan that last week General Jaafar Pasha, Acting Prime Minister, and Major Hubert Young, Acting High Commissioner, toured together the northern provinces with a view to allaying the anxiety of the Kurds and to discouraging any separatist movement. Jaafar Pasha is reported to have said openly that the Iraq Government were resolved firmly to suppress any movement against the unity of King Faisal's State, and Major Young assured the Kurds that the policy of encouraging Kurdish nationalism was absolutely outside British ideas. Whether or not the Kurds will have been duly impressed by these firm declarations we have no means of knowing. There may be wheels within wheels of this Kurdish-Iraq problem which are invisible to the distant observer. This, however, is certain: that the fate of the Kurds in Iraq is bound up with that of the other minorities. If prompt steps are taken to confer on them the rights suggested by the Teleki Commission in 1925, all may yet be well. It is to be hoped that the statesmen of Iraq will rise superior to the old Arab dislike of Kurd and Assyrian. In this matter, Iraq cannot possibly take as her model Turkey, where absorption rather than amalgation is the aim of the Ankara Government.

Great Britain and The Hijaz.

With the arrival in London last week of Shaikh Hafidh Wahba, King Ibn Saoud's Minister in London, the relations between Great Britain and the new State of Hijiz-Najd may be said to have reached a definite stage. Shaikh Hafidh Wahba was in London last year, but not as Minister to the Court of St. James's. During his absence Sir Andrew Ryan took up his post as Minister at Jidda, and now, with the arrival of King Ibn Saoud's former Counsellor, full diplomatic relations have been achieved. It is a happy consummation to a remarkable historical achievement. Readers of The Near East and India will need no reminder of the amazing speed and success with which King Ibn Saoud conquered and is organising the dual Kingdom of Hijaz-Najd, nor of the close interests which Great Britain has in the Arabian Peninsula and particularly, in virtue of her millions of Muslim subjects, in the Holy Places of Islam. Both countries are to be congratulated on the possession of able Ministers, representing their respective Kings, in their midst, and should be able to look forward to a long and mutually beneficial period of co-operation.

The Sukkur Rioting.

The recent murderous rioting in Sukkur, the principal town in Upper Sind, is a striking instance of the deterioration in the behaviour of the two great Indian communities. Formerly they lived together in Sind, if not in complete amity, at least with mutual toleration. The Muhammadans had the preponderance in numbers and supplied the labour, the Hindus had the money and the business capacity. A large and somewhat assertive Sikh colony has, however, been established in the railway works at Sukkur, and has added strength to the Hindu community, while the Muhammadans have become increasingly conscious of their numerical superiority and their economic inferiority. The result has been the recent rioting, the worst sign, perhaps, of which has been the tendency of the villagers to come into the city to loot. The trouble will, doubtless, subside, as the Sindhi is essentially an easily governed person, but what a falling-off from the old system of government! Meanwhile the official account of the position on the North-West frontier shows that although the punitive measures have had a sobering effect on the tribesmen the situation as a whole continues to be one of considerable gravity and danger.

THURSDAY, AUGUST 21, 1930.

STRENUOUS DAYS IN ROUMANIA.

Rumour has found in Roumania these days many spheres for the exercise of her art, but it is unlikely that her reputation will be enhanced in any one of them. Her activities, however, although embarrassing, are not wholly of bad augury, for they bespeak an awakened interest in the affairs of the country, and some of the wilder flights of fancy may serve by their very exaggeration as steadying factors where political effervescence rarely dies down for long. For the moment interest in the King's Coronation tends to overshadow all other questions. The day when the King and Queen are crowned will, it is hoped, not only mark the end of an unfortunate chapter in the domestic history of Roumania's ruler, but should also restore that complete harmony between Throne and people without which no State can really prosper. Little wonder, therefore, that Sinaia should be the centre of much coming and going, until the official announcement of the Coronation ceremony can be made. Significant as the event will be for the Roumanian people, the ultimate reaction on foreign opinion may be of even greater importance. International diplomacy abhors the unprecedented, and inevitably a vacuum would insert itself in one way or another in Roumania's foreign relations, unless the divorce of King Carol and the Princess Mother can be annulled not only ecclesiastically, but, more important still, in their actual lives as well. That this particular field should provide Rumour with the fullest scope is not an occasion for surprise, but the matter is one of which only the ultimate solution is of any consequence abroad.

Imagination will be far more exercised in discovering how the report that Roumania was standing on the threshold of a dictatorship found a moment's credence. In so far as the Government of the day was supposed to be contemplating the step, it would appear the more senseless, because a party which has a substantial majority in Parliament, and has had no special difficulties to contend with in passing its legislation, has no need for abandoning the easier course of constitutionalism. If justification has to be sought for the establishment of a dictatorship in Yugoslavia, it is unnecessary to look beyond the barren record of ten years of the parliamentary system in respect of the country's most pressing needs. Parliament is not responsible for the difficulties of the Maniu Government, but rather the legacy of unsatisfactory legislation and mistaken policy that it inherited from its predecessors. The return of King Carol has rescued the country from the numbing effects of a Regency, and it should have no need to go outside the orderly functioning of parliamentary institutions for the working out of its salvation. A desire to hit upon a short cut out of economic troubles is not unnatural, but there can be little certainty of finding one, in the face of a world-wide depression. It is better to lay securely the foundations on which future prosperity, when it comes, can be built with some degree of permanency, rather than to seek problematical help from political slogans. The danger of the latter may be seen in the attitude of General Averescu, leader of the People's Party and a former Prime Minister, who finds support for his denunciation of the Government in the circumstance that no other country has allowed those who have been liberated from a foreign yoke to govern their liberators. If General Averescu could have his way, he would reproduce in Roumania, by pitting the Roumanians of the Old Kingdom against their brethren of the new Provinces, the disastrous state of affairs that in the case of Yugoslavia, owing to the unhappy quarrels of Serbs and Croats, has left the country with no alternative to a dictatorship. If the economic crisis were to become intensified, there would be much to be said for a Business Cabinet of all the talents, in order that no one should affect to believe that the Government in dealing with the situation were actuated by any other motives than the interests of the country as a whole. There would seem no reason, however, why Roumania should not emerge from her present difficulties without changing horses in mid-stream. A second good harvest will make for greater contentment, even if, owing to the fall in prices, it does not entail a corresponding increase of wealth; but it should help to secure for the present Government a longer, and, therefore, a fairer, trial of its programme for the rehabilitation of the country.

Although the two conferences that have recently been held in Roumania owe their inspiration to neighbouring States, they indicate a sounder appreciation of the need for the scientific direction of agricultural affairs in the country than any previous Government has shown. In the face of extra-European competition it is folly for the agrarian States of South-Eastern Europe to compete as well with one another for outlets for their cereals, if by co-operation they have a chance of securing neighbouring markets wholly for themselves. An inevitable corollary to any examination of the subject must be the emphasising of the necessity for improving the quality of the agricultural produce, with a view to standardising it when sufficiently improved. With collaboration no one country will be able to lag behind the standard set in another, and in this way a much-needed impetus will be given to the general raising of agricultural standards in the Balkan States. Then the marketing of the produce raises the question of communications, and here plans for the furthering of common interests may well be found to bring in their train advantages which would be wholly lost, if the problem of communications had been approached solely from the point of view of a single State, dominated, as it might easily be, by exaggerated military considerations. Not the least interesting feature of the new development is the discovery made by Yugoslavia and Roumania that they have common interests which are not shared by the third partner in the Little Entente. For the sake of the tripartite agreement an attempt will be made to strike a bargain with Czechoslovakia; but unless the latter consents to abate some of the claims of her own economic policy, it is unlikely that the purely artificial political bond which has lured Roumania and Yugoslavia into a Central-European orbit, to the neglect of their joint concern for the consolidation of South-Eastern Europe, will be proof indefinitely against their material interests, which are clearly linked with the Balkan Peninsula.

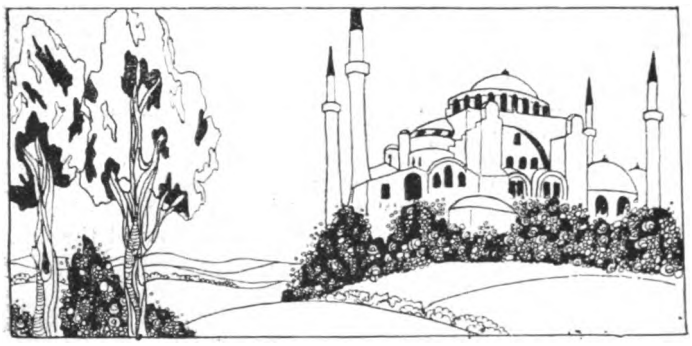
*The Near and Middle East

From Our Own Correspondents.



TURKEY.

Istanbul, August 14.

Events in Kurdistan.

It is by no means an easy matter for the foreign observer in this country to penetrate the obscurity now surrounding certain of the Eastern Vilayets. Military operations on a fairly comprehensive scale against Kurdish tribesmen in Turkish territory—in which aircraft are being utilised as the main arm of offence—have been proceeding for the better part of a month. Little quarter appears to have been given on either side, and very few prisoners are reported to have been taken. The repressive movement has concentrated mainly in the later stages of the operations, against the rebels—or brigands and bandits, as the native papers style them—who have retired to the flanks of Mount Ararat, in the North, and Suphan Dagh, near Lake Van, in the South. In these mountain fastnesses the insurgents appear to be holding their own, as neither horse, gun, nor foot can get at them, and even bombing squadrons are of relatively little value against an enemy who takes instinctive advantage of the natural protection afforded by a very rugged and rocky terrain. The Turkish papers are confident that the rebellious Kurds will shortly be starved into submission, but it is a moot point whether Turkish leader-writers as a body have much practical knowledge of the scant fare on which Kurds can subsist almost for months on end without great suffering. If the insurgents have carried part of their flocks with them—as they are almost certain to have done, seeing that captures of cattle have been announced in Turkish *communiqués*—*yoghourt* (curdled milk) and *airan* (the same diluted with water as a beverage) will afford them sustenance for weeks to come. The season of the year is certainly against the rebels, as is shown by the fact that the Turkish troopers have been supplied already with additional winter kit in the shape of heavy woollen socks and gloves.

The fighting—again according to the vernacular Press—has come to an end in all sectors, except against a fresh incursion, this time from across the Syrian border, and against the rebels in the Aghri Dagh (Ararat) area, where operations on a more extensive scale are now being contemplated.

It is in this connexion that certain side-issues have arisen which leave the ordinary observer in a state of perplexity. Briefly stated, the Ankara Ministry have addressed to the Persian Government, within the past week, a Note admittedly of a comminatory character. After transmitting this Note to the Persian Foreign Office, the Turkish Ambassador at once tendered his resignation to Ankara. He is being replaced by Hosrev Bey, the present Minister to Bulgaria. But the crux of the political enigma which has now arisen is not in this particular development. The Turkish papers as a whole—possibly inspired—have been repeating for days past that, unless the Persian Cabinet can see their way to agree to a rectification of the Turco-Persian border-line in the vicinity of Aghri Dagh, Turkey will inevitably be compelled to take up that military attitude so ominously known as one of "legitimate defence," the responsibility for which must rest on the shoulders of the Persian Ministers. That Turkish forces of appreciable strength have been steadily concentrating for the past fortnight around Bayazid, close to the dividing line, the Turkish papers themselves admit.

In reply to the Note addressed to Teheran, the Persian Government have declared their readiness to collaborate with Turkey in the re-establishment of peace and order on the frontier. The Note goes on to say, however, that the Persian Government cannot tolerate the passage of Turkish troops into Persian territory any more than they are prepared to undertake joint military operations with the Turkish Army. The suggested collaboration would have to be strictly confined, in other words, to the independent action of Turkish and Persian military forces within the boundaries of their own respective territories.

It is reported that, as an outcome of a hastily convened Cabinet Meeting, for which the Premier proceeded from Istanbul to Ankara by express train, a further Note has been addressed to Teheran, again proposing the joint action of Turco-Persian forces on both sides of the border-line. To this Note a reply is being awaited. In the meantime the Turkish striking-force in the neighbourhood of the frontier is reported to be up to full strength and ready for immediate action.

Selahieddin, son of Shaikh Said, the leader of the last Kurdish rebellion, who was executed at Diarbekir some four years ago, is undergoing trial *in camera* at Ankara, on a charge of having fomented the present trouble. It is anticipated in governing circles that Selahieddin will shortly share the fate of his late father.

A New Political Party.

Whatever may be thought or said by a foreigner of the merits or demerits of the one-party system which has formed the basis of Constitutional Government in this country since the inception of the Republican régime, it is at least certain that, for some time past, that system has come to be looked upon with misgivings by certain prominent Turks outside of the Cabinet. Matters have now come to a sudden head. There is here no question of a popular caucus—of an overwhelming majority at the hustings—but the solitary voice of an outstanding personality among the Nationalist ranks, who proclaims boldly that all is not well with Turkey.

In a letter addressed some six weeks ago to the Ghazi—this communication has now been published *in extenso* throughout the Turkish Press—Fethi Bey, Turkish Ambassador in Paris, and a former Prime Minister, seriously impeaches the fiscal, economic, administrative and foreign

policy of the present Ministry. After having carefully analysed passing events and the present internal situation of the fatherland, he claims that not one iota of economic progress has been achieved since the day on which the Treaty of Lausanne was signed. The judicial organisation of the country he considers to be open to grave criticism. The acute economic crisis which continues to afflict Turkey might have been at least alleviated before this, continues the ex-Prime Minister, had not the untutored financial mentality of the responsible authorities brought about a financial deadlock from which it will be no easy matter to extricate the country. His personal observation of the present state of affairs, whilst on leave of absence from France, the letter goes on to say, had filled its writer with the gravest apprehensions and anxiety for the future.

Fethi Bey further intimated to the Ghazi his intention of resigning his Ambassadorship in Paris in order to place himself at the head of a political party in Turkey, whose programme it would be to oppose in Parliament all measures of the Government tending to prolong the present critical situation. The Ghazi's reply, couched in friendly terms, approved of Fethi Bey's intentions, whereupon the latter's letter of resignation of his post in Paris was communicated to the Press, together with a copy of its acceptance by the Foreign Minister.

The interesting situation which so suddenly and unexpectedly has arisen is that, the Ghazi himself being the founder and nominal Leader of the Popular Party which now holds the reins of government, Fethi Bey, theoretically at all events, will find himself with his followers in opposition to the Head of State. But the active Leader of the Popular Republican party is Ismet Pasha, the Prime Minister, and it is against that statesman and his Cabinet that the Liberal Republican Party, with Fethi Bey at its head, will sooner or later launch their attacks.

Ismet Pasha yesterday convened a meeting in the House of such Deputies as are still present at Ankara. After an exposition by the Premier of the general state of affairs, a discussion took place over the attitude to be adopted by the National Assembly and the Ministry towards this novel departure in modern Turkish history. Ismet Pasha, having stated that the Ghazi's feelings on the desirability of a second party in the Chamber coincided entirely with his own, was asked by the Deputy for Konia whether opposition to the Government might not be, not only an unpleasant, but also an unprofitable innovation for the Turkish nation. The Premier admitted that opposition had never yet served the cause of national interests, and that, at that very moment, they were witnessing its effects in the shape of violent disturbances within the national borders. He expressed the conviction, however, that his colleague Fethi Bey would never lower himself so far as to create disagreeable incidents, no more than he would allow himself to become a party to intrigue or a prey of passion.

It is expected that the Leader of the new Liberal Party will publish his programme in the course of the next day or two.

THE HIJAZ.

Jidda, August 1.

Court and Diplomatic News.

King Ibn Saoud, after these few months of strenuous and unremitting labour, left Taif some days ago for camp on the Rakba plain, towards Khurma and Turaba, where he will sojourn for about a fortnight, resting from the cares of State and hunting gazelle. The Foreign Minister, Fuad Hamza, arrived here to-day for a week or more, according to circumstances; and the representatives of the various Powers will thus once more have an opportunity of being in close touch with the Government.

The French Chargé d'Affaires, M. Maigret, is proceeding very shortly to the Yaman, on a visit of courtesy to the Imam. He will leave Jidda about August 6, on the gunboat Montmirail.

Abdul Ghani Bey Sani, the Turkish Chargé d'Affaires, and Madame Sani are leaving Jidda to-day for Beyrout, where Sani Bey will enjoy a short period of leave. The new Turkish Vice-Consul, who arrived here on July 25, will act as Chargé d'Affaires, during his absence.

The Persian Vice-Consul and acting Chargé d'Affaires, Bahjat Effendi, has also recently left Jidda on leave; and for the moment there is no one in charge of the Persian Legation.

Sir Andrew Ryan, the British Minister, who has unfortunately not been in the best of health latterly, proposes to proceed on leave about the middle of this month.

I understand that the projected treaties between the Hijaz-Najd Government and France and Italy respectively are still being actively discussed; and it is to be hoped that they will soon be completed to the satisfaction of all parties.

General News.

At a recent meeting of the European diplomatic representatives concerned it was agreed that the British Legation should assume charge of the *Kanisa* or European cemetery here for the time being. Hitherto it has been the practice for the Consulates of Great Britain, France, Italy and Holland to have charge of the cemetery in rotation for a year at a time. The cemetery, which was much damaged at the beginning of the Great War, is still in a somewhat dishevelled condition; and it is understood that Sir Andrew Ryan proposes to undertake its general restoration so far as possible. It would certainly be interesting to collect such information as may be available in the archives of the various Legations regarding those Europeans whose last resting place is here.

Trade continues very slack as usual at this time; but the new arrangements, sanctioned by King Ibn Saoud, for the prevention of throat-cutting competition between the various motor-transport companies and for the fair distribution of intending passengers between them at fixed prices, should do much to restore prosperity in an important branch of local activity, which has hitherto involved those concerned in unnecessary losses. For the first few months of the season the standard fare to Madina and back has been fixed at £9.5; while in the rush after Shawwal till the end of the season the fare will be £11.5. In both cases the Government cess on passengers will be, as heretofore, £6.5.

The past bad season has resulted in a few sporadic cases of bankruptcy; and it would seem that the piece-goods business has been the chief sufferer. Money is always very tight at this season of the year; and the Government silver Riyal (2 shillings nominally) is now subject to a discount against gold of 4 to 5 per cent. The discount on nickel coins is still higher. I understand that the Government is seriously considering the matter with a view to effecting some improvement in the situation, which is not satisfactory.

The public health continues good; but after a long period of complete immunity from small-pox deaths, three such deaths were recorded in the statistics of last week. The heat at Jidda has not been great, but the humidity is very high, as much as 80 per cent. or more according to statistics which are being collected at the British Legation. It is this high percentage of humidity that makes the summer climate of Jidda a little strenuous for anyone not in the best of health.

ALBANIA.

Tirana, August 13.

Foreigners in Albania.

The number of foreign subjects in Albania have recently been published for the ten Prefectures, and the total given is 4,720. For Kosova the return is 6 Italians and 5 Yugoslavs; for Dibra it is 48 Yugoslavs, 15 Italians, and 1 Englishman. Distribution is given as follows :— Italians, 2,068; Greeks, 933; Yugoslavs, 754; Americans, 291; Turks, 138; British, 79; French, 69; Czechoslovaks, 63; Austrians, 54; Russians, 54; Germans, 44; Poles, 24; Hungarians, 18; Roumanians, 14; Bulgarians, 11; Armenians, 10; Swiss, 10; Belgians, 6; Egyptians, 5; Argentinians, 3; Arabs, 1. As, including the officers serving with the gendarmerie, the Legation staff, and officials of the Anglo-Persian Oil Co., there are certainly not more than 40 British by birth and descent in the country, it must be assumed that the other British subjects are mostly Levantines with British nationality. Of the Americans, most are Albanian emigrants who have adopted American nationality. The Italian total includes 245 officers and officials attached to the Army and various Government departments and engineers executing public works under the S.V.E.A. In view of the proximity of Italy and Albania, and of the relations between the two countries, the total is a surprisingly low figure.

The Balkan Conference.

The Government has nominated MM. Mehmed Konitza, Mitat Frashëri, and Father Gjergj Fishta to represent Albania at the conference at Athens in October, when the formation of a Balkan Economic Union will be discussed. It would have been difficult to make a more fortunate choice from among the outside official circles. Father Fishta is a leading figure in Albanian literary circles. M. Mitat Frashëri, who shares the same distinction, is well known on account of the works which he has published under the *non de plume* of Lumo Skendo; he possesses a large and valuable private library, and manages the admirable Lumo Skendo bookshop in Tirana; among his political activities, he was Minister of Public Works in the first Albanian Government formed in 1912 under Ismail Kemal Vlora, and in Turkhan Permeti's second Cabinet, in 1914, represented Albania at the Peace Conference in 1919 and 1920, before the League of Nations in 1921, and at Athens from 1923 to 1926. M. Mehmed Konitza is well known in London, where he ably represented his country until the spring of 1925, and where his reappointment in due course would be well rejceived; he instigated the convocation of the National Assembly at Durrës in December 1918, was Minister for Foreign Affairs in 1919, and subsequently represented Albania at the Peace Conference, Geneva, and The Hague.

Enti Kombtar.

The regulations governing the *Enti Kombtar* were recently revived; and that organisation, under the direction of M. Rexhel Jella, provides moral, physical patriotic, and artistic education for all boys and girls in schools between the ages of 15 and 19, working in co-operation with the Ministry of Education. Special importance is attached to sport. For the pre-military training of youths a Militia is being formed, organised in ten battalions (one for each Prefecture), under regular officers and commanded by Gen. Leon de Ghilardi. All boys are compelled to join at the age of 19—or, if for some reason exempted, until the age of 25. Training will take place twice weekly between November and May.

A Question of Surnames.

It is reported that the Government is contemplating, in order to avoid confusion, the compulsory adoption by those who employ common-place names (such as Frashëri, Tirana) as surnames, of fresh and distinctive names. The measure seems a little unnecessary, in view of the fact

Digitized by Google

that the Scots manage to carry on without serious difficulty despite their clan names. Moreover, the confusion avoided will be as nothing to that which will be caused in records.

Agrarian Reform.

A difficulty has presented itself to the application of the recently promulgated Agrarian Reforms. A clause prohibits landlords from selling or giving away their property, having retrospective effect for two years, the object being to ensure that landlords should not forestall the application of the reforms and expropriation of their property by dividing it among their relatives and friends in lots small enough to remain unaffected by the expropriation clauses. This, however, many landlords have done, taking advantage of previous legislation, which provided that no subsequent legislation could have such retrospective effect. In consequence, the successful application of the Agrarian Reforms is threatened. On this account, and also because the recent census has revealed the fact that 150,000 to 200,000 Albanians are unrepresented in Parliament, a fresh election is being loudly demanded in some circles. It is even suggested that a National Assembly should be convened to deal with the Agrarian Reform difficulty.

Miscellaneous News.

The postal charges for letters abroad have recently been raised. It is to be hoped that simultaneously measures will be adopted to ensure a safer service. At present the proportion of letters which go astray (whether in Albania or elsewhere one can only surmise) is much too high, and delivery can only be ensured by registration.

The Anglo-Persian Oil Co. has reached an agreement with the Government whereby work is to be suspended for three years without the forfeiture of the concession. It is hoped that at the end of that period economic conditions effecting oil will have improved sufficiently to justify the continuation of operations.

The Italian Minister, Cav. Ugo Sola, left Albania a week ago, leaving Comm. Pierre Quaroni as Chargé d' Affaires. The new Minister, Marchese Meli Lupi di Soragna, has arrived, and presented his Letters of Credence on August 11.

Lt.-Col. W. F. Stirling, formerly Inspector-General of Government Services and attached to the Court, has returned to his former post of Organiser of the Ministry of Interior.

Major General Sir Jocelyn Percy has tendered his resignation to King Zog, but it has not yet been accepted. His action is due to the impossibility of reconciling his views on the administration and organisation, discipline and efficiency of the gendarmerie with those of the Albanian Commandant, Major Muharram Bajraktari.

The wedding will take place on August 24, at Oroshi, in Mirdita, of Mark Marka Gjoni, son of the hereditary chieftain of Mirdita. A large number of guests are invited, and the ceremony should be one of the most interesting and picturesque which has taken place in the Balkans in recent years.

EGYPT.

Cairo, August 15.

A New Rail Line.

On August 14 the inauguration took place of the extension to Zifta of the branch railway line from Benha to Mit-Bera. The guests of the Government, who included Mr. Reginald Hoare, representing the High Commissioner, members of the Diplomatic Corps, the senior British and Egyptian officials, and the leading native and European notables, were conveyed from Alexandria and Cairo by two special trains consisting of Pullman cars. The trains met at Benha and proceeded to Mit-Bera, where there took place a reception over which Ismail Sidky Pasha, the Premier, presided on behalf of the King, and at which speeches were delivered by leading notables of the province, and by Tewfik Pasha Doss, Minister of Communications. The trains then continued along the new line to Zifta, stopping on the way at Ghoraieb to allow the guests to accept Sidky Pasha's invitation to take tea on his estate.

Although the new line is only 23 kilometres in length, it forges a link of extreme importance in the railway system of the Delta. It is part of a scheme of the State Railways for filling in the gaps which occur all over the Delta between important agricultural centres. The Menufia, in which most of this new line runs, is the most densely populated province in the country. But it has sadly lacked railway communication, and the produce of the province has often to be carried by road to the nearest station for conveyance to the main centre owing to the only railway connexion being over a roundabout route with its consequent heavy cost based on mileage. The Mit-Bera Zifta section is an apt illustration of this. Although barely 20 kilometres separate the two points, the only railway connexion has hitherto been *via* Tanta, a distance of over 80 kilometres.

Improved Communications.

In his speech, Tewfik Pasha Doss gave some interesting details of the work done by his Ministry during the past ten years, and now under execution, for the improvement of communications. After referring to the various railway extensions that have taken place, he pointed out that in the decade under review the length of roads available to traffic had been nearly doubled—66,000 kilometres as compared with 36,000 kilometres—and the work of extending was continued apace. He mentioned that his Ministry was now occupied with making a road of 12 metres wide from Alexandria to Luxor, which will be of great benefit not only to the local population but also to the tourist traffic.

Progress is being made with regard to the question of commercial aviation. The aerodrome at Almaza, near Cairo, is expected to be finished next year, and in another year the amphibious aerodrome at Dekheila near Mex will also be ready. The aviation missions abroad have been very successful, and a number of trained Egyptian pilots will soon be available. Steps are being taken to provide them with employment as soon as they have completed their training, and it is understood that an air-wing for the Egyptian Army is under serious consideration.

Amongst the projects about to be embarked upon is a new port at Kosseir, which will provide a very useful outlet on the Red Sea. Altogether it was a very satisfactory record which Tewfik Pasha Doss was able to lay before his audience, and the name of Abdel Hamid Pasha Suliman, General Manager of the Egyptian State Railways, Telegraphs and Telephones was loudly applauded when the story of the work of his Department was completed.

Death of Abani Pasha.

This week Egypt lost the *doyen* of her Corps of Ministers in the person of Mohamed Abani Pasha, who died suddenly at his residence in Alexandria on August 11. Abani Pasha was the only surviving member of the Mustapha Pasha Fahmy Cabinet, which established a record by holding office from 1895 to 1908, and in which he held the War portfolio. It is reliably stated that he was the Minister who was present in the Club on the historic occasion when the present King, then Prince Fuad, was shot at by his cousin Prince Seif Eddin. Abani Pasha had of late years taken little part in the public affairs of the country beyond sitting in the Senate, to which he was appointed on its creation in 1924.

CENTRAL ASIAN SOCIETY

(in which is incorporated The Persia Society.)

Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published.

The subscription of £1 per annum entitles members to a copy of each issue of the Journal, tickets for all meetings, and the loan of books from the library.

Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W.1

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 31.

"This Picture and That."

The Finance Member, in his review of the financial situation, the other day in the Legislative Assembly, quoted "Hamlet"—"Look on this picture and on that." The words have found their echo in not a few minds. One picture to be looked at is the picture of an India in which blood has flowed freely; of an India in which there is one town in which martial law has had to be declared, and hardly a single town of great size in which there has not been a time of rioting or other strife that has not been held to have been grave enough to be made the subject of a special judicial inquiry. It has been an India in which, to men watching it from across a frontier always difficult to guard, authority has seemed so undermined, that now was their chance for loot. It is an India now in which from all sides comes a tale of trade stagnation and financial ruin; of mills closed down, or soon to be closed down, of shops in the bazaars that have been closed, and will never be re-opened for business by the men who closed them; for they are ruined men. Others may open those shops, but those who closed them never will.

The Sapru-Jayakar Peace Mission.

That is one picture. It could easily be presented as a much blacker picture than is shown in the words of the preceding paragraph. The other picture is that of the attempt of the Government of India to conciliate the authors of this ruin. One thinks of it as the attempt of the Government of India To one not looking closely and deeply, the first mover in the Sapru-Jayakar peace mission to Mr. Gandhi and his brother conspirators may have seemed to be the Honourable Mr. Sastri; but the truth is that the first movers were the Government. The date from which the movement must be counted as beginning was July 9. The question that is most important to ask, and having asked to answer rightly, is whether the confidence of the Government in Mr. Gandhi, Pandit Motilal Nehru, and Pandit Jawaharlal Nehru, that is implied in this attempt to conciliate them, is rightly placed, or is wrongly placed; for if it is wrongly placed, what is likely to be the complexion of the next chapter of blood? One is therefore concerned with the characters at depth of those three men, and with the power of insight, the power to read character, of those who have been the prime movers in the attempt to conciliate those three men. As a watcher on the spot, one reporting from the scene, I have to say that there are many in India whose minds are greatly troubled by the whole spectacle. These ask what might not have been the ultimate benefit to India, if the Government of India had declared on July 9, that they had lost all confidence in the authors of the civil-disobedience movement, and would in future refuse all dealings with them. What might it not have been? Is there not a lesson for India to learn?

The Press Ordinance.

The Government of India committed themselves, when they moved first in the matter of the peace mission, or, if people prefer it, when they bestowed their blessing upon a mission that others had begun, to release all the political prisoners save those convicted of acts of violence, and to the repeal and withdrawal of the special ordinances. That means to the withdrawal of the Press Ordinance with the rest. The Government will no doubt be found ready to justify the withdrawal of even the Press Ordinance; but the fact remains that an overwhelmingly strong case could be made out for something on the lines of the Press Ordinance being made the permanent law of the land. If the Government of India were justified in running the terrible risk (it is a terrible risk) of adding greatly to the prestige and power of Mr. Gandhi and the others by showing the Government to all India and all the world as ready to put all its endeavour into the attempt to conciliate those men, they should at least have stipulated, it is thought by many, that the Press Act, repealed in 1922, should be re-enacted. Does any one suppose that a self-governing India would not put a Press Act on the statute book, if there was need for it? Why should the Government of India be so afraid of their own shadow? One thinks of Mr. Gandhi and the others as the authors of the present ruin in India, and there is justification in doing so; but the fact remains that the Government of India are almost equally to blame, in that they let it be known that they would turn the other cheek to the smiter until lawlessness rose to such a pitch that it would just have to be suppressed.

Commerce and Industry.

There have been welcome indications during the week that those who have businesses that they hoped to carry on, but which the lawyer-politicians were either out deliberately to ruin, or would ruin while not intending to, are taking their courage into their hands; and that we shall soon see a strong movement for self-protection organised by the traders and manufacturers. An example of men taking their courage in their hands is the published correspondence of this week between Sir Purshotamdas Thakurdas and Mr. Vallabhbhai Patel, the Acting President of the Congress. "With reference to our conversation this morning," the first has written, "I got the clear impression that you are against the cloth market here being closed for any period at all, as a measure to help the present political situation. All your public utterances that I have seen relate to prohibiting the sale of foreign cloth. I, however, find that the public have been given the impression that the Congress want the cloth market to be closed in Bombay, and this has generally perturbed those interested in local mill-cloth." The Sardar, as he is called, replied that the Congress wanted only that the sale of foreign cloth should be stopped. That is what it may now want, but at one time it did want that only hand-woven cloth should be sold. It wanted everything in India ruined, the ruin of which would embarrass the Government, and force it to abdication, just as now the boycott of the new Government of India loan is being strongly pushed.

The Landlords.

Attention may be called to the address to the Viceroy presented this week by the landlords of all-India. The document may be thought to show somewhat too strong a current of self-interest in the landlords; but after all self-interest is the strongest force in human beings, and a wise Government must count on drawing its chief strength from those whom self-interest ranks on its side. The address deals with the questions of the representation in the Councils, Central and Provincial, of the land-owning classes; of the imposition of taxes on agricultural incomes; of reserve powers for the protection of minority communities, and special classes and interests; and of Second Chambers. That will be sufficient indication to those who may want to know what the document contains, before they decide to get it and study it.

The Adi-Hindus.

Another body that is not prepared to let its claims pass unheard because of the louder shouting of the Congress and the Hindu Mahasabha are the Adi-Hindus, or the depressed classes; and attention may also be called to the proceedings of the special session of the Adi-Hindus' Provincial Conference that has been held in Lucknow. What this body asks for, among other things, are (a) the creation of separate electorates for them in the Central and Provincial legislatures and local bodies, or in the alternative, the reservation of seats strictly in proportion to their numerical strength; (b) that statutory provision be made in the new Constitution for an adequate share to be given to the Adi-Hindus in the Police, Army, and other Services. Another Conference has just been held by Adi-Hindus, this one at Allahabad. It passed resolutions

Digitized by Google

condemning the civil-disobedience movement, protesting against the boycott, "which has already begun to produce economic distress in the country," and declared that India, in which untouchability has not been removed, "is not, at present, fit for full-fledged Dominion status." It also strongly protested against the Statutory Commission's recommendation of a joint electoral system.

Constructive Work.

Though the date of the Round Table Conference is now so much nearer than it was when the announcement was made that there was to be one, one has still the fact to report that of the constructive work in constitution-making that was then before India, none has yet been done. One still finds Indian publicists writing such words as these (they appeared in one of the newspapers of this week):- "Above the participation of the Congress at the Round Table Conference, beyond the question of a further rigorous definition of the purpose of the Conference, overshadowing the intricate but extremely exciting issue of the composition of the Indian delegation, loom two big and vital questions: the Hindu-Muslim problem and the safeguards for the minorities. If these could be solved, and solved amicably and to the satisfaction of the interests concerned, it is possible to lend general agreement to the view expressed that the participation of the Congress at the Conference is 'not absolutely essential.'" What one is afraid is that, when October 20 is at last upon us, there will be nothing for men to say but "If only the more pressing problems could be solved!"

THE PRINCES AND THE SIMON REPORT.

The following statement has been issued on behalf of the Indian Princes as embodying the tentative conclusions of the Order on the recommendations of the Statutory Commission. At the outset the Princes disclaim any desire to pronounce upon the Commission's findings in so far as the latter relate merely to the domestic problems of British India. As regards the portion of the Report which bears upon the States, in view of the interrelation of the proposals touching both British India and the States and the implications of the Report as a whole the Princes, it is pointed out, feel that a more minute and detailed examination of the document will be necessary than has been possible in the time at the disposal before any final views can be expressed.

"They are, however, gratified," the statement proceeds, "at the endorsement by the Commissioners of their contention, already admitted by the Butler Committee, that by the nature and provisions of their treaties, of which the binding character has been repeatedly affirmed by successive sovereigns of England since the days of Queen Victoria the relationship of the States is to the British Crown. It follows that closer political association with British India for the purpose of co-operation in all-India concerns must depend upon their free consent on terms which are fair and mutually acceptable to them and British India.

"They, therefore, consider that the suggestion that their official relations should be with the Viceroy, as representative of the Crown, provides a useful basis for exploring through the Governor-General the avenues that may lead to a satisfactory solution of the question of providing for a closer association of the States with British India without any infringement of their sovereignty, and they are gratified that the Commissioners recognise that in view of the reality of the interests of the States in matters of common concern to India, means for ensuring co-operation between British India and the States must be found. They realise that the future evolution of an all-India polity can only be on Federal lines. A system designed to safeguard their rights of internal autonomy would be the most satisfactory solution of India's problem.

"The Princes, however, cannot be expected to regard with satisfaction certain proposals of the Commissioners or of their Financial Assessor, such, for instance, as those that concern the economic claim of the States. These proposals appear to subordinate the just claim of the States to the dictates of the financial exigencies of British India, or make the acceptance of that claim contingent upon the doubtful results of the operation of their constitutional recommendations, more particularly in regard to the Provinces of British India.

"As regards the proposal for the constitution of the Council of Greater India, the Princes are disposed to accept the suggestion in principle, but it should be obvious that the composition as well as the procedure and the rules of business of this body will have to be settled in discussion with them. The Princes regret that no proposal has been made by the Commission for the immediate institution of a Supreme Court. They consider such a course to be an essential pre-requisite to any scheme of Federation.

"Repercussions of what may happen in India before and after the Round Table Conference, all within the next few months, which may well prove the most critical in her history, must be taken into serious consideration in relation alike to the future of this country and, indeed, of the British Empire.

"The present situation cannot but cause the gravest anxiety to the Princes and their States who have ever been inspired by deep-rooted feelings of unflinching personal loyalty and devotion to the King-Emperor, by attachment and friendship for the British Empire, as by the most patriotic feelings for their country. The Princes, therefore, venture to take this opportunity of giving expression to their confidence in Lord Irwin, who, though faced with serious difficulties within and without India, is yet persevering in his attempt to serve the best interests of India and Great Britain, and they earnestly hope that during the remaining few months of his Excellency's viceroyalty he may be enabled to see contentment and tranquillity restored in India and to secure for her the position which is her due as an equal partner in the Commonwealth."

THE NEAR EAST AND INDIA understands that the Indian States' Delegation to the Round Table Conference will be headed by His Highness the Maharaja Dhiraj of Patiala, who represented India at the Imperial War Conference and the Imperial War Cabinet in 1918, and was also one of India's representatives at the League of Nations in 1925. Recently elected for the fifth time as Chancellor of the Chamber of Princes, His Highness is one of the outstanding members of an Order whose attachment and loyalty to the British Crown is proverbial. The delegation will include H.H. the Maharaja of Kashmir; H.H. the Maharaja the Gaekwar of Baroda; H.H. the Maharaja of Bikaner; H.H. the Ruler of Bhopal; H.H. the Maharaja of Alwar; H.H. the Maharaja Jam Sahib of Nawangar; H.H. the Maharaja of Rewa; H.H. the Ruler of Sangli; H.H. the Maharaja Rana Sahib of Dholpur; Sir Akbar Hydari, Finance and Railway Member of the State Executive Council of H.E.H. the Nizam of Hyderabad; Mirza Sir Mahommed Ismail, Prime Minister of Mysore; Sir Manubhai Mehta, Prime Minister of Bikaner; Sir Prabhashankar Pattani; and Colonel K. N. Haksor, Political Member of the Gwalior Council of Regency and Director of the Princes' Special Organisation.

Advisors to the delegation include Professor L. F. Rushbrook Williams, Foreign Minister of the State of Patiala and Joint Director of the Special Organisation; Sir Reginald Glancy, late Agent to the Governor-General for Central India; and Diwan Abdul Hamid, Prime Minister of Kapurthala. A series of short biographical notices of the members of the delegation will appear in a subsequent issue.

The Secretary of State for India has appointed Messrs. F. A. M. H. Vincent, and P. K. Dutt, to act as Social Secretaries to the Indian delegates to the forthcoming Round Table Conference which, as already announced, is to take place in St. James's Palace. Communications for the Social Secretaries should be addressed to them at India House, Aldwych, W.C.2.

THE RAID AT CHITTAGONG.

It was reported recently, from Calcutta, that the Bengal Chamber of Commerce—having in mind the raid at Chittagong last April—has proposed to the Government of Bengal that more adequate provision should be made for the safeguarding of life and property in that division of tne province. In support of the proposal the Chamber has pointed out that, if the troubles at Chittagong, Dacca and Midnapore had occurred at the same time as the trouble in Calcutta itself, the situation in these areas might easily have got out of hand. It appears to us that the Chamber has been well advised in making this recommendation, as the outrage at Chittagong was of a serious character. It attracted a good deal of attention at the time of its occurrence, but, so far as is known, no detailed account of it has hitherto been published in this country. In his history of the Surma Valley Light Horse, which was mentioned in last week's issue of THE NEAR EAST AND INDIA, the Rev. Mr. Wood gives a graphic description of the raid, and of the part played by the Light Horse in suppressing it.

On April 19, 1930, the General Officer Commanding the Presidency and Assam District ordered one squadron of the Light Horse to proceed at once to Chittagong. The reason for the order was that on the preceding day a hundred Bengali members of the so-called Republican Army had raided the Axuiliary Force and Police Armouries there, and had murdered seven men, including the Sergeant-Major of the Assam Bengal Railway Battalion. "This attack," to quote the Rev. Mr. Wood, "had been very carefully planned. Every man had his task specified, and their watches had been synchronised with London time and the exact variations worked out. At 9.30 p.m. on April 18 the operator at the Telephone Exchange was held up with a revolver and chloroformed, and the Exchange burnt. Almost simultaneously a party went in cars to the Assam Bengal Railway Battalion Armoury, and the leader of the rebels was disguised as the Adjutant of that unit. He walked up to the sentry and demanded the key of the Armoury. On being told that the Sergeant-Major had it, he immediately shot this sentry and also two others, and when Sergeant-Major Farrell came out on hearing the firing, he was shot as well. Then, by using crowbars and by tying a rope to a car, the Armoury was forced, all the rifles and revolvers taken, and, after saturating the place with petrol, the building was set on fire.

"The rebels then dashed to the Police Armoury, where again the sentry was murdered, and the arms taken. From the operation plans that were discovered later, their ultimate aim was to murder all the Europeans in Chittagong, and actually a number of the rebels went to the Club for this purpose, but, by a fortunate chance, everybody had gone home and the place was in darkness. In the meantime the plans of the rebels were frustrated by a British Sergeant, who dashed off to an Armoury in the Assam Bengal Railway workshops and got a Lewis gun, which he brought into action and disabled three cars full of the captured rifles and revolvers. It is almost certain that this act, and also that the rebels were not aware that there existed this small armoury, saved the situation. The rebels then escaped into the jungles near Chittagong.

"In the meantime another party had derailed a ballast train at Dhoom, a few miles out of Chittagong, their intention being to hinder the arrival of reinforcements, and yet another party had cut the telegraph wires. One fact escaped their notice. The ships in the port are fitted with wireless, and it was by this means that the news of the raid was made known to Calcutta."

A troop only of the Light Horse, instead of a squadron, was found to be all that was required, the position being well in hand. This troop arrived at Chittagong on April 21, where a hundred men of the Eastern Frontier Rifles had arrived on the previous evening. The Surma Valley Light Horse were made responsible for the safety of the town.

"On April 22," to resume Mr. Wood's narrative, "the rebels were located in the jungles about five miles from Chittagong, and at 4.30 p.m. the detachment, with a force of Eastern Frontier Rifles, were dashed to the scene in motor cars. The exact position of the enemy was vague, but on approaching a hill, where it was thought that the rebels might be, the Eastern Frontier Rifles were thrown out on the flanks and the Surma Valley Light Horse proceeded to hold the front. On nearing the hill a man opened fire on the advancing troops with a revolver, and immediately this was followed up by constant fire from the hill top. Fortunately for the Surma Valley Light Horse there was a small *nullah* near by, but with the enemy only one hundred and fifty yards away, and apparently well supplied with ammunition, the position might have been serious. Had the rebels been able to shoot with any degree of accuracy we must have had a large number of casualties. As it was, there was only only one, a trooper being slightly wounded by a bullet grazing his arm.

. . . . . .

"Firing was kept up until dusk. It was not then known that the whole of the rebels were on the hill top, and it was presumed that only thirty were there, and, as the Surma Valley Light Horse were responsible for the safety of Chittagong, they were recalled from the action and immediately took over the patrol work. The Eastern Frontier Rifles remained at the position, but later on they were withdrawn as well. The following morning a party with a machine-gun raked the position but, getting no response, they approached the hill and found nine dead and two mortally wounded, while the ground was thickly covered with empty cartridges cases, giving some idea of the amount of ammunition the rebels had at their disposal."

The King has approved the appointment of Khan Bahadur Khwaja Muhammad Nur to be a Puisne Judge of the High Court, Patna, in the vacancy caused by the retirement of Mr. Justice P. R. Das.

In the note on the Benares Hindu University which appeared in the issue of THE NEAR EAST AND INDIA of July 31, it was inadvertently omitted to state that the particulars therein given were based on an interesting publication, entitled "Benares Hindu University: A Symposium." By V. A. Sundaram. (D. B. Taraporevala Sons and Co., Bombay). The proceeds of the sale of this book, which is published at Rs.5, will be devoted to the appeal fund.

A telegram from the Viceroy, Education, Helth and Lands department, to the Secretary of State for India, dated August 13, states that the rainfall during the week ending August 13 was as follows: Excess: Lower Burma, Chota Nagpur, Bihar, United Provinces, Punjab, Rajputana (East), and Centra India (East). Normal: Upper Burma, Assam, Bengal, North-West Frontier Province, Rajputana (West), Gujarat, and Central India (West). Fair: Bay Islands, KPashmir, Baluchistan, Central Provinces, Hyderabad (North), and Mysore. Scanty elsewhere. The monsoon was weak in the Peninsula.

A Commission organised by missionary bodies in Great Britain and America will survey the higher education work of Christian bodies in India during the cold weather season. On its return from India in the spring, the Commission will report to mission boards and the missionary conferences in Great Britain and America. Dr. A. D. Lindsay, Master of Balliol College, Oxford, will be the Chairman of the Commission, and Dr. Oscar Buck, of Drew University, New Jersey, the Secretary. The other members of the Commission are:—Canon A. W. Davies, secretary of the Missionary Council of the Church Assembly and formerly Vice-Chancellor of Agra University; Dr. Nicol MacNicol, of the Scottish Mission, Poona, and secretary of the National Christian Council of India; Dr. W. Adams Brown, Professor of the Union Theological Seminary, New York; Dr. W. A. Hutchins, President, Berea College, Kentucky; Dr. S. K. Datta, of the Y.M.C.A., formerly a member of the Indian Legislative Assembly; and Mr. S. N. Mukerji, Principal of St. Stephen's College, Delhi.

PERSONAL AND GENERAL

TO-DAY

August 21, 1930 (New Style).
August 8, 1930 (Old style).
Rabia I. 26, 1349 A.H., of the Muslim Calendar.
Ab 27, 5690, of the Jewish Calendar.
Mordad 30, 1309, of the Persian Calendar.

Sir Robert Johnson has arrived at 56, Chester Square from Ceylon.

Mr. H. C. Luke, the newly appointed Lieutenant-Governor of Malta, arrived in Malta on August 12.

Lord Lloyd will return from the Continent about August 28.

Admiral of the Fleet Lord Wester Wemyss and the Hon. Alice Wemyss left Southampton last week in the Almanzora for Rio de Janeiro.

H.E. Shaikh Hafidh Wahba, Minister of the Kingdom of Hijaz-Najd, arrived in London on August 13, and is temporarily staying at the Hyde Park Hotel.

Sir Herbert and Lady Samuel will return to London from the Western Mediterranean about the end of the month.

Ex-King George of Greece, who last week paid a visit to the Earl and Countess of Lonsdale at Lowther Castle, Penrith, returned to town this week.

Ex-Queen Elizabeth, of Greece, left town last week-end for the Royal Hotel, Cromer, where she will be the guest of Commander Oliver Locker-Lampson, M.P.

General Nouri Pasha al Said, Prime Minister of Iraq, is expected to leave London this week on his return to Baghdad.

We are officially informed that Mirza Seyid Hasan Taqizadeh, formerly Persian Minister in London, is responsible now for two Departments in Teheran—Finance and Communications.

King Faisal of Iraq, who during his short stay in Germany visited a new museum of Hittite finds dug up by Baron von Oppenheim in Syria, near the Iraq border, arrived in Paris on August 13.

It is announced by the Colonial Office that Dr. Drummond Shiels, Parliamentary Under-Secretary of State for the Colonies, will take an opportunity during the Parliamentary recess of making a short visit to Palestine. He may also call at Cyprus.

The following appointments to the Colonial Services have been made by the Secretary of State for the Colonies: Palestine.—Dr. J. W. Harkness, to the Deputy Director, Department of Health; Dr. N. M. Maclennan, M.D., Ch.B., to be Senior Medical Officer, Department of Health.

Sheikh Sulaiman bin Nasur al Lambi, Senior Arab Member of the Legislative Council, Zanzibar, had the honour of being received by the King at Buckingham Palace on August 12, when His Majesty invested him with the Insignia of a Commander of the Most Excellent Order of the British Empire (Civil Division).

The Air Ministry announce the appointment of Air Vice-Marshal Hugh Caswall Tremenheere Dowding, C.B., now Air Officer Commanding, Fighting Area, Air Defence of the Air Council (Air Member for Supply and Research), with effect from September 1, in place of Air Marshal Sir John Frederick Andrews Higgins, who has been placed on the retired list at his own request.

Sir Maneckji Dadabhoy last week left Kingsnympton Hall, Kingston Hill, for Nagpur.

CORONATION OF RAS TAFFARI.

The Foreign Office announces that the mission of the Duke of Gloucester to attend the coronation of the Emperor of Ethiopia will leave London towards the middle of October, arriving in Abyssinia at the end of the month.

Ras Taffari, better known by the title of the Negus of Abyssinia, succeeded to the Throne on April 2, on the death of the Empress Zauditu, though the government had long been virtually in his hands.

The Duke will be accompanied by the Ear of Airlie, one of His Majesty's Lords-in-Waiting; Major R. T. Stanyforth, Comptroller to the Household of His Royal Highness; Mr. E. W. Brooke, Equerry in attendance, Major A. T. Miles, Mr. A. N. Noble, Third Secretary in the Diplomatic Service, and Mr. Wilfred Thesiger, Honorary Attaché.

KING FAISAL'S VISIT.

The following telegram was received on August 12 by the Prime Minister from King Faisal of Iraq:—

"I have great pleasure on leaving England in expressing to your Excellency, and the other members of his Majesty's Government, my sincerest thanks for the hospitality which I enjoyed during my stay in London, and of which I take with me many pleasant memories."

Mr. Ramsay MacDonald replied in the following terms: "On behalf of his Majesty's Government I wish to thank your Majesty for your kind telegram. It was both a pleasure and a privilege to entertain your Majesty, and his Majesty's Government are gratified to learn that your Majesty enjoyed your visit."

THE WEEK AT HOME

London, Tuesday Morning.

The Lambeth Conference.

Writers of leading articles have obviously found the space at their command insufficient to deal with the seventy-five resolutions passed during the five weeks by three hundred and seven Bishops at the Lambeth Conference, and I am not so impertinent as to attempt to deal with the matter in a paragraph. But if expression of individual reaction to the Encyclical may be permitted, then I must say that mine is one of disappointment.

On several problems, such as war, race, and so on, the Bishops have done well. Bold speaking is always good. On other subjects, such as the question of reunion with non-Anglican Churches, on the place of women in the ministry, only the specialist should speak. But over the tremendously vital question of how to bring the Church to the people, or, perhaps, the people to the Church, the Bishops, it seems to me, have taken refuge in platitudes. After all, it is not the Church's attitude on this or that subject, but the faculty for making Christianity a real, a definite force in man's life, to which the ordinary man will pay attention. And what do the Bishops say for our modern generation?

That the heart of youth is still sound, in spite of its neglect of the Church, that religion must be "humanized," that the apparent gulf between dogmatic and ecclesiastical questions and common concerns must be bridged, that "witness by life" of the Church must be made "more convincing" by "enlightened study and effective teaching," and so forth. But how, how, how? Surely the Church will not regain its hold on the nation by declarations on birth control or on union with other Churches?

One fears, indeed, that, however much the converted may be encouraged by the resolutions of the Lambeth Conference, the hunter for truth may still be dissatisfied. But, as I said before, to treat these vast subjects in a paragraph is an impertinence.

Towards Protection.

The rift recently manifested in the Liberal lute by Mr. E. D. Simon's categorical questioning of the infallibility of Free Trade is likely to widen if, as is reported, the Government is proposing to impose a ten per cent. revenue tariff on all imported manufactured goods. The immediate problem is how to find the additional revenue required in the next financial year. Certain financial advisers of the Government, including, most notably Mr. H. D. Henderson, formerly Editor of the *Nation*, are said to have counselled this measure of Protection on emergency financial grounds.

But that there will be fierce opposition to such a course in both the Labour and the Liberal camp may be taken for granted. Obviously such an arbitrary tariff has its disadvantages, but it is difficult indeed to see what other method of obtaining the necessary revenue can be adopted, unless the Labour Government is prepared to impose additional taxation.

The Liberals, for their part, are conducting a comprehensive inquiry into the whole fiscal system of Great Britain, and though most of them at the moment appear to think that the inquiry will only result in a re-affirmation of the principles of Free Trade, there is, I think, a significant leavening which regards a certain measure of Protection, in this really imperfect world, with no unfavourable eye. It seems a pity that a national inquiry, cannot be made into this extremely difficult problem. If ever there were a case for a Royal Commission, surely the fiscal system provides one.

Lord Beaverbrook and Bromley.

So the "official" candidates in the Bromley by-election are not to have the field to themselves, after all. For one Mr. Redwood, urged on by Lords Beaverbrook and Rothermere, has entered the lists as an Empire Free Trade candidate. So now, for the first time, I think, we have the spectacle of a pseudo-Empire Free Trader and a real Empire Free Trader bidding against each other for votes. Whether this division will allow the Liberal, who is a devotee of that declining cult, Free Trade, or the Labour man, of whom it is not certain yet whether he stands with the Protectionists in his party or with the Free Traders, to get in, it is yet too early to say.

One imagines, however, that the appearance of this fourth candidate will annoy the official Conservative more than anybody else—which may, indeed, be the Press Lords' little plan. It seems certain that this by-election will be fought round the issue of Protection, and electors will have their choice between the "No Protection at any Price" of the Liberal and the "Protection all the Time, including Food," of the Empire Free Trader. Let us hope the voting will be instructive.

British Goods.

British goods are known all over the world for their quality, their reliability. They may be higher-priced than those of other nations, but they are more dependable, more durable. So we have boasted. But it seems that we are all wrong, and must alter our methods.

For, speaking a few days ago at the Drapers' Chamber of Trade, which was in conference at Cambridge, Mr. F. C. Hooper said that we had made a fetish of reliability, and that we were losing much money. There was, he cleverly said, no particular credit in selling a thing which was going to be more than adequate for its purpose. What was necessary was the manufacture, not of rubbish, indeed, but of articles just fit for their purpose. It was realisation of this fact that explained the success of big stores since the War and the non-success of several big industrial concerns.

Undoubtedly there is truth in all this. We live in a cheap age. Fashions move quickly. "Discard" is the modern motto. Never grow obsolete. Keep smack up to date and live with relish. It is all very sad. Slogans and reliability or power of endurance go ill-together. And until we have freed ourselves from the servitude of slogans, it behoves manufacturers to sell things that last only so long as it takes to devise a new kind of advertisement.

The Timeless Test.

One thing has sadly marred the Test Match now being waged at the Oval: I mean the descent of Mr. A. P. F. Chapman into journalism. To the real cricketer, and to many others, this Press hullaballoo over the dropping of England's very popular skipper has been nauseating, not because the subject was not worth discussing—it certainly was—but because the popular Press, *faute de mieux*, has so manifestly made a "stunt" of the whole affair. There is springing up, as a result of such things as the incomparable Miss Amy Johnson's speech on the wireless and the jovial Mr. Chapman's equal bondage to a daily newspaper, a sense of revolt against our Press Lords which, sooner or later, is bound to show itself in material form. I was not at the Oval on Saturday, but it seems that the terrific ovation given to the English skipper showed what the public thought of the critics who set themselves above the Selection Committee.

One thing, indeed, the popular Press cannot do when discussing Cricket: it cannot "play the game."

For the rest, one need only say of this Test Match that the absence of a time limit will never commend itself to Englishmen. As a nation we in our games shall always prefer skill to mere endurance, and power of endurance is at least as much needed as skill in these timeless affairs.

ALTER EGO.

Our Cyprus Correspondent writes (July 29): "The new Greek Consul, M. Alexandros Kyrou, arrived at Nicosia on July 13. Hitherto all the foreign Consular body have been stationed at Larnaca, but M. Kyrou will reside at Nicosia. On July 14 he placed a wreath on the new memorial which has been erected at Nicosia, in honour of the Greek Cypriots who lost their lives in the Greek War of Liberation."

Book Reviews

"SUED TIROL" AS "ALTO ADIGE."

"TYROL UNDER THE AXE OF ITALIAN FASCISM." By Dr. E. Reut-Nicolussi. (Allen and Unwin, Ltd. 12s 6d.)

Italy has had her own experience of being ground under the heel of Austria and did not like it, though the tyranny she suffered from was light compared with that which she has inflicted on South Tyrol now that her turn has come. It might have been hoped that *experientia* would have taught her better. It was, we hold, essential that Italy should be given the Brenner line to protect her territory for the future, but the purely German tracts could surely have been incorporated in the *Regno* with perfect safety as a largely autonomous district. Not only are the Tyrolese fanatically patriotic, but they are very hard-headed, very democratic and very tenacious of their own customs. In fact, it would be difficult to imagine any community whose whole temperament is more antagonistic to everything which Fascism connotes. When to this is added the appointment of inferior, and often corrupt officials, it may be imagined that Italy has, in her new Province, anything but happy and loyal citizens. The Trentino has settled down fairly comfortably, but a continuation of the present policy further north can mean only complete failure and much unhappiness. This book should be read. It is, of course, partisan and entirely one-sided, and much of the misery recorded may well be set down to the foolish obstinacy of the South Tyrolese. Again, there is no doubt that, with better officials in charge, the circumstances are bound to improve. Finally, there seems, from what we have been hearing of late, to be some hope that Signor Mussolini has been, to some extent at least, reconsidering his policy towards these unruly people. We hope that this is the case, as South Tyrol in a permanent state of silent rage cannot be healthy for Europe. Pin-pricks mostly, some will say. But constant pin-pricks on highly sensitive surfaces will drive the most patient to desperation. We cannot but think that Italy will realise that this is the case and will gradually change her course, preferring to have loyal Italian subjects living under their old ways and speaking their own tongue rather than potential rebels constrained to live under laws and to use a language which they neither understand nor will consent to use except under dire compulsion.

As we have said already, this book is professedly propagandist and the other side is not heard. With all possible allowance made, however, the story is not creditable to Italian intelligence. Here in England we know what we are talking about. Have we not had our own treatment of Ireland to teach us?

INDIA SEVENTY-FIVE YEARS AGO.

"PERSONAL REMINISCENCES IN INDIA AND EUROPE OF AUGUSTA BECHER. 1830-1888." Edited by Principal Rawlinson. (London: Constable and Co., Ltd. 12s)

These are the recollections, written some fifty years ago, of a lady of a well-known Anglo-Indian (in the old sense) family, put together to interest her children, the eldest of whom had seen but little of her till they were nearly grown-up. There was no thought in her mind of their being given to the outside world. While, therefore, we are duly grateful to Principal Rawlinson for rescuing them for our delight, we cannot but wish that he had taken his duties as editor more seriously and given us a book half as long but all the richer for the excision of the merest tittle-tattle and matters of purely family interest. We feel certain that the old lady would have seen to this, had it ever occurred to her that the general public would have taken an interest in her book. And why does the editor call it a "Diary?" Why does he call the authoress "Anne?" Why does he make the "Reminiscences" last from 1830 to 1888? The lady was born in the former year and her book ends with 1867. We must not, however, dwell on Principal Rawlinson's faults as an editor, as, after all, we are greatly in his debt for giving it to us at all.

There is much to interest the reader in the account of life in Anglo-Indian circles in London nearly a century ago, but the real interest of the book lies in its artless description of her life in India as the wife of an army staff-officer. Travel was not easy in those days, even in the best of circumstances. The account of the Commander-in-Chief's march in State to Peshawar in the days when there was no road beyond Jhelum makes one wonder how a lady with a baby could have undertaken it. The long journeys on the Ganges must have been very trying experiences and the *Dak* travel from Simla to Calcutta (with a young family) with its hurry to reach Raneegange in time to catch the one night train to Calcutta which was then the furthest thrust up-country makes one blush to think of the way one has grumbled at the journey by express train all the way, with electric fans, refreshment car and all modern comforts. It is queer to read of the Simla road: "I believe there is now a horse-*dak* up it. Speed carries the day in this age against all calmer pleasures." And while we are on the subject of travel, it would not do to omit the description of a truly marvellous conveyance used by the Bechers in June of 1850 for their journey from Lucknow to Umballa. Here it is:—

> We were to start from the Birds's house in the city, and travel in an "equirotal," an American invention, I believe, the first advance on palkees, and supposed to be either by horse-dak, or pushed and pulled by sixteen coolies at a time! It would contain just two people, sitting up by day, or, with a lid over the foot-well, and extra cushion, the two could be in rather close quarters at night—in our case very close with the baby—and we were to travel day and night. All four wheels of this machine turned *under* the carriage, for what mysterious reason I cannot say, but it was a dreadful arrangement, for, if the horses were obstreperous at starting, or indeed at any time, which is the rule and not the exception with country *tats*, and they go backwards instead of forwards, which is their wont, you find yourself capsized in a moment; the same if the coolies pull and push irregularly.

But the gem of the book is the simple account of the terrible journey in 1857 from Simla to England; by road to Lahore Mooltan, river steamer to the mouth of the Indus, a terrible little warship to Karachi, a bigger one to Bombay (it took five days to do this part of the journey) and thence home by an incredibly over-crowded and ill-found Dutch steamer. Yet Mrs. Becher was fortunate in her way to secure her escape from the horrors of the Indian Mutiny at such a price. To all her discomforts was super-added the terrible anxiety as to her husband's safety and the hopelessness of getting news. For these pages alone the book was well worth publication. And there is much else besides. C. S-W.

PERSIAN ART AT QUM.

In view of the forthcoming exhibition of Persian Art at Burlington House, the following extract of an article written by an Armenian Deputy, M. Mirzayantz, in the *Shafagh Sorkh* of July 31, may be of interest. M. Mirzayantz went to see the objects of art in the sanctuaries of Qum and Ardabil, and he relates the difficulties with which he, as an Armenian, met in his quest. He repeats a conversation which he had with the keeper of the shrine at Qum :—

"Why do you not allow me to go into the sanctuary of Saint Massoumeh?"

"Because you are an Armenian."

"Do you consider the Prophet as greater than Saint Massoumeh, his niece?"

"Yes, certainly."

"If the Prophet were still on earth, would he refuse to see me if I went to visit him?"

"No, certainly."

"Well, in that case, if you agree that the Prophet himself would see me, why do you refuse to let me visit the tomb of his niece to which I wish to pay my humblest respects, all the time observing other formalities of usage and custom?"

"Impossible . . . ."

M. Mirzayantz then relates that he was shown fourteen most marvellous silk carpets, dating from the seventeenth century, the work of Nematollah Jovchaghani, the finest artist of that century. He tells also of how he was shown a small silk carpet, the best in Qum and probably the best in the whole world, although unfortunately it was eaten at the edges by rats—a fact which deprived it of at least eighty per cent. of its value. M. Mirzayantz in this article further narrated the marvellous things he saw in the Mosque of Shaikh Safi-ed-din at Ardabil, in which he especially noted a "ravishing" library of admirable manuscripts, containing some superb miniatures.

A PERSIAN MOTORIST.

Mr. Gholam Ali Rodd, a Persian who has received much of his training in England and who is now on the staff of the Anglo-Persian Oil Company, has recently arrived in London after driving his motor-car all the way from Teheran to London, a distance of 4,794 miles. The trip is all the more remarkable in that he had to drive all the way himself and was alone half the time. He covered the distance in forty-four running days—an average of 114 miles a day.

There were days when Mr. Rodd did not cover more than twenty miles in nine hours' continuous driving when crossing Turkey in Asia. On the other hand, he averaged 193 miles a day through France in doing the 678 miles from Lanslebourg to Dieppe *via* Paris.

Mr. Rodd did not experience any serious difficulty in travelling from Baghdad to Aleppo *via* Anah, Abu-Kemal, and Dair az Zoor. This road is not frequented by private motor-cars or a passenger service, and for a whole day one might not see a single car.

But the journey through Turkey in Asia was less easy. Owing to the existence of the railway, Turkey has not deemed it necessary to make or maintain roads in that part, and foreign motor tourists are generally not encouraged to undertake a journey through Anatolia. It took Mr. Rodd ten running days to cover a distance of 729 miles from Dort-Yol to Mudanya, the two extremities of Anatolia—an average of 73 miles a day.

Mr. Rodd, who was given a very cordial send-off from Teheran by a large number of enthusiasts, is the first Persian tourist to have done so long a trip in a motor-car.

NEWS IN BRIEF.

Tel-Aviv has decided to appoint a woman Justice of the Peace.

One hundred persons have been arrested in Bessarabia on charges of having been concerned in Communist activities.

It is stated from Ankara that Munir Bey, Turkish Minister at Berne, will succeed Fethi Bey as Turkish Ambassador in Paris.

Memduh Shevket Bey, Turkish Ambassador to Persia, was last week summoned to Ankara.

Mirza Farajollah Khan Bahrami (Dabir-Aazam) has been appointed Governor of Isfahan, in place of Mushar-ud-Daulah, who has been recalled to Teheran.

Dr. Verona, Rector of the Economic Institute, who has several times represented the Yugoslav Government at international conferences, has died at Zagreb.

Landing and embarkation taxes on passengers to and from Egypt will be waived for travellers who stay in Egypt not more than twenty days.

Mirza Mahmoud Khan Fateh left Teheran at the end of last month for Paris, where he intends to buy the material necessary for a sugar factory.

It is reported that the Junkers Company is negotiating with King Nadir Shah for the extension of Persian air service to Afghanistan.

Mgr. Pellegrinetti, Titular Archbishop of Adana, the Nuncio in Belgrade, has been appointed Papal Legate to the Eucharistic Congress which started last week in Zagreb.

It is announced that an Arab general strike will take place in Palestine on August 23, which is the anniversary of the disturbances, as a protest against the commutation of the death sentence on the Jew, Urfali.

General Pangalos, the former Gerek Dictator, has been sentenced to four months imprisonment and a fine of 500 drachmæ (£1 6s.) for illicit deals in exchanges while in office. He has already been sentenced to four years' imprisonment on other charges.

Rear-Admiral H. Davies, flying his flag in the cruiser Curaçoa accompanied by the destroyers Arden and Antelope, left Argostoli on August 16 for Constantza. The squadron will return to Malta on August 30.

Mr. C. F. Martin, from Bangalore, last week lost his life heroically in a vain attempt to save the life of the young son of Dr. N. C. Todd, of Bahrain, who had fallen overboard. Mr. Martin at once jumped in to rescue the child, but he hit the propeller and was killed instantly. Dr. Todd, formerly I.M.S., is well known in Iraq and in the Gulf.

The death has occurred of Major-General Sir Francis George Bond, who had a long record of service. He served in Egypt in 1882, in India with the Hazara Expedition in 1891, and in the Tirah Expedition of 1897-98. From 1905-6 he was A.Q.M.G., Punjab, then D.Q.M.G. at Headquarters, in from 1908-1911 he was Director-General of Military Works in India.

The Turco-Persian frontier Commission has arrived at Maku, a town near the boundary and not very far from the scene of the present trouble between the Kurds and the Turks. The Persian representatives on this Commission are Sardar Entessor, who is President, Colonel Kazim Khan, representing the War Ministry and Raffi-ol-Molk, representing the Foreign Office, General Abdul Razagh Khan, and Mirza Muhsin Khan Ansari.

The death occurred last week of Admiral Lionel Grant Trufnell, who was known as the "father" of the modern Greek Navy. It was in 1910 that he occupied the position of Naval Adviser to the Greek Navy. He thoroughly trained and organised the Greek forces, so that, when war broke out between Greece and Turkey in October, 1912, the Greek Fleet, though weak in numbers, was of the utmost value. For his services to Greece, which were generally recognised, Admiral Tufnell was decorated by King George of Greece with the Cross of Grand Commander of the Redeemer.

The death occurred on August 12 of General Sir Horace Lockwood Smith-Dorrien, who had seen an immense amount of service, culminating in the memorable battle of Le Cateau on August 26, 1914. He was in, among other things, the Egyptian campaign of 1882, and later joined the Sudan Frontier Force. In 1895 he was with the Chitral Relief Force, and in the frontier campaign of 1897-8 in Tirah. In 1898 he was again in the Sudan, taking part in the battle of Omdurman. After the South African War he went out to India as Adjutant-General. After serving in the Great War, he went out, in 1918, to Gibralter, where for five years he was Governor.

NOTES AND NEWS

170, *Strand, London, W.C.2,*
Tuesday Morning.

The Position in Yugoslavia.

On another page will be found extracts from the interesting report of Mr. H. N. Sturrock on conditions in Yugoslavia in 1929. To-day the general position in that country can only be described as very satisfactory, both from the financial and the trade point of view. Last year there was a favourable trade balance after a series of adverse balances, and while the general stabilisation of the currency has not yet taken place, the dinar has actually been stable for a very long time. As I pointed out recently, Yugoslavia, like other Balkan countries, is now desirous of floating a large loan for works of development, and in the present conditions in the country no Balkan State is likely to have less difficulty in doing so, given normal world conditions. In the existing circumstances, however, there can be no question of a loan, but if, as is the view in certain quarters, there is a marked improvement in conditions at the end of this year or the beginning of next, then no doubt attempts will be made to arrange a loan. Like every other agricultural country, Yugoslavia suffered last year from the low prices obtainable for cereals, and it can no doubt be said that but for the world depression the bumper harvests of 1929 would have had a pronounced effect on the markets of South-East Europe. Mr. Sturrock, incidentally, deals in detail with the question of British trade with Yugoslavia, and shows how, as in other Near Eastern countries, our methods need to be revised. He points to the neglect of advertising an old shortcoming of British firms in the Near East markets—and also makes the criticism that efforts have not been made to cater for the local taste. The market, it must be emphasised, is an important one, and will expand, and it is to be hoped that our traders will endeavour now to take due advantage of the opportunities that it affords.

Foreign Names and Trade.

One of the essentials for success in foreign business is accuracy, and British firms have been set quite a new problem in recent years in keeping abreast of the changes in the names of cities and towns in the Near East and elsewhere. One wonders how many of our business men could pass an examination in the alterations in Turkish names, for instance. But where the alterations are fixed, as in the case of Turkey, the problem becomes simply one of memory. It is when, as so frequently happens in regard to Near East names, there is no apparent agreement as to the correct spelling that the real difficulty arises. Addis Ababa is a good example. I have come across at least four ways of spelling this place, and there may be several more for all I know to the contrary. Basrah is another town in regard to which there is no agreement, while even the names of countries are not immune from this uncertainty. There would seem to be a good case for the appointment of a body which would lay down definitely the correct method of spelling all foreign names.

Trade with Egypt.

Reference is made in the current issue of the Monthly Journal of the British Chamber of Commerce of Egypt to the improving market in Egypt for British fancy biscuits and cakes. It is interesting to note that while the total imports of these commodities have steadily declined for the past four years, the British percentage of the trade has increased every year. For 1926 the total imports amounted to £E75,839, the share of the United Kingdom being £E29,865 or 39 per cent., but for 1929 out of the total imports of £E60,723 the United Kingdom was responsible for £E34,243 or 56 per cent. It is obviously the high quality of the British products that is responsible for these satisfactory figures. Under the new tariff biscuits and cakes are liable to 15 per cent. *ad valorem,* but while this may have the effect of reducing the sale to some extent it may be taken for granted that the appreciation of the quality of British biscuits and cakes will at least keep for them their present proportion of the trade.

Eastern Carpets.

The world conditions which ruled last year caused a sharp falling off in the demand for most commodities, but the report of the Oriental Carpet Manufacturers of Smyrna shows that this concern has not been affected to anything like the extent that carpet manufacturers in Great Britain have been. The net profits amounted to £89,425 as compared with £104,388, the dividend is maintained at 5 per cent., £3,080 is placed to the reserve, raising it to £125,000, while £22,412 is to be carried forward as against £1,366. Considering the conditions the shareholders will no doubt regard the results as quite satisfactory. It is to be noted that in Turkey the output for local consumption is being increased as a result of the protection given by the new tariff, but production in Persia, India, and Greece has tended to decline owing to the decreasing demand.

Sudan Trade Figures.

The fall in the price of cotton is having a pronounced effect on the Sudan's trade figures for this year. For the first five months the total trade via the Red Sea ports and Wadi Halfa amounted to only £E6,654,165 as compared with £E8,238,766 for the corresponding period of 1929, a decline of £E1,652,239. There was a satisfactory increase in the imports, Government imports showing an increase of £E12,495 at £E805,960, while public imports were up by £E99,776 at £E1,966,399, for which the

demand for machinery and metals and metalware was mainly responsible. The imports of machinery amounted to £E200,277 as against £E54,584, while those of metals and metalware were £E130,246 as against £E94,218. On the other hand, exports at £E3,637,007 showed a decrease of £E1,652,239, due principally to the lower prices for, and the smaller exports of, cotton. The approximate unit value of Egyptian cotton per kantar for the period was £E5.3 as compared with £E7.2, and the exports only amounted to 441,839 kantars as against 550,237 kantars, the respective values being £E2,353,431 and £E3,969,886. The principal increase in the exports was in gum owing to the increase in prices as compared with the previous year. As it is improbable that the Sudan will have two moderate cotton seasons one after the other, and this year a larger acreage will be under the crop, it may be taken for granted that the trade figures will make a very different showing a year hence, even if cotton prices remain low.

Canada and the Near East.

Since the War Canada has been paying particular attention to the development of trade relations with the Near East, and a further step in this direction is the forthcoming establishment by Messrs Elder Dempster and Co., of Liverpool and Montreal, of a monthly direct steamship service from Eastern Canadian ports to Gibraltar, Malta, Alexandria, a Palestine port, Port Said, Suez, Port Sudan, Aden, and East African ports. Canada has made special efforts hitherto to develop commerce with the Balkan countries, but she is doing a growing export trade to Egypt in a variety of commodities such as motors and tyres, and this new service will no doubt give an impetus to commercial relations between the two countries.

COMMENTATOR.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, August 5.

Greco-Bulgarian Relations.

There are a number of private claims still pending between Greece and Bulgaria, the liquidation of which is regarded at Athens as preliminary to the settlement of important questions affecting the prosperity of the two countries, such as the linking up of the Greek and Bulgarian railways, the conclusion of a treaty of commerce for the regulation of the economic exchanges between the two countries, and the establishment of close collaboration between Greece, Bulgaria and Turkey for the common organisation of the cultivation of, and trade in, the famous tobaccos which the three countries produce. These claims include the demands for indemnification for damage suffered during the military operations and the payment for properties expropriated by the authorities. All depend on legislation in one or other of the two countries and all are a matter of money. Because these claims are all of a pecuniary character the settlement has hitherto been postponed in the hope that some of them at least would be settled through judicial channels. To be just it is necessary to point out that Sofia is chiefly responsible for the delay. The effect of postponement has been to complicate the matter rather than simplify it, since two new claims have now come to be added to the list, and these are actually the most difficult. One is the demand by Bulgaria for the settlement of 6,000 new claims of Macedonians for the liquidation of their properties remaining in Greek territory; the other is the claim by Greece for damages sustained by its nationals, formerly Bulgarian dependents, who were victims in the anti-Greek movement in 1906 in some districts of Bulgaria, notably in the towns and villages beside the coast of the Black Sea, and who, finding themselves in danger, had to emigrate hastily to Greece without stopping to save their belongings. The Bulgarians declare irrecoverfication of Greek emigrants as a result of the events of 1906. The Greeks, on their part, refuse to take into consideration the 6,000 new claims of Macedonian emigrants, it being pointed out that the time for the submission of these claims was thrice prolonged by the decision of the Council of the League of Nations, and it was agreed that the third extension should be final. In its desire to facilitate pourparlers the Greek Cabinet has attempted a compromise by proposing to withdraw the claim for indemnification with regard to the emigrants of 1906 if Bulgaria will do the same with regard to the 6,000 claims of Macedonians. Bulgaria, however, refuses to link up the two claims. It is in these circumstances that the negotiations between the two countries were begun. Conducted at first simultaneously at Athens and Sofia the negotiations were finally concentrated at Athens. They opened with an important meeting of M. Kiosséivanoff, the Bulgarian Minister, with the President of the Council of Greece, and subsequently the respective delegates—the Bulgarian Minister and M. Tzamados, Secretary General of the Greek Ministry of Foreign Affairs—met. The delegates well realised the difficulties of their task, and to find a way out of the impasse the idea was put forward of recourse to arbitration at The Hague with regard to the two points in dispute, but this suggestion did not find favour with the Bulgarians.

A crisis was then inevitable in Greco-Bulgarian relations. The Bulgarian Government having raised the customs duties on a number of foreign products, notably soap, olives, and olive oil and raisins imported from Greece, the Greek Government asked through its Minister at Sofia, M. Dendramis, that this measure should be revoked as regards Greek imports into Bulgaria, and, having received a negative reply, it proceeded to denounce the provisional commercial convention which has governed commercial relations between Greece and Bulgaria for three years, pending the conclusion of a commercial treaty. To appreciate the seriousness of this decision it is necessary to point out that the total of Greek imports into Bulgaria does not exceed 25 million drachmæ while the total of Bulgarian imports into Greece is not much below 350 million drachmæ. The denunciation of the commercial convention caused a deep impression at Sofia, and interested circles have demanded the revocation of the increased duties introduced by M. Molloff, as regards Greek products. The Government Press has explained that the increased duties constitute simply a general measure which was not directed against Greece. The conviction is almost generally held that Greece's action over the duties has been taken with a view to rendering Bulgaria more compliant in the negotiations regarding the liquidation of the various claims. This view is strengthened by the fact that the Greek Government has refused to agree to the proposal of the Bulgarian Government that negotiations should be opened immediately for the conclusion of a commercial treaty or at least for a new provisional agreement which would prevent Greco-Bulgarian trade from being subject to the maximum tariffs on the expiration of the convention which has been denounced.

GREEK COMMERCIAL NEWS.

The report of Hambros Bank., Ltd., for the week ended August 15, contains the following:—

The commission studying the shipping conditions of Greece have recommended the establishment of a maritime bank, the object of which will be to facilitate the capital requirements of Greek shipowners and to assist the development of the insurance branch of Greek ships. It is contemplated making it compulsory for Greek shipowners to insure 25 per cent. of the value of their ships within the country. It is expected that the undertaking of a partial insurance risk within the country will lead to cheaper rates being obtainable abroad for the balance of the shipping values.

In the light of protective tendencies which are shown practically in every country, the Greek Government's aim tends to secure markets for the agricultural products primarily, and secondly for the industrial products of the country. Special attention is given to the terms of treaties with countries which are able to absorb Greek agricultural products. There are under discussion at the present time treaties with Bulgaria, Austria, Turkey, Roumania, U.S.A., France, Canada, Spain, Czechoslovakia, Abyssinia, and the Argentine. There are sanguine hopes that Greece will obtain good conditions as regards imports of her primary exports, currants, tobacco, and wines.

There have been imported into Greece during June 237,773 tons of goods of a value of 886,855,000 drachmæ. Exports during the same period amounted to 37,583 tons, valued at 275,805,000 drachmæ. The above figures compare with 205,320 tons of goods worth 1,013,150,000 drachmæ imported during June 1929 and 62,357 tons of goods worth 201,601,000 drachmæ exported during the same period of 1929. The total of imports for the first half-year of 1930 amounted to 1,274,331 tons of a total value of 5,307,827,000 drachmæ, while exports amounted to 410,555 tons of goods worth 2,336,824,000 drachmæ. The figures for the corresponding period of 1929 are as follows: Imports 1,348,908 tons worth 6,554,174,000 drachmæ; exports 332,311 tons worth 3,447,456,000 drachmæ.

The trade movement has been brisker during June, the depleted stocks necessitating replenishment at much cheaper prices. Cereals, as usual, are heading the list of imports, with textiles, other fibres, and metals following. An appreciable diminution of imports of fancy and other luxury goods has been noticeable. A noticeable development in the exports of this year is the importance which garden products have assumed. They are responsible for 164,814,000 drachmæ. The U.S.A. are heading the lists of exporters to Greece. They are followed by Great Britain, Germany, and Italy. The most noticeable feature is the steady increase of German exports to Greece since 1928, the year when the new commercial treaty between the two countries was put into operation. Germany is at the head of the list as importers of Greek products, with the U.S.A., Italy, and Great Britain following.

All the Balkan States will be well represented in the ensuing International Fair of Salonika. Other European countries also are taking a keen interest, as the trading results achieved during the past years' fairs have been most encouraging.

There has been a good demand during June by Continental firms for Xanthe and other neighbouring brands of tobacco. The Italian Monopolies are also in the market. The Czechoslovakian Tobacco Monopoly is also expected to begin shortly purchases for its requirements. A good demand is also reported for lower grades, especially on German account.

A report from the Director of Agriculture and Forests, Jerusalem, states that in the northern districts of Palestine the orange crop has set well, but the June fall was comparatively heavy as a result of drying easterly winds. In the southern districts the crop does not promise to be as heavy as that of last season, but many new groves will be coming into bearing.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Files.—The Egyptian Ministry of War and Marine invites tenders for the supply of files. September 15. (D.O.T.)

Towels.—The Ordnance Survey Department of the Egyptian Ministry of War and Marine invites tenders for the supply of 9,850 hand towels. September 24. (D.O.T.).

Paint, etc.—The Stores Department of the Egyptian Ministry of Education invites tenders for the supply of paint, varnish, dry colour, wood stain, soft soap, sandpaper, chemicals and miscellaneous painting and decorating materials. September 20. (D.O.T.).

Motor Fire Engines.—The Ministry of the Interior, Cairo, invites tenders for the supply of motor fire engines. September 20. (D.O.T.).

Structural Steel, etc.—The Egyptian State Railways, Telegraphs, and Telephones, invite tenders for structural steel for Santa station footbridge, standard lamp fittings, supply of spares for auto and half auto Lux lamps, high tension feeder cable, and tinned sheets double.

Sterilising Outfit.—The Ministry of the Interior, Egypt, invites tenders for the supply of sterilising outfits and gas apparatus. October 13. (D.O.T.)

Compressor Sets.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for the supply and erection of four electric air compressor sets for Egyptian Army Barracks drainage at El Arish and Mankabad. September 14.

TURKEY.

Wire.—The Department of Posts, Telegraphs, and Telephones in Ankara invites tenders for the supply of galvanised and bronze wire. September 14. (D.O.T.)

Telegraph Wire.—The Department of Posts, Telegraphs, and Telephones invites tenders for the supply of telegraph wire. September 10 (D.O.T.).

Manganese Dioxide, etc.—The Turkish Department of Posts, Telegraphs and Telephones invites tenders for the supply of manganese dioxide and graphite. September 15. (D.O.T.)

YUGOSLAVIA.

Oil Driven Road Tractor.—H. M. Consul at Sarayevo reports that a local firm is desirous of receiving from British manufacturers quotations for the supply of a small naphtha tractor fitted with solid rubber tyres for hauling trailers. (D.O.T.).

FORTHCOMING SAILINGS

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Manchester, August 26; Birkenhead, August 29); S.s. Elysia for Bombay (Glasgow, August 30; Manchester, September 6; Birkenhead, September 12). (For passenger sailings and dates see advertisement.)

Bibby Line.—S.s. Cheshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, August 20).

British India Line.—S.s. Mandra for Bombay, Port Okha and/or Bedi Bunder, and Karachi (London, August 23); s.s. Margha for Colombo, Madras, and Calcutta (London, August 23).

Johnston Line.—S.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 13).

P. and O. Line.—S.s. Viceroy of India for Bombay (London, August 29); s.s. Nagova for Calcutta (London, August 29); s.s. Kaisar-i-Hind for Bombay (London, September 12); s.s. Bangalore for Calcutta (London, September 12).

Prince Line.—S.s. Egyptian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, August 23); s.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, August 30).

Ellerman and Papayanni Line.—S.s. Lesbian for Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, August 30; Swansea*, August 30); s.s. Gerano for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, August 30; Swansea, September 4); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, September 1). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Messageries Maritimes.—(From Marseilles).—S.s. Pierre Loti for Naples, Piræus, Istanbul, Izmir, Rhodes, Larnaca, and Beyrout (August 26); s.s. Lotus for Alexandria, Jaffa, and Beyrout (September 2); s.s. Lamartine for Naples, Piræus, Istanbul, Izmir, Rhodes,, Larnaca and Beyrout (September 9).

Motors and Motoring.

(By Our Motoring Correspondent)

Synthetic Glass.

The interesting news is forthcoming that glass is to be made synthetically, and that, so made, it will be unbreakable although easily cuttable, bendable and capable of being readily shaped for special purposes. The new material is, it seems, already being made on a commercial scale, and it should not be long, in that event, before it is obtainable here as well as in France, where manufacture is at present taking place. The new substance is called "Similex," and it is said to be only about one-third of the weight of ordinary glass. Naturally, its manufacture is the subject of several patents, not only covering actual manufacture, but, for the sake of safety, several possible alternative processes. There have been many difficulties to be overcome and many special processes to be worked out and tools to be designed, but the result is a flexible, imitation glass which can be supplied in any degree of elasticity and any grade of hardness, from a form which is almost soft enough to bend with the fingers to a hardness almost equal to that of the best flint glass.

Without divulging any secrets, it may be mentioned that the material is made from phenol and formaldehyde as bases, and there are said to be other substances mingled with these in various proportions to govern the degrees of hardness or elasticity. Urea, which has hitherto been the bugbear of all who have tried to turn out synthetic glass, is entirely absent and a feature of the new production is that there is nothing in its composition which delays its setting or hardening in any way, which means that the process of manufacture can be carried on intensively. The material is not to be confused in any way with the various synthetic resins which have been produced from time to time; in fact the operations of manufacture differ widely from those used in the artificial resin-making process in that the formol and phenol are mixed together in a cold state first, and the other processes follow. It is understood that ample capital has been forthcoming, and that a large factory has already been laid out for production on a commercial scale.

Motor Shipbuilding.

It may be mentioned that the motor shipbuilding industry is fairly brisk in this country at present. Actually, in Great Britain, the tonnage of motor ships on the stocks is 40 per cent. more than a year ago and abroad the figure is 30 per cent.—a fact which suggests that it is not motor shipbuilding but steam shipbuilding which is in a depressed state. However, whereas the United Kingdom a year ago was building 52 per cent. of the world's cargo and passenger tonnage, it is to-day building only 39 per cent.

A New Clutch.

A new clutch which has been designed for heavy duty service embodies ventilated driving plates, 429 square inches of facing area and is constructed of chrome-nickel-steel parts. The hub and bolts, driving pins and release studs are of the same tertiary alloy. The driven plates, two in number, are, however, of high carbon steel, heat-treated and spoked. The friction facings are nearly 14 inches in outside diameter. The two driving plates, which are of cast iron, are cored to provide air passages for insuring the dissipation of heat by promoting a free circulation of air. Eighteen pressure springs are incorporated in the design so as to ensure uniform pressure, and each spring is effectively insulated from the pressure plate. The six release levers are of 3-16th inch stock, heavily ribbed and heat-treated, whilst the cover plate is of drawn steel. Altogether, the clutch is one of the strongest yet designed.

An explanation of the manner in which the so-called "free wheel" clutch, regarding which so much is being, and has been, written, carries out its duties, may be of interest, particularly as one of the largest makers of commercial vehicles has designed such a clutch for use with heavy duty vehicles. In miniature, it has long been familiar to cyclists, and when in operation the action is similar to that of the vehicle, to which it is fitted, running free with gear in neutral, the only difference being that when the clutch is fitted the gear may be in any position for the same effect to be gained. In addition to the obvious advantage, when these clutches are fitted, of increased fuel economy, gear shifting on free-wheel vehicles is easy and can be accomplished without declutching except on first speed and reverse. It is only necessary for the driver to take his foot off the accellerator pedal and change the gear up to the next highest or lowest speed as the case may be.

The newly designed clutch consists essentially of a coiled spring enclosed in cylindrical driving and driven members. When the driving member tends to run faster than the driven member, the spring tends to unwind and expand diametrically until it binds in the driven member and power is transmitted. The coiled spring is ground a few thousandths of an inch smaller than its housing and one end of it is rigidly attached to the driving member. Turning the driving member in one direction causes a ball-type engaging member to wedge in between the spring and the hub of the driven member. This forces the end of the spring into contact with the inner surface of the driven member. The resulting friction at this point builds up along the entire spring, tending to unwind and expand it diametrically. As the spring is caused to make contact with the driving and driven members throughout its entire length, the driven member is forced to rotate with the driving member. If, however, the momentum of the vehicle gets to work, the member which is normally driven runs faster than the engine, the spring is coiled up out of contact and the whole arrangement runs free. When descending hills, there is no necessity to depend entirely on the brakes as a supplementary arrangement allows of the engine being cut-in.

SIR JOHN P. HEWETT, G.C.S.I., K.B.E., C.I.E.
General The Hon. SIR H. A. LAWRENCE, G.C.B.
Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers:

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

NATIONAL BANK OF INDIA, LIMITED.

Registered in London under the Companies Act of 1862, on the 23rd March, 1866

Established in Calcutta, 29th September, 1863.

BANKERS TO THE GOVERNMENT IN KENYA COLONY AND UGANDA.

AUTHORISED CAPITAL	**£4,000,000**	**Paid-up Capital**	**£2,000,000**
Subscribed Capital	**£4,000,000**	**Reserve Fund**	**£3,000,000**

HEAD OFFICE: 26, BISHOPSGATE, LONDON, E.C.2.

BRANCHES.

Aden	Calcutta	Colombo	Lahore	Rangoon	Eldoret	Entebbe	
Aden, Steamer Point	Cawnpore	Delhi	Madras	Tuticorin	Kisumu	Jinja	Uganda
Amritsar	Chittagong	Kandy	Mandalay	Zanzibar	Mombasa (Kenya Colony, Brit. E. Africa)	Kampala	
Bombay	Cochin (S. India)	Karachi	Newera Eliya		Nairobi, Nakuru		

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms.

The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfer on all its Branches, at the exchange of the day.

The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.

Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.

The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — **SOFIA** — Founded in 1865

CAPITAL & RESERVE FUND, 617,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roser is made under the control of the Bank in all rose-growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August 18.

All that can be said of the past week's stock markets is that they have been characteristic of a week in the midst of a holiday period during a general depression. Home rails on bad traffic figures, and rubber shares on the record low price of the commodity, were exceptionally weak, while share values of many industrials reached new "low records" for 1930. With the attendance of members small and business very slack, brokers and jobbers have given much attention to the Report of the Stock Exchange Committee on means of giving increased protection to the investor—a subject discussed below.

Meanwhile the whole business world is anxiously asking two questions:—first, what is the likely duration of the present world depression, and, secondly, what are the chances of Britain participating adequately in ultimate economic recovery. There are, sad to say, "defeatists" about, who frankly despair of England's future as a great manufacturing and exporting country, and picture her future as that of a country able to support only a lower population at a lower standard of living. Happily, these views are not general, but best experts realise that there is one very discouraging sign which is not generally appreciated. The malaise of the old staple industries is natural, for those industries are in trouble all over the world; but more disturbing is the failure of Britain to secure an adequate share of world trade in the rapidly growing newer industries such as motor cars, artificial silk, and films. It suggests a lack of adaptability, which must be remedied. As to the duration of the slump, highest authorities are by no means confident of any sustained recovery within the next twelve months, but they are not inclined to go to the extreme of pessimism recently adopted by the British Electrical Manufacturers' Association in its very gloomy trade survey.

Stock Exchange Reforms.

Following the Hatry scandals of a year ago the Stock Exchange set up a committee to draw up rules to make such frauds more difficult in future. To this end the regulations with regard to the preliminary transactions in transferring shares will be tightened up. The committee which investigated the matter fortunately went further than this, and suggested rules for another aspect of Stock Exchange business. According to the rules now recommended, new companies will have to give much more information about themselves before their shares can be quoted. One of the points on which the Stock Exchange will in future desire more information is the position with regard to underwriting; recent accounts, and in the case of subsidiaries the accounts of the parent company will also be examined; the prompt announcement of the retirement of a director is also required. These regulations should prove very useful when the next boom comes and with it the temptation for many doubtful promoters to set up new companies. They will now find their tricks a little more difficult.

Stores and Trade Depression.

Despite the present trade depression many shops and stores did well last year. The recent passing of dividend by Waring and Gillows, however, has made shareholders anxious about other companies in a similar line of business. It would seem that there is really no cause for fear, and the maintenance of Harrods' interim is reassuring. It is common knowledge that prices on the whole are falling, and this would suggest that a writing down of stock-in-trade is necessary. Now, if stock had to be written down by as much as 10 per cent. the reduction of profit would be as follows: Harrods 13 per cent., Selfridges 12 per cent., Swan and Edgar 7 per cent., Lewis 5 per cent., on the basis of the figures in their last balance sheets. Supposing that, in fact, profits were reduced by the extent indicated, that would not be drastic, and ordinary shareholders would still receive dividends. Even allowing for a little falling off in business, dividends can still be earned. Those who hold shares of the leading stores should therefore in no hurry to sell them. Indeed, if any nervousness should cause a weakening in price far-sighted investors will take the opportunity to buy this kind of share.

Lead-Paint Merger.

An amalgamation between two of the leading concerns in the British paint and lead industry was announced last week. A new company, Goodlass, Wall and Lead Products, Ltd., with a capital of £3¼ million is to be formed by the merging of Goodlass, Wall and Co. and Associated Lead Manufacturers, Ltd. The amalgamation terms will be based on the respective earnings of the two businesses in the last two financial periods. On the basis of these results the profits of the new concern amount to an average of £268,000 per annum. The proposed capital will be divided into £1,500,000 in 7 per cent. cumulative £1 preference, £500,000 in 7 per cent. 10s. preferred ordinary, and £1,250,000 in 10s. ordinary shares, and on the figures given above earnings on the ordinary shares would be 11.8 per cent., while the preference dividend would be covered nearly three times. Both concerns have been engaged in extending their interests of recent years, and the new move will be especially beneficial in promoting sales both at home and abroad. As a result both sets of plant should be more fully worked, output increased and incidental costs reduced. Both concerns also see in the amalgamation particular gains. Goodlass, Wall and Co. will be able to undertake certain foreign business previously outside its scope, while Associated Lead Manufacturers can readjust the capital value of certain assets without creating a special reserve out of profits. The merger appears to be soundly financed, and enhanced strength should improve the prospects of both concerns.

Travellers in India

THE CONVENIENCE OF THE CHEQUE

For those who know beforehand where they will be likely to require money, the system by which the Westminster Bank can arrange for a customer to cash his own cheques abroad is an undoubted attraction. Any local branch manager will be pleased to arrange with the Bank's agent in Poonah, say, and Benares, and Jubbulpur, to cash a customer's cheques within any pre-arranged limits. Nothing but a cheque-book need be carried, and the utmost ease and safety are enjoyed

British Consular Reports

II.—YUGOSLAVIA.

The following extracts are taken from the report on economic conditions in Yugoslavia in 1929 of Mr. H. N. Sturrock, Commercial Secretary, H.M. Legation, Belgrade:—

Yugoslavia has been passing through an eventful period. It is fifteen months since King Alexander's step of declaring a dictatorship was taken, and it is now possible to make some estimate of the achievements and the aims of this new government. Parliament, at the time when the dictatorship was declared, had made only small headway in the task of unifying Yugoslav legislation, which differed widely in the various provinces and was often quite unsuited to the requirements of the new kingdom. The tasks with which the dictatorship was faced in January, 1929, were therefore no light ones. It is perhaps in the field of legislation that most success can so far be recorded. It has been possible under the new régime to pass large numbers of laws and, while it is too early to judge yet of the effects of most of these laws—many of which are indeed only now about to enter into force—their unification is undoubtedly a step towards consolidation. Of the legislation affecting economic life the law providing for the creation of new administrative areas known as Banovinas is among the most outstanding. Each Banovina is governed by a Ban with wide local administrative powers, and many important economic functions are now being taken over by them from the central authorities, including business connected with local taxation, agricultural development, roads, mining, forestry and technical education. Other important new economic laws are those regarding bankruptcy and composition. It is hoped that these laws will do away with some of the injustices suffered, particularly by foreign creditors, under the bankruptcy law in force in the pre-War kingdom of Serbia.

The budget remains high in fact the 1930-31 estimates of 1,348 millions of dinars which have just been published are higher than those for some years past. This can be accounted for to some extent by increased provision for the service for foreign debts, and also partly by the fact that it has been the practice of former Governments to vote comparatively moderate estimates, and to exceed them by piling up a floating debt. A great part of this debt is now said to have been liquidated. The Ministry of War continues to be a heavy drain on Government resources, and the cutting down of Government departments has not, so far, led to the reduction in the estimates for any branch of administrative expenditure, which might have been expected. There have been no official statements of expenditure during the past two years.

The exceptionally good harvest of 1929, after two unfavourable years, was, needless to say, more than welcome. Thanks to this harvest the trade deficit of the two previous years was replaced by a favourable trade balance of some 327,000,000 dinars. But this year's experience has shown that a good harvest can no longer be depended on, as once it could, to set the economic situation to rights. The price obtained for grain has been so low that instead of the revival of internal trade, which was expected after the harvest, the public purchasing power has continued to decline.

Inside Yugoslavia's towering tariff wall (according to Sir Clive Morrison Bell's interesting model the fourth highest in Europe) the peasant remains nearly as backward as even, and it is hard to see how this major part of the population can, for many years to come, ever become a serious consumer of the country's expensively produced protected manufactures. The transformation of the peasantry into a consuming class must of necessity be preceded by the introduction of economic methods of agriculture, and it is therefore with agricultural questions that the Government is greatly concerned at present. An important step in this connection has just been announced. A credit of 50 million dinars has been voted by the Government for the formation of a privileged company for the organisation of Yugoslav export trade. It is not yet clear exactly what the functions of the new company will be, but it is to be subject to the control of a Government commissioner and will be exempt from all taxation.

Although the dinar has been kept steady at about 275 or 276 to the £ for several years past the question of its legal stabilisation still remains undecided. In 1928, when the conclusion of a foreign loan for stabilisation and other purposes was considered imminent, preparations were made, with a view to the legal stabilisation of the dinar, for the payment of part of the Government's debt to the National Bank and for the introduction of the necessary legislation; this legislation was, however, never carried into effect.

The Trade Position.

The year 1927 ended with a deficit in the trade balance of some 886 millions of dinars, and at the end of 1928 there was a further deficit of 1,390 millions. In 1929, however, a striking change took place; thanks to the excellent harvest there was a great revival of export trade, and at the same time a certain decline in importation, and by the end of the year there was a balance of about 327 million dinars on the side of the exports.

The principal exports are timber, maize, wheat, eggs, minerals (particularly copper), pigs, cattle, cement, hemp and fruits. In 1929 there was an increase, as compared with the previous year, in the exportation of practically all these articles, and particularly in that of wheat and maize. The total exports amounted to 7,921,707,022 dinars, and of these about a quarter was taken by Italy and about 15 per cent. by Austria. The Yugoslav exports to Great Britain amounted to 106,483,351 dinars, that is to 1.34 per cent. of the total. The principal commodities imported by Great Britain from Yugoslavia in the past year were the following: Timber and wooden manufactures (which amounted to nearly half the total), calcium carbide, tanning extracts, "artificial slate," poultry, prunes, acetic acid, skins, magnesite and acetone. The principal imports into Yugoslavia are cotton, silk, machinery of all kinds, railway material, metals, coal and coke, motor cars and cycles, petroleum and oil products, colonial produce, leather and chemicals. Owing to the rapid growth of the local textile industry, which produces cotton materials of cheaper quality and woollen cloth of lower and medium qualities, it is now, generally speaking, only middle and better class fabrics which are imported. The principal distributing centres for the textile trade are Belgrade and Zagreb.

The better class woollen suitings are still imported largely from Great Britain although competition from Germany, Czechoslovakia, Italy and France is very strong. The importation of cloths can only be expected to decline as the local industry is supplied with up-to-date machinery, and is producing increasingly good qualities of cloth. There are ten cloth mills in the country, most of which are employed in producing cloth for the army. The woollen yarns for the local weaving industry are supplied chiefly by France, Belgium, Czechoslovakia, Germany and Italy, and only a very small proportion is supplied by Great Britain. Germany supplies most of the carpet yarns used. Yugoslavia produces considerable quantities of wool, but this is coarse and of short staple and therefore used only for home weaving. The raw wool used in the local industry is chiefly Australian cross-bred. "Greys" are manufactured in the country in sufficient quantity to cover 40 per cent. of the total demand. Great Britain has a certain share in the market and Italy, Czechoslovakia and Germany also participate.

The cotton fabrics manufactured in the country are

Digitized by Google

still only of a low average quality: finer materials are imported chiefly from Great Britain, Germany, Czechoslovakia and Italy. The lasting qualities of British goods are little appreciated, and to obtain a ready sale in this country cotton goods should be of striking colours and highly finished. Czechoslovakia provides cotton materials with a very shiny surface, which are very popular. Cotton yarns for the use of the local textile industry are supplied almost exclusively by Czechoslovakia and Italy. A certain quantity of yarns of the lower counts are manufactured in the country. Cotton yarns are the principal articles exported by Great Britain to Yugoslavia, and the total value of the yarns imported from Great Britain in the past year was about 77,000,000 dinars. The importation of British yarns had declined since the war, principally owing to energetic competition from neighbouring manufacturing countries and partly on account of a tendency on the part of the peasants to purchase ready-made cotton materials instead of making home woven fabrics with imported yarns. There is now said to be a certain reaction, as the peasants have found that ready made materials are in the end expensive and are therefore returning to home weaving. This should be of particular interest to British manufacturers as it is British cotton yarns which are principally used by the peasants, who have long been familiar with them and are conservative in their tastes.

Silk fabrics, both natural and artificial (particularly those of bright colours), are extremely popular and are imported in important quantities. Natural silks are obtained chiefly from France and artificial silks chiefly from Italy and Germany. There is a considerable demand for artificial silk yarns for the local weaving and stocking industries. This demand is supplied by Italy, Germany and France. Hosiery of the cheapest quality is manufactured in very large quantities in the country. Better quality stockings and socks come principally from Germany, Italy, France and Czechoslovakia. There are two jute factories in the country but the great majority of the jute material used is imported from Italy, Austria and Czechoslovakia.

Trade With Great Britain.

It is not possible to report much progress in any particular branch of British export trade to Yugoslavia, and the total volume of this trade, which has never been large, has decreased slightly in the past three or four years. This year's low figure (about 46 million dinars, approximately £1,549,091) as against 446.5 millions (approximately £1,623,636) in 1928 is partly to be accounted for by a general falling off in imports, due to low purchasing power in Yugoslavia; but there is also a further slight decline in the proportion of the total Yugoslav imports taken from Great Britain—from 5.7 per cent. in 1928 to 5.61 in 1929.

The fact that so small a place on the Yugoslav market is held by British goods is regrettable and deserves the careful consideration of British traders. Although Great Britain is in many respects at a disadvantage as compared with Continental manufacturing countries, and although the Yugoslav market is a peculiarly difficult one to deal with, it would nevertheless in many cases be worth the while of British firms to make more effort to secure a share of it. There is a tendency on the part of British firms to expect the quality of British goods to prove the best selling factor and not to realise that an effort has to be made in this country to convince an inexperienced and sceptical public. Advertising has been neglected, and British manufacturers have not hitherto, as have those of other countries, considered it necessary to cater specially for local taste, which, needless to say, differs very widely from British taste. Further, many British firms are generally unwilling to meet the exacting demands for credit which are the rule in this country, and business is often lost through failure to do so.

Losses in the past have been frequently due to dealings with unsuitable Yugoslav firms. Many of the firms which sprang up during the period of expansion of a few years

CARTRIDGES

TIME and Science have seen and brought remarkable changes in the methods of man as a hunter.

In early times the element of uncertainty involved great danger. To-day Eley and Kynoch Cartridges and scientifically accurate weapons make results dependent on little more than the skill of the shooter.

Wherever shooting men gather Eley and Kynoch Cartridges claim a reputation for accuracy which has built up a large and increasing demand in every part of the world.

Digitized by Google

ago have proved unsound, and the number of bankruptcies, especially in the capital, has been alarming. The losses experienced by British firms in this country were unfortunately not mitigated to any considerable extent by the bankruptcy legislation in force. It is particularly necessary in the present difficult situation to take all possible precautions, both by ascertaining the reputation of the firms concerned and by utilising local methods of obtaining guarantees for payment. There is in this matter fortunately reason to hope that under the new unified bankruptcy law, which allows for greater protection to foreign creditors, conditions will be somewhat improved.

Yet another circumstance which may influence British commercial opinion is that a number of debts to British firms by Serbian merchants since before the War still remain unsettled. It should not be forgotten, however, that this state of affairs is due to the Yugoslav Government's having, in the uncertain months immediately after the Armistice, declared an arbitrary rate of exchange (the pre-War one of something under 26 dinars to the £) for the settlement of foreign pre-War commercial debts, a rate which the majority of British creditors not unnaturally refused to accept. Some attention has been given to this question in official circles of late, and although the matter is fraught with difficulties it is hoped that the Yugoslav debtors may shortly offer some acceptable proposal for settlement to the British creditors.

A third important point is that one of the principal difficulties with which British trade has to contend in Yugoslavia is a deep-rooted conviction that British goods are dearer than all others, a conviction which is encouraged not only by competitors but also by local salesmen of British goods for which there is a safe market, who are said to use it as an excuse to ignorant customers for their excessive profits. The conviction is natural in a country in which prices have remained abnormally high; there is scarcely a single manufactured article and there are few agricultural products which cannot be said to command a higher price than in Great Britain, and yet this fact is not being turned to advantage. There is no reason why suitable publicity campaigns should not go a long way towards destroying this mistaken belief regarding British prices, and in this connection it should be borne in mind that advertising and other forms of publicity are comparatively cheap in this country. Further, even the simplest mechanical advertising devices make an enormous appeal to a very large section of the Yugoslav public, which has not yet become blasé through familiarity with advertising methods.

Misunderstandings or still more serious difficulties between British and Yugoslav firms are frequently due to differing attitudes towards correspondence. It is not even now the habit of Yugoslav business houses to make the usual formal acknowledgment of business communications; they do not so readily put pen to paper as we do, and are apt to expect others to assume that "no news is good news" in business. Perhaps the most serious obstacle of all to British trade in Yugoslavia has been, and is indeed likely to continue to be, the enormous quantities of deliveries on reparations account from Germany, and in particular machinery and technical equipment of all kinds which flow into the country. German machinery and other goods have become well known in consequence, and the habit has been formed of obtaining not only spare parts for the renewal of machinery, etc., obtained as reparations, but new supplies as well from Germany. The fact that English is little known and that most of the foreign-trained engineers and other technical experts have had their training in Germany, Austria or France, and are therefore unfamiliar with British machinery and apparatus also has a considerable influence here.

Great Britain's principal exports to Yugoslavia are woollen and cotton piece-goods, yarns, colonial produce and iron and steel manufactures and machinery. The rapid development of the Yugoslav textile industry, with high tariff protection, has naturally led to a falling off in the first of these. While there is a tendency for the importation of yarns, both woollen and cotton, to increase, trade in all but the highest qualities of woven materials has declined seriously, and it can only be expected that with the continued development of the local industry, which has an ample supply of exceptionally cheap labour at its disposal, it will decline still further. Competition from France, Germany, Italy, Czechoslovakia and Poland in better quality piece-goods is keen, and great pains are taken by many of the foreign manufacturers to suit local requirements and to create a market for their own wares. Textile machinery, for which it might have been hoped to secure a market in Yugoslavia, has been obtained, like the bulk of other machinery, chiefly as reparations.

It is perhaps principally in schemes for mining, railway and electrical development that the most important openings for British interests are to be looked for, and these schemes are only likely to prove acceptable where finance can also be provided. At the same time Yugoslavia is, in spite of the high tariff wall designed to foster local industry, a market which Great Britain should not neglect.

ROUMANIAN MONOPOLIES INSTITUTE.

According to the fifth quarterly report of the Adviser to the National Bank of Roumania, covering the period from February 7 to May 7, 1930, the gross receipts of the Monopolies Institute for the first four months of 1930, including royalties from the match contract, amounted to 2,155,145,731 lei (£2,640,000) as compared with 2,015,693,454 lei (£2,470,000) for the same period of 1929.

Copies of an English translation of the quarterly report, which gives interesting and up-to-date information on the general situation in Roumania, are now available and may be obtained from Hambros Bank, Limited, or from Lazard Brothers and Company, Limited.

The half-yearly ordinary general meeting of the Ottoman Railway from Smyrna to Aidin will be held on September 30.

Captain Alcock, an Imperial Airways pilot, and brother of Sir John Alcock, flew on August 15 from Basrah to Karachi—a distance of 1,450 miles—in 24 hours. This constitutes a record.

A Cairo message states that it is understood that the Egyptian Government is preparing a scheme for the restriction of the acreage under Sakellarides to the most suitable land in the centre of the Delta.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended August 13:—

Egyptian Futures.

Sakel Contract.—A slight hardening in values occurred during the sessions immediately following our last report, a certain amount of short covering then taking place owing to fears of a "bullish" American condition figure. This initial advance, however, proved of short duration, as, following the publication of the Bureau report, markets resumed their declining tendency. Whilst at times Sakels have exhibited a certain amount of steadiness, notably on Monday, when further reports of crop damage owing to leafworm attack were received, the general trade situation and weakness in outside commodities are the governing factors for the time being. Under ruling conditions it appears useless anticipating any sustained upward movement until such time as consumption figures commence to show the development of a more satisfactory trade. Whilst it is true that fine cottons now stand at a lower level than they have done for many years, we have rarely experienced such world-wide depression. It may be argued that when the turn comes cotton will be wanted in most quarters; in the meantime, however, operators are more concerned with the prospects of crops having to be marketed during a period when trade support is at a low ebb, and this point alone is mainly responsible for the lack of outside interest at the present time. The Alexandria market has maintained its recent premium over local values; apart from the crop reports mentioned previously and a total lack of demand for new crop cotton, there is little of interest to report regarding this quarter. We see little inducement to enter into commitments at the present juncture, as probably opportunities of operating with greater certitude will develop during the next few weeks.

Upper Contract.—Only a moderate amount of business has been attracted to this market during the past week, and values have approximated closely to the movements witnessed in the American departments. Differences with Alexandria continue to run well below a shipping parity, but, with the movement of the crop, some adjustment must take place. At the moment, Novembers here appear an attractive proposition to those who have to cover any business ahead, as there seems little doubt that weight of cotton will later force both the basis and contract in Alexandria to a cheaper parity. With abundant supplies in evidence, the Upper varieties will probably run fairly close in value with American during the early part of the season, but much depends on prospective supplies of outside staples which at present cannot be accurately determined.

Egyptian Spot.

Rather more buying was in evidence during the few days preceding the American Bureau report published last Friday, and had that report estimated the figures of the American crop at under 14 million, instead of over, it is probable that business by now would have been considerably more active than it is. The "bearish" interpretation placed upon the published figures at once caused the demand to dry up, and for the two or three days following a very poor inquiry materialised. It is not even yet clear whether the decline is to continue or whether some hopes of a recovery may now be entertained, but there is no doubt that opinions are becoming rather more two-sided on the question. Generally speaking, quotations have been reduced ¼d. per lb. all round, but there were signs to-day that interest in actual cotton was again reviving.

Sakels.—There has been a fair inquiry for Sakel cotton at about 50 to 100 on; above this figure very little business has taken place.

Uppers have been in fair request at from 25 to 100 on, a range at which there is a very poor selection. Apart from this, very little interest has been shown, at all events in the better grades.

Pilion.—There has scarcely been an inquiry for this cotton throughout the week.

Nahda.—A good inquiry has been in evidence, but prices are very irregular, and sellers for the most part appear most anxious not to miss bids of any kind.

Maarad Cotton.—A small inquiry has been witnessed, and what appears to be very cheap cotton has changed hands in the neighbourhood of 1d. on November Sakels.

White Descriptions.—Slightly more interest has been shown, principally for cotton at round about the contract price. We have not heard of any actual business however.

Fouadi, Farouki, etc.—These outside growths have again suffered from neglect. There seemed to be at one time some likelihood of these growth filling a gap in the Sakel demand, but for the present, at all events, spinners appear to be content to wait for the new crop rather than experiment with these comparatively untried qualities.

Sudan Sakels.—A much better business has been done, principally in the lower qualities.

Tokar Sakels.—This cotton has been in fair request, chiefly for the top quality, at from 200 to 250 on. The lower qualities have been neglected.

Low and Inferior Cotton.—Considerably more interest has been shown lately in the very low-priced raw material, and we have heard of one or two comparatively good lines being placed somewhere in the neighbourhood of 6½d. to 6¾d.

C.i.f. business has been most disappointing.

Forwardings.—Very low figures were again returned last week, 1,881 bales Egyptian and 592 bales Sudan. Sales have been estimated as 1,300 bales Egyptian and 1,100 bales Sudan Sakel.

Quotations.—Those of Sakel have been reduced 20 points, those of Upper 24 points, and those of Pilion 25 points on the week. F.G.F. Sakel to-day, 11.95d. F.G.F. Upper to-day, 8.99d. F.G.F. Pilion to-day, 9.55d.

EGYPTIAN FUTURES WEAK.

The Alexandria Commercial Company report as follows for the week ended August 7:—

The tone of our market has been rather weak except during the last two sessions, when some support was lent by New York. The week's summary of price movements is as follows:—Sakellaridis; November N.C., 22.60 dollars, 0.28 dollars down; January N.C., 22.89 dollars, 0.22 dollars down; March N.C., 23.34 dollars, 0.16 dollars down; May N.C., 23.79 dollars, 0.16 dollars down. Ashmouni: August, 15.04 dollars, 0.03 dollars down; October N.C., 14.74 dollars, 0.06 dollars down; December N.C., 15.02 dollars, unchanged; February N.C., 15.40 dollars, 0.03 dollars up; April N.C., 15.77 dollars, 0.08 dollars up; June N.C., 16.16 dollars, 0.06 dollars up.

An export combine of Roumanian live stock dealers has been formed at Bucharest.

The Yugoslav Government has under consideration the establishment of an organisation for the development of industrial exports.

A Sofia report states that a locomotive works is to be established in Bulgaria with the aid of English capital.

Bulgaria's wheat harvest is estimated at 1,690,000 tons compared with 900,000 tons last year. Other crops also show improvement, and the total grain yield is put at 2,640,000 tons as against 1,560,000 tons.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended August 9:—

The firm grain markets, which continued throughout the week, have this time, owing to increased arrivals of barley, resulted in several transactions being concluded on our market mainly for the Continent. The price of maize has risen considerably, but the arrivals of this commodity are very small. English markets were almost inactive, the only business concluded this week being a parcel of 1,400 tons of barley for Plymouth and Falmouth. Owing to the increased supply of tonnage, freights were hardly maintained; in fact, 10s. 3d. and even below has been accepted for Antwerp/Rotterdam, but it is expected that next week higher rates will be seen. There has been practically no chartering during the week.

The timber market continues lifeless with very few transactions for autumn sales. A steamer is shortly due to lift a parcel of 300 wagons for Basrah, and another is to take a cargo of 400 wagons for Alexandria. Besides these, a quantity of 400 wagons is destined for South America, but there is no other important business in view. Several parcels have been placed for North African ports at low rates, and some stray parcels are in the market for South Italy, but so far no further freight engagements have been concluded for the latter destination.

Weather and Crops.—On Sunday last, August 3, more or less copious showers fell in the western districts, measuring from 2 to 38 millimetres of water, and some further showers of less importance were scattered in the north-west on the following day; but in general dry and very hot weather has continued to prevail. To-day intermittent rain is forecast for the north and west, with a showery tendency in the afternoon over the rest of the country; and as the barometer has fallen somewhat this morning, it may be hoped that some appreciable and much-needed moisture will materialise.

A report by the Chambers of Agriculture on the position at the end of July says: "Partial rains have fallen in the plain of Muntenia and in the south of Moldova and Bessarabia, in consequence of which the maize and root crops were greatly improved. Light rains fell in the provinces of Transylvania and Bukovina. Drought continues in the northern parts of Moldova and Bessarabia, in the central plateau of Transylvania, and in the Danube plain. Hail and storms which accompanied recent rains caused considerable damage in some districts. There are some areas in the south-east of Muntenia and in Moldova and Bessarabia where it has not rained for a fortnight or a month and in which the maize is seriously threatened, the more so as the drought has been accompanied by hot winds. On the other hand, there are regions in Muntenia where the maize is exceptionally fine."

Sulina.—The bar depth remains unchanged at 24 feet, and the general conditions continue to be good. Work on the north pier prolongation is being continued rapidly, and is helping to maintain the constant depth of 24 feet. The dredger Sulina is being used to deepen the lower end of the channel. The depth at the 41st mile-post has fallen to 23 ft. 6 in., and the suction dredger Dimitrie Sturdza has been sent again to this shallow spot to restore the normal depth of 24 feet.

Constantza, week ending August 6.—This week one steamer loaded 6,000 tons of grain for Rotterdam. Ten vessels loaded about 39,450 tons of petroleum products, and six took oil fuel for bunkers. Owing to the unremunerative prices ruling at present, the Petroleum Companies have considerably reduced their output, which had greatly increased during the last twelve months.

Notes of the Week.

The Egyptian Tug-of-War.

The best service that Great Britain can render Egypt at the present time is to convince the Egyptians that the issue of the present political struggle in their country rests with themselves and not with the British Government. When the unfortunate effect of his reference to Egypt's electoral law and of the British Government's warning that it would not be a party to any change in it was brought home to Mr. Ramsay MacDonald, he pleaded that he had meant well. Similar good intentions, no doubt, prompted the British High Commissioner to entertain successively at luncheon first the leader of the Wafd, who has proclaimed himself the victim of attempted assassination by the Government's agents, and, secondly, the Egyptian Prime Minister, who, in spite of his successful handling of the ugly situation deliberately provoked by the Wafd had received such a chilling communication from the British Government. It is to be hoped, however, that the purpose of these social functions was not merely to extend condolences to the chief guests. There is much to be said for straight talking in Egypt at the present moment; but if the British Government is to play the only part that fits it, such straight talking should be either in public or in the presence of both contending parties. As the Sidky Pasha Government has been warned publicly against tampering with the Constitution, there would seem to be equal urgency for an expression of the British Government's attitude towards non-co-operation or the non-payment of taxes—the official policy of the Wafd—which, according to its General Secretary, is to lead in the autumn to a situation more serious than the recent spasms of disturbances and riots in Mansourah, Balbeis and Alexandria. Silence on this point is unfair to both the contending parties in Egypt, as it encourages the Wafd to persevere in a line of policy that must widen the breach between the two sides and hinder the only possible solution of the Egyptian problem, which can be reached by the rallying of all moderate-minded politicians to the maintenance of law and order and the cause of good Government. Only the equivocal attitude of the British Government can explain the pathetic spectacle of the propaganda now being let loose in Great Britain to prove the Wafd a model of administrative and financial efficiency, as well as the champion of democratic liberty. An independent Egypt has the right to expect this standard of all its parties, and may be excused for wondering why the Wafd should think it necessary to convince Britons rather than Egyptians of the fact.

The New Turkish Party.

If the report is true that bitter discussions are taking place in Turkey between adherents of the Prime Minister, Ismet Pasha, and those of Fethi Bey, who, with the Ghazi's full approval, has formed a new party, it must be regarded as a hopeful sign. For, although one may admit the necessity of practical dictatorship, or at least an absence of party politics, for the carrying out of such reforms as amount to a revolution in the country, few things have been more distressing to the outside observer than the tendency of the average Turk in recent years entirely to close his mind. If ever he had the faculty of individual judgment, he cheerfully abandoned it during the time when the Turkish Parliament spoke with one voice. Fethi Bey, therefore, if only he end this pernicious system, will achieve much. There are signs, however, that he may achieve much more. It is difficult of course, to estimate to what extent in Turkey a public opinion exists, though in any country other than Turkey the Liberal Republicans could at once be said to have a good chance of success. Foreign advice in financial and economic matters, though easy for such a proud country as Persia to accept, is still, apparently looked upon with grave misgiving in Turkey; nor can Fethi Bey's outspoken declaration in favour of non-Mussulman minorities in Turkey be expected to prove palatable to the long and resolutely unenlightened. Yet it seems certain that the new movement is, to say the least, not ill-regarded by Mustapha Kemal Pasha, and that being so, it is by no means improbable that the end of Turkey's policy of isolation is impending. If Turkey does return to the West, it will assuredly be to her own benefit. After all, she will not have been the first country to have discovered since the War the futility of the device "By Ourselves Alone."

Turco-Persian Relations.

The present course of Turco-Persian relations, arising out of the trouble in Kurdistan, is difficult, indeed, to follow. On the one hand, we are told that nothing but the friendliest sentiments exist between Ankara and Teheran, that it is untrue that Turkish forces invaded Persia, that Persia is only too anxious to do all she can to help Turkey, and so on; and on the other, that the

Digitized by Google

Notes exchanged between the two countries are increasingly sharp, that the Persian Government has bluntly refused to accept the Turkish proposal of joint military measures against the Kurds, that the Turks are demanding a rectification of the frontier, and so forth. Not only has one the choice between these two interpretations of the situation; one is also told, by Turkish newspapers, that the Kurdish revolt has virtually ceased to exist, and if one were to believe certain journalists in Ankara, the whole problem is now reduced to the future of a mere handful of brigands around Ararat. We are probably not wrong, however, in guessing that the Turkish officials are slightly exasperated with Persia, and that, from a military point of view, they are puzzled how to root out the insurgent Kurds without international complications, or international co-operation. It is just possible, of course, that Persia might consent to some slight rectification of the frontier, but she will not be unmindful of the old Turkish urge towards the province of Azerbaijan, over which the presence therein of Turki-speaking people has always caused a certain type of Turk to cast an acquisitive eye. However that may be, we are convinced that Turkey is in error, if she supposes that the Kurdish problem can finally be solved by forceful methods. Few things, indeed, could so mark the departure of Turkey from traditional ways as an enlightened solution of her Kurdish problem. It is to be hoped that Fethi Bey, who, it may be recalled, fell from office in 1925 during the rebellion of Shaikh Said, has formulated a progressive policy in this particular direction.

The Plague of the East.

Few things more definitely demark post-War from pre-War history in the Middle East than the fact that the mandated territories, under Western ægis, have for perhaps the first time in their long story been making a determined fight against the perennial enemy of the agriculturist, namely, the locust. That fight, however, which is only just beginning, must extend far beyond the Middle East. As a special Committee on Locust Control, appointed by the Economic Advisory Council, has just pointed out in a White Paper (Cmr. 3642), the areas on which investigation should be concentrated are the Red Sea littoral of the Anglo-Egyptian Sudan and Eritrea, the northern provinces of Kenya, Italian and British Somaliland, Southern Arabia, and Northern India, Baluchistan, and Southern Persia. This Committee prefers, as the only means of effectively combating the Desert Locust, a co-ordinated scheme of investigation and research over a period of five years. The Imperial Institute of Entomology, it is suggested, should supervise this work. Already many of the Governments concerned have agreed to contribute financially to this scheme, but there still remains a sum which, apparently, the Empire Marketing Board alone is in a position—at least the Committee hopes it is in a position—to supply. One curious feature of this locust problem is the fact that it affects very closely mainly those countries over which Great Britain has some control. It is to be noted, however, that the Italian Government and the Abyssinian Government are also vitally concerned in the problem, and it is to be hoped that scientific observations will meet with every facility in Eritrea and Ethiopia. Finally, there is every reason to expect that a solution of the problem may be brought nearer by the increased use of aeroplanes—a benefit which the R.A.F. is peculiarly qualified to bestow on the world.

Afghan Independence.

It was gratifying that Afghanistan last week could celebrate the twelfth anniversary of her independence in perfect tranquillity, but particularly gratifying in view of the unrest on the North-West Frontier. So far as is known, the tribes of Afghanistan have behaved with correctness, while the Afridis and other tribes have been attacking India. There is reason to believe, indeed, that King Nadir Khan has successfully imposed his personality upon the people of Afghanistan, and that the murders and brigandage which were recently harming the country will be no more attempted during his régime. The recent history of Afghanistan has been so strange that no one would venture to prophesy on its future, but it is a happy fact that conditions there have at last some appearance of stability. A lesson has been learned from the mistakes of ex-King Amanullah, and the reforms which are essential are being gradually pushed forward. King Nadir Khan realises the peculiar qualities of his people and is seeking to change, almost imperceptibly, their outlook and methods. It is a world interest, and particularly a British interest, that he should succeed in the task to which he is addressing himself with notable resolution and common sense.

INDIAN NOTES

A Progressive Little Indian State.

The interesting speech delivered by the Chief of Bhor, a small State near Poona in the Bombay Presidency, at a recent reception in London, sets out accurately the aspirations and the anxieties of the lesser Indian States. The State itself supplies an instructive example of what can be done with limited resources. It measures a little over 900 square miles, and has a population of about 130,000. These figures are small indeed in comparison with many other States; but the situation of Bhor, in the heart of the Maratha country, and close to Poona, the historical and intellectual capital of that country, has given it opportunities, and entailed responsibilities, greater than fall to many States of more imposing dimensions. The rulers of the State have always showed unfailing loyalty to the British Government, and have had unusual opportunities for doing so, in meeting the request for the surrender of the land required for the reservoirs for some of the great irrigation works of the Deccan. The water collected in these reservoirs is distributed at a distance from the State territories, and are consequently of no advantage to the State; and the compensation given can never quite make up for the territory lost. Nevertheless, the successive Chiefs have always met the demands made upon them cheerfully. A similar anxiety to work for the common good is shown by the creation of a Legislative Council by the present chief. It wisely does not yet go to such rash lengths as popular election by an illiterate peasantry, as were forced upon British India by the Montagu-Chelmsford Reforms: but it gives the people a real interest in the management of the State finances. The meagreness of these finances is a constant difficulty of all the small States. The Rulers of such States are met by two difficulties: the natural discontent of their subjects when they see their brethren in the British Indian Provinces with greater electoral powers, and greater provision of funds, particularly for judicial and educational establishments: and the fear that the privileges that may be extended to the larger States may not be regarded as applicable or necessary for those that are smaller. It is natural, therefore, that the smaller States should be especially anxious for such concessions as a share in the Customs Revenue of India. Their case is certainly strengthened when they can point to good administration and a desire to move with the times in prudent and well concerted measure. Such a claim can certainly be made in the case of Bhor and in fact in the large majority of such instances.

Indian Politics and Economics.

The extent to which the political situation in India has been affected, and the opportunities of agitators increased, by economic conditions is not perhaps fully realised. The world-wide depression in the prices of the principal raw products has hit India particularly severely. The recent disturbances in the Punjab and in Sind are, for example, largely due to the fact that the prices of grain and cotton are so low that the Zamindars and cultivators cannot obtain sufficient cash even to pay off their commitments for seed purchase to the banias, still less to meet the

PALESTINE AND THE LEAGUE.

Differences between the theorist and the realist always exist. Sometimes the gulf is barely visible, and the realist may even persuade himself that he has won the theorist's approval; at other times the gap is so painfully obvious as to be almost unbridgeable. It is then that each side appeals to the idealist, who, of course, may in addition be as well a realist as a theorist. One is prompted to some such reflexion by the dispute between the Permanent Mandates Commission and the British Government in its capacity as Mandatory Power for Palestine. The criticisms which that Commission thought fit to make public last Monday had been keenly resented by the Mandatory Power, who on the same day published a reasoned reply to these adverse comments. The spectacle is scarcely an edifying one, undeniably instructive though it be. It is, perhaps, a sign of the times. One remembers the outburst in certain League circles when, a few years ago, Sir Austen Chamberlain complained of the exhaustive nature of the *questionnaires* submitted to the Mandataries; and it is curious that a sequel to that incident should be this open dispute with the Permanent Mandates Commission. To suppose, indeed, that Great Britain as Mandatory Power had ever found peculiar favour in the eyes of the Permanent Mandates Commission, would be dangerous self-adulation, however much the Commission's Reports might lead one to think so. Certainly in this last meeting on Palestine, the British representatives were "heckled" in a way that can scarcely have been the lot of representatives of other Powers. One thinks of the bombardment of Damascus.

But that is by the way. The real problem is: is government by Geneva in the last resort actually possible? It is a common complaint among the citizens of Great Britain that such-and-such a country under British ægis is ruled too much from Whitehall. Will the task of governance be any easier if, on top of the dictates of Whitehall, we are to have the dogmas of Geneva? At least it can be claimed that Whitehall pays. Yet let us be fair. The answer is not wholly in the negative. The Permanent Mandates Commission can perform, has performed, most useful work. The more impartial and the less magisterial its comments are, the more helpful they will be. Colourless acquiescence or dissent as the result of *parti pris* is the reverse of helpful. Now it is part of the British Government's case, we notice, that, in regard to the problem of the Wailing Wall, the Permanent Mandates Commission thoroughly approved of the Mandatary's policy in July, 1929, whereas it thoroughly disapproved of it a month later. Similarly with other things. The present wisdom of the Permanent Mandates Commission had found no anterior expression. In other words, either the Commission in previous Reports said too little, or in this Report it is saying too much. The Permanent Mandates Commission cannot have it both ways. What is the explanation for its apparent change of front? It would appear, undoubtedly, to lie in the effectiveness of Jewish propaganda at Geneva. That propaganda, both verbal and written, was this year ceaseless; and it has been successful. Much of the Permanent Mandates Commission's criticism rests, to all appearances, on nothing more than statements emanating from the Jewish Agency. Those statements were known to the British Government; they had been carefully weighed, and some had been discounted. It is with a certain dismay, therefore, that the Mandatory Power for Palestine sees the Permanent Mandates Commission accepting *ex parte* statements as the final truth. Yet there are lessons to be learned from this strange spectacle. The Permanent Mandates Commission is composed of men who are far from being unintelligent. Those men must have come to the conclusion that there was in Palestine last year, if not a breakdown of government, at least a lack of it. It was a conclusion shared by certain Englishmen, neither Zionists nor anti-Zionists, who deplored the rôle of mere umpire in Palestine to which the local Administration appeared to have resigned itself. That there are abundant explanations of, or reasons for, this apparent relegation is true. But virility in government is a boast of the Englishman, and he did not like even the appearance of its being placed in abeyance in Palestine. In so far, therefore, as the Report of the Permanent Mandates Commission emphasises the virtue of the saying that "Governments should govern," it may do good. That one should have to go to Geneva, of all places, for the finding of such emphasis is, perhaps, a reflexion on our time.

Into the details of the Mandates Comission's criticism, we do not intend to enter here, important though they are. Such questions as whether the outbreak was or was not premeditated, whether it was a revolt against the Mandatory Power or only against the Mandate, whether the Palestine Administration did or did not do all it could to settle the Wailing Wall problem, whether that Administration has done as much as it might have done for the agricultural population—these and other questions will be judged in accordance with one's estimate of whether the Permanent Mandates Commission had all the facts at their disposal, whether they remembered them all, or whether they saw, or see, them in a clearer light than is vouchsafed to the Mandatory Power. There is, however, one very serious aspect of the Commission's charge against the Mandatory Power that it has failed in important respects to carry out the Mandate. That the Commission could refer to the Mandatary's "immediate obligation" as being, simply, to place the country under such conditions as will secure the establishment of a Jewish National Home and the development of self-governing institutions is quite amazing. How the Commission could have ignored the phrase in the Mandate concerning "safeguarding the civil and religious rights of all the inhabitants of Palestine, irrespective of race and religion," passes comprehension. As the reply of the British Government says, this is "the core of the problem." It is disappointing in the last degree that the Permanent Mandates Commission should virtually have ignored it. Without question it is the ambiguity of the Mandate, and particularly the relation of facilitating the establishment of a Jewish National Home with the qualifications we have just quoted, which of necessity clips the wings of many idealistic measures. That Geneva should, through the Permanent Mandates Commission, have begun to criticise, is by no means a bad thing, but one has the right to expect such criticisms to be helpful. No country is so learned in the arts of governance that fresh lessons and knowledge are not assimilable, even acceptable, but such knowledge is better inculcated through the medium of experienced counsellors than of the doctrinaire schoolmasters which the Permanent Mandates Commission has on this occasion shown itself to be. One ray of light is worth a hundred lectures from Geneva. It is to be hoped that the Council of the League itself, which is to meet in a few days, will realise this.

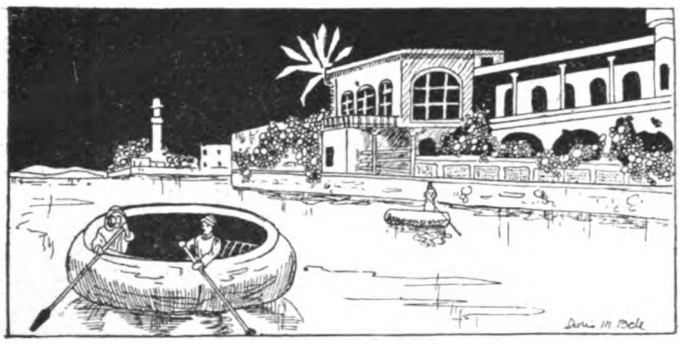
*The Near and Middle East

From Our Own Correspondents.



IRAQ.

Baghdad, August 10.

A Political Interregnum.

The last fortnight has produced nothing new in the political world. King Faisal continues to be interviewed in Europe, and we are informed what he is said to have said. Nouri Pasha al Said is expected back in Baghdad shortly—with what items of his collossal "mission" programme completed is not yet known. Sir Edward Hilton Young seems, on his return to England, to have given a wide publicity—with the usual repetitive and not too happy results on our local Press—to his impressions of Iraq. The bulk of the local Press continues to revile the Treaty: the cry for "free elections and no Government control" is heard from the usual clique of lawyers, precarious journalists, dismissed officials, and others of our patriots: meanwhile, the preparation of the Elections register, one supposes, is proceeding. In a country where truly repreesntative Government must for years remain (in Lord Curzon's phrase) a "grotesque illusion," and in the absence of a powerful and well-drilled party like the Wafd in Egypt, it is difficult to see any alternative to some Government "control."

In the Kurdish situation, there is no change to report. Jaafar Pasha, Acting Prime Minister, accompanied by two of his colleagues and by the Acting High Commissioner (Major Young) is, at the moment of writing, touring Southern Kurdistan.

The Oil Problem.

The scene of the vitally interesting oil-negotiations, involving I.P.C., B.O.D., A.P.O.C. (and perhaps much more of the alphabet than is known to the oil-less layman) has, of course, shifted from Baghdad to London, or more probably to the mid-Channel or mid-Atlantic ether, where wireless messages pass and repass. Rumours of a £3,500,000 loan, without interest and ear-marked for capital works, have been heard, but as yet from no credible source.

It is sincerely to be hoped, at least, that one part of the oil settlement will take a form to benefit the emaciated 1930-31 budget; and not less that the new coinage, for which plans and legislation are understood to be well advanced, may be able shortly to contribute its very perceptible profits to the Iraq Treasury. As things stand, the position of the public finances is no secret. Without panic, there is room for great seriousness. The two main coin-extracting Departments—of Customs and of Land Revenue—are both working to much reduced estimates, which facts will probably reduce again: and in spite of tangible (but scarcely fundamental) economies in the spending Departments, the rate of military expenditure is scarcely checked. Until when? One wonders.

Agricultural Depression.

The condition of the agricultural world is less gratifying. Of the world-wide slump in all the chief primary products the over-production, the lack of demand—there is no need to speak. Iraq is affected all along the line: all the more because two of its chief exports, wool and barley, are among those afflicted to-day by the very worst of the markets, while its dates, skins and lesser products are prejudiced by the universal lack of movement and purchasing power. The barley position, indeed, appears desperate; there is absolutely no buying, nor can the state of the London market make any possible at a figure which would give back to the Iraqi grower in most cases his bare costs of production. Meanwhile the grower's out-of-pocket expenses—his pump and its upkeep to be met in cash, his private borrowings, and his land revenue to be paid in cash—run on, and no light ahead is visible. The date crop may be of average size and merit; it will not be more, and it must anyhow be thrown on to a jaded market still overstocked with the unsold (and too often ill-packed and unattractive) dates of last year. Wheat is a shade brighter: that is to say, the sheer necessity to sell something is leading growers to accept a price at which export is just possible, and moderate quantities are being shipped.

The subject of a swing-over among agriculturists from the traditional low-grade cereals, which have so far covered 90 per cent. of Iraq's acreage, to better grades and to other types of produce—oil-seeds, hemp, and others still under consideration—is being keenly canvassed. Of the difficulties, it is enough to say that the better one knows the Iraqi peasant and land-owner, the greater they appear. Cotton remains under something of a cloud: can it ever succeed—even here, where all natural condi-

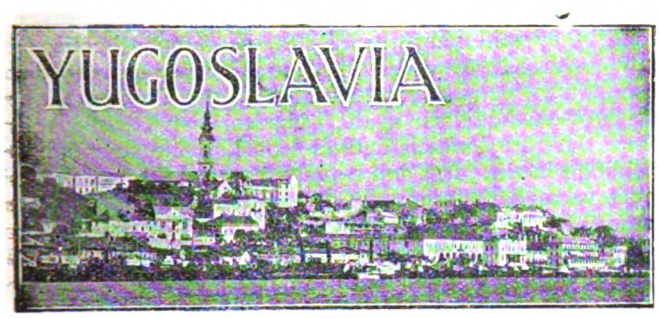
tions for success seem present—in face of the unteachable ignorance, apathy, suspicion, idleness, and the many other shortcomings of the *fallah*?

Meanwhile, the Agricultural College is closing down; the budget allotments for that Department are cut, one is told, almost to invisibility; and another of our very few scientific agriculturists is to leove the country. A considerable number of pump-installations put up since 1926—items in the amazing "pump-boom" of these four years—are bound to shut down. Their disposal, sited as they often are on tribal lands and under personal terms of agreement between tribesmen and capitalist, will raise delicate questions.

Weather and Health.

Predictions of a cool summer were well supported until the last week of July. Thereafter, the shade temperature rose to the vicinity of 115, and early in August added and maintained a further five degrees. Hot and gusty winds by night have been an unpleasant feature. The river (the lowest within all memory and record, and bound to fall still further) is at sunset too warm to freshen the bather.

In spite of these trials, public health is good. No epidemics are reported. Indeed, the plague-restrictions imposed by our neighbours of Syria and Persia on entrants from Iraq are now being relaxed, after their usual career of vexatious futility.



Belgrade, August 15.

The Eucharistic Congress.

On August 14 the Eucharistic Congress began in Zagreb. This Congress, apart from its spiritual significance for all Roman Catholics of the State, demonstrates the forces that the Roman Church has in Yugoslavia, and the attachment of the Catholics to their canons and rulings. The Roman Catholic paper of the Bishopric of Zagreb comments thus on the congress: "The present Eucharistic Congress is being held now, when the whole Catholic people is with its Church. The strength of the belief wiped out all that was not in agreement with the confessional traditions of the Croat people. This congress, therefore, is going to be a manifestation of faith: at present there is no one who would dare to advocate an anti-Catholic programme." The paper continues by publishing the statements of various Bishops to the same effect. They say: "Let the whole world hear that our people does not want to follow the way taken by certain persons. The day of the Eucharistic Congress will be the best manifestation against all the dark plots of inimical elements against the Faith and the Church."

This somewhat militant tone—for such a manifestation as a Eucharistic Congress—can be accounted for by the very interesting position in which the Roman Catholic Church is at present in Yugoslavia. A considerable majority of the members of the present Yugoslav Cabinet are believed to be faithful members of the Grand Orient (Free Masons) organisation, which is said to be inducing the Roman Church to see in the general measures now being taken in regard to all the four main Churches of Yugoslavia (Greek Orthodox, Roman Catholic, Muslim, and Jewish) special efforts to destroy the influence which the Roman Catholic church has over its faithful.

Church and State.

From the day the Dictatorship began it became clear that one main attitude would have to be taken in regard to the four different Churches composing, or, as it would, perhaps, be more correct to say, decomposing the present uniform Yugoslav State. In these measures, to which the Government proceeded gradually, a single common principle could be easily detected: the submission of the spiritual to the political side of the question, with a view to removing all that could interfere with the absolute domination of the State in all questions.

Though, at first sight, such a principle could seem to imply an absolutely equal treatment of all four confessions, the special conditions of Yugoslavia encourage the Government to act in different ways towards each separate Church.

The Jews.

The most liberal law—for which countless thanks have been sent from all over the world by Jews—has been promulgated by decree in regard to the Mosaic Canon. This can certainly be explained by the fact that the Yugoslav Jewish communities, wealthy and industrious, though not very numerous, have always supported the different Governments in power, and, therefore, needed more encouragement than restraint.

The Orthodox.

With the most important Church—the Greek Orthodox—things were not quite so easy. The Orthodox Church in Yugoslavia had always enjoyed a great measure of independence in all its activities, particularly in administering its great wealth, left by testament according to the old Serbian custom, in the form of "*Zaduzhbinas*." The attempt made in the spring of 1929 to transfer the management of church estate from the competence of the ecclesiasticals to that of the State (Ministry of Faith, which has now been merged with the Ministry of Justice) met with the strongest opposition of the Orthodox priests. The Bishops of Serbia threatened to tender a collective resignation, if the Bill, published in tentative form, were to become law. In view of such feelings, and considering, quite rightly, that it would be impossible to struggle with all churches at one time, the Government yielded, and on the day of the Slava of the old patriarch Dmitrye, published a decree regulating the position of the Orthodox church, according to the ideas of the clergy. This provisional victory of the clergy lasted, however, only to the day of the death of His Holiness Dmitrye. A few hours after his death a decree was published, by which the new Patriarch (for whom there were three candidates)—who is the supreme authority of the Pravoslav church—was henceforth to be elected by a body composed to a great part of Cabinet Ministers and high State officials. This would guarantee to the Government the choice of their own candidate. The Bishops objected very strongly to this, threatening not to come to the conclave at all, and to let the new Patriarch be elected by State officials only. Subsequently a change in the law was made. The Conclave of Greek Orthodox Bishops are now electing among themselves candidates, from whom the mixed body of ecclesiastical and secular members will elect three Bishops, one of whom is being presented by the Minister of Justice to the King to be appointed Patriarch. This complicated arrangement enables peace to be maintained between the Greek Orthodox Church and the State.

The Muslims.

The Church that has suffered the heaviest changes in its former status is the Muslim Church. Nothing remains of the former arrangements which made the Rais-ul-Ulama in his stronghold, Serayevo, a very powerful person. The Rais-ul-Ulama is going to be appointed – from the candidates selected not only by the Bosnian, but also by the more obedient Kossovo Muslim Shariats – by King's decree and on the proposal of the Minister of Justice. The residence of the Muslim head of the Church will be Belgrade, where there are very few Muslims, and the laicisation in regard to the Muslims will be, therefore, complete. Such strong action towards the Muslims is to be explained by the fact that geographically they hold the provinces which are subject to the most energetic Serbization, especially Bosnia, where the union of strong Muslims with the Croat Roman Catholics was a serious challenge to the aims of the State. Of this the Minister of Justice (M. Sershkitch), who is himself from Serayevo, must have been well aware.

The Roman Catholics.

In regard to the Roman Catholic Church, the direction from abroad by the Pope constitutes the main difficulty in a settlement. But the position of the Roman Catholics is considerably stronger than that of any other Church. It has been possible to "regulate" the position of all other three Churches by decree-laws, and to have as their heads, so as to speak, persons acting as Government Officials. In spite of all efforts, it proved totally impossible to adopt the same procedure with the Roman Catholics. No one wished to hear of any other way of settling its status in the State than by a Concordat. The Government have tried, while discussing the question of negotiations for a Concordat, to settle various questions, coming under the jurisdiction of the ecclesiastical authorities, by decrees of a general character for all four Churches. Such was the decree for religious tuition in the schools, which allowed the parents of the pupils to decide about it, as well as to choose whether the teacher should be a priest or a layman. This and other attempts to make *faits accomplis* of matters which are generally being settled by Concordats led to a real *kulturkampf* between the State and the Catholic Clergy. The Croat Clergy, in semi-official articles, were accused of supporting Signor Mussolini's aims, by championing the "alien" Roman Catholic Church, to which Archbishop Bauer, of Zagreb, in a Press statement under his own signature, said that all these accusations were coming from a dark international body of alien character—the Orient Free Masons—who were working throughout the world at the destruction of the Roman Catholic Church, which, far from being alien, was national in whatsoever State it existed. This same Bishop Bauer, isued on May 25 a message, read in all churches, bidding the faithful not to recognize in matters of religious education any other rights than those of the Pope, according to his last Encyclical to this effect. After some hesitation, the Government withdrew their law, and substituted an amendment allowing the church authorities to appoint the religious teachers. This was considered by all as a most favourable sign for the beginning of negotiations for a Concordat with the Vatican.

A Concordat?

The Archbishop of Zagreb—head of the Roman Catholic Church in Yugoslavia, called all Bishops to a conference in order to establish their position in these negotiations. This meeting took place on the day before the beginning of the Eucharistic Congress, and proved that the huge masses of Roman Catholics will be the champions of the decisions of their clergy. It is to be hoped that the decisions of the Bishops, which are to be kept secret for a certain time, will be less militant than their public statements in the Press about the aims of the Congress, and that the Concordat, which is one of the capital needs of Yugoslavia, will be delayed no longer —either by the exaggerated *étatisme* of the Government, or by the militant attitude of the Clergy. It remains to be seen, however, how it will be possible to combine the decision of the Roman Church to remain independent with the endeavours of the Government to submit it to their rule. It is a gratifying feature that H.H. the Pope delegated as his representative to this congress his Nuncio in Belgrade, Mgr. Pelegrinetti, who is known as one of the warmest champions for the early establishing of a Concordat and the giving to the Catholic Church here of a status, which, alone of all the four Churches, it does not yet possess.

CENTRAL ASIAN SOCIETY

(in which is incorporated The Persia Society.)

Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published.

The subscription of £1 per annum entitles members to a copy of each issue of the Journal, tickets for all meetings, and the loan of books from the library.

Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W.1

CYPRUS.

Nicosia, August 12.

Earthquakes at Limassol.

The town of Limassol has been disturbed by earthquakes, which began with an alarming shock on July 25, between 9 and 10 p.m. All the inhabitants rushed from their houses and remained in gardens and open spaces, where they still pass the nights, as minor shocks and tremors have continued daily. No damage has been done to buildings. In the summer of 1896 there was a similar series of earthquakes, in the Limassol district, of a more serious nature, which caused considerable damage to buildings in the town and a few villages. All native residents vacated their houses. The Government lent tents, and the military authorities kindly placed at the disposal of townspeople the camp of Polemidia, about three miles distant from the town, with numerous wooden huts and storehouses—the troops being then in summer quarters on Mount Troodos. Government offices and Courts were held for many weeks in the open air, and in sheds. The present fears are increased owing to accounts of the recent calamities in Italy.

The Crown Prince of Sweden.

It is understood that the Prince, who has, it is said, desired for some time to visit Cyprus, and who is keenly interested in the work of the Swedish Archæological Mission, is likely to arrive about the second or the sixteenth of October. He will, it is believed, visit various places of interest, including those in which excavations are now proceeding, and inspect the objects which have been discovered. His visit will be strictly private.

The Bishop of Papho.

The arrival of the prelate Leontios has been welcomed with remarkable enthusiasm. A long and interesting speech, delivered by His Eminence on the occasion of his enthronement, has been published. He has, through the Press, expressed his thanks to the clergy and Christians of the Island who visited and welcomed him at all the towns and places through which he passed.

General News.

Rumours of various kinds are current—it is always so when the Governor is absent in England. They relate chiefly to alleged impending changes in the Island Constitution, and in the existing system of elections to the Legislative Council.

It is believed that part of the Mediterranean Squadron will visit the Island in September, and it is hoped that vessels will remain in the principal roadsteads of the Island for some weeks.

The dates for gathering the carob (locust bean) and olive crop are fixed by the Commissioners of Districts in which they are principally grown, for different areas, having regard to altitude and climate. The date for

Digitized by Google

beginning to gather in the Nicosia district is August 12 for carobs, and September 15 for olives.

The great fall in the value of shares in the Cyprus Asbestos Company creates the impression that the outlook is not favourable. The number of labourers employed this summer has fallen by some thousands.

ALBANIA.

Tirana, August 20.

A Shortage of Stamps.

Following a shortage of token money, Albania is now afflicted by a shortage of stamps. Only stamps of 1 Quidar (.01 gold fr.) are plentiful, these being 50 Quidar stamps over-printed with their present value. In consequence the stamping of letters is something of a problem, and letters have been recently sent out of the country bearing from 25 to 30 stamps each. Nevertheless, one is glad that the present issue of very ugly stamps appears to be coming to an end, and one hopes that the next issue will be more representative of the King; but it would be interesting to know whether the gum on stamps has any nutritive value.

Suppression of Papers.

The newspaper *Arbenia* has been suppressed and the Editor arrested, following the publication of an article adversely criticising Italo-Albanian relations and including certain inaccurate but not very serious statements. It must be added that Italy had nothing whatever to do with the affair, and that the initiative in the suppression of the paper was a spontaneous act on the part of the Albanian authorities. A few days earlier the sale in Albania of the *Dielli*, which is published in America and is the organ of the Albanian Nationalist society "Vatra," of Boston, U.S.A., was prohibited owing to an attack which it made upon the former Prime Minister Kotso Kotta and his Cabinet. In the Constitution it is laid down that the Press is free, provided no articles be published which are contrary to the interests of the State, a reservation which, however foreign to British principles it may seem (incidentally, there seems to have been taken recently a similar line with the Cypriot Press), is very necessary in a country where the Press is extremely ill-informed and where its readers are apt to attach an exaggerated importance to the printed word. Moreover, among a population which, owing to Turkish policy and neglect, is largely illiterate, a quite innocuous statement is rapidly exaggerated and distorted to a dangerous degree. While, therefore, the action against the *Dielli* seems unnecessary, one must agree that there is some justification for the suppression of papers which criticise foreign affairs of which they have only the most elementary knowledge.

EGYPT.

Cairo, August 23.

The High Commissioner.

The High Commissioner sailed to-day for England by the Lloyd Triestino S.s. Helwan. It is understood that he will be absent only a short time, but his departure may be taken as a clear indication that no developments of any importance are to be expected for the next few weeks. During his absence Mr. Reginald Hoare, Counsellor at the Residency, will act as High Commissioner.

A Much Debated Invitation.

Never can an invitation to the Residency have given rise to so much comment and so much poitical deduction as the invitation which Nahas Pasha and Nokrashi Effendi received from the High Commissioner to lunch with him on August 18. The fault rests with the Wafd, which, as usual, tried to make political capital out of what was merely intended as a social courtesy. Its effort to exploit this invitation with the Egyptian public as an outward and visible proof of the support of the British Government, after a short lived success, fell, however, altogether flat. Indeed, it may be said to have had somewhat of a boomerang effect, for two days later Sidky Pasha was bidden to the Residency, and, by contrast with Nahas Pasha, who had been invited with other guests and was afforded no opportunity for conversation of a confidential nature with the British representative, he lunched quite privately with Sir Percy Loraine and remained for over an hour in private conversation with him afterwards. In addition the members of the Cabinet lunched on August 21 with the King, a significant indication of the relations existing between Palace and Cabinet, for invitations to meal at the Royal table are usually confined to feasts and special occasions. And as a final reply to the Wafd propaganda, the High Commissioner was the guest last evening at a dinner given in his honour by the Minister of Foreign Affairs, Abdel Fattah Pasha Yehia, at his residence.

Foolish Wafd Propaganda.

The new Egyptian Press Bureau inaugurated in London by Makram Effendi Ebeid for the carrying on of Wafd propaganda has not been very happy in its initial efforts. Much satisfaction has been expressed, not merely in non-Wafdist circles but also in the European communities, at the very effective manner in which his claims and insinuations have been answered in *The Times* and *The Daily Telegraph* and the true nature of the activities of the late Wafdist Cabinet has been revealed.

Similarly the statements spread in London on the imminence of a change in the electoral law and of the intention to introduce an absolutist régime have been knocked on the head. The unfounded nature of these rumours intentionally circulated by the Wafd to attract sympathy for its case becomes evident when it is stated that even to-day the Egyptian Cabinet has no concrete proposals for the much-talked-of reforms before it, that Sidky Pasha and his advisers are still investigating the manner in which such reforms could be made in the best interests of the country, and that the main preoccupation of the Cabinet has been, and still is, the economic situation, which by its effect on the whole mass of the population must take precedence over political questions in the programme of the Government.

Nahas Pasha's Pension.

Unusual interest was shown this week in the publication of a decision of the Council of Ministers reducing the pension which Nahas Pasha has been drawing. It appears that after the fall of the Zaghloul Cabinet in November, 1924, Nahas Pasha, finding that the Government refused to count as service towards his pension the period between his dismissal from the Courts for political activities and his nomination as Minister of Communications in that Cabinet, brought an action in which he called upon the Egyptian Government to fix his pension at £E1,500 a year. This action was still before the Courts when he became Prime Minister in March, 1927, and it was arranged in the following June that in return for his formal renunciation of his claim a special pension of £E1,000 a year should be accorded him. When, however, Nahas Pasha became Prime Minister for the second time, a Note was presented by Makram Ebeid Effendi, Minister of Finance, to the Council of Ministers expressing the opinion that Nahas Pasha was entitled to a pension of £E1,500 a year. The Council approved of this and ordered payment to him with retroactive effect from the date on which the Zaghloul Cabinet resigned in November, 1924.

According to the State Legal Department, this decision of the Council of Ministers was *ultra vires*, particularly as the special pension of £E1,000 a year was accepted by Nahas Pasha in consideration of his abandoning his claim to a pension of £E1,500 a year. This is given by the Council of Ministers as an explanation of its decision to re-establish the special pension of £E1,000 a year and deduct from his pension in monthly instalments the amount paid to him for arrears last January.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 7.

"The Era of Agony."

Those words—"the era of agony"—have appeared in a newspaper of this week as a description of the present state of India. They are apt enough. Hopes are still entertained that an era of peace (it might not last long, it must be remembered) may be ushered in by the success of the Sapru-Jayakar negotiations with the Congress leaders.

As to the negotiations themselves, the cables will have told you what has happened so far—how Sir Tej Bahadur Sapru and Mr. Jayakar first discussed matters with Mr. Gandhi at Yeravda; how they then proceeded to Allahabad, with a paper by Mr. Gandhi that they were to show to Pandit Motilal Nehru and Pandit Jawaharlal Nehru; how Mr. Jayakar returned alone to Yeravda; how he has again departed thence. The Viceroy was requested to let the three leaders be together, free to consult each other, at Yeravda, and to this His Excellency is understood to have agreed.

The Bombay Arrests.

The chances of the peace negotiations ending successfully have not, Mr. Jayakar thinks, been improved by the arrest of Pandit Madan Mohan Malaviya, Mr. Vallabhbhai Patel (not the ex-President of the Legislative Assembly, but his brother), and others in Bombay last Saturday, and that last "agony" has provoked an utterance from Mr. Jayakar that is indicative of much. From the course events had taken in Bombay, he has argued, addressing a Press Correspondent, that neither the Government nor the Congress wanted peace. He appealed, he went on to say, "specially to the leaders of the Congress, for they know that there are few among the officials besides His Excellency the Viceroy who want peace, not to contribute anything towards efforts which would undermine the prospect of a settlement." The suggestion there is, that Mr. Jayakar knows of efforts that are being made by officials to prevent a settlement. If he was cross-examined as to that, he would doubtless admit that he knows of no actual efforts. There can have been no such efforts. What there may very well have been, and be, is a strong wish in the mind of many an official, as of others, that a settlement now may not be bought at the cost of surrendering, even before the Round Table Conference begins, the whole case for the *gradual* transforming of government in India that the Statutory Commission has pleaded for. The officials, thinking of the trade of the country and of the public finances, must be anxious as any can be for peace during as much of the rest of this year as possible.

What appears to be in Mr. Jayakar's mind is that the only settlement that the Congress leaders would accept, the only possible settlement therefore, would be one bought against the will of those officials whom he thinks of as standing out against the Viceroy; bought, that is, by a surrender beforehand, as those officials would judge it, of all chance of reasonably good government in India in future. They may be of much the same mind that Mr. Lloyd George was of, when, in the last debate in the House of Commons, he said that "he felt that the Conference was being manœuvred towards an objective which had already been determined in India, if not here, and which was more than half concealed from English opinion, in the hope that, when the objective was reached, it might be said, 'It is too late to learn.'"

"Talking Themselves Farther On."

I have called attention before this to the way in which the Indian lawyer-politicians, if they are not kept in hand and guided, as they might have been throughout these critical months, will "talk themselves farther on," from new point to new point, from one claim to yet another claim. This will be made clearer, if I quote again words that I quoted in my letter of February 7, 1929. They had been spoken a few days before by that same Pandit Motilal Nehru, to whom it is now feared that the heads of the Government may surrender. "I must express my full agreement with His Excellency," said Pandit Motilal Nehru at the beginning of February of that year, "when he says that what all people must desire is a solution reached by mutual agreement between Great Britain and India, and that, in the present circumstances, the friendly collaboration of Great Britain and India is a requisite and indispensable condition to obtain it." Pandit Motilal Nehru has since talked himself many leagues beyond that. He has been "helped" by what Lord Lloyd, in his recent speech to the Central Asian Society (reported in The Near East and India of July 17), called "the Government's policy of hesitations and ambiguous announcements and by the unhappy raising of hopes which were clearly incapable of any early fulfilment."

The Trade Paralysis.

I recently quoted from the Finance Member's review of the present financial position of India. We have since had a review by the Viceroy himself. "The civil disobedience movement," he said, in replying to the all-India landowners' deputation, "has resulted in a complete loss of confidence in all business centres. No one in these conditions wishes to enter into new contracts. Shopkeepers and retail traders do not wish to lay in stocks, and as a result we see, for example, that the cotton mills of Bombay cannot dispose of their cotton goods, many mills have had to close down, and as a result of the general position the mill-owners are not able to purchase Indian cotton. From this the growers of cotton directly suffer, but others suffer too. The loss of profit and the unemployment which result mean that the purchasing power of the country for grain and other agricultural products is reduced. I have referred especially to Bombay, but the effects are general, and it is no exaggeration to say that the civil disobedience movement has produced a paralysis of business in all the industrial and commercial centres of India, and that this must react disastrously on agricultural interests of all kinds by destroying the market for their produce. Moreover, it reacts unfavourably on the whole world, for India contains one-fifth of the world's population, and economic stagnation in India must have world-wide effects."

What will happen when John Bull takes in how badly he may be hit in his pocket as the result of weak government in India?

Dialectical Skill.

There has been that word of Mr. Jayakar's about the attitude of officials. I wrote this on April 25, 1929: "There are three main schools of political thought in India; the Indian politicians, the men of business, represented by the Associated Chambers of Commerce and the European Association, and the officials. The views of the last are those of which the general public hears least. The officials either speak *in camera* before such bodies as the Statutory Commission, or they do not speak at all. I have just had an opportunity to learn the views of an official holding high office up-country; for he and I were fellow-travellers for a few hours at the end of last week. In his view the curse of the situation is that the Indian politician is supremely able as a dialectician and debater, far more able than the Englishmen in the Assembly who are put up to answer him, but has very little other capacity, and knows least of all how to govern.'

I thought I might quote that; first, because of that word of Mr. Jayakar's about the attitude of the officials; secondly, because this week another Indian publicist has given us this to read: "The worst of dialectical skill is that in time you come to think it is the only thing that matters." The writer was thinking, of course, of our politicians. He was writing of the current peace negotiations, and in the sentence before had: "Their task has not been lightened by inconsiderate utterances of many apparently responsible publicists. And, wonder of

Digitized by Google

wonders, Mr. Sastri is among that number, who think that the raising of those academic issues so dear to the subtle Madrassi intellect can serve other than to darken the problems before us."

Constructive Work.

I ended last week with some remarks about the deplorable failure of India's public men to accomplish any of that constructive work that the crisis calls so loudly for. This was in my newspaper of the day but one after: "It has been observed time and again that the internal problems clamouring for solution are very urgent; yet, whether this side or that is to blame, we are in no way near a solution of the grave issues between the Hindus and the Muhammadans and those between the other minorities. This question also depends for its solution on a workable understanding as to what precisely is to be the future government of this country. An examination of the Simon Report from this point of view has never yet been attempted, for obvious regrettable reasons, by any party of nationalist politicians."

INDIAN COMMERCE AND THE BOYCOTT.

(From a Correspondent.)

Amidst the welter of criticism directed at the Government of India in the present crisis, an absorbing problem to students of the situation to-day is to try to reconcile the apparent weakness of Government's actions with the almost unanimous manner in which the leading, and formerly loyal, merchants, particularly on the Bombay side, are committing economic suicide. The critical observer is driven to the belief that the forces with which Government have to contend are greater than they are commonly supposed to be.

In previous crises connected with Congress propaganda, there has always existed a large section of the trading community which, while professing sympathy with Indian aspirations, has refrained from active assistance and maintained an outwardly loyal attitude towards the Crown. This attitude has now ceased to exist, and those who formerly adopted it, either because of a change of heart or else fear of the consequences, are to-day among the more vocal supporters of the extremists. This spectacle of merchants, formerly loyal, and in many cases possessing and using the outward symbols both of Government's pleasure and their own common sense, must be distressing to the well wisher of India and is sufficiently serious to need more than a passing thought.

Although the economic losses arising out of the present situation must be felt primarily by those least able to afford them, and at the same time least capable of expressing their own views on the subject, some portion, and that no inconsiderable one, must fall on the shoulders of the Indian merchant community. To the extent, therefore, that their actions are not dictated by intimidation, credit must be given to them for their willingness to make sacrifices for a cause, however mistaken it may be.

A close examination of the data available shows that the majority of the merchants are sincere in their wishes to advance the cause of their mother country. And because of this sincerity, it is vital that Government should be lenient in dealing with them, more especially as their attitude cannot be reconciled with their conscience. To this extent sympathy must be extended to the Viceroy in what is obviously a task of unusual magnitude.

But it is equally clear that intimidation is the main factor that is now sustaining the economic boycott, whatever may have been the reason for its support in the first flush of its creation, and the test of the efficacy of Government's past actions will be their ability to hit the psychological moment for checking with all firmness methods that are no longer palatable to the majority. Signs are not wanting that the trading community is growing tired of the outward and visible signs of revolt. From this to a commonsense view of the whole situation is but a short road.

THE PRINCES' DELEGATION TO THE CONFERENCE.

Below are appended a series of brief biographical sketches of some of the leading members of the Indian States' Delegation to the Round Table Conference, which, as reported in last week's issue, will be headed by His Highness the Maharaja Dhiraj of Patiala.

H.H. the Maharaja of Kashmir is the Ruler of one of the greatest States in India, with an area of 80,000 square miles, a population of 2½ millions, and an important frontier towards Central Asia. Since he succeeded his uncle, the late Maharaja, in 1925, His Highness has introduced notable reforms in his State. He has been for some years a member of the Standing Committee of the Chamber of Princes; and now holds the position of pro-Chancellor of the Chamber. The Kingdom over which he rules is famous all over the world for its beauty; and is visited every year by thousands of English people, who desire to escape the burning heat of the plains. His Highness is an excellent all-round sportsman; he is keenly interested in shooting, fishing and polo. The State possesses some of the greatest natural resources of any territory in India; and under the Maharaja's wise guidance these are being scientifically developed for the benefit of his people.

H.H. the Maharaja the Gaekwar of Baroda succeeded to the throne of this important State in 1875. His rule has been notable for the number of reforms which he has introduced into the administration; and his progressive views have won for him an honourable place among the most enlightened statesmen in India. He was one of the pioneers of free and compulsory education, of village libraries, and of travelling dispensaries. He displays a keen interest in the education of women. His subjects number nearly two and a quarter million people, and the area of his territory is 8,000 square miles.

Like his brother Prince, the Maharaja of Patiala, Major General H.H. the Maharaja of Bikaner has been associated with the Chamber of Princes from the earliest days of its inception. He was the first elected Chancellor of the Chamber, an office which he held for five years. The Maharaja is also an extremely distinguished soldier. He served with the British Army in China in 1901; and played a very prominent part in the Great War. He represented India at the Imperial War Conference in 1917-1919; and he was amongst the representatives of the Imperial War Cabinet and of the Peace Conference of 1919, and is a Freeman of the Cities of London, Edinburgh, Manchester and Bristol. He is about to proceed to Geneva to head the Indian Delegation to the League of Nations, being the first Indian Prince to occupy this position. He will also represent India on the Imperial Conference of 1930. His territory is very large—23,000 square miles—but is sparsely inhabited by hardy desert-dwellers, who number nearly three quarters of a million.

H.H. the Ruler of Bhopal is one of the youngest representatives of the Indian Princes upon the Round Table Conference, since he was born in 1894. Before he came to the throne, His Highness went through the full course of University education at the Muslim University of Aligarh. He then worked as Chief Secretary to Her Highness the late Begum of Bhopal; and on her voluntary abdication, in 1926, succeeded her. His Highness of Bhopal is an extremely energetic Ruler, who has introduced many reforms into his State. He is also amongst the finest polo players of the Empire. He is generally

regarded as perhaps the most prominent of the younger generation of the great Princes of India. The State is nearly 7,000 square miles in area, the population numbering about three quarters of a million.

H.H. the Maharaja of Alwar belongs to an extremely ancient Rajput family. He rules three quarters of a million people, and his State is more than 3,000 square miles in area. He was among the first of the Indian Princes to interest himself in the Chamber; in which his striking personality and remarkable powers of debate have kept him always to the forefront. His Highness is a profound student both of Eastern and of Western philosophy, and a great sportsman. His troops served in the Great War, and he himself was the Representative Prince at the Imperial Conference of 1923. He officiated as Chancellor of the Chamber of Princes while the Maharaja of Patiala was in England in 1928 in connection with the Butler Committee's enquiry into the relations between Indian States and the Crown. He is a famous polo player, and his team won the Open Cup at the Delhi Durbar of 1903

H.H. the Maharaja Jam Sahib of Nawangar, better known to the English-speaking world as "Ranji," has been a member of the Standing Committee of the Chamber of Princes since the inception of this body. Although perhaps best known in England as a sportsman and above all as a cricketer, His Highness the Maharaja Jam Sahib is recognised by his brother Princes as being among the most enlightened of the present-day Rulers of Indian States. Since he ascended the throne of Nawanagar in 196, His Highness has greatly increased the material prosperity of his State, and has devoted great attention to the educational and medical welfare of his people. He takes a leading part in directing the policies of the Chamber of Princes. The State, which has excellent harbours and a long seaboard, is just under 4,000 square miles in extent; and the people number some 400,000.

H.H. the Maharaja of Rewa is the youngest of the Princes' Delegation to the Round Table Conference, being born in 1903. His Highness's State is a large one in Central India, and contains great natural wealth in forests. The Maharaja of Rewa is known as among the greatest tiger shots in India; but his enthusiasm for sport does not prevent him from being an energetic and able Ruler, who has already done much to improve the condition of his people. He is keenly interested in the politics of the Chamber of Princes; and stands for a very influential body of opinion among the Indian States. The area of the State is 13,000 square miles, and the population numbers a million and a half.

H.H. the Ruler of Sangli is among the most progressive of the Maratha Princes. He has served for several years on the Standing Committee of the Chamber of Princes, of which he is at present a substitute Member. His Highness has devoted much attention since he succeeded to the throne to promoting the educational and social welfare of his people. His State is generally regarded as being among the most advanced of the smaller States in India. He has done much for the education of women in his territory; and has greatly increased the medical facilities available to his people. The State is about 1,000 square miles in area, and the inhabitants number a quarter of a million.

H.H the Maraja-Rana Sahib of Dholpur is the Ruler of a small but ancient State, with an area of 1,200 square miles and a population of a quarter of a million. He takes a keen interest in the affairs of the Chamber of Princes; and has for long served, with short intermissions, as a member of the Standing Committee of that body.

A telegram from the Viceroy, Education, Health and Lands Department, to the Secretary of State for India, dated August 20, states: Rainfall for the week ending August 20: Excess: Bay Islands and United Provinces (East). Normal: Burma, Assam, Bengal, Chota Nagpur, United Provinces (West), Central India (East), Mysore, Madras (South-East) and Madras Deccan. Fair: Orissa, Bihar, Kashmir, Konkan and Malabar. Scanty elsewhere. Monsoon weak generally.

INDIAN NOTES

(Continued from page 226.)

assessment due on their lands, and the cost of the maintenance of their families. In Sind particularly the dispersion of the well-to-do Hindu families of Larkána and Shikarpur among the villages, owing to the flooding of these towns afforded temptations for looting by the Muhammadan agricultural labourers, which were too strong to resist. In the cities the commercial depression has been at least equally destructive in its effects. The numbers of the blackcoated clerks and of other young educated men thus unable to find employment have formed the most favourable and the most desperate recruiting ground for picketting and civil disobedience. The attitude of Gandhi's followers, and the attempt to boycott foreign goods, can of course only make the situation worse, and postpone indefinitely the recovery which would otherwise be expected when the general improvement in world conditions comes, as it must surely soon come. It may be hoped, without perhaps much confidence, that the agitators will learn wisdom, but for the present it should be remembered that much of the discontent in India is due to conditions which no government can control, but which have unfortunately been made use of in India by the more unscrupulous class of politician. At the same time, it is unfortunate, as a correspondent pertinently remarks on another page, that one of the greatest differences between the present crisis and previous movements under the same ægis, is to be sought in the attitude of the Indian mercantile community. Formerly a large section of the latter, "while professing sympathy with Indian aspirations, has refrained from active assistance and has maintained an outwardly loyal attitude towards the Crown.' To-day, instead, particularly on the Bombay side, we have the unedifying spectacle of "merchants formerly loyal, and in many cases possessing and using the outward symbols both of Government's pleasure and their own common senses, among the most vocal supporters of the extremist movement." That the development has greatly increased the Government's difficulties is unquestionable, but it is equally plain that, whatever may have been the original cause of the merchants' *volte face*, intimidation is the real reason for the maintenance of their present attitude, and already there are unmistakeable signs of revolt. From this to a more commonsense view of the whole situation is, as our correspondent remarks, "but a short road."

OBITUARY.

MR. GEORGE GALL SIM.

The death of Mr. George Gall Sim, deputy chairman of Vickers Limited and of Vickers-Armstrong Limited, which occurred last week, after a brief illness from pneumonia, complicated by malaria, will be a severe loss to a wide circle of friends, both in India and and this country. Although only in his 53rd year, Mr. Sim, who retired from the Indian Civil Service four years ago to take up a business career, had already achieved unusual distinction in the wider field where his genius for financial administration, to which his work as Financial Commissioner for Indian Railways will always be a lasting monument, was allowed full play.

If his part in the separation of the railway finances from the general Budget of the Government of India was, perhaps, his most outstanding achievement, Sim has left a permanent mark upon the financial history of India in more than one direction. Both as Chairman of the Municipal Board of Cawnpore from 1912 to 1917 and, on his transfer to the Central Government, his appointment as the first member of the new Board of Inland Revenue, he early displayed in a notable degree the same qualities which afterwards enabled him to play his part with such conspicuous success in the reorganisation and rehabilitation of the State Railways, of which the Financial Convention was only one of the most important aspects. As Sir Clement Hindley, who as Chief Comissioner of Railways was perhaps most closely associated with Sim during that strenuous and difficult period, writes: "In spite of the fact that he had to be a ruthless agent of economy, he never failed to keep the friendship and respect of those with whom he worked."

His blunt and direct methods, in speech and action, and dry humour often converted his most obdurate critics into the strongest supporters of the official policy, and his influence with Indian politicians of all parties was probably greater than that of any other civilian of his time. There was general regret on the part of his colleagues, non-official legislators and the Indian and European commercial communities when his retirement in 1926 was announced.

Lord Lloyd has returned to England from the Continent.

Sesostris Sidarouss Bey, Egyptian Minister to Belgium, arrived last week at the Hyde Park Hotel.

The Bishop of Bombay left London on August 21 on his return to Bombay.

The Hon. Lady Schuster is expected to arrive in London this week from India.

Sir Edward and Lady Boyle have returned to England from their sojourn abroad.

King Faisal of Iraq arrived in Berne last week from Dijon.

Sir Percy Loraine, High Commissioner for Egypt, sailed for London on August 23 on short leave.

Ridvanbegoglu Khusrev Bey, the newly appointed Turkish Minister to Persia, has left Turkey to take up his post in Teheran. He is travelling *via* Batum.

The Persian Minister of Justice, M. Davar, accompanied by M. Sadigh Aalam and Dr. Guiah, has left Teheran on a visit to Berlin and Paris.

Major and the Hon. Mrs. Ralph Glyn, who had been on a cruise to the Baltic and Norway, returned to 22, Manchester Square on August 21.

Sir Stanley Jackson, Governor of Bengal, and Lady Jackson, will leave London next week on their return to India.

Earl Winterton left on August 21 in the Toledo for Lobito Bey, whence he is going to the Belgian Congo and Northern Rhodesia. He will return to England at the end of October.

Sir Herbert and Lady Samuel returned to 35, Porchester Terrace on August 19 from their cruise to the Mediterranean. They have now left London for the country, where they will remain until the middle of September.

It is authoritatively announced that Mr. H. St. John Philby, who since he resigned from the post of Chief British Representative in Trans-Jordan has been carrying on a business at Jidda, has embraced Islam, and that he is now staying at Taif.

Mr. A. V. Alexander, the First Lord of the Admiralty, accompanied by Rear-Admiral Chetwode, Naval Secretary, is now on a visit to Malta, the headquarters of the Mediterranean Command. Mr. Alexander, who will be away until about September 14, will discuss naval matters with Admiral Sir Ernle Chatfield, who recently took over the command.

School of Oriental Studies, London Institution

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY

THE IRAQ FINANCIAL AGREEMENT.

It is officially announced that Notes were exchanged in London on August 19 between Sir Francis Humphrys, High Commissioner for Iraq, and Nouri Pasha al Said, Prime Minister of Iraq, embodying the separate Agreement on financial questions referred to in the second Exchange of Notes appended to the Anglo-Iraq Treaty signed on June 30, 1030. The Notes will be pubished in due course.

Mr. W. A. Coote, an official in the Air Ministry, arrived at Karachi on August 23 from Iraq in connexion with the proposed flight of the R101 to India.

Tewfik Rushdi Bey, Turkish Minister for Foreign Affairs, left Yalova on August 24 for Istanbul on his way to Ankara.

Members of the London Choral Society, who are touring in Central Europe and the Balkans, last week visited Belgrade, whither they had proceeded from Bled.

It is stated that negotiations are in progress between Persia and Italy, France, Germany, the United States, and other countries with a view to the establishment of regular wireless communications with Persia.

The Maharaja of Patiala, who is heading the Indian States delegation to the Round Table Conference, sailed from Bombay on August 23 for England in the P. and O. liner Macedonia.

The death is announced of the Rev. G. W. Horner, the eminent Coptic Ethiopic scholar. Among the books which he edited were: "Coptic Versions of the New Testament," "Coptic Consecrations of Church and Altar," and "Ethiopic Statutes of the Apostles, or Canones Ecclesiastici, and Coptic-Sahidic Version of the Gnostic Pistis Sophia." At the time of his death—he was 81 years old—he was engaged on the Egyptian New Testament, of which the Clarendon Press had printed eleven volumes.

Princess Helen, accompanied by her little son, Prince Michael, has paid a visit to the British cruiser Curacoa, the flagship of Rear-Admiral Davies, which, with the destroyers Ardent and Antelope, is now lying at Constantza. The crew were paraded on deck and the Princess and the boy Prince were greatly interested in all they saw. On August 21, Admiral Davies, accompanied by two senior officers, was received by King Carol at Sinaia. On August 23, he and the officers of the squadron were entertained by the Government at a banquet.

Book Review

AN INCOMPARABLE AUTOBIOGRAPHY.

"BENGAL LANCER." By Francis Yeats-Brown (London: Gol'ancz. 9s.)

At last it has come—the perfect autobiography of the Englishman in the East. We use the word "perfect" in the modern technical sense, as implying, that is, that waste by-products have been eliminated, and that the essence of experience alone remains. So far from being a collection of "snippets," these sketches of life in India, Mesopotamia, Turkey and so on are marvellously linked up. Major Yeats-Brown has achieved something very memorable. In the purely literary sense his is a book that stands out in dazzling distinction beside a melancholy pile of Eastern "memories" and "autobiographies." As mere photography his book is superb; as prose it is almost unique.

The author of this book begins his story in 1905, with an account of his experiences with his Regiment on the Frontier, and ends it with his attempt, a few years ago, to penetrate the mysteries of Yoga in India. The theme is a dual one: exaltation in the physical delights of open-air life (pig-sticking, polo, and the rest of it), and progressive curiosity about the mind of the Indian. Towards the end of the book this dualism appears to be renounced; and, at the expense of the interest of the ordinary reader (though certainly Major Yeats-Brown will find many readers out of the ordinary), concentration is made upon Hindu philosophy, or, rather, upon a section of that philosophy. The variations on this theme are composed with marvellous brilliance; there has scarcely been since the War finer descriptive writing of battle and soldiers and manly delights.

But for all his gifts of representation, Major Yeats-Brown succeeds only in raising clouds of vagueness (and, consequently, of doubt) about the value of striving to attain by Hindu methods to that physical and mental command which would, if generally attained, usher into the world universal peace and love. He writes of the Upanishads as a devotee rather than as a scholar; nor can it be said, for all his evident sincerity, that he here excites the reader as he has previously excited him in this book. As if conscious of his failure to make the reader comprehend his position, he adds an Appendix, the more fully to explain what is meant by the study of Yoga. He believes, he passionately believes, that he has had a glimpse of the Truth, that the Curtain, if only at brief intervals, was lifted. His resolution to find a Solution was urgent and implacable. But has he unlocked the Door?

Let us, moved by his unwearying quest, ponder and postpone answer. Enough for the moment that he has given us a book in a thousand, one that as propaganda has no value whatever, but for its human and literary qualities must be long cherished.

THE WEEK AT HOME

London, Tuesday Morning.

The "Ashes."

Well, we have lost the "Ashes." Australia comprehensively beat us last week. There is no explanation of our defeat except that the visitors were the better side. When you have talked about the weather, bad luck, the Selection Committee—or any other inexhaustible subject—the blunt fact remains that the Australians were the better team. There was not a side to be found in England to cope with them at timeless cricket, revile the Selection Committee how you may.

But it must be noted that this Test Match business is extremely fatiguing. Most unfortunately, the newspapers "featured" it. It became a stunt. Hence there was widespread hysteria. People who hardly know how to spin a ball trumped out their opinions on this or that cricketer; this one was a hero, that one a miscreant or nincompoop. It was nauseating, this enveloping of cricket in the atmosphere of professional football. Of course it has now passed; the miserable experts who could tell you how to play Grimmett are already "spotting" the winner of the English Cup. The newspapers, if we did not know it, have seen to it very thoroughly that the Test Matches are over.

Time and Space.

What is going to be done about English cricket? Must it, for the sake of hopefully challenging Australia in 1932, completely change its style? Must the boy at school be given "lines" if, unlike Bradman, he lift the ball in the air? Is county cricket to be sacrificed to the den ands of Test "probables"? Shall we assiduously begin to train young cricketers in order that they can endure a week of continuous cricket as easily as they do a two-day match? As matters now stand, we stand no chance of regaining the "Ashes" in Australia next time.

Something, obviously, will have to be done. But let the M.C.C. go its ways. We shall never generally adopt the "timeless" attitude to cricket. Our climate alone forbids it. It is, moreover, alien to us. Our Club cricketers, then, will continue to get caught in the country, while our Olympians at the head of things may, if it please them (and it won't) continue to tap them away to the on for a single.

On the Irish.

Of all Celts, said a lecturer at the Cambridge Summer School recently, the Irishman has suffered the greatest misconception. This is undoubtedly true, because few people know of what the real Ireland does consist. Most people in England, said Mr. Hardman, saw in Ireland one only of three things—a gunman, a colleen, or a clown.

That is delightfully false, but near enough to the truth to prompt an inquiry into the sources of the average Englishman's knowledge of the Irish. Those sources are for the most part literary—Synge, Shaw, Yeats, O'Casey, and so on. From such writers one gets in abundance the contradictoriness of the Irishman—that trait which, because of its incomprehensibility, makes the practical Englishman simplify the Irish character down to one quality, the poetical, the fanatical, the beautiful, and so on.

It is, by the way, worth remembering, what Mr. Arnold Bennett reminded us of the other day, that in literature written in English Irishmen nearly everywhere lead. The genius of the race seems inexhaustible.

Alter Ego.

Hajji Amin-Zarb, a deputy in the Persian Majlis, has returned to Teheran after a long sojourn in Europe.

It is announced from Teheran that Mirza Hasan Sayid Taqizadeh, recently Persian Minister in London, will work four days a week at the Ministry of Finance, and two days a week at the Ministry of Communications.

TARSUS: A NEGLECTED SHRINE.

By R. H. Beadon.

There are few shrines in the Christian world that have not their own special devotees. Throughout both Western and Eastern Christendom are many places hallowed by the memory of some apostle, saint or martyr which have attracted, and continue to attract, the pilgrimage of the faithful. Though many of these spots are connected with their heroes by legend alone, they serve to fulfil certain of the aspirations and needs of mankind. The world in general would be the poorer for their disappearance.

These facts make it at least curious that the birthplace and early home of the greatest apostle and preacher of the Christian faith is almost wholly neglected. Tarsus, though somewhat out of the beaten track, is not inaccessible. And the country in which it lies is not without interest to the archæologist or even to the less learned.

There were seven in our party when we landed one beautiful September morning from the Italian steamer Milano at Mersina, in Cilicia. Our boat was remaining in port until late that evening, so we had the best part of a day in which to explore the neighbourhood, and we all agreed that Tarsus, some twenty-five miles distant, should be our objective.

Turkish passport formalities under the post-War régime are complicated, but having eventually satisfied the officials that we were harmless, we were allowed to land.

The town of Mersina, which contains from twelve to fourteen thousand inhabitants, was one of the dirtiest and most evil-smelling places imaginable. But it is well situated on level ground a few miles from the foothills of the Tarsus mountains, and its facilities as a port make it of some importance in that part of the world.

Our first difficulty was to make ourselves understood. The population, wholly Turkish, had no other language than their own. But we possessed amongst us some Arabic, and after a little delay found a boatman who, having lived at one time in Syria, spoke that tongue. He was annexed as our guide and interpreter, but when we explained our desire to visit Tarsus, we were met with a perfectly definite *non possumus*. In the first place, it appeared to be forbidden to any foreigner to leave Mersina without a special permit that could only be issued by the Chief of Police himself—which official was likely to be difficult to find. Secondly, there were no means by which we could be conveyed to our proposed destination, for no railway went to Tarsus. These obstacles sounded convincing enough, but we were not satisfied that they would prove insuperable.

As we were discussing the question on the quay, two cars came slowly down the street. We learned afterwards that they were the only cars in the place. One of these was a four-seater Citroen tourer of fairly good outward appearance. It was a vehicle of which I had my doubts. The other car was one of the most dilapidated-looking Fords on which I had ever set eyes. But we hailed them and lost no time in negotiating for their hire.

"Tarsus?"

"We are not going to Tarsus," came from both drivers.

"How much to go there?"

The two chauffeurs looked at each other and hesitated. Then the spokesman said firmly:

"Twenty Turkish pounds for each car."

This was the equivalent of some two pounds English, so we replied:

"*Bismillah!* It's far too much. We will give you ten."

A shrug of the shoulders and assent.

While this conversation was in progress I took the opportunity of examining the cars. The Ford looked incomparably the worse of the two. But appearances, as a good deal of travel in the Middle East had taught me, are apt to be deceptive. "When in doubt take a Ford," was a motto the soundness of which I had proved from experience. After all, the object of a journey is to get to one's destination: comfort is only a secondary consideration. I made up my mind then and there that with my section of the party I would travel by the Ford. Nor did I anticipate any difficulties in doing this, for I was confident that, given the choice, the others would go for the better-looking and more comfortable of the two vehicles.

"Which car do you prefer?" I asked casually.

"Oh! I think that one," said the other section leader, pointing equally casually at the Citroen.

"Right," I replied. "Now for fixing up this police *visé*. I'm told we shall be stopped otherwise at the exit of the town."

We packed ourselves in. Somehow the cars started, and we proceeded through devious lanes and by-paths to a comparatively imposing and modern building standing amid the usual heaps of rubbish and refuse. Preceded by our boatman, we entered, and were kept waiting some five minutes while a subordinate went to ascertain the whereabouts of the Chief of Police. This important personage turned out to be in his office. He was a youngish man, well-dressed in European clothes. His manner was supercilious. As a matter of fact, I saw him later just before our boat sailed in the evening, when, after dining remarkably well, he required some assistance to get him down the gangway. But it was early when we were seeking his official favours. He greeted us haughtily.

"Do you speak French?" he asked in that language.

"Yes, certainly," we replied in chorus, delighted to think that our Arabic struggles were over.

"Well, I don't," he replied shortly, and continued his sentence in Turkish. However, his bark was worse than his bite, and he stamped and signed our passports without demanding any fee for his services.

We started off.

I had travelled by such infamous apologies for roads in my time that the route to Tarsus seemed no real hardship. At any rate it had once been metalled, and as the weather was dry there was no chance of our becoming bogged. We drove through a flat plain—the foothills of the Tarsus being some miles to our left flank. The ground was well cultivated and a number of peasants were working in the fields. Cotton was the chief crop.

We had been going about half an hour when the Citroen car, which was leading, came slowly to a stop. It was true it had boiled over, but something internal seemed to be wrong also. I congratulated myself on my foresight in choosing the Ford. However, we were only delayed some forty minutes. Between them our chauffeurs produced sundry pieces of wire and string from their pockets, by dint of which they re-started the Citroen, and we jolted onwards and eventually arrived without further mishap.

Tarsus is a city of some twenty thousand inhabitants. It is prettily situated between some undulations of the plain with groves of oranges, fig, and other trees on its outskirts. The population is wholly Muslim—a strange phenomenon in the birthplace of the apostle who by his labours and journeyings played the chief part in the conversion of the Western world to Christianity. No Christian place of worship exists in Tarsus to-day.

There were, however, three Christians residing there when we paid our visit. These were the teachers at an American school which had been established there some twenty years before. We drove first to this establishment. Its work was, of course, entirely secular, since the Turkish Government strictly forbids any religious propaganda. Indeed, so many difficulties are put in the way of European educational establishments that the Principal informed us that they were contemplating

Digitized by Google

closing down there altogether. He had himself been there some twelve years and had a great affection for the Turkish people, but confessed that any real progress in the Western sense was very slow.

We inquired whether many European visitors came there. In reply, he produced a book in which were inscribed the names of most who had passed by. They were few in number and seemed to consist for the most part of *littérateurs* of various sorts. Some well-known names were among them, but I could not find that of Donn Byrne, whose brilliant work, "Brother Saul," gives, perhaps, the most complete characterisation of the Saint.

There are, of course, no traditional spots to be pointed out where Paul may have been born or where he lived or worked. But we went down to the placid Cydnus, by the banks of which he sat and practised his trade of tent-making. Tarsus in those days was a great centre of learning and culture. The Roman Emperor Tacitus died there, and the Emperor Julian was buried there, though the site of his grave is unknown. In a later age—in 833 A.D.—the Caliph Mamoun, who succumbed to a chill caught by bathing in the river, was likewise laid to rest in the town, which had been settled as a military colony and frontier post by the famous Haroun-al-Rashid some forty years previously. It was last in Christian hands when taken by the Crusaders under Baldwin.

The American schoolmaster with whom we talked had been working there in 1916 when our prisoners from the surrender of Kut-el-Amara had come through on their way to the interior. Some hundreds, in fact, had been quartered in his buildings. The story he told brought back some of the worst recollections of the War and were unpleasant hearing to Englishmen. Few of those who reached Tarsus survived. Typhus was rampant. Medical stores and adequate commissariat arrangements were lacking. But it was a cause of pride to hear that for the most part the spirit of these men, both British and Indian, even though they were at the last stages of destitution, remained unbroken. We desired to visit the graves of those who died, but they did not appear to have been marked. We consoled ourselves that, if it were possible to locate them, our War Graves Commission would not overlook them.

There is one sight in Tarsus at least. This is the alleged tomb of Assur-bani-pal, or, to give him his Greek name, Sardanapalus, the "Grand Monarque" and last king of the Assyrian Empire. As he died in 625 B.C. and the tomb is probably of later date, the claim can hardly be substantiated, and seems to have been founded on the fact that Sardanapalus did actually make war and by some accounts is said to have died in those parts. But whether the mausoleum at Tarsus covers the remains of the great king or not, it is of interest and antiquity, and from its size and indications of past splendour doubtless marked the resting place of some very important personage. It is now in a dilapidated condition, but the walls, some twenty feet high, enclosing a large tomb, remain. To the local inhabitants it is of no interest, except as the spot in which a number of Armenians were massacred some thirty years ago during one of the periodical outbreaks against those unfortunate people.

Tarsus boasts, too, some Roman remains which take the form of massive arches, walls and gateways, still in a fair state of preservation. One of these latter still spans the main street, giving some indication of the splendour of the ancient city which at the height of its glory was said to possess one hundred thousand inhabitants.

The streets are peaceful and sleepy enough in these times. Even the usually noisy Oriental bazaar seemed somnolent. There were few people about he streets. Such shops as existed were uniformly adorned with flamboyant portraits of the Ghazi, Mustapha Kemal Pasha.

We left late in the afternoon to drive back to Mersina. Our party was unusually quiet. Perhaps they, like myself, were thinking how strange it was that a dwelling-place so humble and tranquil to-day should have nurtured so fiery a spirit.

NON-CO-OPERATION IN EGYPT.

According to the latest news from Egypt, the movement for the non-payment of taxes shows signs of being a complete failure. All instalments of taxes due in July were duly paid, and only three attempts were made to refuse payment to the Ghaffir (night watchman) tax. As soon as it was realized, however, that the Government was determined to enforce the law by taking steps to distrain on the non-payer's property, payment was forthcoming.

NEWS IN BRIEF.

Mr. Leo Weinthal, founder of *The African World*, left £7,977.

Customs officers seized 180 lb. of opium on board the French steamer Tadla, on her arrival last week at Marseilles from Istanbul.

M. Malinoff, Democrat Leader of the Opposition in Bulgaria, was received in audience by the King at Varna on August 24.

On the conclusion on August 21 of the 12th anniversary of the Declaration of Independence of Afghanistan, the Minister in London, General Shah Wali Khan, brother of the King, sent a telegram of congratulation to King Nadir Shah at Kabul.

A treaty to regulate the importation of arms and munitions into Abyssinia was signed at the Quai d'Orsay on August 21 by representatives of Great Britain, France, Italy and Abyssinia. The treaty applies to Abyssinia and the surrounding territories the provisions for publicity and control of the Geneva Convention of June 17, 1925.

The King has approved of British Officers attached to the troops of the Iraq Army or Iraq Levies during the operations in Iraq in 1926 and 1927 being permitted to accept the Iraq Active Service Medal granted by King Faisal for those operations, and to wear it without restriction, as provided by the Foreign Order Regulations.

The King of Bulgaria, with his Prime Minister and other members of the Cabinet, attended recently a banquet given at Shumen (Shumla) in honour of the 90th birthday of Mgr. Simeon, Archbishop of Varna and Preslav. A bronze bust of his Grace was afterwards unveiled in the Marine Park at Varna.

The Inspector of the Popular Party in Istanbul is stated to have received information that a group of reactionaries there is engaged in buying arms which are being sent to the Kurdish insurgents. A search is being made in different parts of the city and arrests are expected.

During an interview with M. Michalacopoulos, the Greek Minister of Foreign Affairs, the Turkish Minister to Greece, confirmed that Turkey will accept the scheme for a Greco-Turkish pact of friendship drawn up by the Greek Government.

Members of the Bible Research Institute of America arrived at Folkestone on August 24 from the Continent, and afterwards proceeded to London, in order to visit English Cathedrals before leaving for America on August 29. The party, numbering over 70, left New York in June, and, among other countries, visited Palestine.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Co-operation in the Balkans.

The results of the economic agreement between Yugoslavia and Roumania for the sale of their surplus agricultural products will be watched with keen interest, for it is at any rate a most hopeful experiment, and, if successful, may be fraught with important consequences. For the initial cause of the agreement it is only necessary to look back at the events of last year. There were bumper harvests throughout the Balkans, but so there were in practically every country, and the prices for grain began to fall rapidly, and it became a very difficult matter to dispose of surplus stocks and impossible to obtain a good return for them. In this situation, which was not unique in Balkan history, but was particularly irksome at this juncture, it was only natural that ways and means should be considered of coping with similar conditions in the future. As I have already pointed out, the initiative in regard to an economic understanding was taken by Poland, who propounded a scheme for the union of a number of countries, but the turn of events ruled that the first attempt towards an economic entente should be on more limited lines. Both Yugoslavia and Roumania are predominantly agricultural countries, and the view taken in these countries is that their economic unity will facilitate the disposal of their surplus grain on the European markets. Last year the two countries together exported roughly 2,356,000 tons of grain, and the two principal customers were Czechoslovakia and Austria, who took between them about 1,600,000 tons of this amount. The next step will be to arrange an economic understanding with Czechoslovakia, thus bringing about a Triple Economic Entente, but while this will no doubt be accomplished, it is likely to be a somewhat difficult matter to negotiate, for Czechoslovakia is not only a manufacturing, but also an agricultural, region. Subsequently efforts will be made to bring about similar understandings with other neighbouring countries.

America and the Tourist Traffic.

It is a trait of the American character to desire to reduce all human activities to the form of graphs and statistical tables, and it is not surprising that an attempt should have been made to estimate the amount of the expenditure by American tourists in the various countries to which they go. The tourist traffic, in the form in which we now know it, has sprung up since the War, and as the United States is now the wealthiest country, it naturally follows that America has provided the greatest migrations of individuals. The statistics are for 1927, and show that as far as the Near East is concerned, Egypt is easily the chief centre of attraction. It is estimated that the amount spent there in that year was about £1,400,000. Palestine comes second with £230,000, Greece third with £190,000, Turkey fourth with £150,000, Roumania fifth with £61,200, and Yugoslavia sixth with £60,000. The order, at any rate as regards the first three countries, is just what one would expect. The attractions of Egypt are such that that country will always have an advantage over other regions as far as tourists are concerned, while the associations of Palestine and Greece assure these countries their share of the tourist traffic. The figures for Yugoslavia suggest that Americans are just beginning to appreciate the delights of a visit to the Adriatic coast, and no doubt when the present depression is over Croatia and Dalmatia will have many more visitors from the United States. For a number of years now, it may be pointed out, the Yugoslav tourist traffic has been on the upgrade, though Americans have been relatively few, and while the number of visitors was estimated at 154,992 in 1924, the total for last year exceeded 350,000. The importance of this traffic to Yugoslavia may be gathered from the fact that the total income from tourists last year is put at over £1,000,000.

Decreased Suez Canal Traffic.

An indication of the incidence of the existing trade depression is to be found in the decline in the Suez Canal traffic for the first six months of this year. The tonnage amounted to 16,212,000, which represents a decrease of 642,000 tons as compared with the figures for the first half of 1929. The greater part of the decline—469,000 tons—took place in the second quarter. As might be expected, the outward traffic suffered most, the total being 7,571,000, a falling off of 408,000 tons; the homeward traffic totalled 8,641,000 tons, a decline of 234,000 tons. Of the principal regions which are either the destination, or the source, of the traffic through the Canal the Persian Gulf alone shows an increase with 2,262,000 tons, an improvement of 263,000 tons, for which, of course, the larger tanker movement is responsible. India, with 4,414,000 tons, is down by 329,000 tons, the total for China, Japan, Siberia and the Philippines is 3,713,000, a decrease of 108,000 tons, while Australia's total of 1,887,000 tons is lower by 162,000 tons. The tonnage of the shipping of all but two of the ten principal countries using the Canal shows a decrease. The British share of the tonnage is 9,065,000,

of 55.9 as against 57.2. As German shipping only registered a decrease of 9,000 tons as against one of 35,000 for the Netherlands, Germany moves up to second place with 1,723,000 tons as against 1,722,000 tons for the Netherlands.

India's Export Trade Decline.

The accounts of the Imperial Bank of India for the half-year ended June 30 last, shows net profits of Rs65,58,996, an increase of Rs99,687, the dividend being maintained at 8 per cent. free of tax and Rs5,00,000 again being placed to the reserve. Normally the period of the year covered by the accounts constitutes the most active season in India's export trade, but as the bank's report shows this year the exports showed a considerable falling off. The demand by the trader for funds was poor, the export trade being affected by the fall in prices, and in consequence of the fall in the exports the exchange was not so favourable as it should be in the early months.

COMMENTATOR.

THE EGYPTIAN POSTAL ADMINISTRATION.

The Postmaster-General of Egypt, in submitting to the Minister of Communications his annual report on the Post Office for the year 1929, states that the receipts of the Administration exceeded expenditure by 34 per cent. Details of the receipts, which showed an increase of £E13,469 on the returns of the previous year, are as follows: Postage and poundage in stamps £E644,865; Poundage in cash on monetary remittances, £E44,219; Other items, £E68,294; Services rendered by the Postal Administration to Ministries and Government departments, £E290,958; Total £E1,048,336. Expenditure, amounting to £E781,201, was made up as follows: Salaries, £E463,333; General expenses, £E244,715; Services rendered by other Government Departments, £E73,153; Total, £E781,201.

At the end of the year the Postal Provident and Mutual Help Association possessed scrip to the value of £E134,689. The income dividends and other receipts amounted to £E16,614, while the expenditure and sums paid as indemnity to members amounted to £E13,572, the net profit for the year being £E3,042.

Developments in 1929.

Developments in the inland service during the year included the following:—Second Grade post offices (with Savings Bank facilities) were opened at 21 places, bringing the total of First and Second Grade offices to 456. Eleven new Third Grade offices brought the total of this class to 118. Three temporary Second Grade offices were opened in Cairo for the International Motor Show from February 2 to 12, the French Exhibition from February 23 to April 15, and the International Literary and Artistic Congress from December 22 to 28. Six Fourth Grade "unestablished" offices brought the number of these to 64, while 279 rural stations were created, making the total 2,940. Six fresh offices adopted delivery of express letters, and sixteen house-to-house delivery. Thirty-seven railway stations have been admitted to the Travelling Postal Service, bringing the total to 395. Three more trains have been utilised for the transport of mails, one between Alexandria and Cairo, and two between Banha and Ismailia.

On the occasion of the tenth birthday of H.R.H. Prince Farouk, new postage stamps of 5, 10, 15 and 20 mills. values bearing the portrait of His Royal Highness were issued. New postage stamps of 27 mills., similar in colour to the ordinary stamps of 5 mills., have been specially issued for the Air Mail Service.

Developments in the foreign service include the reduction of the special charge for correspondence despatched by air mail to Baghdad and Basrah from 15 mills. to 12 mills., the suppression of the surcharge on letters and postcards for Iraq and Persia dispatched by motor-car via Damascus and Baghdad, and the inauguration of a money order service with Hungary.

Correspondence.

There was an increase of 8 per cent. in 1929 in the total number of articles dealt with, inland and foreign, which totalled 167,390,000. The number of registered articles lost was 9 out of about nine and a half millions exchanged with the interior and abroad.

The figures for inland correspondence were as follows (the figures for the previous year being in parenthesis): Letters, 63,263,000 (59,521,000); Post cards, 4,840,000 (3,910,000); Registered articles 7,661,382 (7,227,998); Newspapers and other printed matter, commercial papers, and samples, 26,521,000 (21,957,000); Government correspondence carried free 9,565,000 (9,429,000); Totals, 111,850,382 (102,044,998).

The totals for foreign correspondence were as follows: Despatched: Letters 16,039,000 (15,670,000); Post cards, 1,978,000 (1,928,000); Registered articles 939,302 (932,128); Newspapers and other printed matter, commercial papers, and samples 5,538,000 (4,933,000); Totals, 24,494,302 (23,463,128). Received: Letters 14,962,000 (14,248,000); Post cards 1,228,000 (1,150,000); Registered articles 840,746 (826,221); Newspapers and other printed matter, commercial papers, and samples 14,004,000 (12,759,000); Totals 31,034,746 (28,983,221).

The following tables shows the number delivered per head of the population:—

Category.	1925	1926	1927	1928	1929
Letters	5.8	6.3	6.0	6.4	6.8
Post Cards	0.5	0.4	0.3	0.4	0.4
Newspapers, commercial papers, and samples	2.8	2.5	2.4	2.5	2.8

An analysis of the correspondence exchanged with foreign countries shows that Great Britain and Dependencies (including Palestine) heads the list with 17,628,556 articles, or 31.7 per cent.; France and Dependencies (including Syria) is second with 11,176,552 articles, 20.1 per cent.; Italy and Colonies third with 5,239,886, 9.4 per cent.; America fourth with 4,225,360, 7.6 per cent.; Germany fifth with 3,502,295, 6.3 per cent.; and Greece sixth with 2,989,303, 5.4 per cent.

Express Letter Service.

During the year under review, 180,387 letters were handed in for express delivery against 114,078 in 1928, showing an increase of about 58 per cent.

Air Mail.

The following table relates to correspondence despatched and received by the Egyptian Post Office.

	Ordinary letters.	Registered articles.
Dispatched	64,346	6,793
Received for Egypt	46,964	4,787
Received in transit	20,522	2,064
Total	131,832	13,644

Overland Mail Service (By Motor Car).

The total weight of correspondence despatched in 1929 amounted to 4,443 kilogrammes as compared with 4,144 kilogrammes in 1928—an increase of 7 per cent.

Returned Letter Office.

During the year the Returned Letter Office dealt with 211,473 articles; of this number 866 were returned to claimants and 49,861 were returned without previous

Digitized by Google

claim. The registered articles which reached the Returned Letter Office in 1927 and have, according to regulations, been opened in the year under review, in order to determine their contents, numbered 7,348.

Parcels.

The total number of parcels dealt with was 2,049,660 against 2,015,773 in the previous year—an increase of 1.6 per cent. 7,717 Inland Express Parcels and 475 from abroad have been delivered to addresses by special messengers. Details of this service were as follows, the figures for 1928 being in brackets :—

Number of parcels exchanged : In the interior 1,283,711 (1,258,714); with the Sudan 175,665 (158,653); with abroad 590,284 (598,406); Total 2,049,660 (2,015,773).

Of the parcels exchanged with foreign countries 126,669 were despatched and 463,615 received. Of the joint total France and Dependencies were responsible for 182,189, Great Britain and Dependencies (including Palestine) being second with 164,983. Germany was third with 66,574, Italy and Dependencies fourth with 43,473, and Switzerland fifth with 28,159.

Newspapers and Periodicals.

The following is the classification of the newspapers and periodicals handled by the Post Office :—

Category.	Published in Arabic	Other Oriental Languages	European	Oriental and European	Total
Newspapers, political, commercial and financial ...	66	8	42	—	116
Newspapers, humorous ...	1	—	4	—	5
Reviews, literary	85	6	48	5	10
,, judicial	9	—	1	—	10
,, religious	28	—	2	—	30
,, for women ...	5	—	2	—	7
Totals	194	14	99	5	312

Of 312 newspapers and reviews, 207 are published in Cairo, 65 in Alexandria, 20 in Tanta, 4 in each of Port Said and Minya, 2 in each of Bani Suef, Bilqas, and Mit Ghamr, and one in each of Asyût, Bahr el Saghir, Faiyûm, Malawi, Mansûra, and Zagazig. Of the 312 newspapers mentioned, 43 are illustrated. Subscriptions taken out for foreign newspapers and periodicals amounted to 1,418, as compared with 1,615 in 1928.

The total value of cash handled in respect of Money Orders (Inland, Sudan and Foreign) Specie, Collection Orders, and Postal Orders (Egyptian, British and Palestine) in 1929 amounted to £E13,193,035 as against £E13,150,253 in 1928—an increase of £E42,782.

Staff.

At the end of the year, the staff totalled 4,367 of whom 1,601 are pensionable or temporary and 2,766 unpensionable.

FOREIGN EXCHANGES.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended August 16 :—

Grain.—For the greater part of the week, markets continued steady, and this, coupled with the fact that grain arrivals became more plentiful, facilitated the conclusion of numerous transactions, the bulk of the shipments being to Antwerp and Hamburg. Rotterdam has become rather neglected. As regards English destinations, for which the inquiry has been very slack for the last three weeks, the tone is now much better, and, although no fresh transactions have been effected, the negotiations which have been and are still being conducted will no doubt result in further business shortly. A slight setback is being felt in the generally improved feeling this week-end, but this is not affecting shipments appreciably and is probably only temporary. Notwithstanding the larger grain arrivals, it has not been possible to maintain spot rates at their previous levels, owing to the accumulation of tonnage; 10s. 6d. and even 10s. 3d. have been accepted for Antwerp and Rotterdam, 11s. for Hamburg. It is not anticipated however, that any further serious fall in freights is likely, in view of the improved arrivals of grain and the steady grain prices abroad. Chartering has been very much reduced, the only fixtures being two or three steamers for end August beginning September at 14s. Antwerp Rotterdam, 14s. 6d. Antwerp/Hamburg, whilst a Greek 6,000 tonner accepted 14s. 1½d. for Havre/Hamburg range. The position at Constantza was livelier, arrivals of grain there being also satisfactory. Several vessels are loading for the Continent, for which the berth rate is 8s., and an equal number are waiting their turn for berth. No serious delays in waiting turn are being experienced, however, as loading is being effected at a very good rate.

Timber.—Space for shipments for which inquiries came forward for North African and North French ports was easily obtained at moderate rates. Oran is quoted £8 per wagon, whilst parcels for Rouen were placed at £8 10s. and even £8 per wagon. A few parcels are still in the market for Italy and a small steamer was fixed for two ports at £7 10s. per wagon. Otherwise business has remained slack, and no fresh transactions of importance are reported.

Weather and Crops.—The rain forecast for last week-end was widespread and more copious in the Eastern districts than anticipated. The temperature as usual fell considerably, but it rose again towards the middle of the week. Yesterday there was moderate rain here from 10 a.m. to 1 p.m., and there was a good steady downpour between 2 and 6 this a.m., accompanied by another drop in the temperature. It is still very cool, although the weather is now bright again. The recent rains will put weight into the maize, with the exception of such parts as were damaged by the June/July droughts, and the general opinion appears to be that this crop will be about an average one.

Sulina.—The bar depth remains unchanged at a minimum 24 feet, the general conditions continuing to be satisfactory. Calm weather has permitted the dredgers to work almost without interruption, and the shallow parts in the channel are being cleared up. The minimum depth of water in the river is still 23 feet 6 inches at the 41st mile post, and the suction dredger has again been put on to improve the situation.

Constantza.—Several vessels are loading at the elevators and quays at the time of writing, and six others are waiting for berths. Two steamers loaded 268 wagons of timber for Port Said and Alexandria; 21 vessels loaded about 63,750 tons of petroleum products, and eight took oil fuel for bunkers.

Bulgarian Report.

Bourgas, August 9.—A limited amount of business has been done owing to the fluctuations of prices on consuming markets. Besides these bookings mentioned in last week's report, fresh engagements amount to about 1,500 tons for Antwerp, prompt shipment, at 9s., whilst about 2,000 tons have been shipped for Greece.

SUDAN GUM ARABIC PRICES LOWER.

Messrs. Boxall and Co., of Khartoum, report as follows for the month ended July 31 :—

Arrivals in Kordofan stations (El Obeid, Nahud and El Odaiya only, all other stations having completely given out) amounted during July to 878 tons, showing a great decline as against the previous month.

Prices at El Obeid experienced daily fluctuations during the month, but the general tendency has been downward. The price paid on July 1 was 6d. down as against the closing price of June 30. Prices continued to fall, up to the 10th, the fall amounting to 9s. 9d. From the 17th, the 27th prices took an upward move, the rise amounting to 6s., but during the last four days of the month they suddenly fell again 5s. 3d. The net fall during the month was therefore, 9s. 6d. per cwt. Demand has been generally slack. During the last week of the month, when prices fell again, demand somewhat revived both from the Continent and the U.S.A.

The market during the whole month has been very uncertain. Whereas during the first fourteen days of the month arrivals were good, for the following thirteen days they were very small. One would have believed that arrivals were falling off, but on the contrary during the last four days of the month they increased considerably. It is noticeable that whilst arrivals were good prices were gradually falling, whereas they were rising when arrivals were very small. Talha prices declined during the month 1s. 6d. per cwt., overseas demand being insignificant.

Engineering Topics

(By An Engineering Correspondent)

Blast Furnace Practice.

A few years ago some blast furnaces, at home and abroad, were operated in a far from efficient manner, and it is quite probable that an analysis would have shown that no clear idea existed as to the actual ideal aimed at. By some masters it was considered apparently that the function of a blast furnace was to turn out some sort of iron at as cheap a rate as possible, whilst others aimed at turning out the highest grade product, neither considering the cost, nor the time accupied in the process. At a meeting held at the British Iron and Steel Institute some little time ago, the matter was placed in a nutshell by a well-known expert, Mr. A. K. Reese, who defined the purpose of an up-to-date blast furnace as being the proper production of the highest possible amount of iron, of a given degree of excellence and up to a certain recognised standard, in the shortest possible time. Examined, this gives us a two-fold function; one, the production of iron of a required and uniform quality, the other, the operation of the furnace in such a way as to secure a maximum output.

Obviously, then, scientific methods of working must be employed, the whole of the costs must be examined and studied with a view to any and every possible reduction, and the whole business treated on quantity production lines, similar to those which have proved so successful in other manufacturing businesses. It was shown that the required object has been obtained in connection with many of the more up-to-date blast furnaces in certain localities and a normal economcal production reached of anything from 400 to 600 tons of iron per 24-hour day.

Certainly the most important point to which attention must be paid is in regard to the preparation of materials, and the need for perfect uniformity in the size and density not only of the ore but also of the fuel and flux with which the furnace is charged must be insisted upon. All these proportions must be the subject of a careful consideration, and when these proportions have been decided upon the proportion of air, or "blast volume," must also be determined in order to produce the conditions of a plenum throughout the entire interior of the furnace. An insufficient blast or air supply is fatal to good results, and practically every engineer will agree that "dry blast" method should be adopted wherever possible, so that a higher blast temperature could be obtained than is possible with natural air.

It may be considered by some—and there is much to commend the view—that the actual furnace design is of equal importance in regard to the quantity and quality of the production. It can be laid down as a general law that the output capacity of a blast furnace, with any particular proportion of raw materials, is comparable or in proportion to the effective "bosh" area, that being that portion, at its maximum diameter of normal activity, of the full area. Naturally, the more this can be increased, or, in less technical language, the cleaner the walls can be kept, the better. It is certainly owing to this, in a great measure, that the increased output resulting from scientific working is due.

A point that may be made is in connection with the advantage of a regular and constant volume of free air per minute, and also in regard to the advantage of using roughly-cleaned gas, as compared with the use of uncleaned gas. The handling of molten cast-iron has been simplified, and many of its objectionable features removed, by the introduction of the pig-casting machine.

Derby Electricity Station Extensions.

The extent to which modern scientific methods are being adopted for power generation, even for quite small stations, as well as industrial plants, is well illustrated by the recent 1929-1930 extensions of the Derby Electricty Station, now in full operation. Essentially the additional plant consists of two "Combustion Steam Generators" a new design of water tube boiler, each of 60,000 to 80,000 lb. evaporation per hour, and a "Parsons" 20,000 k.w. turbo-generator with turbine of the single-cylinder pure reaction type for high efficiency. The steam generators are fired with "Lopulco" pulverised fuel equipment, constructed at Derby, which include the entirely new "Volcano" burner and the latest "Duplex" type of pulverised coal feeder, while also the chimney gases are all washed with pressure water sprays to remove the fine dust. Pulverised fuel firing according to the "Lopulco" system was first adopted at Derby in 1924 on two "B. and W." boilers, while a third "B. and W." boiler was installed in 1928, the results being excellent, but the present 1929-30 extensions constitute a further notable advance. The new boilers have been designed and constructed by Combustion Steam Generators, Ltd., of London, a subsidiary of International Combustion, Ltd., and consist of a steam and water drum with four complete combustion chamber walls of "Murray" fin water-cooled steel tubes in series with the boiler. Also the roof of the combustion chamber is formed of horizontal boiler tubes, with the water screen below, and "M.L.S." superheaters. "Usco" multiple plate air heaters, and "Foster" steel tube economisers with cast iron fins are included, the pressure being 350 lb. and the temperature 750 degrees F. The new "Volcano" burner, of which one only per boiler is required, burning up to 5 tons per hour, is a somewhat modified "R" turbulent burner, but fixed in the bottom of the combustion chamber, pointing vertically upwards, pro-

Digitized by Google

jecting through the water screen tubes, some of which are diverted for the purpose, the flames therefore spouting upwards. Also the outer casing of the "Volcano" burner is a large firebrick cone, and, as with the "R" burner, there is both primary air carrying the pulverised coal and secondary air passed to the burner, each of which is given a turbulent motion by helical valves. Further to increase the mixing action in the combustion chamber, part of the secondary air is now projected from the lower part of the steel tube walls as a series of jets, while no brickwork is used for the boiler setting, which is entirely of steel plate. Also an additional six ton per hour "Raymond" pulveriser has been installed, and at the present time Derby has five boilers of 60,000 to 80,000 lb. per hour evaporation, two vertical rabble arm cold driers of the "Rosencrantz" design, and three "Raymond" mills of six tons per hour. For feeding the pulverised coal to the burner, two "Duplex" feeders are used, consisting of two horizontal perforated plates with a rotary scraper between, replacing the screw feeder. The washing of all the combustion gases with water sprays to remove grit takes place near the base of the chimney, and Derby, therefore, burning also cheap low-grade coal, is undoubtedly one of the most up-to-date stations in the world.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at June 30, 1930, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities: Share capital (300,000 fully paid shares of £10 each), £E2,925,000; reserve fund: statutory reserve £E1,462,500; special reserve, £E1,413,750; current, deposit and other accounts, £E15,223,611; Egyptian Government, £E7,921,076; Sudan Government, £E45,923; Mixed Tribunals, £E2,125,077; bankers accounts, £E418,241; cheques and bills payable, £E179,861; sundry and other accounts, £E1,880,406; £E33,595445. Assets: Government securities and securities guaranteed by the Egyptian Government, £17,850,239; sundry securities, £E905,990; advances on merchandise, £E1,342,908; advances on securities, £E3,392,702; advances otherwise secured, £E1,737,769; sundry other advances, £E1,375,000; bills of exchange, £E1,409,872; local bills discounted, £E649,690; buildings and furniture, £E199,109; money at call and short notice, £E1,053,000; bankers accounts, £E254,134; sundry other accounts, £E1,212,816. Cash: notes, £E1,300,025; gold, £E567,639; silver, nickel, etc., £E344,358; £E2,212,022; £E33,595445. Issue Department: notes issued, £E23,000,000; £E23,000,000. Gold, £E3,339,570; *British Treasury Bills, £E8,310,430; £E11,650,000; securities: Egyptian Government securities and securities guaranteed by the Egyptian Government, £E1,500,000; British Treasury Bills and British War Loan, £E10,150,000; £E11,650,000; £E23,330,000.

*By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916.)

A statement issued by the Yugoslav Ministry of Agriculture gives the following crop yields: wheat, 2,422,300 tons; barley, 448,700 tons; rye, 242, tons and oats 241,400 tons. The yields of wheat, barley and rye are slightly below last year's figures, while the oats crop is about 30 per cent. smaller.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates :—

SPECIAL NOTICE. New T.S.S. CALIFORNIA, 17,000 Tons, carrying FIRST CLASS and THIRD CABIN passengers, sails from LIVERPOOL Oct. 21, MARSEILLES Oct. 27. All 1st Class state rooms are fitted with Punkah Louvres and with fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Sterilising Outfit.—The Ministry of the Interior, Egypt, invites tenders for the supply of sterilising outfits and gas apparatus. October 13. (D.O.T.)

Compressor Sets.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for the supply and erection of four electric air compressor sets for Egyptian Army Barracks drainage at El Arish and Mankabad. September 14.

Swing Bridge.—The Inspector, Third Circle, Alexandria, invites tenders for the construction of a swing bridge, load 20 tons, over Mahmudia Canal, at Zargun Syphon. September 30.

Generating Sets.—The Director-General, Mechanical and Electrical Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of two electrical generating sets for Arish Barracks. September 30.

Paint, etc.—The Stores Department of the Egyptian Ministry of Education invites tenders for the supply of paint, varnish, dry colour, wood stain, soft soap, sandpaper, chemicals and miscellaneous painting and decorating materials. September 20. (D.O.T.).

INDIA.

Transformers, Switchgear and Cablework.—The Indian Stores Department, Simla, invites tenders for the supply of transformers, switchgear and cable work. September 4. (D.O.T.).

Oil Engine Generating Sets.—The Indian Stores Department invites tenders for the supply of oil engine generating sets, etc. September 29. (D.O.T.).

YUGOSLAVIA.

Naptha Motors.—H.M. Consul at Sarayevo reports that a leading firm of local engineers are desirous of receiving tenders from British manufacturers, for the supply of two Naphtha Motors of 5 to 6 h.p. each, required for installation in launches. (D.O.T.).

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Elysia for Bombay (Glasgow, August 30; Manchester September 6; Birkenhead, September 12). (For passenger sailings and dates see advertisement.)

Anchor-Brocklebank Line.—S.s. Makalla for Calcutta (Birkenhead, September 4); s.s Masirah for Calcutta (Birkenhead, September 11).

Bibby Line.—S.s. Yorkshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, September 3); s.s. Leicestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, September 17).

British India Line.—S.s. Manora for Colombo, Madras and Calcutta (London, September 6); s.s. Warfield for Port Okha and/or Bedi Bunder, and Karachi (London, September 13); s.s. Morvada for Colombo, Madras, and Calcutta (London, September 20).

Johnston Line.—S.s. Dromore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz and Braila (Liverpool, September 13); s.s. Aviemore for Piræus, Syra, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 11).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, September 12); s.s. Bangalore for Calcutta (London, September 12); s.s. Rajputana for Bombay (London, September 26); s.s. Nankin for Calcutta (London, September 26).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, August 30); s.s. Persian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, September 13).

Ellerman and Papayanni Line.—S.s. Bulgarian for Algiers*, Oran*, Malta, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, August 30; Swansea, August 30); s.s. Lesbian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona, Venice, Trieste, Fiume, and Shushak (Liverpool, August 30; Swansea, September 3); s.s. Egyptian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, September 4; Glasgow, September 1); s.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, September 11); s.s. Algerian for Gibraltar, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 20; Swansea*, September 20). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Messageries Maritimes.—(From Marseilles).—S.s. Lotus for Alexandria, Jaffa, and Beyrout (September 2); s.s. Lamartine for Naples, Piræus, Istanbul, Izmir, Rhodes, Larnaca and Beyrout (September 9); s.s. Champollion for Alexandria, Jaffa, and Beyrout (September 9); s.s. Pierre Loti for Naples, Piræus, Istanbul, Izmir, Rhodes, Larnaca, and Beyrout (September 23).

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August 26.

Once again gilt-edged stocks were the only firm market this week, the abundance and cheapness of money and the strong Bank of England return, and the cessation of gold exports all helping this market, which also benefits from the fact that banks cannot find an outlet for their resources in trade channels. The worst feature of the week was the general crumbling of industrial share prices on one day, when sales from certain big holders were heavy enough in a weak market to arouse considerable apprehensions of serious trouble if they continued for even a few days. Happily the liquidation ceased as abruptly as it began. Home rails go from bad to worse, and in the rubber market sellers are brought out by any temporary and practical improvement in prices. No one in the House will be sorry when an unusually dull and depressing August wears to its close.

Two Interim Reports.

Striking contrast is afforded between the dividend announcements made during the week by Imperial Chemical Industries, Ltd., and the Shell Union Oil Corporation, the former an English concern and the latter American, and both of them among the most important of their kind. The Shell Union Corporation provided perhaps the greatest surprise by passing the usual quarterly dividend of 35 cents on its Common Stock, a reflection of the conditions obtaining in the oil industry. It was stated that the company is still operating on a profitable basis after making its usually conservative reserve for depreciation. The reduced earnings are in a large measure attributable to the unsatisfactory prices ruling; but it is welcome to note that such a large producer as this is following a policy of reduction in the interests of the conservation and stabilisation of the oil industry, which should ultimately yield benefits to shareholders. By way of contrast, Imperial Chemical Industries have declared an unchanged interim ordinary dividend of 3 per cent. actual. Furthermore the board has stated that "despite the fact that widespread depression in industry in the home trade, and economic disturbances in some of the more important export markets have naturally brought about some contraction in the sales of the company's products, earnings have been relatively well maintained."

Outlawing Nitrate War.

A most interesting and important international trade agreement has been successfully negotiated and entered into by Imperial Chemicals of this country, the I.G. Farbenindustrie of Germany, both producers of synthetic nitrate, and the Chilean Government which is the principal shareholder in "Cosana," the semi-State monopoly now extracting and controlling Chilean natural nitrate. Under the "commercial treaty" signed by these three powerful interests and several other foreign concerns, and which is to run experimentally for one year, price wars between themselves have been "outlawed." For synthetic nitrate the I.C.I. has been allocated its own home market and the British Empire and I.G. Farbenindustrie has been allocated the German market, and several other foreign firms have been guaranteed their own home market. None of these concerns will compete in one another's territories. As for neutral territory, exports to them by each firm will be on an agreed quota basis. In the interests of Chile, prices of synthetic nitrate are being fixed at a level favourable to the natural Chilean product, which, moreover, may be imported to any amount into any market. The new situation improves the outlook for both Imperial Chemicals and for British companies now owning Cosana shares and the arrangement will therefore be welcomed by many British shareholders.

Brewery Results and Prospects.

The number of satisfactory brewery results that have been issued during the last few weeks have drawn attention to the apparently flourishing state of the industry in contrast with conditions prevailing elsewhere. It has been calculated that the aggregate profits announced recently by nine such concerns amounting to £7,655,459 show an increase of £578,884, or 8 per cent., as compared with the previous results. Only two concerns declared a lower net profit, two increased their distribution to ordinary shareholders, and only one had to reduce the ordinary dividend. In the face of such results it is hardly surprising that brewery shares remain a relatively bright spot in the generally dull markets. A note of caution is, however, necessary in this respect. By reason of its severity the depression experienced during the last few months must eventually react even on "the trade," but this effect will only be disclosed in the next accounts. The figures mentioned above are for the most part for a period a large part of which was relatively prosperous as compared with present conditions. The profit results for the current financial year may be not quite so rosy. Nevertheless, it cannot be denied that brewery concerns are well placed. They have undergone a high degree of rationalisation and amalgamation and as a result the leading firms form very efficient and financially strong organisations. Investment in such companies therefore is not without decided attractions and for those interested one might mention Arthur Guinness ordinary stock yielding £6 10s. per cent. and Watney, Combe, Reid deferred ordinary stock yielding about £6 16s. per cent. Both these stocks are transferable in £1 units.

Considerable activity is reported in the Yugoslav textile industry, with many new factories being built and existing factories enlarged (says an American Consular Report). Owing to the critical conditions in Austria, Poland, and Czechoslovakia, many factories have removed to Yugoslavia. The hosiery and knit-goods industry in particular has expanded. Spinning mills are working day and night to meet the present demand, and it is reported that several new mills will be constructed, with a probabe resultant decrease in imports of yarns. Rayon also will be produced in moderate quantities if present plans mature. The rapid expansion of the Yugoslav textile industry is in direct contrast to conditions existing in the textile industries of the neighbouring countries, particularly in Austria, Czechoslovakia, Poland, and Switzerland.

ROUMANIA'S PORT TRAFFIC IN 1929.

The following extracts are taken from the reports of H.M. Customs Officers at Constantza and Braila.

Constantza.

During the year 1929, 1,289 vessels with a tonnage of 3,020,535 entered this port, compared with 1,113 vessels with a tonnage of 2,482,767 in the year 1928. British shipping lost its place at the head of the ship-owning countries to the Italians, the number of whose vessels visiting the port increased in 1929, in comparison with previous years. This increase is due to the Italians having two mail boats a week. In the oil carrying trade Italian vessels took the first place which was held in 1928 by British vessels.

During the year 1929, 9,581 passengers entered and 7,027 left through this port, as compared with 12,229 in 1928. The majority of the passengers were carried in the Roumanian mail boats, the remainder in Italian and French steamers and 644 persons in the Khedivial Line. The Khedivial Mail line ships made 49 trips in 1929.

A direct carriage is now available on the Orient Express from Calais to Constantza on Mondays, Thursdays and Saturdays and on Mondays, Wednesdays and Fridays there is a through carriage in the reverse direction. Another direct carriage as far as Warsaw, with connexions with Berlin, leaves on the same days as the Constantza-Calais carriage. These arrangements correspond with the departure and arrival of the Roumanian mail steamers, which ply between this port and Alexandria, calling at Istanbul.

The two storey warehouse opposite Berths 6 and 7, reported upon last year, has been completed and is occupied; it is proposed to construct another warehouse, opposite Berth 4 during the course of the present year. The electric cranes which were ordered in Czechoslovakia and the goods lifting apparatus ordered in Austria have been delivered and are now in use. The pipe line to serve Berths D and E has been laid down and is operating. Two pipe lines (for lubricating oil and cylinder oil) mentioned in last years's report have been constructed. The number of tanker berths in the petrol basin is now four; in addition there are three berths outside at which steamers may bunker, thus making a total of 7 berths. The fresh water pipe in the petrol basin is expected to be in working order this year. The 550 h.p. tug which was ordered in Italy has been delivered and is found very useful. A radio beacon has been installed at Cape Caliacra with a wave length of 1,000 metres. It emits a musical tone corresponding to a frequency of 1,000 cycles per second. The radio beacon is now working day and night.

No steps whatever have been taken to carry out any work in connexion with the Free Zone.

Braila.

A revival in the export of grain from Braila and, consequently also in the movement of shipping was brought about last autumn as a result of last year's abundant barley harvest. The maize crop was also exceedingly good, so that there was plenty of grain available for export, and there is even enough to keep the port active until next harvest time.

There was a marked increase in the total quantity of goods imported through Braila during last year, not only by sea-going vessels but also by lighters coming from countries on the upper Danube. Out of the total quantity of 70,092 metric tons imported in 1929, 17,201 metric tons were rice. One British steamer arrived with 2,570 tons of coal. The figure of imports discharged ex-British tonnage for 1929 represents a quantity of 11,168 metric tons as against 14,196 metric tons in 1928. There was a decrease in the quantity of goods imported last year from Great Britain, as only 1,986 metric tons were brought, as against 2,364 metric tons in 1928.

The figure for exports of cereals in sea-going vessels from Braila during 1929 shows an enormous increase when compared with the figures for previous years: it is necessary to go back to 1926 to find a year as good. The bulk of the cereals loaded into lighters in Braila during 1929 represents literage for sea-going vessels, which cargo had to be loaded in Sulina Roads, owing to a temporary decrease in the river draught.

There was a considerable increase in the number of British ships calling at this port during the past year, the number being 81 ships with an aggregate net tonnage of 160,458 tons for 1929, as against 33 ships with an aggregate net tonnage of 56,064 tons in 1928.

NEAR EAST MARKET REPORTS.

The following cabled reports have been received by Barclays Bank (Dominion, Colonial, and Overseas):—

Egypt.

Alexandria, August 18.

General.—Conditions have remained unchanged, the lack of buying up-country causing a slow movement of goods. The Government has decided to put an import tax on cereals, which has caused an improvement in the price of home-grown commodities.

Cotton.—The market has continued to be dull and weak, and has depended mostly on the fluctuations in American cotton. The first American crop estimate being higher than had been expected, resulted in a heavy break in new crop prices both here and in America. With expectations of a very heavy yield of Uppers this year, the general weakness has been more largely reflected in contracts for that class of cotton. Sakels are reported to have suffered from leafworm and wilt in various districts, and there has been a noticeable widening of differences between the Sakels and Upper contracts. The spot market has been completely dull and featureless. Reports on the new crop are on the whole satisfactory; in Upper Egypt it has progressed well and the acreage planted is considerably in excess of last year. Despite the damage already mentioned, Sakels, on the whole, promise an adequate yield. Arrivals from September 1, 1929 to date are 8,394,342 kantars, compared with 7,050,241 kantars in the corresponding period last season, while exports are 6,041,444 kantars against 7,672,651 kantars. Stocks are 3,546,875 kantars against 1,439,819 kantars a year ago.

Cotton Goods. The demand for cotton goods has been satisfactory and old stocks have been slightly reduced; there have been few arrivals and prices show signs of improvement. Sales in Manchester goods have been normal and quotations have been maintained.

The Sudan.

Khartoum, August 15.

The market generally is dull, with a poor demand for imported goods. Gum arrivals during July were exceptionally heavy for this period of the season, owing to the release by natives of stocks held for a rise in prices, and ruling quotations are now 35s. per cwt. for natural and 55s. per cwt. for cleaned. The sesame market is firm, with small stocks in hand and prices are tending upwards.

Palestine.

Jerusalem, August 12.

Forward orange prices still range from 5s. to 5s. 3d. per case on the tree, and the demand continues small. Under a recently published ordinance, the importation into Palestine of wheat flour and semolina flour, other than the produce of Syria and Trans-Jordania, will only be allowed under a system of licences to be granted by a standing committee. The import duty on wheat flour and semolina has been increased by approximately 50 per cent.

In June 68 merchant ships of 246,733 net registered tons called at Port Sudan as compared with 73 ships of 252,229 tons in June, 1929, and 74 ships of 249,434 tons in June, 1928.

British Consular Reports

III.—TURKEY (Continued).

Adana District.

The following extracts are taken from the report of Mr. B. J. Catton, Acting British Consul, Mersin, on the economic situation in the Adana District :—

The port of Mersin serves the extremely fertile cotton-cereal producing area of the Cilician plain; Adana is the industrial centre situated forty miles inland. Mersin is joined by a local branch line to Adana. The Port of Mersin is still without a harbour and ships have to anchor about one mile from the shore in fine weather, where the anchorage is fairly good, but at times when the weather is bad ships take up their anchors and go out to sea until the weather abates and they can return into port. The talk of making a harbour is revived from time to time. The district fully justifies one, but as things are at present there is little hope of a harbour being made.

Present Economic Situation.

Cotton and most of the natural products have long been exported from this district. Modern methods of cultivation and industrial exploitation are gaining ground, and numbers of tractors, mostly American, can be seen at work in the fields. Ginning mills are progressing and the two cotton-seed oil mills are refining cotton-seed-oil and making oil-cake, meal and common household soap. Owing to the wonderful cotton crop of 1929, there will be no less than 160,000-180,000 bales of cotton, already exported or available for export. The cotton-seed oil mill at Mersin is installing a copra plant for the making of vegateline and will also endeavour to make soap. The pest of Suné has of late years caused the farmers considerable losses to their wheat crops and it is reported from many parts of the district that it is very prevalent this year, so bad that in many places the farmers do not consider their crops worth gathering, and they are now busy ploughing it up and planting cotton in its place. The local agricultural authorities assist the farmers all they can to destroy the Suné, but they have so far little results to show for their labours. It is said that the Suné does not attack wheat imported from Cyprus. More land has been placed under cultivation for cotton and cereals than last year. The whole industrial and commercial activity of the district relies on the harvest; the last harvest was a very good cotton one, but the cereals suffered from late rains and insect pests. The commercial activity of Mersin last year was not good, and it is at present even worse; everything is at a standstill: this crisis is accounted for by the extraordinary low market price of cotton, the introduction of the new customs tariff, the shortage of money; everybody looks at their piastres twice before they part with them for anything except absolute necessities.

The Cilician plain is very suitable for the cultivation of cotton and cereals, as it is watered by several streams, but there is no other irrigation system and thousands of tons of water from the mountains are allowed to go uselessly to the sea. The cotton grown is of local origin of inferior quality of very short staple, and is not in very great demand in the United Kingdom. The cereals, wheat, oats, barley, maize and sesame are all of fairly good quality except the wheat which is the inferior soft kind. Great quantities of cotton-seed have been exported to Malta and Great Britain. The district is suitable for the cultivation of sugar cane and the Government are endeavouring to persuade the farmers to cultivate it; in former years it has only been cultivated on a very small scale and used by the natives as food. (b) The products which are exported from Mersin are cotton, ginned and baled, cotton-seed, cotton-seed oil, oilcake and meal, beeswax, gum, sesame seed, locust beans, barley, oats, maize, yellow-berries, apricot kernels, sheep, goats, bullocks, hides, oranges, wool, sea turtles, etc.

British Trade.

From this district Great Britain buys oilcake, cotton, yellow berries, locust beans, cotton-seed, barley, etc. Sheep, goats and bullocks are exported to Egypt and Palestine. Trade is carried on with Cyprus. Textiles, metals, hardware, machinery, paints, linseed oil, etc., are imported into Mersin. Although the market is at present not encouraging to the British manufacturer it should be borne in mind that British goods are preferred to all others, and the only reason why more British goods are not on the market is because credit is not given as it is by other foreign manufacturers and that the prices of British goods are somewhat higher than other foreign goods. In this district cheapness is preferred to quality.

Long credits on almost every class of merchandise are granted in this district, i.e., 30, 60, 90 days, and even as long as 1, 2 and 3 years by some German firms; most of the business is done through commission agents; credit may be given, but great care should be taken as regards the standing of the importers. The local banks are all very careful now about giving credit even on the excessive interest charged on loans, which is usually from 15 per cent. and even more. Merchants charge farmers at the rate of between 25 per cent. to 30 per cent. It will be seen at a glance from these figures that the farmer has a poor chance of making a very great profit however good his harvest may be. There are now in the district agricultural banks where the farmer is advanced cash to purchase machinery, etc., but the interest charged by them is above those already quoted, and the farmers would like to avoid business with these banks, but they are forced to deal with them as only a very small percentage of the farmers having any cash.

Izmir District.

The following is a summary of the report of the Acting British Consul-General at Izmir on the trade of Izmir District in 1929 :—

The import trade of the district of Izmir is conducted almost exclusively through agents working on a commission basis direct with manufacturers, and by far the most important factor is that of price. None but the cheapest articles can hope for any measure of success at present, and even these make but slow progress when unattended by the most tempting facilities for payment. Three to four months' payment is usual, but longer terms are often required. In these circumstances a reliable agent with a knowledge of local conditions is a necessity, and home manufacturers, having once satisfied themselves of the integrity and capability of their agent, are recommended to give the most serious consideration to the recommendations and warnings of the man on the spot. United Kingdom manufacturers are said to be too often inclined to adhere rigidly to a general policy applicable to all

countries rather than to adapt themselves, on the recommendation of local agents, to the demands of the market.

Izmir is primarily the outlet for the agricultural products of Turkey in Asia and the sum of the exports of sultanas, figs, tobacco, valonia, cotton, opium, olive oil, liquorice root and barley amounts to over 75 per cent. by weight of the exports from the port.

Exports.

The total yield of sultanas last year was estimated at 70,000 tons, which would have been a record, but, on account of the damage caused by the rains, the amount marketable was actually only 50,000 tons. The exports represent about 20 per cent. of the total shipments from Izmir, the quantity in 1929 being 41,923 tons as against 29,370 tons the previous year. The chief foreign buyers were:—Germany, 16,053 tons; the United Kingdom, 9,765 tons; Holland, 6,214 tons; Italy, 6,095 tons, and Belgium, 1,193 tons.

Approximately 33 million kilogs. of figs were harvested in 1929, as compared with 32 million kilogs. in the previous year, and the quality was considered to be superior to that of 1928. Of the yield, 23.8 million kilogs., which represents 12 per cent. of the total exports from Izmir, were exported to foreign countries. The chief purchasers were:—The United Kingdom, 6,493 tons; Italy, 3,475 tons; and Egypt, 956 tons.

The Izmir zone occupies an important place in the production of tobacco, for which Turkey is famous, on account of the perfume, taste and small content of nicotine. The average yearly production is valued at approximately £T30 million. In 1929 the total crop amounted to 15,500,000 kilogs., and 18,923,000 kilogs., which includes the balance of the previous year's crop, valued at £T26,100,000, were exported. This represents about 9.7 per cent. by weight of the total exports from Izmir, or 31.8 per cent. of the total value. Local consumption ranges between 2½ million kilogs. and 3 million kilogs. The chief distribution for 1929 was as follows:—The United Kingdom, 155 tons; Belgium, 569 tons; Germany, 6,791 tons; Greece, 1,337 tons; Holland, 635 tons; Italy, 6,545 tons; and America, 1,541 tons.

During the year under review 1,180,213 kilogs. of carpets were exported, representing 394,546 square metres, of the value of £T4,670,885. The best quality carpets continue to be taken by the United States, which country, together with the United Kingdom, took about three-quarters of the total exports. Although the area taken by the United Kingdom is considerably in excess of that taken by the United States, it is obvious from the total weight and value of the American purchases that the American demand for the best quality is maintained.

Valonia containing up to 37 per cent. of tannin is an important product of the Izmir zone. The 1929 harvest produced approximately 40 million kilogs., of which 36,257,000 kilogs. were exported. The chief buyers were:—The Soviet Union, 10,221,000 kilogs.; the United States, 5,833,000 kilogs.; the United Kingdom, 5,395,000 kilogs.; Germany, 4,413,000 kilogs.; Italy, 2,934,000 kilogs.; Egypt, 1,926,000 kilogs.; Holland, 1,660,000 kilogs.; and France, 1,166,000 kilogs. Although the 1929 harvest was about 3½ million kilogs. less than in the previous year it was still 4 million kilogs. in excess of the 1927 crop.

The average annual crop of cotton from the Izmir zone is 25-35,000 bales of about 140 okes, and represents a little over 3 per cent. of the exports from this region, the most important customers being France, Greece, Italy and the United Kingdom. The disposal of the crop was:—10,000 bales to local mills, 25,000 bales exported, 3,000 bales used locally for mattresses and bed covers, and 2,000 bales still in the interior. According to information supplied by the Chamber of Commerce the total exports of cotton were 3,547,000 kilogs., valued at £T 2,705,000, of which the distribution among the leading purchasers was:—France, 1,286,000 kilogs.; Greece, 721,000 kilogs.; Italy, 685,000 kilogs., and the United Kingdom, 437,000 kilogs.

The annual production of olive oil in 1929, according to figures furnished by the Chamber of Commerce, was 15 million kilogs., of which 7,232,000 kilogs. were exported, 5,814,000 kilogs. to Italy, 777,000 kilogs. to the United Kingdom, and 325,000 kilogs. to France. Of the oil sent to Italy large quantities are stated to be re-exported to Central Europe after refinement. The amount of opium produced in the Izmir region during the last three years was as follows:—1927, 166,000 kilogs.; 1928, 22,000 kilogs.; and 1929, 174,000 kilogs. Exports of opium from Izmir in 1929 amounted to 213,000 kilogs., as compared with 164,000 kilogs. in the previous year. Owing to the increased demand it was possible to dispose of considerable stocks remaining on hand from 1928.

ADVERTISING IN
"THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of ***all*** classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

The Manager, "The Near East and India," 170 Strand, London, W.C.2

TO INDIA VIA IRAQ.

Even in these hurrying days there are those who like to take their pleasures quietly, and to those people the alternative route to and from India by way of Iraq and the Persian Gulf, charmingly described in an admirably illustrated little booklet issued by the P. and O. and Associated Companies, will no doubt make a strong appeal. The route is essentially for the leisurely traveller, and it has the fascination of taking the tourist by ways rich in historical memories and not yet so trodden as to have entirely lost the glamour of the past. The route is by way of Beyrout to Baghdad by the cars of the Nairn Eastern Transport Co., Ltd., and thence to Basrah either by the Iraq Railways or by the steamers of the Euphrates and Tigris S.N. Co., Ltd. The various places of interest in Iraq that can be visited on the journey are outlined, and for those who have the time available there is the possibility of a detour from Baghdad into Persia, with the option for the traveller of going on from Teheran to India by the old caravan route via Yezd and Shiraz to Bushire, and thence by B.I. steamer to Bombay, or from Ispahan via Ahwaz to Busreh.

The Sudan Directory, the 1930 edition of which has recently reached us, is an indispensable publication for those who have interests in the Sudan. Besides a list of the names and addresses of the principal official and non-official residents, it contains a wealth of general information with regard to the country. Thus the contents include articles on the history and the economic position of the Sudan, while separate sections are devoted to such matters as big game shooting and fishing, health, trade statistics, travel information, and weights and measures and currency, etc. It remains to be added that the price of the directory is PT100, and it can be obtained from the Sudan Advertising and Publishing Company, P.O. Box 500, Cairo.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended August 20:—

Egyptian Futures.

Sakel Contract.—Values in this contract have shown continued weakness throughout the past week, the uncovering of stop-loss orders, the declining tendency in the American markets, and, most important of all, the unsatisfactory general trade situation combining to create a distinctly "bearish" atmosphere. For an immediate view, it is difficult to pick out any factors to arrest the downward swing that is now in progress, Sakels at under 10.00d. per lb. should ultimately stimulate consumption, but confidence has been so badly shaken that the buying power which in ordinary circumstances would come in at this level, in the shape of speculative and downscale trade operations, is being withheld. The heavy liquidation experienced during the week has further encouraged the putting out of some fairly extensive lines of "short" cotton, and this rather inclines one to the view that we are approaching a period when more two-sided markets will be the rule. In a consistent decline, such as has occurred, sentiment is apt to swing all one way. The present Sakel crop is now passing through its most critical stage, and should any unfavourable news start to come in we do not think the outstanding interests could cover themselves without causing a sharp reaction. After declining below the 20.00 dollar level earlier in the week, the Alexandria market has latterly developed more resistance, due probably to the belief that the Government will advance to the growers 17½ dollars per kantar on their crop. If this proves to be the case, it will probably prevent a fair percentage of the crop coming on to the hedge markets at the ruling level, or at least result in a more gradual crop movement. Trade reports in some quarters show that a little more interest is being taken, but many inquiries have failed to result in business, owing to the persistent drop in actual values. Whilst conceding that the main issues fail to reveal that markets are grounding, we consider that values, as far as this market is concerned, have fallen to a point where considerable caution should be exercised on the "short" side

Upper Contract.—Business in this contract continues to reveal a lack of interest on the part of both trade and speculative interests. Price movements have again been regulated by the fluctuations in the American markets, and very little alteration in last week's differences has taken place. Whilst the Alexandria market showed a poor tone earlier in the week, recent reports have been firmer, due, no doubt, to expectations that the Government will finance growers up to 10 dollars per kantar on their crops.

Egyptian Spot.

Spinners on the whole during the past week have shown more interest in the various qualities. This has resulted in the inquiry being on an improved scale, but, unfortunately, the steady decline that has taken place in values appears to have been detrimental to the actual business. There are signs, however, that given more stability in values, an improved offtake will be experienced. Sakels, in particular, seem to have worked down to a reasonable basis, and it certainly appears that an increased consumption of this variety should be felt during the coming months, as the substitution of other varieties, which has been so prevalent in recent years, will hardly operate at present differences..

Sakels.—Only a small business has been reported in this cotton, the demand that has come in running mainly on the better qualities.

Uppers continue to be in fair request at values ranging from 50 to 100 on. Although the stock here is extremely limited, holders show an inclination to offer their cotton at more reasonable differences with new crop quotations.

Nahda has been occasionally in demand, and a few sales have been put through at somewhat irregular prices.

Maarad Cotton has only been inquired for occasionally and the resultant business has been negligible.

Fouadi, Farouki, etc., have been slow of sale.

Sudan Sakels continue to meet with a fair inquiry, but sales have been for unimportant quantities.

Tokar Sakel has been in request occasionally, sales amounting to about 150 bales at 125 on.

Low and Inferior Cotton has figured fairly consistently in the inquiry, and a few lots ranging in value from 5d. to 7d. have changed hands.

C.i.f. Business.—Buyers have shown decidedly more interest in this department during the past week, and whilst business has been small, there are indications that a better undertone is developing, giving a promise of greater activity as soon as values commence to show more stability. Forwardings have been returned as 1,170 bales Egyptian and 485 bales Sudan. Sales have been estimated as 1,200 bales Egyptian and 320 bales Sudan Sakel.

Quotations.—Those of Sakel show a decline of 100 to 110 points, those of Uppers 60 points, and those of Pilion 65 points on the week. F.G.F. Sakel to-day 10.84d. F.G.F. Upper to-day 8.39d. F.G.F. Pilion to-day 8.90d.

EGYPTIAN FUTURES WEAK.

The Alexandria Commercial Company report as follows for the week ended August 14:—

Our market has continued to decline during the week in sympathy with the weakness in New York since the issue of the Bureau report on Friday last. The week's summary of prices is as follows:—Sakellaridis; November, 22.08 dollars, 0.61 dollars down; January, 22.34 dollars, 0.55 dollars down; March, 22.80 dollars, 0.54 dollars down; May, 23.30 dollars, 0.49 dollars down. Ashmouni: August, 14 73 dollars, 0.31 dollars down; October, 14.07 dollars; 0.67 dollars down; December, 14.37 dollars, 0.65 dollars down; February, 14.78 dollars, 0.62 dollars down; April, 15.18 dollars, 0.59 dollars down; June, 15.60 dollars, 0.56 dollars down.

A Teheran message states that a representative of a big French firm of engineers has arrived there to discuss the question of the completion of the railway south of Bandar Shahpur to Dizful.

Yugoslavia's exports for June amounted in value to 508 million dinars, or about 3 millions over the imports. For the first six months of the year the imports amounted to 3,478 million dinars, the value of the exports being 3,362 million dinars, there being thus an adverse trade baance of about 115 millions as against one of 689 millions for the first six months of 1929.

The crude oil production of the Roumanian fields during July amounted to about 400,000 tons, as against 520,000 tons the previous month. The figures of the chief operating companies during the month are as follows (in tons):—Astra Romana, 101,147; Steaua Romana, 74,847; Phœnix Oil, 65,598; Sirius, 54,165; Romano Americana, 46,788; Creditul Minier, 43,210; Colombia, 29,889; Concordia, 19,628; I.R.D.P., 19,388; and Romano Africana, 16,874.

NEWS FROM ALL SOURCES.

The address of the National Mining Corporation, Ltd., has been changed from 428, Salisbury House, London Wall, E.C.2., to 1, Broad Street Place, E.C.2.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended July 31, amounted to £E7,387 as against £E8,783 for the corresponding period of the previous year.

The traffic receipts of the South Indian Railway Company for the week ended July 26, amounted to Rs5,30,552 as against Rs12,14,223 for the corresponding week in the previous year.

Cables and Wireless, Ltd., announce that the transfer books of the 5½ per cent. Cumulative Preference Stock of this company will be closed from September 1 to 8, inclusive, for the preparation of warrants for the dividend for the half-year ended June 30, payable on September 30.

The traffic receipts of the Suez Canal from August 9 to 15 amounted to 21,480,000 francs.

It is reported that the Egyptian Government has decided to remodel the Assiut Barrage. Extensive additions are to be made to the substructure of the barrage and a new lock is to be built.

Roumania's Budget receipts for the first six months of this year amounted to 12,800,845,535 lei, plus exceptional revenues of 373,037,785 lei, totalling 13,233,883,323 lei. The gross receipts of State enterprises totalled 1,301,013,798 lei.

A Cairo message states that the Egyptian Public Works Department has received eleven English and Continental offers for North Delta pumping stations. The lowest tender was submitted by Metropolitan-Vickers, namely, £E466,000. Siements-Orient quoted £E476,000, Ateliers de Constructions Electriques de Charleroi £E662,000, and Alsthom (Société General de Constructions Electriques de Mecaniques, Paris) £E800,000. The quickest delivery—sixteen months—was offered by Metropolitan-Vickers.

Notes of the Week.

Egypt "Carries On."

The only hint that Egypt has given during the last few weeks that political troubles weigh heavily upon her—for the consumption of English readers reference has been made to the "grave constitutional, and possibly political, issues involved by the present crisis in Egypt"—is the unpleasant incident provided by the presence of a man armed with a hatchet in the coach in which the Prime Minister was travelling. Fortunately, the man was discovered soon enough to prevent him from carrying out any designs that he may have had, and consequently the full scope of his intentions may not be revealed. Sidky Pasha is to be congratulated on the fact that the incident did not bear a more sinister aspect, and all sections of public opinion in Egypt should feel relieved that the honour of the country has not been besmirched by a revival of political crime. The Egyptian Government is justifying its existence by setting economic affairs before politics. To cope with the economic depression, which, inasmuch as it is largely due to the cotton slump, is bearing heavily upon the fellahin, it has authorized a moratorium in respect of one-fifth of land rents, and the postponement of the collection of half of the Government's advances to farmers and half of the cost of fertilizers sold to them. That the Prime Minister should have refused the request, urged by delegations of farmers, that rents should be reduced permanently in ratio to the price of cotton, and should have based his refusal on the ground that such a step would require the sanction of Parliament suggests that he has not yet embarked on a campaign of Constitution-violating to the extent with which he has been credited. For the present he seems content to confront constitutional theorists with the maintenance of internal peace, the expert handling of economic problems and sympathetic attention to the needs of the fellahin, and to await the effect of this policy on the intensification of political unrest promised for the autumn.

Albanian Problems.

As Albania is one of the countries in the Near East that has freely summond to her aid foreign advisers, it is much to be regretted that she is not making a greater success than she is actually of the experiment. The large numbers of Italian helpers—an inevitable corollary of Italo-Albanian relations—ought to be a guarantee of almost Fascist efficiency, but the results do not bear out the promises, and the outside observer is left wondering whether Albanians or Advisers are to blame, or whether possibly both are at fault. It may be that recourse to foreign advice was had in the first instance so much under compulsion that the Albanians have not yet succeeded in shaking off their lack of sympathy with it. To-day the world is far more anxious for the success of things as they are than it is concerned over theories of government. Consequently, whether it be a republic after the model of Greece or that of Turkey, a dictatorship as adopted by Yugoslavia or the existing régime in Albania, the main point for the peace of the world is that one and all should avoid failure and insure stability by a reasonable measure of progress and prosperity. If Albania constitutes the weak spot in this respect in the Balkan Peninsula at the present time, it is not from lack of Advisers. Whether they have failed to serve her well or whether she has failed to derive full advantage from their presence, it may not be easy to determine. Her financial situation can afford satisfaction neither to the Albanians nor to those who are supposed to advise them on financial affairs, and it is probable that failure in this one sphere is mainly responsible for troubles in other directions. Early in August Major-General Sir Jocelyn Percy, Inspector-General of the Gendarmerie, was obliged to hand in his resignation. So far as is known, the resignation has not yet been accepted, and it is to be hoped that, as a result of conversations with King Zog, he may be able to remain at his post. If, as it is understood, the Gendarmerie suffer from arrears of pay, with the consequent undermining of discipline and *espirit de corps*, it is clear that no foreign Adviser, lacking executive authority over the whole force, will be content to remain identified with a force that can bring only discredit on itself and on its country. No doubt, the Albanians are not as instinctively prone to discipline as some other races, and their Advisers may need an abundance of tact and exceptional adaptability to unfamiliar conditions in dealing with them; but it is better for all concerned to call attention to shortcomings than to allow a state of affairs that must ultimately end in disaster to continue without comment. It seems unfortunate that Italy should have associated herself so closely with Albania and have not made it her first concern to see that the finances of the country were placed on a sound basis. Roads, railways and Army might follow. A country that cannot pay its way and has to allow official salaries to be in arrears is going to experience the worst consequences of indiscipline and corruption.

Administration in Palestine.

It is to be hoped that, whatever action the Council of the League may see fit in the next few days to take upon the dispute between the Permanent Mandates Commission and the Mandatory Power for Palestine, nothing will be done to make the task of administration in the Holy Land more difficult. For it seems obvious that, if the Jews are somewhat dismayed at the official British interpretation of the Mandatary's duty in Palestine, the Arabs of Palestine will have taken small comfort from the Mandates Commission's comments upon their part in the mandatory experiment. In other words, the domestic situation in Palestine may have become, passively, at any rate, even more delicate. There is, however, a belief in international circles that the Mandates Commission's Report may be regarded as giving to the Mandatory Power *carte blanche* for future administrative measures, and there is, therefore, great eagerness displayed in the forthcoming report of Sir John Hope Simpson, upon whose recommendations, as we have always insisted, the immediate future of Palestine largely depends. That the keynote of this report will be realism, allied to an idealism that is never absent from the best British administrators, may be taken for granted. What concrete result the Mandates Commission's report will have remains to be seen, but at least this will be said by historians in favour of the Shaw Commission's Report: that it resulted in the mission of Sir John Hope Simpson. We do not doubt that, on the basis of his report, an official re-declaration of policy will be enunciated, and that British administration in Palestine will proceed on lines true to its best traditions.

Economics in Iraq.

Economics must always precede politics, though this is a truth to which Orientals, no less than Occidentals, are slow in accustoming themselves. That political power is but a reflex of economic power is an axiom which has long been known to the more enlightened sociologist. It is one which is peculiarly applicable at the present time to Iraq, a country in which political advancement is regarded as having left economic development far behind. Especial attention, therefore, will be paid to the two reports of Sir Hilton Young, on "Economic Conditions and Policy in Iraq" and on "Loan Policy in Iraq" respectively, which were issued in Baghdad last week. Sir Hilton would appear to be absolutely correct in stating that, while Iraq may very slowly be becoming richer, the country cannot provide from internal resources the capital necessary for its development. A loan, therefore, is necessary. But on what security? The dread of all Middle Eastern States of a return to anything resembling a capitulatory régime is very real, and suspicion of foreign financiers' motives does not appear to be less in Iraq than elsewhere. But, as Sir Hilton suggests, there is no reason why foreign lenders should impose such terms as have been felt to be humiliating in the past, and he thinks that, if the oil revenues were pledged, cheap money could be obtained for such urgent works of development as the extension of the railway from Kirkuk to Mosul (at a cost of £1,000,000), a bridge across the Tigris at Baghdad (at a cost of £100,000), and flood prevention works (at a cost of £700,000). The first two schemes, it may be recalled, were suggested some years ago by General Hammond, when he was appointed to report on the Iraq Railways. Since his Report nothing has been done. But it is to be hoped that, now that agreement has been reached as between the Iraq Government and the British Government on the future of the Iraq Railways, the development long overdue will be taken in hand.

Expenditure in Iraq.

Apart, however, from the future development of Iraq, Sir Hilton Young has some pertinent comments to make on present-day expenditure in Iraq. He says that every item of expenditure should be tested with the questions: "Is this necessary for the maintenance of order and security? And, if not, will it increase the productivity of the country?" In the summarised forms of the Reports no amplification of these vital questions is made, so that one does not yet know what is at the back of Sir Hilton's mind. One may, however, recall the fact, reported in our Baghdad Correspondent's letter last week, that in spite of tangible economies in the spending Departments in Iraq, the rate of military expenditure is scarcely checked. This problem of Iraq's expenditure on defence forces is more urgent now than ever, and one hopes profoundly that no false ideas of *amour propre* will be allowed to interfere with the workings of sound and sane finance. As a rule, the money devoted to military expenditure in all Middle Eastern countries is too great a proportion of the total Budget, and Iraq is better qualified than any other State to demonstrate the folly of such expenditure. To walk before you run is a sound though unpopular rule, and one which we hope the statesmen of Iraq will consistently endeavour to obey.

Persia and Bahrain.

As reported by our Bahrain Correspondent in our issue of June 5, the syndicate which has now for some years held an oil concession in the Bahrain Islands recently installed drilling machines, and considerable speculation existed among the islanders on whether or not Bahrain was to become another Abadan. Such speculation has not been without its effect on the Teheran Government, which, though it appears to have ignored the original granting by the Shaikh of Bahrain of the concession to a British Syndicate (together with its not unimportant subsequent history) has now become so alert at the possibility of tapping a fresh source of royalties as to have made the actual working of the concession a new point of protest in the whole matter of the sovereignty of Bahrain. This Persian protest to the League of Nations is not, however, likely to cause much excitement in League circles, which were surely convinced by the former British repudiation of Persian rights to the ownership of Bahrain. It is unfortunate that the Teheran Government should permit itself to use such rhetorical expressions as that it "considers itself at liberty to claim and demand the restitution of any profit that may accrue from the concession in question without prejudice to the damages relating thereto." There is no need here to reiterate the conclusive arguments, which will be familiar to readers of THE NEAR EAST AND INDIA, against Persian claims to Bahrain: one need only say that no British Government—nor any other civilised Government, for that matter—is likely to admit that they have any justification. That they were advanced last century proves nothing. Surely this is a Qajar precedent which the present enlightened Persian Administration would be well advised not to follow?

A BEWILDERED TURKEY.

Whatever may be the fate of the Party that Fethi Bey has set himself to found in Turkey, there can be no doubt that his return to political life has served to throw a flood of light, as far as the Turks themselves are concerned, on the situation in the country. Most of what is now being said by the leader of the new Liberal Republican Party has long been apparent to foreigners; but it has been hidden from the Turkish public, and the punishment meted out to the one journalist who dared to suggest that things were not as they should be made a pathetically unenlightened Press still more subservient to the existing order. It has required only a few courageous words on the part of Fethi Bey to tear away the veil that had been so carefully thrown over public affairs in general. Constant assurances that the Government could do no wrong, that everything was for the best and of the best in Turkey left the people as a whole unprepared for any sudden revelation of the real facts, and there is the danger that the Liberal Republicans will try to swing the pendulum too violently at first. Mustapha Kemal Pasha may have satisfied himself that a little criticism in the country would prove a healthy innovation, but he can hardly have been prepared to endorse the verdict that the whole administration which nominally has had no existence apart from his inspiration or *imprimatur,* is rotten to the core. This, in effect, is what Fethi Bey, or at least some of his lieutenants, in the exuberance of their new-born freedom of speech and from a desire to speed the new Party on its way, are telling a bewildered Turkey. Hitherto it has been customary to regard Ismet Pasha as merely the very efficient agent whose rôle it was to give practical effect to the ideas emanating from the Ghazi as the sole source of administrative wisdom in Turkey. In such circumstances it is difficult to attack the Prime Minister's policy without challenging the infallibility of the President, which has been the beginning and the end of a true Republican's belief. That this aspect of the position has not escaped some of Turkey's public men may be inferred from their cautious attitude towards the new Party. The initial blessing that Fethi Bey received from the President secured for the new movement the usual pæans of approval that any measure that is known to have his approval invariably evokes; but now that it is confronted with the logical sequence of Fethi Bey's outspokenness, public opinion in Turkey is evidently awaiting further endorsement from the Ghazi.

If the latter had followed up his sanction of the formation of the new Party by withdrawing from the presidency of the People's Party, it would have been comparatively easy to contemplate the existence of two parties competing by means of rival programmes for the favour of a President identified with neither. The Ghazi, however, retains his intimate association with the People's Party, and the politically-minded Turk is left in the uncomfortable uncertainty whether, if the stage is to be set for a political conflict, it will be between Ismet Pasha and Fethi Bey, or between Ismet Pasha and the Ghazi. In the former case the Ghazi's retention of the presidency of the People's Party suggests that, while he may be willing to see Ismet Pasha reminded that infallibility in Turkey cannot be shared, he will not allow Fethi Bey to assume the rôle of second saviour of the country. If, on the other hand, the close co-operation between the Ghazi and Ismet Pasha is to be finally terminated, Turkish public opinion is puzzled by the resolute fight that the Prime Minister seems determined to put up and wants further guidance before coming down on one side or the other of the fence. In the meantime there can be no doubt that the letting-in of some light on the situation in Turkey is good for the country, even though it be perplexing for the individual politician and for the Press in general. The basic weakness of Ismet Pasha's régime has been a deep-rooted suspicion of all foreign interest in Turkey. It has not only prevented, until too late, the Turkish Government from seeking advice abroad on a number of intricate questions bearing on the reconstruction of Turkey, but it is also responsible for the aggravation of the national difficulties as a result of the attempt to impose too heavy a burden on the country from a false sense of *amour propre.* Fethi Bey has pointed out that the fact that the number of taxpayers imprisoned for not having paid their taxes has attained such enormous proportions is proof that taxation has reached its apogee and exceeds the taxable capacity of the nation. A sinister commentary on this contention is provided by the report of the German expert invited to examine Turkey's financial position. Herr Müller calls attention to the fact that military expenditure has ranged from 50.7 per cent. of the annual Budget in 1926 to 45.7 per cent. in 1929, whereas expenditure in the latter year "serving directly or indirectly the economic development of the country" was only 15.4 per cent. He then passes to the Government's railway policy and shows that, as a result of the purely strategic character of the new lines built, the mere cost of running them will be from two to three times the total of any possible revenue, and, if the cost of repairs, renewal of rolling stock and interest on capital involved be included, receipts will range only from one-fourth to one-seventh of the annual expenditure. If there had been any semblance of discussion in the Grand National Assembly, some check must have been imposed on a policy so prejudicial to the interests of the Republic. Unfortunately, the mere suggestion, whether from abroad or from Turks, that Turkey needed to cut her coat according to her cloth was regarded as being dictated by hostility to the Republic, instead of being, as it was in most cases, prompted by anxiety for the success of the new order. Even now, when the necessity for foreign financial help is reluctantly recognised, there are Turks in high places so unsophisticated in world affairs that they see no incongruity in expecting further money from abroad while they are at pains to repudiate their obligation to meet Turkey's present indebtedness.

The rehabilitation of Turkey's economic position will not be achieved in a short time. The first step has been taken by the removal of the veto on all criticism regarding matters of public importance. Fethi Bey claims, as a result of his return to politics, that henceforth no one can be exposed to blame for the free expression of his opinion. It is to be hoped that this will be the case. His own policy includes "a fierce struggle to put an end to excessive State expenditure." Railway construction may have to continue, but the excessive expenses incurred hitherto will have to be avoided. The monopoly system, one of his lieutenants has declared, is disastrous; "the sugar monopoly is simply a crime." These are brace words, and the country awaits the next step. Fethi Bey is not yet a deputy, although it is stated that no obstacles will be placed in the way of his becoming one by the Party which he is attacking and which has a monopoly of all the seats in the Grand National Assembly. Ismet Pasha remains unmoved, and considers that he has a complete answer to all Fethi Bey's charges by a brusque denial of every single statement. Turkey is bewildered, and the only point on which she has any certainty is that the present parlous situation cannot be remedied merely by words.

From Our Own Correspondents.

EGYPT.

Cairo, August 30.

The Attempt on Sidky Pasha.

The attempt on the life of the Prime Minister, Ismail Sidky Pasha, has come as no surprise to those who have watched the development of the political situation during the past two months. Basing oneself on past experience, one could judge that the speeches and declarations of Nahas Pasha, leader of the Wafd, as well as the articles published by the Wafdist Press, must sooner or later have their effect in stirring one or more hot-headed young men to emulate the nobles who so tragically took at their face-value the words of Henry II. and rid him of the "turbulent priest," Thomas à Becket. Circulars calling for the removal of Sidky Pasha have been in circulation lately throughout the country, some of them were even addressed to members of the Public Security Department, and there is in the possession of the authorities a secret report giving a forecast of events, which has been most accurately realised, including an attempt on the life of the Prime Minister as soon as a suitable agent could be found. For this attempt, as for any others which may be made against the lives of their political opponents, the Wafd and its leaders are morally responsible, just as the late Zaghloul Pasha, by the terms in which he referred to the British officers serving in the Egyptian Army, could not escape moral responsibility for the assassination of Sir Lee Stack.

The Wafdist Press ill-advisedly feigns to believe the explanation given by Hussein Mohamed Taha, Sidky Pasha's aggressor, that, having no money, he was seeking a free ride back to his work in Cairo, and are saying that he never intended to murder the Premier. But they do not explain why he should have bought the hatchet found on him in Cairo, and have deemed it necessary to have it freshly sharpened before leaving Alexandria, nor why, in order to get a free ride, he should have donned the uniform of a Pullman car attendant and have taken up his position in the Prime Minister's saloon. All these preliminary facts, coupled with the evidence that he was about to enter the Premier's own compartment when he was given the order to bring breakfast, are in themselves proof that he was there for no good purpose. That he was a bad character and a political agitator is shown by his career in the Sudan, whence he had to be expelled, while there has since come to hand, in the shape of letters to and from him, evidence which makes it clear that not only did he intend to murder the Prime Minister, but also that he was merely the spear-head of a murder conspiracy.

The Economic Crisis.

In spite of the political alarums and excursions that have marked the past ten days, Sidky Pasha has been devoting much attention to the very grave economic crisis in the midst of which the country has found itself. The result of his preliminary labours has been evident in a series of proposals laid on August 28 before the Council of Ministers and a meeting of bankers. It has now been decided to come to the aid of the fallahin by opening a credit of four million pounds for the purpose of making advances to them against their cotton crop, so as to save them from being compelled to throw their cotton on the market in order to meet their immediate needs.

Under this scheme the Government is postponing half of the advances, amounting to £E700,000, made to cotton growers and the whole of the advances (£E350,000) made to cereals growers for agricultural operations, fertilisers and seed on condition that the borrowers take advances on their crops from the Government. This will go some way towards relieving the fallahin. But it is generally felt that the Government will in the end have to remit, for this year at least, the tax on ginned cotton, the rate of which was fixed when cotton was double its present price, to reduce the railway transport on cotton and cereals, and to do something with regard to the collection of taxes.

Considering the "dried up" condition in which the Wafdist Cabinet left the Reserve, Sidky Pasha has done wonders to be able to afford four millions for the purpose mentioned above. And it is a pity that the fallahin masses cannot be made to realise that, if they are suffering to-day and if the Government is not doing more to relieve them, it is because of the insane fanatical policy carried out by the Wafd, who for its own political ends abused the trust which they showed by the ready manner they gave their votes to its nominees.

The Question of Rent.

Perhaps the most interesting decision and the one likely to relieve the fallahin most is that taken with regard to land rents. There has been much justified criticism of the maintenance to-day by the landlords of the rents based when cotton was 50 per cent. higher. For divers reasons it was impossible to enact legislation directly fixing agricultural rentals. The Ministry of Finance found, however, a way out by proposing to prevent by law the Courts from dealing with cases where the tenant had paid four-fifths of his rent. In devising this expedient the finance experts based themselves on the practice of the Ministry of Wakfs, which is one of the largest landowners in the country. There the leases are based on Sakellaridis at 30 dollars and Ashmouni at 20 dollars. If on October 15 contract prices are either above or below these figures, for every dollar difference the rent is either increased or decreased, by 2 per cent. in the case of Sakellaridis, and 1½ per cent. in the case of Ashmouni. The present price of Sakellaridis is 10 dollars below the Wakfs limit, and Wakf leases are being reduced by 20 per cent. By means of the law now approved leases throughout the country will automatically come down 20 per cent. for the coming year. This will greatly benefit the fallahin tenants.

IRAQ.

Baghdad, August 26.

The Heat Wave.

The heat wave which developed in the first days of August relented after a week of high temperatures—nothing above 121, but nothing below 118—and a spell of comparative cool followed which touched the Arctic depths of 102! Since then, and for the last week, we have risen again to a range of between 112 and 116, and—with cooler nights and shorter if not more lenient days—feel some

confidence that permanent improvement is not distant. some of the worst usual plagues—notably sand-flies and dust-storms. The Tigris continues to drop—being already past all previous minima—but experts assure us that not more than a further foot of mud and islands will emerge. The effect of these levels on the rice crops, on both the rivers, has ben serious.

Electoral Activity.

The machinery preparatory to the elections proceeds with little incident. In the capital, the choice of an Electoral Committee was carried out with no interruption save that of a few young men distributing hand-bills in favour of a boycott—a device which their elders seemed indisposed to follow. It is, however, true that—on present indications—an attitude of boycott is to be that officially prescribed by one of the more vocal cliques of out-of-office Nationalists, the party of Abu Timman and his friends. But no Iraqi politician has ever yet boycotted, nor ever will, an election in which he felt a chance of being elected: and it is doubtful whether the spirit of non-co-operation will go very far. Much of it is but an apeing of India, not India's politics or measures, but just her phrases: just as we have seen a few of our publicists proclaiming Fascism (because it is fashionable and European), and others, when France and America published a heavy protection tariff, clamouring that Iraq should show its spirit by doing the same!

For the rest, candidates are active though policies are doubtful and parties mere momentary agglomerations of individuals. No doubt the resulting Parliament will be wonderfully like its predecessors. It can only be the hope of Iraq's sincerest friends that it will contain a good proportion of her best elements.

Movements of Officials.

From Europe, meanwhile, come many rumours but little news. A "Financial Agreement," one learns, has been initialled by Sir Francis Humphrys and Nouri Pasha: it must contain, presumably, provisions for the settlement of those hardy perennials, the Iraq Railways and the Port of Basrah. The High Commissioner is expected back early in October, the King a week or two before, and the Prime Minister perhaps ten days or a fortnight from now. Major Hubert Young, Acting High Commissioner, is to proceed on leave early in September, when the A.O.C., Sir Robert Brooke-Popham, will act until Sir Francis's return. Jaafar Pasha, I understand, will also leave the country in the next few weeks for a time; the ill-health which alarmed his friends two or three months ago seems better.

Talking of these movements reminds one of diplomatic changes. Raouf Bey Chadirchi is to come back from Ankara (where Naji Bey Shaukat, late Minister of the Interior, will replace him), and proceed to Teheran: a prospect which, one feels, will leave him unenthusiastic. Daoud Bey al Haidari (now on holiday in England) is mentioned as the new Iraq Minister for Queen's Gate Gardens, where Husain Beg Afnan is still acting. The three posts abov-mentioned represent the senior appointments in the Iraq diplomatic service. To complete the list, we have the Consul-General at Cairo, and Consuls at Alexandria, Karmanshah, and Muhammarah.

Iraq and the Kurds.

The Ministerial tour in Kurdistan, mentioned in my last letter, was pronounced a success. Meetings and receptions were held, speeches were delivered, and—particularly at Sulaimani, one is told—informal argument was exchanged with the less tractable Kurdish spokesmen. The Press of the capital, whose ignorance of Kurdistan and the Kurds is as complete as it would be hotly denied, stress the need of "firmness." The attitude of the Administration, it is clear, is one of sympathy, and, in non-essentials, of concession. It is willing to go far in the outward things—language, departmental grouping, nomenclature—which touch the *amour propre* of the Kurd; but not, one supposes, to admit the least trace of separatism.

THE PERSIAN GULF.

Bahrain, August 18.

Shaikh Salman's Visit to Hassa.

In July, Shaikh Salman, the eldest son of Shaikh Hamed, accompanied by several lesser Shaikhs of the Ruling Family, paid an official visit to Shaikh Abdullah bin Jaloui, Governor of Hassa, on the occasion of his return from the pilgrimage. They were entertained for several days in Hafuf. The journey from Ojair to Hafuf, the capital of Hassa, can now be done partly by car when the conditions are favourable, but the heavy sand prevents the whole distance being passable by motor traffic.

Although the province of Hassa is not dependent on the pearl trade, it is equally affected by the general trade depression prevalent in these parts. The Maria Theresa dollar, which is used in Hassa, now stands at 12 annas; this time last year it was worth Rs.1/4/-. This coin is an interesting survival. The dollars, which are minted in Austria, are replicas of the original currency, and bear the date 1780 and the head of the Empress Maria Theresa. These coins are little used in Bahrain, except on such occasions as for payment of blood money, which is always decreed in dollars. The coinage of Bahrain is the Indian rupee, but paper notes are almost unobtainable, as the Arabs have not yet overcome thesr suspicion of paper money.

Bahrain Passports.

The Bahrain State, as well as Muscat, has lately taken to issuing its own passports for foreign and inter-Gulf travels.

A special visa is required on passports of all persons other than the Shaikh's subjects who land in Bahrain; without this they are not allowed ashore. Although this regulation has been in force for some time, many people still arrive without the necessary visa on their passports. In most cases they have to travel on to Basrah, where they obtain a visa.

Bahrain, especially during the pearl season, attracts a large proportion of the riff-raff of other Gulf ports. Owing to the new passport rules the entrance of undesirable characters can to a great extent be prevented.

Journalists and Bahrain.

A recent visitor to Bahrain was M. Albert Londres, the well-known French author, who was accompanied by Lt.-General Depui, who was for many years French Consul at Jidda. M. Londres came to Bahrain in order to obtain information about the pearl-diving in connexion with a series of articles and a book which he is writing. During his stay he was received by Shaikh Hamed; he also spent a day out at the pearl banks and visited the pearl market and various places of interest in the islands.

Visits from eminent writers and journalists are appreciated in Bahrain, but unfortunately most of the so-called journalists who visit the State, especially from Egypt, Syria, and Iraq, are not genuine journalists. As in many of the Indian States, their system is to praise or abuse the country, the Government, and individuals, according to the value of the presents which they received.

Surprising inaccuracies are published about Bahrain, not only in the Arabic papers but also in England. A leading London daily paper recently published a photograph of Shaikh Hamed with a statement that his annual income from the pearl industry amounted to £500,000. Such misleading remarks are apt to cause annoyance and inconvenience.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 14.

Little Wars.

India to-day may almost be said to have three little wars on her hands; one on the North-West Frontier, one in Sind between Hindu and Muslim, and one in Bombay City between the Congress and the Government. The situation on the frontier is undoubtedly serious. There is talk already in official circles of the "unrest" spreading to such an extent as to render major operations necessary. The term "unrest" is still being used, however, and not, apparently, as a euphemism. The first to drop the term will probably be those British-Indian subjects in the North-West Frontier Province, whom current opinion credits with having provoked the "war" with their solicitations to the tribesmen to come and make trouble for the Government. They now find that the trouble is as much for themselves. The "war" in Sind will probably end before these lines appear in print; so it need not be dwelt on. One of the Collectors, a Hindu, has had to be withdrawn, and an Englishman sent to take his place. With regard to the "war" in Bombay City, the detail of most interest is that events are thought more than to give ground for the suspicion that the explanation of the courting by the Congress leaders of arrest, is that they feel that they cannot now control the violent element of their precious non-violent civil-disobedience movement, and are anxious themselves to be out of danger. That might be.

The Peace Mission.

Perhaps the clearest indication of where matters now stand with regard to the Sapru-Jayakar peace mission to the Congress leaders is that Mr. Jayakar, who is not seeking re-election to the Legislative Assembly, has given as his reason that, his hands being so full with the peace mission, he has no time for electioneering. That indicates that he does not expect, for one, that the mission will suddenly end, leaving him with no occupation. The two pandits and Dr. Syed Mahmud have been taken to Yeravda, and I have seen a report that Mr. Vallabhbhai Patel, and others of those recently arrested in Bombay (not Pandit Madan Mohan Malaviya, for an anonymous person paid his fine, and he was immediately released), have also been sent there. Sir Tej Bahadur Sapru and Mr. Jayakar were to confer with them all yesterday morning, according to report. There is the deepest wish in the country, especially among the trading classes that the mission should suceeed; that the civil-disobedience movement should be called off, and India return to her normal life.

Strife.

The English have kept the peace in India so long, that the Indians have now forgotten what a scene of strife Clive and his contemporaries found the country. One would not expect a man of Sir Francis Younghusband's experience to have forgotten it, or, while remembering it, to think that the India of to-day is a land that has outgrown her old disposition. Yet he will write to *The Times*: "Why not recognize both the greatness of the work we have already done in welding India into a political unity, and also the nobility of the work the Indians themselves are doing in creating a national spirit within that political unity?" That has provoked the question here: How much welding has really been done? And in the very same hour of asking that question there has seemed to come the answer, not in words, but in a scene of strife within our own municipal chamber; a scene that has provoked this comment: "The meeting of the Calcutta Corporation called to elect an alderman has again dispersed on account of rowdy scenes. A pitched fight is the outcome of the rivalry between Mr. J. M. Sen-Gupta and Mr. Subhas Chandra Bose, both Congressmen, now in prison. Neither of them can take his seat, nor do they profess to stand for different principles. Yet they cannot bring themselves to spare the city of Calcutta and its civic body the humiliation attendant on this virulent competition. The whole thing is personal, and the choice of the Corporation is left to be settled by virtually an "ordeal by combat." In certain circumstances this method of mutual elimination may be commended to the supporters of opposing schools, but it augurs ill for the future that the aggrandisement of two political leaders should have led to hooliganism and physical violence." In hardly a soul in this country does there appear to be the spirit of l" Ecce quam bonum et quam jucundum habitare fratres in unum!" Only last night I heard a Muslim in a company of Muslims reviling Maulana Shaukat Ali, and just because he is not for the Congress and the civil-disobedience movement. Not one of the others said, or silently thought, a word in reproof of the speaker's virulence.

Picketing Schools and Colleges.

Two days ago I met an Indian college student in the road, the son of one of my friends, a judge. I said to him: "Are you one of the picketers, or one of the picketed?" "I am one of the picketed," he replied with the sweetest smile. Could he tell me, I asked, what the non-co-operators saw as the gain for the nationalist cause of this picketing of schools and colleges. He said he could not tell me. The matter must have been much talked of in his home, by his father and others. No one I ask can answer that question—What do they think they gain? except with a smile. There is something that they see as a gain, or they are just blindly impelled by the love of strife for strife's sake. They cannot be so stupid as not to know that such intensive picketing of schools and colleges as Calcutta, Allahabad, and Lucknow are now vexed with, or any mild form of picketing, is no thing that could possibly be kept up for long. They cannot but know that the end will find the established Government just as much the established Government as it was at the beginning, while the students will have lost a term, or two, or three, and much educational apparatus have been destroyed. Shakespeare has put this into the mouth of one of his characters:—

> Our natures do pursue,
> Like rats that ravin down their proper bane,
> A thirsty evil; and when we drink we die,

and one, remembering the words, will think that it must be so with the Indians; that, because they lack the habit of self-discipline, they must "pursue the thirsty evil" of striving for the love of strife.

The Hindu-Muslim Problem.

It was with great relief that one turned from the revolting and degrading spectacle of that strife on the frontier, in Sind, in Bombay, in our municipal chamber, at those school and college gates, to read the constructive plea of Sir Abdur Rahim for a settlement by consent and agreement of the vexed question of Hindu-Muslim relations. The plea is in a speech that Sir Abdur delivered in the Town Hall here five days ago. One would specially call the attention to it of those who are to be members of the British delegation to the Round Table Conference. For others the briefest summary will suffice. Sir Abdur contends that the question of Hindu-Muslim relations should form a distinct subject in the portfolios of which the principal Ministers in the Provinces and of the Government of India will have charge; that provision should be made by statute and in the instruments of instruction to the Viceroy and the Governors, empowering them to veto executive and legislative measures of a discriminatory nature, that the franchise should be a wide one; for the wider it is, the less the Muslims will have to fear from the communal ascendency of any class. Sir Abdur also suggested an ingenious and safe method of educating India out of her present need for separate electorates. That, I think, is a not unfair way of putting it.

The Adi-Hindus.

There has been a Congress at Nagpur of Adi-Hindus (the depressed classes), with a well-reasoned and reasonable presidential address by Dr. B. R. Ambedkar. This makes

Digitized by Google

another document to which one would specially call the attention of the British delegates to the Round Table Conference. While it appears plain that the Congress delegates to the Conference, should there be some after all, will want to take the line that the Statutory Commission's Report should be shelved, and may refuse themselves to take any part in discussing it, it is shown that large bodies in India, such as the Muslims and the Adi-Hindus, are ready to accept the Commission's recommendations, while they mean to do all they can to secure what they think would be still better terms for them. That is one of the very few hopeful signs there are. Any period of peace would provide a welcome breathing-space.

THE PRINCES' DELEGATION TO THE CONFERENCE.—II.

In last week's issue of THE NEAR EAST AND INDIA a series of brief biographical sketeches was given of the Princes who are attending in person as representatives of their Order at the forthcoming Round Table Conference. As previously indicated, the delegation also includes a number of Indian States Ministers who are representing either individual States or groups of smaller States.

In addition the members of the delegation will be accompanied by at least three advisers. Below are appended a few interesting particulars concerning the remaining personnel of the delegation:—

Sir Akbar Hydari is the Finance and Railway Member of the State Executive Council of Hyderabad, the greatest State in India, which he will represent at the Conference. He received his training in the Indian Finance Department, and first entered State service as a lent Officer. He is widely respected and a shrewd and successful administrator; and has thrown himself with great energy into the promotion of the Osmania University at Hyderabad, which is the only University in India giving higher instruction in any language save English. The State of Hyderabad is among the oldest of Britain's allies in India; and the Ruler, who is entitled Nizam, and enjoys the distinction of being termed "His Exalted Highness," is officially known as "Faithful Ally of the British Government." The territory is more than 80,000 square miles in extent, and the Nizam's subjects number twelve and a half millions.

Mirza Sir Mahommad Ismail is the Prime Minister of Mysore. He has a considerable reputation throughout Southern India, and is an active and enlightened administrator. Mysore, the State which he represents at the Conference, is nearly 30,000 square miles in area, having a population of just over six millions. It was under direct British rule for half a century, and was restored to the present Ruling House in 1881. The Paramount Power is entitled under the Treaty to exercise considerable control over the administration of the State, which prides itself upon its progress and efficiency.

Sir Manubhai Mehta is among the most experienced of Indian States Ministers. He was Prime Minister of Baroda from 1916 to 1927; and on his resignation from that high position became Prime Minister of Bikaner. In the course of his long career he has filled a variety of legal and administrative posts, and is much respected for his great experience in handling the problems which arise for settlement as modern requirements impose changes upon the traditional polity of the Indian States.

Sir Prabhashankar Pattani has served in distinguished positions in British India as well as in the Indian States. He was a member of the Bombay Executive Council from 1912-1917; and served on the Secretary of State's Council in London from 1917 to 1919. From 1920 until 1929 he was President of the Council of Administration of the State of Bhavnagar, in Kathiawad, during the minority of the Ruler. Sir Prabhashankar is the doyen of Indian Ministers, and has great influence among the Princes of Kathiawad.

Colonel K. N. Haksar is the Political Member of the Gwalior Council of Regency. He has had long experience of political work under the late Maharaja Scindia of Gwalior, who was distinguished for the prominent part he took in organising the Chamber of Princes. Colonel Haksar was for some years Private Secretary: afterwards serving in the Revenue Department before he held charge of the Political portfoliso. He has been associated with the work of the Chamber of Princes since its inception: and a short time ago was lent by his own Government to the Chamber as Director of the Princes' Special Organisation. He has a profound knowledge of the political problems of the Indian States in general, as well as of his own in particular. The State of Gwalior is 26,000 square miles in extent, and the population numbers 3¼ millions.

The advisers to the delegation include Professor L. F. Rushbrook Williams, a distinguished Fellow of All Souls', who served the Government of India for some eight years in a variety of posts, and finally as Director of Public Information. He then became Foreign Minister of the State of Patiala; and for the last three years has been on special duty with the Chamber of Princes as Joint Director of the Special Organisation, in which capacity he has work in America and England as well as in India. For the last five years he has specialised in the problems of the Indian States. He was Official Historian of the Indian Tour of the Prince of Wales, 1921-22; was one of the Secretaries of the Imperial Conference of 1923; and attended the League of Nations in 1925; also

Sir Reginald Glancy, who has had long experience in the Political Department of the Government of India. He served on the Frontier; and was afterwards for ten years lent to the Hyderabad Government as Finance Minister. He has been British Resident at Baroda; President of the Cabinet at Jaipur; and prior to his retirement in 1929 was for five years Agent to the Governor-General for Central India; and

Diwan Abdul Hamid, Prime Minister of the State of Kapurthala, which is 630 square miles in extent, with a population of nearly 300,000 peeople. He is widely esteemed as an able, progressive ,and enlightened administrator, and is among the leading figures of the Punjab States.

INDIAN NOTES

A Reasonable Case.

The interest of the non-official European in Indian polites in the past was apt to be fitful, wayward and inconsistent. The wonder is that the community has been able in the circumstances to command the services of such competent leaders as the small but distinguished band of representatives in the Central and provincial legislatures whose practical commonsense, broadminded co-operation and technical knowledge have proved such invaluable assets in the working of the reformed constitution. Thanks in large degree to the disinterested labours and personal example of men like Sir Campbell Rhodes, Sir Walter Willson ,Sir Arthur Froom and Sir Hugh Cocke, who now acts as spokesman of the group in the Legislative Assembly, the charge of apathy can certainly not be sustained to-day. The Europeans, as we observed recently, are now as fully alive to the needs of the political situation as any members of the other communities. Moreover, unlike the majority of the latter, the rank and file are not only beginning, as never before, to show a remarkable aptitude for politics but are also evidently capable of displaying that practical statesmanship which is willing to look beyond the prospect of immediate gain and mere

personal advantage. Although, as is evident from what we have already said, the task of representing the views, and safeguarding the interests, of one of the most important minority communities is being undertaken in no reactionary spirit, the European Association is very properly determined that its attitude should in no way be misconstrued. We are glad, therefore, that opportunity should have been taken of recent developments to indicate afresh the Association's attitude not only towards the Simon Commission's Report, but also in regard to the present political situation in general. The efforts being made to secure participation of all parties in India in the Round Table Conference lend particular interest to the series of resolutions adopted unanimously at the recent Branch Conference. That the resolutions will commend themselves to the overwhelming majority of clear thinking persons in this country is unquestionable. The insistence very rightly laid upon the necessity for the complete abandonment of the civil disobedience movement, and in fact seditious propaganda and unconstitutional agitation of every kind, as an essential condition precedent to any change in the present system of government in India, is an especially welcome feature.

The Banking Inquiry.

The programme laid down for the Indian banking inquiry is stadily taking shape ,although the progress had been somewhat overshadowed by the more spectacular developments in the political sphere. The problem, while it is as urgent as it is important, is at the same time so wide and complex—in its broadest aspect it might include every thing likely to increase the material prosperity of India—that there was always a danger, unless the main points to be investigated were clearly demarcated and adhered to, that the inquiry would lead to nothing more than a mere accumulation of facts from which nothing but general platitudes could be drawn. While the method of approach which was finally decided upon is perhaps unduly cumbersome to European ideas, it has proved, as we anticipated, well adapted to the purpose in view. The results to date, in the shape of the reports of the provincial committees, nearly all of which have now concluded their labours, are not unencouraging, even if they show more clearly than before the immensity of the problem. The first stage of the inquiry, it will be recalled, was devoted to the collection of evidence and an analysis of the main directions in which the provision of increased facilities was likely to prove most fruitful. This work was entrusted to provincial committees, which instituted in a few selected areas an intensive study of local conditions. The next step was the formation of a Central Committee, which has appointed sub-committees to visit important industrial centres and gain first-hand knowledge of the needs of the large industries and trades that are not the monopoly of any one province. When these various committees have issued their separate reports the Government of India propose to invoke the aid of a small body of outside experts, who will examine the evidence and suggestions accumulated during the first stage of the inquiry and advise the Central Committee in the preparation of its report. Although the personnel of the expert body, which will begin work early in December, has not yet been announced, it is understood that it will be found to represent a great variety of banking experience and generally be of a nature to command the confidence of both Indian and European interests. The Finance Member will therefore have the advice of sound and experienced banking authorities, based upon an exhaustive acquaintance with local conditions and requirements.

A telegram from the Viceroy, Education, Health and Lands Department, to the Secretary of State for India, states that the rainfall for the week ending August 27 was as follows:—Excess: Assam and Orissa. Normal: Lower Burma, Bengal and Madras (South-East). Fair: Upper Burma, Chota Nagpur, Bihar and Madras Coast (North). Scanty: Elsewhere. Monsoon weak outside North-East India and Burma.

INDIA'S TRADE IN 1930.

By H. A. F. Lindsay, C.I.E., C.B.E., I.C.S.
(Indian Trade Commissioner in London.)

The slump in the prices of raw materials which was so marked a feature of the last half of 1929 and the beginning of 1930 cannot yet be said to have stopped, although its pace seems to have abated. The slump has affected India no less seriously than other countries. The simplest way to illustrate its extent will be by quoting from the official series of index numbers of wholesale prices in Calcutta which is based on prices in July, 1914=100.

The index number of cereals, such as rice and wheat, fell from 128 in September, 1929 to 103 in June, 1930; pulses fell from 155 to 116; and oilseeds from 175 to 133. Tea fell from 159 in July to 113 in June. Raw jute was only 99 in August, 1929, or practically at the same level as in July, 1914; by June, 1930, it had fallen to 69, while raw cotton had fallen from 146 in the same period to 87. The average price of all commodities, which was 143 in September, 1929, had fallen to 116 by June, 1930, a drop of 27 points.

In order to explain the real effect of this slump it is necessary to revert very briefly to the course of prices since the War. It will be found that the prices of raw materials have generally followed lower levels than those of manufactured goods. The explanation appears to be that the agriculturist, who produces the bulk of the world's raw materials, is unable to control production in the same way as the manufacturer is able to control the output of manufactured goods. Another consideration is that industrial wages are generally higher than agricultural wages; and that taxation affects the manufacturer more seriously than the agriculturist and tends therefore to increase the cost and value of manufactured goods to a greater extent than the cost and value of agricultural produce.

These are world conditions and their effect is clearly seen in the statistics of India's import and export trade. A comparison of the values of imports and exports of merchandise into and from India on the basis of the declared values of 1913-14 shows that the margin between the values of India's imports, chiefly manufactured goods, and of her exports, chiefly agricultural produce and other raw materials, was extremely wide in 1920-1921, but has contracted since that year. By August, 1929, the levels of values of imports and exports were approximately the same. Since that month raw materials have fallen again and the margin between the prices of raw materials and manufactures has advanced. There is little doubt that this is an abnormal development which is bound to right itself sooner or later; and that trade cannot develop on healthy lines until the condition of equilibrium has been restored.

The effects of the fall in prices on the total value of India's import and export trade (private merchandise only) may be gathered from the following statement which shows in £ millions India's imports and exports during each of the five months January to July, 1930:—

	Imports.	Exports.
January	17.2	20.1
February	12.9	18.5
March	15.6	21.0
April	13.5	18.4
May	13.4	16.4
June	10.4	15.5
July	10.2	15.7

The figures for the last two months are, of course, exceptionally low, for reasons which require no explanation, and do not serve as an altogether reliable illustration. Much will depend on the course of this year's monsoon and all that can be said on this subject at present is that the conditions of rainfall hitherto experienced in India are satisfactory.

The King has been pleased to approve the retention for a further year by Nawab Sir Muhammad Ahmed Said Khan, of Chhitari, of his seat on the Executive Council of the Governor of the United Provinces, which he will have held for a period of five years on January 2, 1931.

PERSONAL AND GENERAL

TO-DAY

September 4, 1930 (New Style).
August 22, 1930 (Old Style).
Rabia II, 10, 1349 A.H., of the Muslim Calendar.
Ellul 11, 5690, of the Jewish Calendar.
Shahrinar 13, 1309, of the Persian Calendar.

Sir Ronald and Lady Storrs left London on August 30 for the Continent and Cyprus.

The Maharaja of Rajpipla arrived last week at the Hotel Splendide-Royal, Aix-les-Bains.

M. Famy Shawaa, the well-known Egyptian violinist, will give a recital of Egyptian music at the Egyptian Club, 71, Baker Street, to-day (Thursday) at 7.30 p.m.

The President of the Hellenic Republic has conferred upon Mr. Frederick W. Emett, O.B.E., of Reuter's, the Insignia of Commander of the Order of Phœnix.

His Beatitude the Patriarch Meletios arrived at Alexandria on August 30 on his return from London, where he attended the Lambeth Conference.

The Maharaja of Bikaner, who is attending the League of Nations meeting at Geneva, arrived in London on August 31.

Sir Charles and Lady Stuart-Williams having returned from India, are residing at Garden Reach, Cookham Dean, Berks, which will now be their permanent address.

Mohamed Mahmoud Pasha, formerly Egyptian Prime Minister, returned to London at the end of last week from Scotland.

Lady Irwin, wife of the Viceroy of India, will return to India about the middle of September. She is staying at Garrowby Hall, Yorkshire.

The Hon. Sir Stanley Jackson, Governor of Bengal and Lady Jackson leave London to-day (Thursday) on their return to India.

Lady Dadabhoy left Kingsnympton Hall, Kingston Hill on August 28 for Nagpur. Sir Maneckji Dadabhoy left England the previous week.

Sir Herbert and Lady Samuel left 35, Porchester Terrace last week for the country, where they will remain until the middle of the month.

Field-Marshal Sir George Milne and Lady Milne, who have been staying with Sir Robert-Williams, at Park House, Drumoak, Aberdeenshire, have returned to London.

The Maharaja of Dholpur and Major-General Freeth, Deputy Adjutant-General in India, arrived at Marseilles on board the s.s. Narkunda on August 29 en route for London.

Mr. W. A. Smart, Oriental Secretary to the Cairo Residency, left for Europe last month on leave. During has absence, Mr. L. B. Grafftey Smith is Acting Oriental Secretary.

Sir John Norton-Griffiths left London on August 30 by Air Mail for Egypt.

Major and the Hon. Mrs. Ralph Glyn left 22, Manchester Square on August 28 for Oberammergau, and were expected to return to 22, Manchester Square, yesterday (Wednesday).

Abdel Malek Hamza Bey, who until recently was Chargé d'Affaires at the Egyptian Legation in London, left Cairo last month in order to take up his new post of Egyptian Minister to Ankara.

Sir Kay and Lady Muir's recent house party at Blair Drummond, Perthshire, included the Hungarian Minister, Prince and Princess Jean de Caraman Chimay, Marquis and Marchioness Douro, Gen. and Mrs. Maxwell Scott, M. and Mme. Felix Guepin, and Mrs. Steven Runciman.

Sesostris Sidarouss Bey, C.V.O., Egyptian Minister to Brussels and The Hague, who is at present in London, represented the Egyptian Minister to the Court of St. James at the Funeral Service for the Duke of Northumberland, held on August 27 in Westminster Abbey.

The Secretary for Foreign Affairs, Mr. Arthur Henderson, on August 29 received Shaikh Hafidh Wahba, the first Minister of the Hijaz and Najd to be accredited to the Court of St. James, at the Foreign Office.

BEYROUTH, SYRIE.

A VENDRE EN BLOC; 2 MAISONS D'HABITATION ET VASTES LOCAUX.

PERSIA'S FOREIGN RELATIONS.

By D. BOURKE-BORROWES.

With the establishment of a new dynasty on December 12, 1925, a great change took place in the relations of Persia with foreign Powers. It was determined that, henceforth, the basis of Persia's foreign policy should be that of equal reciprocity in all matters. The abrogation of the Capitulations in May, 1928, severed the last link with the past, and Persia now claims to take her place in the world as an independent nation desirous of remaining on equal and friendly terms with all other nations, whether immediate neighbours or not.

Relations with Russia.

Persia enters into direct relations with five foreign Powers, Russia, Great Britain, Turkey, Afghanistan and Iraq—of these, the first two are of much greater importance than the rest. Normal relations between Soviet Russia and Persia began with the signing of the General Treaty of Friendship in Moscow in February, 1921. Under this treaty the Soviet Government denounced the former policy of the Imperial Government towards Persia, cancelled existing loans, presented to the Persian nation the valuable Russian properties in Persia, and relinquished all extra-territorial privileges. But the Persian Caspian fisheries remained under Russian occupation. These constitute a source of considerable economic wealth to Russia and provide, in case of necessity, a strong territorial grip along the northern Persian coast.

Thus Persia not only acquired without payment a number of valuable assets but also was eventually able to use the voluntary renunciation of Russian extra-territoriality as a precedent to obtain similar concessions from all other Powers concerned. The generous terms thus granted produced a favourable impression in Persia, causing all classes of Persians to regard Soviet Russia as the friend of Asiatic nations—a feeling which has become considerably modified during the course of time. Of recent years, Russian policy in Persia abandoning all threats of territorial aggrandizement which were so prominent during Tsarist rule, has concentrated upon two objects—the propagation of Communist doctrines and the economic exploitation of Persia. Communist propaganda is spread through the fine schools which the Soviet Government has built in all large north Persian towns, by the agency of Russian clubs and associations, and through the activities of the "Ogpu," which is strongly organized in all places containing resident Russian communities; all Soviet commercial enterprises in Persia have also a strong flavour of propaganda about them. But, owing to the individualistic character of the people, the influence of religion, which is still powerful among the working classes, and the absence of any large industrial elements among the population, it would appear that the movement has as yet made little real progress among the Persian masses. Soviet trade relations with Persia have been characterized by extensive importation and disposal of certain classes of goods which undersell both the imports of other foreign countries and the products of the small local Persian industries, and also by restrictive control over the Persian export trade to Russia. This control is governed by a system of exchange under which the Soviet Government fixes both the prices of the goods received from Persian merchants and the prices of Russian goods delivered to them. This has inflicted immense economic losses on the rich northern Persian provinces, and has recently provoked such a feeling of resentment amongst all classes of Persians that the negotiations concerning the conclusion of a Commercial Treaty between the two nations which have been under discussion for the last two years, are now practically at a standstill.

During the early part of the Pahlavi régime the Russian attitude was friendly and, in 1928, proposals were made that Persia should join in a league of Asiatic nations which was being organized by the Soviet Government. But, in pursuance of its declared policy of preserving an independent political attitude towards all nations, Persia declined to contract obligations of this nature and, without its adherence, it was found impossible to form this league. Since then, the Bolshevist official Press has been constantly hostile, notably in April, 1929, when an article appeared in the *Izvestia* accusing the Persian reactionary party, under British instigation, of planning to take advantage of the Afghan troubles to seize and occupy territory in western Afghanistan. This insinuation was emphatically repudiated in the Majliss by the Persian Foreign Minister. Later on, in the spring, the Bolshevist Press expressed its sympathy with the tribesmen in revolt against the Central Government.

With Great Britain.

The policy of Great Britain towards the present Government in Persia has been one of friendliness and conciliation and, on the whole, the general relations have improved. There is a tendency, however, among the present-day Persian Nationalists to regard British enterprise in Persia with suspicion, to credit the British with a capacity for intrigue which is quite foreign to the race, and to attribute readily the causes of any troubles which may arise in Persia to British machinations. British institutions are periodically subjected to vigorous attacks in the local Press, which is under strict official control. In spite of this, there exists in Persia to-day a nucleus, composed of moderate and better informed elements, who are sufficiently far-sighted to realize that the British Empire is Persia's best customer, and that, politically and economically, Persia must benefit largely by a good understanding with Great Britain.

The treaty settlement of May, 1928, resulted in the conclusion of a series of conventions of which the most important concerned the abrogation of Capitulations, the Tariff Autonomy Treaty, and the facilities granted to Imperial Airways. Many weighty matters still remain to be settled, and negotiations have been proceeding for the last two years towards the conclusion of the two remaining Treaties, namely, the General Treaty and the Treaty of Commerce and Navigation, whereby all outstanding matters will be regulated. As yet no definite results have been achieved, and this delay may by explained partly by the talent for procrastination and the dislike for making decisions which are features in Persian character, and partly by the present system of Government whereby the control over all kinds of important public business is vested in two or three persons—a system which is conducive to uneven results, either by the promulgation of hasty and ill-considered legislation or by unduly delaying important measures and negotiations.

With Turkey.

During the Pahlavi régime, general relations between Persia and Turkey have certainly been placed on a better footing than in the past. In spite of the divergences of religion, and of national character and outlook, the processes of change and reform which are going on simultaneously in the two countries have created a bond of sympathy which was previously lacking. The friction over boundary questions, which at one time threatened to be serious, has now ben allayed through the labours of a Joint-Commission in 1929. Consequently, it can only be regarded as regrettable that this harmony should have been recently disturbed by certain disorders caused by Kurdish frontier tribes, and that the Turkish Government should have appeared to blame the Persian authorities for occurrences which, in their own interests, they are trying to prevent and to suppress. The Turkish Press has even brought the absurd charge against the Persian authori-

CENTRAL ASIAN SOCIETY
(in which is incorporated The Persia Society.)
Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published.

Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W.1

Digitized by Google

ties of arming the Kurdish tribes and inciting them to raid into Turkish territory!

With Afghanistan.

Persia's attitude towards Afghanistan during the past four years has undergone considerable fluctuations. Much sympathy was felt with the drastic, if ill-conceived, attempts at reform initiated by the ex-King Amanullah, who visited Persia and was well received in Teheran. After the outbreak of the revolution, in the spring of 1929, serious disorders broke out in the Herat Province, and those portions of Persia bordering on Afghanistan suffered from a series of raids and other crimes committed by Afghan freebooters. The traditional dislike of Afghanistan which is always smouldering in Persia burst into flame, and relations between the two countries became extremely strained. With the re-establishment of peace in Afghanistan relations have again become normal, the new King has been recognized, and there is every reason to hope that mutual relations will steadily improve in the future.

With Iraq.

The establishment of normal and friendly relations between Persia and the new State of Iraq has been one of the most important questions in Middle Eastern politics of recent years. An Anglo-Iraqi Judicial Agreement came into force in Iraq by which certain judicial privileges were granted to the subjects of some countries, but not to the numerous Persian community residing in Iraq. This measure was considered by Persia as an infringement of the rights of reciprocal capitulations previously in force, when Iraq formed part of the Turkish Empire, and also as derogatory to its status as an independent nation. Persia declined, therefore, to recognise Iraq, and much tension prevailed between the two countries. In the early part of 1929 the Council of the League of Nations, on the proposal of the British and Iraq Governments, accepted in principle the abolition of this Judicial Agreement. The Persian Government, perceiving that all discrimination against Persian subjects was to be speedily removed, recognised Iraq without further delay. In April, 1929, the Shah received a special diplomatic delegation from Iraq, and this has been followed by the appointment of Ministers Plenipotentiary in both capitals. It is expected that a Treaty of Friendship and Commerce will be negotiated that should be highly beneficial to both countries, which possess many common interests.

With Germany.

The increasing influence which Germany has recently acquired in Persia is noteworthy. Before the War Germany had established close contact with the Democratic Party, then powerful in Persia, and to-day, a considerable proportion of the Persian *intelligentsia* has been educated in Germany and is in sympathy with German character and methods. Germany has been quick to seize the opportunity offered by these associations to increase her interests in Persia under the present régime. Germans now exercise a preponderating influence on Persian finance, since all foreign officials except one in the Ministry of Fnance are Germans, and the controlling staff of the newly founded National Bank, which has branches all over Persia, is practically entirely German. Important technical interests are now in German hands, such as the construction of the northern section of the trans-Persian railway, civil aviation in Persia (a German concession), and the management of the Government arsenal and the extensive explosive works now under construction near Teheran. The ease and rapidity with which the Germans have adapted themselves to the new conditions prevailing in Persia have reacted favourably on German trade, which in the last two years has increased by thirty-five per cent.

With France.

French interests in Persia are chiefly cultural and educational and, to a much lesser extent, commercial. The French are striving to maintain their language and culture in competition with the English language, the use of which is increasing owing to the educational facilities afforded by British and American missionary institutions, and the industrial and commercial activities of British firms, especially in southern Persia. They are in a position to promote these objects through French schools and such institutions as the *Alliance Universelle Israelite* and the *Alliance Française*, and also by the leading part which they are playing in Persian education. The foreign teaching staff in the various Government schools and colleges is being recruited from France, and the majority of Persian civil and military students sent to study abroad, in accordance with the new educational policy, will receive French training. France is assisting in the development and scientific awakening of Persia by supplying experts in such subjects as law, medicine, archæology, and wireless telegraphy. The general organisation and training of the Persian army are based on French methods. This increased intercourse has promoted cordiality in the relations between the two countries. But, since Persia's economic future, for geographical reasons, must inevitably be closely associated with the British Empire and Russia, it is open to doubt whether the ultimate interests of Persia will be best served by the widespread diffusion of the French language and education.

With America.

The appointment of the American Financial Mission to Persia for five years from November, 1922, was an important event in the relations between Persia and the United States. This body was invested with full executive powers, and was regarded by most Persians as an instrument destined to regenerate the finances and the economic life of the whole country. Strong hopes were also entertained of obtaining an American loan and of interesting American firms in the exploitation of the North Persian oilfields. These high hopes were not fulfilled, and when the Mission finally left Persia in August, 1927, a feeling of disillusionment had set in, and American prestige suffered considerably.

American interests in Persia have recently experienced a further set-back by the cancellation last April of the contract to build the southern section of the projected trans-Persian railway, which was held by the American firm, Ulen and Company. It seems doubtful whether Americans will play any further part in the economic development of Persia except through the importation and sale of motor vehicles, but they continue to exercise a beneficial influence on Persian education through their missionary schools.

With Belgium and Italy.

Among foreign nations having less important relations with Persia may be mentioned Belgium and Italy. Belgian officials continue to exercise an efficient control over the Persian Maritime Customs, the revenue of which forms one of the two most important sources of revenue in the Persian Budget. Italians are now taking part in the Persian public service, and for over a year an Italian naval mission has been studying the question of organising a Navy in the Persian Gulf. The ships, consisting of six gunboats, are now being constructed in Italian shipyards, and should be in commission by the beginning of 1931.

With the Hijaz-Najd.

Persia achieved a remarkable diplomatic success when she entered into treaty negotiations with the Wahhabi State, now controlling the Holy Places of Islam. In August, 1929, the Shah received a Special Mission from King Ibn Saoud in Teheran. A Treaty of Friendship was signed between the two States, and this is to be followed by the negotiation of other treaties. In this treaty the Hijaz-Najd Government has definitely pledged itself to protect Persian pilgrims and to allow them every facility to perform their religious devotions.

THE WEEK AT HOME

London, Tuesday Morning.

The Heat Wave.

There are those who delight in heat waves, such as that which afflicted south-eastern England last week: but I am not of them. London, in particular, becomes an inferno when the temperature is over the nineties, and it is humid at that. I do not say that swords melted in their scabbards, but strong men visibly wilted, and the only really unperturbed people were those females whose preparedness for all weathers is not to be accounted as conceit but rather as a virtue, and the children who wore nothing but a bathing-suit all day.

As for the perspiring men, they were hopelessly outclassed by the weather. The tyranny of the collar stud held them tight in its grip; nor could they be brought to shed more than waistcoat, hat, and suspenders. That this absurd convention in the wearing of clothes can endure much longer seems inconceivable, but it will take more than one heat wave to break it down. Even those sensible men who, as soon as they return to their homes from work in town, have a cool bathe and change into shorts and open-necked shirts, dare not travel up to London in clothes other than those which inevitably induce discomfort.

Finance and Politics.

It takes little, after all, to move the Stock Exchange, which for months has remained depressed. And the rumours which last week set it humming with activity had little real basis. At any rate, all the talk that was then indulged by hopeful brokers and speculators about a Liberal-Labour Coalition, a ten per cent. revenue tariff, and so on, was, to say the least, premature.

That something may result, however, from the conversations between Labour and Liberal leaders, is by no means impossible. A regular coalition appears to be out of the question, but it is possible that a working agreement might be arrived at, in time to save the "Progressive" cause at the general election—which is thought by many judges to be probable in the early part of 1931. If the Labour Party and the Liberals stand together, it is difficult to see how the Conservatives will displace them, particularly if the scruples of Mr. Snowden regarding the imposition of a revenue tariff are overcome. The Free Trade dogmatists, one notices, are again rearing their heads, but it is unquestionable that a revenue tariff which would not only save the Exchequer but also give to British industry command of the home market is attracting more and more minds.

In any case, one ought not to be misled by the recent cheerful tone of the Stock Exchange. It really affected closely very few people, for the general investing public was outside the movement. Artificial though this activity was, however, it may conceivably spread to the general populace. Optimism is badly needed, Heaven knows.

Sober England.

Whether England is better for being sober rather than free is a disputable matter on which a Bishop has uttered an immortal dictum, but it is a fact that, as a nation, we are growing more sober. The causes are varied. There is less money to buy drinks with, the present liquor is "poor stuff," nothing like the pre-War brew, "houses" often present closed doors, social opinion is moving against drunkenness, there are now numerous counter-attractions to the "pub"—and so on. That intoxication is less than it was before the War is remarked by all, especially by foreign visitors.

Yet the figures are still high enough. Last year, there were 51,966 convictions for drunkenness, compared with 55,642 in 1928. In England the decrease in the number of convictions was 3,707, but in Wales there was an increase of 31. This may very well have been due to the appalling industrial situation in Wales, and the misery (temporarily alleviated by intoxication) caused by unemployment.

There was, notably, a decline in the number of convictions of people for being drunk while in charge of a motor vehicle—1,230, as against 1,254 in 1928. The sociologists are, in short, congratulating themselves that last year was the best one, from the point of view of temperance, since 1918. Has drunkenness had its day?

The County Championship.

Lancashire have once again won the Cricket Championship, and everyone in England, outside Lancashire, begrudges them it. It is not that, with the exception of last year, when Notts were at the top, they have won it every year since 1926—before the War, Yorkshire always seemed to be winning it and by general consent they were the best side—but that they have made their leadership certain by such unattractive methods. One cannot believe that for Lancastrians themselves there is any pleasure or much pride in the achievement. That the county of Spooner and Hornby can ever have produced Hallows and Watson must be a most melancholy reflexion for them.

Indeed, as is evident from the writing of Mr. Neville Cardus ("Cricketer"), the spectacle of so gallant an eleven as Gloucestershire this year being below so ungallant a mechanism as Lancashire is felt to be revolting even by Lancastrians themselves. There is no finer writing on cricket than that by "Cricketer" in the *Manchester Guardian*, and he has not minced his expression of (unofficial) Lancashire's desire that Gloucester should have prevailed. Beyond doubt, this Western County has been *the* team of the year: it has played always to win, with not a single member of the eleven thinking of his average. The "terrible" efficiency of northern teams one must always admire—and it was not always allied to boring and unprogressive ways—but it is the cricket played by such counties as Gloucester, Kent, Sussex, or Somerset which sets the pulses throbbing and makes us, when we are past picking them up on the run, "babble o' green fields." As played by them, cricket will always be a game, the most delectable game ever invented. As played by Lancashire this season, it is torment to the body and soul.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Bulgarian Harvest.

The economic crisis through which South-Eastern Europe is passing has had the effect of compelling every State to pay more attention to the improvement of agricultural methods as a means of increasing the national wealth. This year's favourable harvest will not, it is hoped, cause any relaxation of effort in this direction. More detailed information regarding the harvests is now becoming available, and earlier estimates are being confirmed. In Bulgaria the various crops are reported to show increases on last year's harvest ranging from twenty to forty per cent.; in the case of wheat, the chief item of export among cereals, the improvement is estimated at thirty-five per cent. There should, consequently, be a large surplus of wheat for export, and the question of the prices likely to rule on the world's markets becomes important. As is known, the agrarian States of South-Eastern Europe have held a conference at Warsaw to discuss the possibility of co-operation in the marketing of their agricultural produce. The general outlook is supposed to have improved as a result of the dry spell in the United States and inferior crops in some European countries; but the need for the States in conference to co-ordinate their selling arrangements is appreciated. Bulgaria is now considering steps to overcome a serious handicap from which she has suffered in the past. Her maize crop is harvested from the end of August to the end of September, according to the part of the country, south or north, in which it is grown and as a rule it is not possible to dry the maize in time to sell it before winter sets in. Consequently it has to be kept until the spring, when it is sold in competition with maize from the southern hemisphere. A start is now to be made with the installation of drying plants in northern Bulgaria, which should enable maize to be dried during October and to be marketed at a time when prices are generally higher than they are in the spring.

The Roumanian State Railways.

The Roumanian State Railways, which had their budget separated last year from the State Budget and were placed under "autonomous administration," come in for a considerable amount of criticism from M. Roger Auboin, Technical Adviser to the National Bank of Roumania, in his last quarterly report. The reorganisation of the Accountancy Department, it is pointed out, has not yet been carried out to the extent required, and the information regarding receipts and expenditure that is absolutely indispensable for the control of the financial management of the railway system is not yet available. Working results for the first five months of the year are not satisfactory, but allowance has to be made for a falling off in goods traffic as a result of national and international conditions. On the other hand, the French adviser states, all the reductions in expenditure contemplated in the Railway budget have not been effected. The curtailment of staff has not been carried out to the extent promised; there are still many more officials than the real needs of the Railways warrant, and, moreover, they are badly distributed. It is evident, adds the report, that the object of the establishment of the Autonomous Administration will not be attained without radical measures, "and notably an important reduction in salaries which, in the case of several posts, are abnormally high." In view of public criticism of the salary attaching to one post in particular, this pronouncement by the Technical Adviser is significant. Budgetary equilibrium for 1930 has called for a revision of railway rates, and the new tariff has been published since M. Auboin's report was issued. From the fact that it represents in general an enhancement of existing rates, it must be inferred that the Railway Administration was cognisent of one aspect of its difficulties. Unfortunately, it has added to its troubles by raising rates on exportable goods in contradiction of the Government's policy of facilitating export. Its critics, therefore, have seized on its failure to allow the customary time to intervene between the publication of the details of the new rates and their coming into force, as from September 1.

Foreign Supervision in the East.

The report on the Roumanian State Railways by the foreign Technical Adviser to the National Bank of Roumania affords the strongest possible evidence of the value for countries in the Near and Middle East of independent technical supervision in the case of certain categories of public affairs. It is not the fact that Roumanian administrative standards fall below those of neighbouring States, but the Roumanian Government does well to take advantage of the presence in the country of the Technical Adviser associated with the scheme of financial reorganisation under the auspices of the Council of the League of Nations in order to tighten up the administrative machinery as a whole. The step taken by Roumania can involve no loss of prestige for any other country in the East, and it is to be hoped that, as a result of new ideas so energetically put forward by Fethi Bey and those associated with him in the formation of the Liberal Republican Party, Turkey will overcome her reluctance to avail herself of the services of foreign advisers. The Turkish Government has gone so far as to invite a German financial expert to report on the country's financial position, and the revelations that Herr Müller has made regarding the Turkish railway policy indicate the need for taking outside advice on some of the larger State problems. It remains to be seen, however, whether the Government will commit itself to the logical corollary of appointing foreign Advisers to maintain constant watch for a number of years over certain administrative departments. In Western countries the indispensable check or stimulus is to be found in the ranks of the general public, exercised through Parliament or the Press or both. In Turkey no such check has hitherto existed, both Parliament, as now constituted, and the Press being worthless for such a purpose. A point often overlooked by Dictators in Eastern countries is that the administrative machinery of a modern State, if it is to be governed satisfactorily, is too complex for one man, however able, to manage single-handed, inspired by no

ideas and no knowledge outside his own. If, therefore, the standard of advice and knowledge that he can draw upon in his own country is not adequate for the purpose of creating a first-class or even second-class State, he must look abroad for what is lacking at home.

Roumania and Great Britain.

The recent conclusion of a commercial treaty between Roumania and Great Britain lends special interest to the report of Mr. Humphreys on conditions in Roumania in the past year, extracts from which are given elsewhere in these pages. As I have already pointed out, the treaty gives British traders a great opportunity in the Roumanian market, and it is encouraging in this connexion to note from the report that our merchants have been taking a greater interest in this trade outlet recently. As the trade figures show, this increased attention to the market has still to be reflected in the commercial exchanges between the two countries, which have remained for some years at a low level. Last year, as a matter of fact, the British exports to Roumania showed a considerable falling off owing to the lack of purchasing power of the population, and this factor constitutes the real stumbling block in the way of the extensive development of the British export trade. Normal prices for grain in the past year would have immensely increased the market's potentialities, and while the position should be improved as a result of the Economic Entente between Roumania and Yugoslavia and its subsequent extension to include other neighbouring countries—a development which should at any rate ensure the disposal of surplus stocks of grain—the recovery of the market is bound to be mainly dependent on the recovery of commodity prices. Outside the purely retail market, however, there is an increasing opening in Roumania for machinery, and this no doubt offers the best prospect for British manufacturers in the near future. Thus Mr. Humphreys refers to the improvement in the sales of agricultural machinery, internal combustion engines, etc. In these and similar lines there is undoubtedly great scope if only our traders will take the necessary steps to bring their goods to the notice of potential buyers.

The Motor in the Near East.

Some interesting statistics have recently been given in the United States "Commerce Reports" with regard to the world's use of the motor car up to the beginning of this year. It appears that there is now one motor car for every 55 persons in the world, which brings home very clearly the rapid increase in this means of transport. In the Near East Greece has one motor vehicle for every 348 persons, Roumania one for 497, Egypt one for 514, Yugoslavia one for 1,165, Bulgaria one for 1,482, the Sudan one for 2,625, Abyssinia one for 17,778, and Oman one for 50,000. The number of motor cars in Greece on January 1 last was 12,500, Roumania had 26,500, Egypt 23,189, Bulgaria 2,487, Palestine 1,537, and the Sudan 1,153. These figures will give some idea of the way in which the market for motor cars is developing in the Near East and the potential market which this region represents. Unfortunately British motor car manufacturers have not so far succeeded in making much headway in many of these outlets against foreign competition. The converse is the case with regard to motor cycles and the success obtained in this respect is surely also possible with regard to motor cars.

Danube Shipping.

An indication of the steady recovery that is going on in South-Eastern Europe is to be found in the marked increase in the shipping using the Danube, which is regaining its position as the chief trade route of this region. In 1929 the number of vessels using the river was 648 of 1,409,103 tons which compares with 474 vessels and 825,524 tons for 1928. The two countries showing the greatest increase in the shipping are Great Britain and Italy, and it is very satisfactory to be able to record the fact that the British increase was the larger. Greece again heads the list as regards the number of vessels but is only third as regards tonnage, the respective figures being 199 and 333,244 as compared with 186 and 260,809. Great Britain with 125 vessels of 336,177 tons is second as regards vessels and tonnage, the corresponding figures for 1928 being 54 and 104,769. Italy is third as regards the number of vessels and first in tonnage, the figures being 115 and 352,576 as against 70 and 156,035 for the previous year. As this year's harvests are again satisfactory in South-Eastern Europe, it is to be anticipated that the figures for the present year will show a further improvement in the Danube traffic.

Trade and the Fair.

If the expected improvement in world trade conditions in the next few months comes to pass the importance attaching to the coming British Industries Fair will be very greatly increased. The Fair has proved its worth as an instrument of trade development in its short career, and in a period of expanding trade its utility as a spearhead of British trade endeavour will be pronounced. The total area of the Fair at the two centres of London and Birmingham will this time be about 700,000 square feet, and it indicates the support given to the undertaking by our manufacturers that only a very small part of the area has still to be let. Special efforts are being made this time to attract foreign buyers, and already letters have been dispatched to them in countries as far off as Persia. Hitherto three letters have been sent to each buyer, but this time five will be dispatched, so, with the other forms of publicity adopted, it may be hoped that foreign buyers will be more in evidence than at previous Fairs. Buyers from the Near East, particularly the Balkan countries, have not so far been very numerous at the Fair, but as conditions in a number of the States are now showing a decided tendency to improve there may be a change in this respect next year.

COMMENTATOR.

A Cairo message states that a contract for the supply of twenty 10-ton petroleum tank wagons to the Egyptian State Railways is being awarded to the Birmingham Railway Carriage and Wagon Company.

The production of crude oil in Roumania during the first six months of the current year amounted to 2,020,200 tons, as compared with 2,224,248 tons in the corresponding period of 1929, showing an increase of 31.8 per cent. The production from the Prahova district accounted for 74.84 per cent. of the total.

The International Institute of Agriculture forecasts the world's wheat crop for 1930 at 71,200,000 metric tons. The European wheat crop, excluding France, is forecasted at 25,600,000 metric tons. The report adds that in France rain storms have caused a further deterioration in prospects and rendered harvesting difficult. Cereals have suffered also in England as a result of bad weather in the latter half of July. The first official estimate in Italy has confirmed the forecast of a smaller crop than in 1929, but above the average. Production has been heavy in the Balkans and Spain.

The Cyprus Trade Mission

As was recently reported in THE NEAR EAST AND INDIA, a Trade Development Mission was appointed last May by the Cyprus Government to visit Syria, Palestine, Egypt, and Greece in order to study the possibilities of further extending and developing trade with these countries. The Trade Mission consisted of Mr. M. T. Dawe, Director of Agriculture, Cyprus (Chairman), Mr. H. Llewelyn Jones, Manager of the Ottoman Bank, Cyprus, Mr. N. P. Lanitis, Director, Cyprus Wine and Spirit Company, and Mr. S. W. Caruana, Chief Clerk, Treasury (Secretary). Its report has now been completed, and we are able to give the following extracts from it :—

In the short space of time at its disposal—forty-one days—the Mission, which started from Larnaca on June 15, made every effort to explore every avenue capable of fostering Cyprus export trade and of advertising its resources and possibilities, including the amenities of its summer and winter resorts.

The Report continues :—

The Mission made particular inquiries, since one of its main objectives was to extend the export trade of the Colony, into the economic situation of each country visited, more especially in regard to the extent the world depression in trade had affected the purchasing power of the respective countries. It was found that, in all those countries adverse trade balances existed, and in consequence the granting of credits had been greatly curtailed and the renewal of credits were being obtained with more difficulty, if at all, causing a shortage of currency in the hands of the inhabitants, thus limiting their purchasing power. The methods employed to counteract adverse trade balances may be said to be more or less identical in all the countries visited, viz. :—

(*a*) Endeavours are being made to limiting, as far as possible, requirements to those obtainable within national boundaries, and every encouragement is being given by the respective Governments to promoting local production, trade and enterprises by protective or prohibitive tariffs, as well as, in some cases, by exemption from import duties and taxes.

(*b*) The development of the tourist traffic is the subject of strong and systematic Government support.

(*c*) Every opportunity is taken to bring home to the agricultural and trading communities the benefits and advantages of co-operation and the value of trade organisation.

Our attention was repeatedly drawn, in each country visited, to the apathy of the Cypriot exporter to the importance of modern methods of grading, packing, and presentation of his produce. Also to his failure to cater for the present demands of the market, as well as to come into personal contact with his clients abroad—which omission strengthens the position of his competitors. Apart from very occasional visits, there is little personal touch between exporter and importer, and we quote, from amongst others, Dr. Moses's comment made at the joint meeting of the Manufacturers' Association of Palestine and the Chamber of Commerce of Jaffa and District at Tel-Aviv on June 29 last : "Though Cyprus is so close geographically, it is yet unknown in Palestine, farther, as it were, than the United States of America."

It is, on the other hand, gratifying that the actual quality of Cyprus produce is, generally speaking, appreciated and enjoys a good reputation.

Syria.

The term "Syria" is loosely used to describe the areas under the French Mandate, which is divided up into (*a*) the Lebanese Republic, (*b*) the Syrian State which comprises the former provinces of Aleppo and Damascus, (*c*) the Alaouites Territory, (*d*) the autonomous "Sandjak" of Alexandretta, within the Syrian State with certain special privileges, and (*e*) the small Jabal Druse State. With the exception of the last-named State, the whole area was covered generally by the Mission.

The area of Syria, subject to the French Mandate, is approximately 100,000 square miles, and has an estimated population approaching 3,000,000. The estimated area of the Lebanese Republic is about 4,300 square miles, with an estimated population of 579,778.

Syria ranks ninth in importance in our exports and twenty-second in our imports. Syria, like Cyprus, is an agricultural country, and grows more or less the same crops. Normally, Cyprus cereals could hardly expect any demand from Syria where prices for wheat and barley run lower than in Cyprus, unless in the possible event of failure of crops.

But a wider possibility of disposal of wheat and barley in Syria for *seed* purposes will be opened up when the improved methods of farming, contemplated by its Agricultural Department, will have been put into operation, as Cyprus has already gained a reputation for the production of seed wheat and barley.

There are favourable prospects of trade in :—

(*a*) Potatoes.—Winter, almost exclusively imported from Cyprus. The quality is admitted to be the best on sale. The summer crop of Cyprus cannot, apparently, compete with the local summer crop. (*b*) Bricks—if the manufacture in Cyprus is increased. (*c*) Wines—but keen competition from France, Syria, and Palestine. (*d*) Vinegar. (*e*) Cheese. (*f*) Gypsum—demand limited by the use of local lime and cement, and the imposition of the octroi (municipal tax) in the interior. (*g*) Tobacco—for blending. In 1929, 2,000 hectares were cultivated, yielding 1,100,000 kilos of tobacco. There are 19 cigarette factories.

We might add mules, although not in regular demand but rather to supply occasional requirements of the Army, which in 1929 amounted to 231 (valued at £8,637). The increasing utilisation of motor vehicles may, however, be expected to reduce the demand for Cyprus mules and donkeys in Syria.

As regards potatoes, our main export item to Syria (£10,889 in 1929), a prohibitive import duty is advocated by certain Deputies and the Press, but we see no reason for alarm at the present time.

Our exports to Syria are on the increase, from £28,990 in 1926 to £48,242 in 1929, but that was due largely to an increase in the import of potatoes and an abnormal increase in the import of barley and mules.

Direct steamship communication between Cyprus and Syria—fortunately maintained by more than one line of steamers—is an important factor in the development of trade between the two countries, and the Cyprus and Near East Exhibition, 1931, in which Syria will participate in the furtherance of her industries, will, it is hoped, lead to further expansion of trade.

Freedom from disturbances during the last three or four years has enabled the Syrian authorities to carry out a programme of road construction which is bound to have a lasting effect on the country's future. Syria is to be congratulated on her fine network of arterial roads. These ramifications—the primary object of which is tourism—connect at the same time the principal areas with the main consuming cities and export towns, and have enabled the rural population to travel more extensively and become more amenable to civilising influences in the general interests of agriculture and commerce.

Much capital is being invested in building, chiefly in Beyrout and Aleppo.

Syria possesses, in its extensive and fertile plains, rich tracts for agricultural development, which should enable farming to be carried on, with power implements, at a small cost of production. In large farm areas, threshing is still being done by animal-drawn threshing boards; only comparatively few power threshers are in use. It would appear that there might be an opening for British firms to push agricultural machinery, such as tractors, ploughs, power threshers, maize shellers, etc.

We would draw particular attention to a projected scheme for the drainage of the vast plain in the vicinity of the lake of Antioch. Surveys and levels have been completed, and if this work is carried out, it should convert many thousands of hectares, now worthless, into valuable land for cultivation.

Digitized by Google

Mention might be made of the attention being given to the cultivation of citrus fruits at Tripoli, particularly oranges. Although the plantations are not so well organised or kept as in Palestine, the production is considerable, amounting in the 1929-30 season to 228,951 cases, the bulk of which is exported to Constantinople, Egypt, England, and Greece.

The banana cultivation on the littoral belt in the vicinity of Beyrout deserves some notice. It forms a valuable crop for disposal in the larger cities and towns. The banana grown is the Canary Island type, but the fruit is not so large or good as the Canary banana.

While we were impressed with a breed of cows known as Damascus, little or nothing would seem to have been done to improve the native races of horses, cattle, sheep, and swine, and in this connexion Cyprus might find its opportunities.

The co-operative movement is non-existent. The incompleteness of the cadastral survey is a hindrance, not only to the development of co-operation, but also to the provision of agricultural credit. It is, however, interesting to note that the Banque de Syrie et du Grand Leban is studying the formation of Co-operative Credit Societies and an Agricultural Bank, and full particulars have been given to its Director-General in Beyrout on the working of Co-operative Credit Societies and the Agricultural Bank in Cyprus.

Tourism, in the Lebanon, is an object-lesson of organisation, with its special commissions to stimulate, encourage, and control the tourist traffic; its semi-official agencies or "Offices de Tourisme" to keep propaganda alive in Egypt, Palestine, and Iraq; the privileges accorded to hotel-keepers with the view of encouraging the erection of new and up-to-date hotels for the comfort of visitors.

Throughout all the States under the French Mandate, a methodical programme is being pursued to encourage tourism, and the installation of new hotels in Beyrout, Damascus, Aleppo, and Antioch is being planned.

The Hôtel du Tourisme Alaouite at Lattakia is a Government building, and another hotel on the hills is under consideration to form the neucleus of a regular summer resort in the "Alaouites Territory."

Tourism is the very best invisible export of the Lebanese Republic, yielding not less than £2,000,000 per summer season, most welcome in view of the adverse trade balance, a seemingly constant feature of the economic life of Syria. In this sphere of competition, too, Cyprus is sorely in the background, despite her attractiveness; varied and most beautiful scenery, clear atmosphere, climate, history, antiquities, archæology, security, etc. Yet Cyprus is jealously regarded in Syria as Mount Lebanon's most formidable rival.

Palestine, west of Jordan, covers about 9,000 square miles, and the population, excluding that of Trans-Jordan, approximates a million.

Our journey through Palestine by car lasted in all six days, June 25-30.

Palestine.

Palestine occupies the tenth rank in importance in our exports and the twenty-ninth in our imports. For the year 1929, the former amounted to £37,043 and the latter to £4,635. There is steady, though small, increase in both.

Palestine, too, is an agricultural country and the crops are in the main similar to those of Cyprus. The share of Cyprus (£37,043) in the imports of Palestine (£5,000,000) is infinitesimal.

The same low percentage is noticeable in certain individual items, viz. :—

(*a*) Oxen—£1,200 against a total of some £34,000, or say 3½ per cent. (*b*) Cheese—£66, against a total of approximately £21,000, or say .3 per cent.

The decline in the import of oxen from Cyprus since 1926 was carefully inquired into by the Mission; the fall in values is shown by the following statement:—1926, £23,101; 1927, £10,114; 1928, £2,060; 1929, £1,200.

Oxen are imported from Syria, Bulgaria, and Roumania at much cheaper rates. Overland supplies from Syria enjoy exemption from import duty, and the presence of

Digitized by Google

Jewish butchers in Bulgaria, who supervise purchases to secure that the animals are suitable for certain Jewish "rites," renders competition by Cyprus against Bulgaria difficult, the more so in the absence of direct steamship communication between Cyprus and Palestine.

There should be good prospects for increased trade in :—

(*a*) Cheese. (*b*) Potatoes—the imports frim Cyprus in 1929 amount to £24,543, against a total of about £52,000, or say 47 per cent.; (*c*) Onions; and (*d*) Lentils. And possibilities in :—(*e*) Fruits and (*f*) Poultry (for hotels, especially during the tourist season). (*g*) Gypsum—to some extent. (*h*) Tobacco—for blending.

subject to (i) regular direct steamship communication, and (ii) exemption from import duty under the "Imperial Preferential Tariff," if such could be extended to Palestine as being under British Administration.

The present limited transactions between the two countries would be a wrong criterion on which to base future prospects. Palestine is in process of development, and much capital is being invested by the Jewish Colonies strongly financed and supported by Zionist Associations abroad. The quota in imports, per head of population, is £8. Agriculture and industry are both the subject of systematic development, but the latter is apt to make greater strides, and, if successful (as Jewish persistency and ingenuity will make it so), is bound to increase the purchasing power of the population for agricultural produce—in which Cyprus should take a greater share.

We would invite particular attention to the question of the "Imperial Preferential Tariff," which should be taken up as early as possible, inasmuch as it was made the insistent note, within the purview of the *quid pro quo* transactions, in the discussions which the various committees and societies had with us in Palestine.

The Cyprus and Near East Exhibition, 1931, will open up, it is anticipated, closer business relations.

Tourist trade is another avenue, by no means the least remunerative, which should be mutually promoted to the advantage of both countries.

The most outstanding aspect of agricultural development in Palestine is the citrus cultivation on the littoral. The area under plantations is now said to cover 100,000 dunams and the further land suitable and available for citrus, some 250,000 dunams. Exports average from two-and-a-half to three million boxes of 150 fruits each, annually. In four years' time, it is estimated that the production will amount to five million boxes, and in ten years to ten millions.

The cost of shipment of oranges to the United Kingdom from Jaffa in 1929 was 1s. 10½d. per box.

If and when the Haifa harbour works are completed, it is hoped that it may be possible to ship oranges from that port to England at a reduced cost, with less risk of damage and loss.

The Mission visited the Assis Citrus Juice Factory at Tel-Aviv, which prepares an excellent citrus drink known as "Jafforange." This Company has an up-to-date plant, and a similar factory would be an asset to the citrus industry in Cyprus.

The grape and wine industries also receive considerable attention in Palestine. The Mission visited the Mikweh Israel Jewish Agricultural School near Jaffa, which was established in 1870, where vines are being cultivated on a fairly large scale experimentally. It also visited Richon-le-Zion, an important winery which produces most excellent wines.

As in Syria, the banana is cultivated in the warmer parts of Palestine, more particularly near the larger towns. The variety grown is principally the dwarf Cavendish kind, but the fruit is not usually equal in size or quality to the Canary banana This cultivation is extending, the production is now exceeding the demands of the population, and producers are looking further afield for new markets. The Director of Agriculture of Palestine and the growers are very anxious to initiate an export trade with Cyprus. As you are aware, the importation of fruit into Cyprus is prohibited by law, but there would seem to be no reason why the question of allowing bananas free import should not be considered, provided the fruit is fumigated either before shipment or on arrival in Cyprus, as is done with exports to Egypt. This concession would satisfy to some extent Palestine in her frank claim to *do ut des* exchanges, and sailing boats carrying bananas to Cyprus could return with cargoes of potatoes, cheese, onions and other products.

The Jewish Co-operative movement in Palestine, thoroughly organised to an elaborate degree and financed by the Central Bank of Co-operative Institutions, is a striking feature in the economic evolution of the country. An illustration of that spirit is to be found in "The Associated Orange Growers Ltd." The movement is confined to the Jewish Colonies. The Arabs are represented as being too individualistic to attach importance to co-operation, in that it involves some personal sacrifice for the sake of collective well-being.

The Mission understands that the present inquiry into rural life conditions amongst the Arabs is paving the way to the study of the contemplated establishment of an Agricultural Bank, which, just as in Syria, encounters a serious obstacle, on the ground of sound business principles, in the incompleteness of the cadastral survey.

The rapid development of industries in Palestine reveals the intelligent foreseight and energy of the Jewish Colonist. Hence the keenness shown by manufacturers in the forthcoming Cyprus Exhibition which will afford them an opportunity of exhibiting what Palestine can produce.

Much stress was laid on the influence of Exhibitions in relation to trade, by most corporations in Palestine. Isolation in commerce, in these days of competition, is looked upon as suicidal.

Bondholders of the Constantinople Loan (1909) are reminded by the Banca Commerciale Italiana that the time limit within which the Prefect of the City of Constantinople has undertaken to allow them to take advantage of the agreement made on April 30, 1929, between the Municipality, the representative of the Committee of Bondholders, and the National Bank of Turkey expires on September 14, 1930.

Travellers in the Near East

THE CONVENIENCE OF THE CHEQUE

For those who know beforehand where they will be likely to require money, the system by which the Westminster Bank can arrange for a customer to cash his own cheques abroad is an undoubted attraction. Any local branch manager will be pleased to arrange with the Bank's agent in Constantinople, say, and Ankara, and Izmir, to cash a customer's cheques within any pre-arranged limits. Nothing but a cheque-book need be carried, and the utmost ease and safety are enjoyed

NOTES FROM YUGOSLAVIA.

(From Our Own Correspondent.)

Belgrade, August 15.

The Press and Stabilisation.

In connexion with the negotiations for the stabilisation of the dinar, a section of the Press has been urging that the State should not repay its debt to the National Bank and that the consequent loss should fall on the shareholders. This strange advice was supported by the agreement that the debt was not a "real" one, since it resulted from the Austro-Hungarian banknotes which were in circulation in the provinces that Yugoslavia acquired after the War. These notes were first stamped and subsequently converted into dinar notes on the basis that these notes, issued by the National Bank, a private, though "privileged" institution, should be inscribed as a State debt to the bank which should be refunded to the bank on the stabilisation of the dinar on a gold basis, when, of course, the bank would have to pay the holders of the notes their value in gold on demand. This State debt amounts to 4 milliards out of the total floating debt of 6 milliards. As there is a strict censorship in Yugoslavia, it is regarded as significant that numerous articles should have appeared advocating the cancellation of this debt, and the shares of the National Bank lost 10 points in one day. Subsequently a number of leading financial authorities explained through the Press that they considered the cancellation impossible, as a debt is a debt. This action has gone some way to removing the anxiety felt in financial circles, as it is taken as an indication that all the members of the Government are not in favour of this measure. However, the arguments in the Press are continuing, throwing a strange light on the financial ideas held in this part of the world.

JERUSALEM WATER SUPPLY SCHEME.

(From an Engineering Correspondent.)

Some interesting information has been made public by Mr. Andrew Koch, Chief Engineer and Manager of the Water Supply Department of the Municipality of Jerusalem, in connection with the new waterworks supply scheme originally commenced in 1921. Generally the mains, about 93 miles in total length, are of small size, not over 8 in. in diameter, while three different kinds of joints are used, that is thread and socket, spigot and socket, and "Victualic" flexible. The results obtained, relating to the use under very difficult conditions, including two earthquakes, are of the most valuable character.

Most of the pipe lines between 4 in. and 6 in. diameter are of wrought iron with thread and socket joints, protected with Dr. Angus Smith's coating and three layers of red lead. In 1923, however, there was laid at the Ain Farah Works 6.2 miles of 8 in. wrought iron piping equipped with "Victualic" joints, being partly a pressure main and partly distribution lines, in the latter case having a pressure up to 25 lb. per square inch and in the former 284 lb. per square inch. This pressure main is laid mostly on the hillsides, quite uncovered, and over very wild country, but the distribution main is buried about 31.2 inches below the ground surface.

Mr. Koch states that in the first place the "Victualic" flexible joint main was laid in about one-third of the time required by the thread and socket joints and as a result of this there is now under consideration the advisability of adopting these flexible joints on the whole of the mains for future extensions. The pipe line curves over the ground and up and down hills almost like a cable, and no leakage, bursts, corrosion, or other troubles are stated to have been experienced during the four years, even from earthquakes, which at certain places moved the main several inches from its original position. Also 3,280 ft. of 8 in. steel pipes has been equipped with spigot and socket joints, which, however, are not found to be superior even to the ordinary thread and socket joints, and very much less satisfactory than wrought iron pipes with flexible joints.

Incidentally this is only another example of the fact that both the Near and the Far East are waking up in very effective fashion as far as water supply is concerned, including the use of modern purification methods, such as rapid gravity filtration and sterilisation by means of a trace of chlorine gas.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates :—

SPECIAL NOTICE. New T.S.S. CALIFORNIA, 17,000 Tons, carrying FIRST CLASS and THIRD CABIN passengers, sails from LIVERPOOL Oct 21, MARSEILLES Oct. 27. All 1st Class state rooms are fitted with Punkah Louvres and with fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, September 12). (For passenger sailings and dates see advertisement.)

Anchor-Brocklebank Line.—S.s. Masirah for Calcutta (Birkenhead, September 11); s.s. Anchoria for Calcutta (Birkenhead, September 18).

Bibby Line.—S.s. Leicestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, September 17).

British India Line.—S.s. Warfield for Port Okha and or Bedi Bunder, and Karachi (London, September 13); s.s. Morvada for Colombo, Madras, and Calcutta (London, September 20); s.s. Dumana for Bombay, Port Okha and or Bedi Bunder, and Karachi (London, October 4); s.s. Mulbera for Colombo, Madras and Calcutta (London, October 4).

Johnston Line.—S.s. Dromore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz and Braila (Liverpool, September 13); s.s. Aviemore for Piræus, Syra, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 11).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, September 12); s.s. Bangalore for Calcutta (London, September 12); s.s. Rajputana for Bombay (London, September 26); s.s. Nankin for Calcutta (London, September 26).

Prince Line.—S.s. Persian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, September 12).

Ellerman and Papayanni Lines.—S.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, September 11); s.s. Algerian for Gibraltar, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Izmir, Istanbul, Bourgas, Varna, and Constantza (Liverpool, September 20; Swansea, September 20); s.s. Gerano for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, September 27; Swansea, October 2); s.s. Manchurian for Algiers*, Oran*, Malta, Piræus, Syra*, Volo*, Salonika, Izmir, Istanbul, Bourgas, Varna, and Constantza (Liverpool, October 4, Swansea*, October 4). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Messageries Maritimes.—(From Marseilles).—S.s. Lamartine for Naples, Piræus, Istanbul, Izmir, Rhodes, Larnaca, and Beyrout (September 9); s.s. Champollion for Alexandria, Jaffa, and Beyrout (September 9); s.s. Angkor for Alexandria, Jaffa, and Beyrout (September 16); s.s. Pierre Loti for Naples, Piræus, Istanbul, Izmir, Rhodes, Larnaca, and Beyrout (September 23); s.s. Mariette Pacha for Alexandria, Jaffa, and Beyrout (September 23); s.s. Theophile Gautier for Alexandria, Jaffa and Beyrout (September 30); s.s. Lamartine for Naples, Piræus, Istanbul, Izmir, Rhodes, Larnaca and Beyrout (October 7).

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, September 2.

The week has been notable for a sudden and wholly unexpected change of tone in the industrial share markets. The early days gave no sign that the monotonous idleness and weakness, to which we had become so accustomed, was to be broken. But on Wednesday the whole face of the markets suddenly changed, demand for industrials of many descriptions sprang into life, and in an oversold market "bears" were caught napping and prices rose sharply. This *volte face* was apparently due to the propagation of a variety of entirely unlikely political rumours of a favourable nature to investors. A word of warning is called for. The rumours on which the new movement was based have no substance at the moment. The demand for shares is almost entirely professional. Nothing has occurred to improve the outlook for industry. In fact wise-heads of the City are steadily becoming more deeply convinced that the trade depression will be prolonged. Therefore, investors should be prudent. If they assume that a real boom is starting they are likely to be caught just as badly as some "bears" were caught this week. A real sustained market boom requires more motive power than exists in the circumstances of the moment

Colgraphs' Rising Profits.

The rising curve of popularity of the gramophone and the success of the leading gramophone and record making concerns led to public support being generously forthcoming to new flotations in this industry during the boom of 1928. While the results of these incursions into the trade have often been most unsatisfactory for the investors concerned, the increased competition, even though coupled with the beginning of the trade depression, does not seem adversely to have affected the trade of the older companies, to judge by the results of the Columbia Graphophone Company, published on Thursday. In the year to June 30, 1930, net profit amounted to £580,159, compared with £505,121 in the preceding year and £471,305 in 1927-28. Earnings on the ordinary capital were 45 per cent., and 40 per cent. was distributed. It should be remembered, however, that the concern is largely a holding company, and it takes account only of dividends paid by subsidiaries. Its finance is exceptionally conservative. A special investigation showed that net assets of subsidiaries, excluding matrices, patents and goodwill, were higher than the value placed on investments in subsidiaries in the principal company's balance sheet. In the later only £1 is allowed for goodwill, etc., and £1 for motor cars and furniture, while net assets are 3½ times the amount of the ordinary share capital. The continued and accentuated trade slump may more seriously affect the next results, but as a favourable industrial investment the ordinary shares which return over £6 8s. per cent. are undeniably attractive, apart from speculative appeal which accounts for the fluctuating market value.

Lamport and Holt Receivership.

At first some surprise was occasioned by the application for the appointment of a receiver and manager to Lamport and Holt, Ltd., one of the R.M.S.P. group, since it is not long since a special committee was appointed to investigate the affairs of this group. This surprise was, however, soon dissipated. The application was unopposed, and Sir William McLintock, a member of that committee, was appointed receiver and manager, and a prompt application was made for leave to borrow up to £50,000 and to make advances up to £100,000. The loan, it was stated, would probably be obtained from the bank, and the money was required for a subsidiary, the Liverpool, Brazil and River Plate Steam Navigation Company, in order to keep it going. It is generally known that the company has recently been passing through difficult times, dividends on both classes of Preference shares being in arrear since July, 1925. After allowing for depreciation, too, the last accounts showed a loss of £70,155, and in the balance-sheet, investments, which contributed the bulk of the assets, were over-valued. Lamport and Holt's affairs, however, are inextricably bound up with those of others of the R.M.S.P. group owing to the complex cross-holdings of shares which have been characteristic of this group, and its prospects must depend on the conclusions of the committee which is now examining the group's finances and administration.

Mysteries Unsolved.

While the publication of the report of Waring and Gillow for the year to January 31 last reassures shareholders as to the earning power of the business, and goes some way to explain—though not to excuse—Lord Waring's premature declaration of June last as to the "record profits" the accounts would show, it fails entirely to explain the present difficulties of the company. On these, however, further light was shed at Monday's meeting. It appears that the "record profits" would have been realised only by the inclusion of profits of a property deal, and such dealings were always left to Lord Waring, who has a flair for this type of transaction. The falling through of the deal and the loan of £98,691 to Lord Waring left the company short of working capital, which presumably was the cause of the action taken by certain trade creditors who have obtained judgments for their accounts. Since it is stated that negotiations for obtaining the required working capital are nearly completed, it would probably be in their own interests for the pressing creditors to await the report of the investigating committee, which is to include Lord Brentford and Sir Harry Peat. The balance-sheet did not disclose too unfavourable a position, and, whatever the present situation, an old-established firm of such a good name as Waring and Willow possesses great recuperative powers.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

RANGOON, CALCUTTA, and COLOMBO
To BEIRA, DELAGOA BAY, DURBAN, EAST LONDON
PORT ELIZABETH, MOSSEL BAY, and CAPE TOWN.

POWER PLANT IN ROUMANIA.

It is only in the present century that industrial development has made headway in Roumania. At the beginning of 1925 the horse power employed in industries was no more than 392,065, the total motive power in the country consisting then of 2,995 steam engines furnishing 437,176 h.p.; 412 gas motors, 24,147 h.p.; 2,494 petrol, benzine, etc., 160,467 h.p.; and 410 hydraulic, 52,592 h.p., giving a total h.p. of 674,382. In recent years progress has been rapid, and the position at the end of last year is shown by the following figures (which include electric motors and electric generators) recently published by the Roumanian Ministry of Commerce and Industry :—

	No.	H.P.
(1) Steam Engines		
Piston	2,584	224,307
Turbine	115	230,444
(2) Motors (Internal Combustion)		
Poor gas	274	21,468
Natural gas	442	18,309
Blast furnace gas	16	1,256
Crude oil	1,297	30,925
Diesel	2,224	222,362
Motor spirit	7,257	158,277
Hydro-motors		
Wheel	1,712	12,090
Turbine	442	56,852
Total	16,363	976,290
(3) Electric motors		
Receiving current from outside	6,141	94,395
Receiving current from their own generating plant	4,958	84,520
Total	11,099	178,915
(4) Electric generators		
Direct current	1,673	95,297
Alternating current	775	235,932
Total	2,448	331,229
Grand total	29,910	1,486,434

EGYPTIAN COTTON ACREAGES.

Details are given in a bulletin of the Egyptian Ministry of Agriculture of the acreage of the different cotton varieties cultivated in Egypt. The total acreage under cotton in Lower Egypt this year was 1,387,363 feddans as against 1,268,152 for 1929 and 1,143,400 for 1928, while the total for Upper Egypt was 695,057 feddans as against 623,326 for 1929 and 595,072 for 1928. This makes the total area for this year 2,082,420 feddans as against 1,841,478 for 1929 and 1,738,472 for 1928 and 1,516,199 for 1927.

In Lower Egypt this year 832,519 feddans have been allocated to Sakellaridis, 287,501 to Ashmouni and Zagora, 124,184 Pilion, 65,944 to Maarad, 32,740 to Fouadi, 25,020 to Nahda, 45 to Giza 3, and 19,410 to Various. In Upper Egypt 648,633 feddans were allocated to Ashmouni and Zagora, 36,271 to Giza 3, 4,825 to Sakellaridis, 247 to Fouadi, 159 to Maarad, 88 to Nahda, 70 to Pilion, and 4,764 to Various. The following table shows the total acreage under the various types of cotton for this year and the two previous seasons :—

	1930	1929 (Feddans.)	1928
Sakellaridis	837,344	847,950	700,523
Ashmouni and Zagora	936,134	804,069	768,411
Pilion	124,254	87,537	97,218
Maarad	66,103	21,548	
Nahda	25,108	44,331	
Fouadi	32,987	36,043	73,320
Giza 3	36,316		
Various	24,174		
Total	2,082,420	1,841,478	1,738,472

It will be seen from this table that Sakellaridis has not maintained its supremacy among Egyptian cottons, the first place now being taken by Ashmouni and Zagora. The acreages under Pilion and Maarad have also increased considerably, while two of the new cottons—Fouadi and Giza 3—are enjoying increased favour.

ECONOMIC CONDITIONS IN BULGARIA.

[*The following notes are taken from the Bulletin of the British Chamber of Commerce (of Bulgaria), dated August 31.*]

General Conditions.

The slight improvement in general conditions is gradually spreading out. Although the results of the different crops do not appear to be quite up to optimistic expectations, the position may be described as satisfactory so far as wheat, barley, maize, tobacco, fruits, vegetables, and oil seeds are concerned.

The credit balance of foreign trade increased to 1,120,000,000 leva for the first half of 1930, a considerable excess over last year's figures for the corresponding period. It must be borne in mind that the main factor in bringing about the favourable trade balance is the almost unprecedented diminution of imports during the six months under review. This circumstance is by no means indicative of a recovery in the peasants' purchasing power. Credit conditions are still difficult, especially in agricultural areas. Although the great majority of local and foreign banks are holding considerable reserves of ready money and easily available foreign short term credits, the granting of new accommodation to farmers and small traders is still being kept within very narrow margins. The rate of interest for first-class bills and advances to firms of good standing is steadily dropping. A rate of 11½ per cent. per annum—a percentage rarely reached in Bulgaria in relatively prosperous years—is offered by banks in the larger trading centres. This is accounted for by the lack of sound business much more than by the abundance of money as a whole.

The situation of local industry has slightly improved, especially in the leather trade. Textiles, vegetable oils, chemicals and metals remain rather dull, although sales have been a shade better during recent weeks. There is a certain improvement in the state of solvency, but this is not general and no definite conclusion could be safely drawn at present. The absorbing potentialities of the market are still reduced and a state of overstocking can be easily created.

Imports and Exports.

During July exports continued to exceed imports, and in consequence there was again a favourable trade balance of 84,427,138 leva. Exports totalled 33,168 tons of the value of 439,945,778 leva and imports 26,083 tons of the value of 355,518,640 leva, as against, for the same period in the preceding year, exports valued at 439,054,761 leva and imports 775,846,516 leva, or an adverse trade balance of 337 million leva. The trade balance for the first six months of the present year, shows the value of exports at 3,304,656,077 leva and imports 2,518,425,855 leva, or a surplus balance of 786,239,222 leva, as compared with a deficit of 1,372,770,255 leva for the corresponding period in 1929.

Briquetting Plant Required.

The State Coal Mines "Pernik," will shortly be calling for tenders for a complete briquetting plant, with an output capacity of 30 tons per hour. Technical specifications and general conditions are now ready and British firms interested can obtain any particulars desired by applying to this Chamber of Commerce. The adjudication will take place during September, on a date to be advised.

The Directors of the National Bank of India Ltd., have declared an ad interim dividend for the half-year ended June 30 last at the rate of 20 per cent. per annum, payable on and after September 19,

YUGOSLAV PORTS AND SHIPPING IN 1929.

Yugoslav coastal shipping had a successful year (says Mr. H. N. Sturrock, Commercial Secretary, H.M. Legation, Belgrade, in his report on economic conditions in Yugoslavia in 1929) owing principally to the large volume of tourist traffic, of which two Yugoslav lines have practically a monopoly. Tramp tonnage was less successful owing to the general fall in charter rates, but Yugoslav tonnage was at an advantage as compared with that of other countries in this respect, owing to its low running costs. An important Yugoslav shipping company, which was formed over a year ago and which purchased most of its tonnage in the United Kingdom, now has a regular service to Brazil; and, since the conclusion of a commercial treaty between Yugoslavia and Spain, a new service to Spanish ports has been started by another Yugoslav company.

Traffic through the ports of Shushak and Shibenik increased in 1929, while there has been little change in that through Dubrovnik and Split. The traffic through the port of Split almost equals that of all the other ports together, and export trade is considerably greater than import trade. Work on the breakwater at this port was completed in 1929 and two 6-ton electric cranes have been erected. The principal exports are cement, marl, bauxite, timber, live stock, and grain; and the principal imports, colonial goods, British coal and coke, iron manufactures, machinery, sulphates of copper, and mineral oils. Both export and import traffic through Shushak have increased very considerably. The principal exports are timber, live stock and tanning extracts, and the principal imports phosphates, coal, salt and colonial goods. The building of a new deep-water quay has been commenced at Shibenik, which imports British coal, pyrites and colonial goods, and exports Yugoslav coal, timber, cellulose, calcium carbide and cyanide.

Efforts are being made to reorganise river shipping, which is largely under Government management, on a commercial basis. Owing to the good harvest of 1929 there has been increased activity in Danube shipping, though great difficulty is experienced in competing with foreign shipping.

THE BRITISH INDUSTRIES FAIR, 1931.

The Department of Overseas Trade announces that in direct association with the British Industries Fair next year representative displays of the cotton textile and artificial silk industries will be held, each in its own exhibition hall. The British Cotton Textile Exhibition, organised by the British cotton industry under the auspices of His Majesty's Government as a section of the Fair, will occupy eight halls at the White City, London. It will open on Monday, February 16, the same day as the British Industries Fair at Olympia, London, and Castle Bromwich, Birmingham, and will close on Saturday, February 28, a day later than the rest of the Fair. At the invitation of the Joint Committee of Cotton Trade Organisations, all the leading Lancashire trade asscciations are combining to produce an exhibition worthy of Britain's largest export industry. The United Textile Factory Workers' Association and other workers' associations are helping. Thus for the first time in the history of the British Cotton industry there will be a united display of fabrics which Lancashire, even in the present state of trade, exports at the rate of 10,000,000 yards a day.

The Exhibition of British Artificial Silk Goods is to be held for the first time during the first week of the Fair, February 16 to 21, at the Albert Hall, London, and it is stated that it will contain the most comprehensive assortment of fabrics made wholly or partly of artificial silk ever assembled under one roof. The effect of these additions to the British Industries Fair will be to increase the total floor space in the various halls used in London and Birmingham to over one million square feet.

JOHNSTON LINE
Mediterranean, Black Sea and Danube.
REGULAR SAILINGS from:
Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.
For Rates of Freight, Insurance and other Information apply to:
JOHNSTON LINE, LTD., 6 Billiter Street, London, 86, Cross Street, Manchester.
and FURNESS, WITHY & CO., Ltd., Royal Liver Building, Liverpool

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended August 23:—

Grain.— In spite of consuming markets having weakened, a fairly active tone was maintained on the grain market here, due, as anticipated, to local prices having had to adjust themselves towards those ruling abroad, in consequence of constant arrivals at shipping ports. Large shipments, especially of barley, wheat being next in importance, have therefore been effected, principally for Antwerp, and towards the end of the week for Weser and Hamburg, Rotterdam only recovering a little interest on the berth. For English destinations, last week's hopeful tone materialised to the extent of a few parcels of wheat and barley sold for Southampton, Falmouth, and Hull, but so far has not shown signs of developing to the extent anticipated. Except for a few odd shipments of wheat and maize for the Adriatic and Marseilles there was hardly any demand for the Mediterranean, although the inquiry appeared better latterly. Last week's low rates of freight were continued during the best part of this, but in consequence of the bulk of open spot tonnage having been covered, an improvement set in at the end of the week, and 11s. 3d. Hamburg, 11s. 0d. Weser, 10s. 9d. Rotterdam or Antwerp were paid, with a tendency, if anything, for these rates to become firmer. The rate of 13s. was paid for Liverpool and Hull, whilst Southampton and Falmouth fetched 4½d. to 6d. more. With the exception of two steamers of from 7,000 to 8,000 tons, fixed for the beginning of September at 14s. 1½d. to 14s. 3d. Antwerp Hamburg range, there has been no revival in chartering, nor any appreciable inquiry for later positions. There was no set back in last week's activity at Constantza where there are still a number of steamers loading grain and on turn for berth; rates for the Continent have slightly receded at this port, and 7s. 0d. is occasionally accepted.

Timber.—Some inquiry came forward for Near East ports, and a vessel of about 200 wagons was fixed for two ports Cyprus and Jaffa at £7 per wagon. There is also a small parcel in the market for Syria for which, however, shippers' idea of freight is at present impracticable, and no space has been engaged for this so far. A parcel of about 85 wagons was taken for Barcelona and Palamos at about £10 per wagon, and there are other smaller parcels in the market for Spanish ports. Other small fixtures include parcels of about 150 wagons for West Italy, to be shipped by liners in small lots over a period of about three months, and 120 wagons for South Italy at rates varying between £7 10s. and £8 10s. The inquiry from the Continent remains weak.

Weather and Crops.—Rain in quantities varying up to 16 mm. fell in most parts of the country on Saturday or Sunday last, but the weather has since again been very dry. The temperature was very low at the beginning of the week, but in the last few days it has again been hot, with cool nights. An official report on the situation at August 15, stated that owing to the continued absence of precipitations in early August the position of the maize was rather precarious in the plains, whilst in the hilly regions of the Old Kingdom and in Transylvania the plants had developed satisfactorily. A slight revival of vegetation was noticed after the rains of August 9 and 11. According to a provisional estimate at the end of July, the average yield per hectare would vary, according to districts, between 600 and 1,100 kilograms and probably the crop would not reach the average of the years 1924-1928. Beans are expected to give a disappointing yield notwithstanding the large area cultivated. On the other hand, the General-Director of Unions of Chambers of Agriculture confirmed to the *Argus* the excellent yields given by the straw crops, wheat having given an average of 1,300 kgs. per hectare, barley 1,500 kgs., rye 1,400 kgs., and oats 1,000, the quality in general being good. A weight of 85.7 kgs. per hectare was obtained in the Banat from selected local seed.

Sulina.—The Bar depth has increased to 24 ft. 6 in. since Thursday, and it is hoped that unless abnormal weather conditions prevail, it may be possible to maintain this depth and possibly increase it to 25 feet. Unfortunately, the minimum river depth remains 23 ft. 6 in. at the 41st mile post. A suction dredger is still working there.

Constantza.—Five vessels are loading at the elevators and quays, and six others are waiting for berths. Fifteen vessels loaded about 69,000 tons of petroleum products and 9 took oil fuel for bunkers.

Bulgarian Report.

Bourgas, August 16.—About 6,000 tons were shipped during the week, principally for Antwerp and Rotterdam, at 9s. Owing to the continuous fluctuations of grain prices, business is on a limited scale. It is reported that in some parts of the country the maize crop has suffered from the drought.

British Consular Reports

IV.—ROUMANIA.

The following extracts are taken from the report of Mr. R. J. E. Humphreys, Commercial Secretary, H.M. Legation, Bucharest, on economic conditions in Roumania down to March last:—

First Year of Stabilisation.

The twelve months that have passed since the last report was written have been of great interest as showing the first effects of stabilisation (carried out in the beginning of the year 1929) on the economic and financial situation in Roumania. It has been the general experience of countries which have returned to the gold standard after a period of monetary instability that some time has been required for an adjustment to take place in order, not only that the monetary standard should regain a stable international value, but also that the prices of commodities should regain their equilibrium and that fluctuations in the selling and buying prices of goods should be reduced to a minimum. Roumania has been no exception to this rule. How long she will need in order to resume pre-War conditions cannot be foreseen, but, given a certain measure of good fortune and perseverance in facing the necessary burden of taxation, the period of regeneration should not be a protracted one, more especially as the currency had, *de facto*, been stabilised for at least a year previously, and though the measures taken to hold the leu during the probationary period had been of an artificial nature, the experience then gained rendered the actual legal stabilisation a comparatively easy transaction.

The effects of stabilisation during the past year have been manifold. First, by the end of the year the Government was enabled to prepare a definite budget according to a fixed standard; it was placed in the position, for the first time since the War, of being able to calculate with a comparative degree of certainty what its expenses were likely to be during the coming year, while the incidence of taxation could also be measured with a certain degree of accuracy. In short, the Government was enabled to erect the financial structure on firm foundations, instead of on the quicksands of an uncertain currency. Secondly, the National Bank, by being made independent of political influences, was placed in a position to exercise its rightful banking fluctuations, thus assisting the real interests of trade. The details of the international loan which enabled the National Bank to hold gold cover for the notes it was legally empowered to issue were described in the preceding report.

At the time when stabilisation was effected the financial and general economic outlook cannot be said to have been bright—indeed the prospects had not been gloomier since 1922. The Budget deficit for 1928—exclusive of the State railways—was estimated by the Minister of Finance to be 4 milliard lei. Actually the deficit was nearly 5 milliards and advances had to be obtained from the National Bank to meet pressing engagements. The State railways were known to have a large deficit. Again, the balance of trade for 1928 had shown a deficit of approximately 5½ milliard lei (against a surplus of 4¼ milliard in 1927) mainly on account of the previous year's bad harvest, and the abnormal severity of the first winter months did not augur any good for the new season's crops.

This then was the situation that had to be faced in March of last year. The Government's first concern was to take steps to restore confidence abroad, and various modifications were enacted to this end in the existing laws, e.g. the Mining Law, Commercialisation Law, Law for the Autonomy of the State Railways and of the Post Office, and one of still greater importance, the long-delayed customs tariff, which was devised to reduce import duties on manufactured articles where possible, in order to diminish the cost of living to the peasant population. Disappointment has been expressed that, while all these measures have been passed, the response of foreign capital has not been so quick as was anticipated.

During the first two months of 1929 agriculture and industry felt the pinch severely and exports fell off gravely. Although imports also declined and the demand for foreign currency to meet foreign payments was, therefore, less, the National Bank felt obliged gradually to reduce the note circulation from 20,150,000,000 lei in March to 18,800,000,000 lei in June—the lowest figure of the year. The bank rate, which for a long time had remained at 6 per cent., was raised to 8 per cent. on May 3, to 9½ per cent. on May 14 for discount and 10½ per cent. for loans—a measure considered necessary to preserve the prescribed proportion of metal cover for the fiduciary currency, the legal minimum having been fixed at 35 per cent. The poor state of trade, which undoubtedly was accountable for the decline of imports, especially textiles, from Great Britain, adversely affected the Bourse and even gilt-edged shares and stocks fell rapidly in value. As a result of stabilisation speculation on the currency was completely stopped. Thus for the first seven months of the year the economic situation of the country was fraught with great difficulties—taxation continued to increase and bank interest charges remained high, with the result that there was more than the usual crop of protested bills, moratoria and bankruptcies. The first effects of stabilisation had not brought the relief to trade that had been popularly anticipated. In August a slight improvement set in. Abundant rains fell in June and July and the harvest on which the salvation of Roumania depends so much, was felt to be secure. The following two months more than justified these hopes, and by the end of November the Ministry of Agriculture was in a position to report a record harvest. The National Bank was able to reflect the increase of the export trade, which from August onwards showed a favourable balance, by gradually increasing the currency in circulation to 22 milliard lei (at the end of October), while retaining the gold cash cover of 27.98 per cent. and an actual cover of 48 per cent. The bank rate was also reduced to 9 per cent. and 10 per cent. respectively on November 23, 1929.

As better trade seemed certain, in view of the crops report, shipping on the Danube again became active and continued so until near the end of the year. Unfortunately, owing to the superabundant harvests in the cereal producing countries of the world, with the possible exception of Russia, prices in those cereals which most affected Roumania—such as barley and maize—began to drop to such a degree that, although Roumania had an exportable surplus of about 3 million tons buyers could only be found with difficulty, if at all, and at the time of writing speculative grain merchants are almost ruined, and the prospect of obtaining anything approaching an average normal price is remote. Meanwhile, in spite of this unsatisfactory situation, the National Bank statistics as well as the Government returns show that the collection of taxes has given much better results than could have been foreseen, and whereas the Government finances showed a deficit at the end of 1928 of 5 milliard lei, M. Rist, in his February report, anticipates that the deficit for 1929, when the full returns are available, will not be more than 1 milliard lei—an effort worthy of all praise. Moreover, the railway debts previous to 1928 were wiped out, mainly from the stabilisation loan and for the first time for many years receipts almost balanced expenditure. The adverse balance of trade was also greatly reduced—from 5¼ milliard in 1928 to 980 million in 1929—principally by the export of cereals, oil, timber and cattle—in the autumn months and an effort was made to cope with the transport difficulties by the hire of locomotives from Germany.

It was to be expected that, with the currency stabilised and the finances placed on a sound basis, and added to this an excellent harvest, the anticipated general improvement would have taken place, but as one writer has put it, "The prosperity of Roumania cannot come overnight."

Digitized by Google

The lack of capital is a dead weight on the production of the country. Throughout the year the ruling rate of interest on loans to peasants and merchants went as high as 30 per cent. The accumulation of old debts has had to be met by extra taxation, and, to sum up, one harvest does not bring entire relief. But the experience of the first year of stabilisation, in spite of burdens and anxious moments, though the results have not been immediately noticeable, will prove to be a benefit in the long run. At the time of writing the curve of trade depression seems to have reached its lowest point, and general opinion inclines to the belief that the long expected improvement is in sight.

Trade With Great Britain.

The trade between Roumania and Great Britain is practically reciprocal in value. Great Britain supplies Roumania with manufactured and semi-manufactured articles, while Roumania exports to Great Britain cereals, petrol and timber. During the last three years, according to the Board of Trade statistics, the following were the trade figures:—

	1927 £	1928 £	1929 £
Exports from Great Britain and Northern Ireland to Roumania	2,681,780	2,989,317	2,321,291
Imported merchandise exported from Great Britain and Northern Ireland	107,455	72,186	57,693
Total	2,789,235	3,061,503	2,378,984
Imports into Great Britain and Northern Ireland from Roumania	2,407,609	1,763,061	2,965,750

Thus we see that, while in 1927 and 1928 the trade balance was in favour of Great Britain, in 1929 the pendulum swung well in favour of Roumania, nearly equalising the figures on the average. Nothing better illustrates than these figures how much Roumania depends upon her natural resources, the difference between 1928 and 1929 being solely due to the harvest. The following table more fully illustrates this, showing as it does that the unfavourable balance of trade, amounting to 5,226 million lei in 1928, was reduced to 981 million lei in 1929. This, it is true, was not only due to increased exports during the last five months of the year, but also to a falling off of imports, to the extent of £2,750,000, from all foreign countries, Great Britain's share of this decrease being £750,000. On the other hand, had grain prices remained as high as in 1928, the deficit for 1929 would have been still slighter:—

	Imports 1929	Imports 1928	Exports 1929	Exports 1928	Balance 1929	Balance 1928
Millions of lei	29,897	32,145	28,916	26,919	— 981	—5,226
Thousands of pounds at 817 lei	36,593	39,345	35,393	32,950	—1,200	—6,395

6.3 per cent. of the Roumanian import trade in the year under review came from Great Britain—a falling off of 1.4 per cent. in comparison with 1928. This falling off of the imports from Great Britain mainly affected the Manchester and Bradford trades. The difference between the figures for 1928 and 1929 is disturbing. In previous years any decline in trade could be attributed to the instability of the currency, but this was not the case in 1929, so that other causes must be deduced. These were, first, the decline in the purchasing power of the population owing (a) to the poor harvest of 1928 and (b) to the low prices of grain in 1929, and secondly the quite justifiable fear on the part of exporters regarding the ability of the importers to meet their engagements. The number of moratoria and protested bills published in Bucharest has been eloquent of the state of trade. Indeed, mainly on account of the above factors and partly owing to the American slump in the autumn, which had its definite repercussion on values in Roumania, bankers have been exercised to know how to place money.

A law instituting compulsory composition (Concordat Preventif) was hastily passed in July, 1929. It was intended to give more confidence to merchants by doing away with the "moratorium"—a legal suspension of payment which had been abused—and giving creditors the right to elect whether a debtor should be allowed a term of three years in which to liquidate the half of his debt or be declared bankrupt. The debtor must offer at least 50 per cent. of his debt. It cannot be said that this new measure was successful in its application, or that it met its avowed object, as an amendment has already been called for by the Chambers of Commerce and bankers. In the interests of Roumanian merchants who desire to see the good name of their country improved on the world markets it is of the first importance for them—more especially as credit terms are invariably required—not only to meet their own engagements, but to insist to the best of their ability that when a debtor fails the strictest and most impartial examination of his means should be made. As far as British firms are concerned, especially those dealing in textiles, it is the responsibility of the firm or of their representative if they do not take advantage of the facilities that are at hand to protect their interests and to guide them in doing their business. The British Chamber of Commerce in Bucharest is available to give invaluable and expert advice.

The rationalisation of selling is an important subject. Where possible it would be of the utmost advantage if British textile manufacturers in the same or similar lines could co-operate in the selling of their wares. This would attain two objects:—(1) The prevention of cut-throat competition, especially as regards credit terms, and (2) the reduction of agency expenses. Where such an arrangement has been made, as in the sewing cotton industry, the results have been excellent. As regards the exports from Great Britain of other articles the facts are more encouraging. The sales of agricultural machinery have begun to revive, internal combustion engines have held their last year's advantage and improved upon it, while roller bearings for motor vehicles and machinery have made strides. The sales of sulphate of copper have also increased, although local production is gradually supplying more and more of the needs of the country. The general impression during the year is that British merchants are definitely taking a greater interest in Roumania. They are keener to investigate the market both by personal visits and by seeking the appointment of reliable agents. They are realising that Roumania is a market for the future, and whatever temporary drawbacks there may be, it is to be hoped that they will persevere and continue their investigations. This remark applies equally to Transylvania, Bucovina, Bessarabia and the old Kingdom of Roumania.

CYPRUS AND THE BRITISH MARKET.

The report of the Trade Commissioner for Cyprus in London for the three months ended June 30 gives interesting details of the steps taken to further the sale of Cyprus products in the British market. During the period Cyprus took part in two exhibitions—the Portsmouth Grocers' Exhibition, when the principal exhibits from the Island were cigarettes, marmalade, brandy, orange and lemon squash, dried fruits, locoum, and nuts, and the display organised by the Empire Marketing Board in connexion with the Belfast Empire Week. As a result of these two exhibitions some 35 retail shops signified their willingness to stock Cyprus products. A trial consignment of Cyprus potatoes is to be arranged for this autumn. A beginning has been made with the exportation of Cyprus wines to Great Britain on a plan which provides for considerable expansion when wines entirely suitable for this market have been evolved. The trade in grape juice is developing, and in 1929 the Island supplied 65,000 gallons. The specimens of flax shown during the Belfast Empire Week are stated to have been regarded favourably on the whole by the experts, and it is thought that Cyprus may be able to supply part of the demand for flax in Ulster.

Palestine honey from the orange groves of Jaffa is to be shown in an Empire Marketing Biard exhibit at the forthcoming Grocers' Exhibition in the Agricultural Hall.

The Association of Poultry and Pigeon Breeders of Novi-Sad, Yugoslavia, is arranging to hold an International Exhibition at Novi-Sad from November 30 to December 4.

The traffic receipts of the South Indian Railway Company for the week ended August 2 amounted to Rs.11,28,541, making the total from April 1 Rs.2,23,41,373, as against Rs.2,30,12,838 for the corresponding period of the previous twelve months.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended August 27 :—

Egyptian Futures.

Sakel Contract.—There has again been inadequate support or encouragement from trade sources to counteract the prevailing "bearish" sentiment, with the result that further liquidation of old long accounts and selling by local operators has caused values to decline to fresh levels during the week. The movement, however, has been on a gradual scale, and the fact that a more two-sided situation is slowly developing is indicated by the market exhibiting at times a certain amount of resistance, and an occasional reactionary tendency. In the light of recent events it appears as if the long interest accumulated during the summer months was of more important dimensions than generally anticipated; most of this cotton has now been forced out, with the result that local values have latterly acted quite independently of Alexandria. During the week, t heoverseas market has shown signs of recovering, with the result that the November straddle difference has widened to 72 points discount; with practically no tenderable cotton at this side, and a prohibitive import basis ruling, it would appear reasonable to expect a shortage of contracts locally, should anything constructive on the "bullish" side eventuate.

Manchester reports have been slightly better recently, but this has brought little increase in business so far in either spot or forward cotton. The prevailing state of trade and the probable difficulty of marketing the approaching crop without causing further weakness in the contract market are the main "bearish" arguments at the moment; however, these factors are gradually being discounted, and whilst further declines may take place, we would hesitate to advise short commitments at the prevailing level.

Upper Contract.—Rather more business has been transacted in this contract during the past week, reversals of old straddles against Sakels, and buying here against sales in Alexandria creating a more active market. Owing to the improvement in values that has taken place in the American market, and also because our market is running at too close a difference with Alexandria, we have latterly had to face very little short selling, and to this, and to the first-named factor, is due the advance that has taken place on the week. Whilst periodical reactions are to be expected, it appears useless looking for any sustained improvement until trade interests begin to show improvement; in the meantime we are faced with record supplies and it is difficult to foresee how the early weight of the crop can be marketed without depressing values still further.

Egyptian Spot.

While spinners continue to show more interest in their various qualities, the actual offtake shows no definite improvement. It is noticeable, however, that whenever the futures market begins to show a hardening tendency business commences to come in, but immediately any reaction takes place the demand becomes again restricted to nominal proportions. Manchester reports have afforded somewhat better reading, but it appears useless to look for any sustained stability in prices until the consumption figures start to work up from the very low levels that they have recently touched.

Sakels.—The inquiry for this cotton has been improved during the past week. Stocks here, however, are so small that in some cases would-be buyers have been unable to find their cotton.

Uppers have again constituted the bulk of the business transacted, cotton changing hands at values ranging from 75 off to 100 on. In some cases, mills are experiencing difficulty in finding supplies to bridge them into the new crop.

Nahda has figured prominently in the demand, but definite business in this variety is very slow in maturing.

Maarad Cotton has been sought for in some quarters, but only occasional sales for any important quantities have been reported.

Fouadi, Farouki, etc., have again been slow of sale.

Sudan Sakels.—The recent improved inquiry has been well maintained, and one or two large sales of the lower qualities have been put through.

Higher grades of Kassala cotton are meeting with a steady demand from certain outlets, and as supplies are beginning to run down we would advise would-be buyers of this cotton to secure their requirements.

Tokar Sakel has figured very occasionally in the inquiry, and we cannot trace any sales during the past week.

Low and Inferior Cotton has again been in steady request, and several trials lots ranging in value from 4d. to 6d. have been taken up by buyers.

C.i.f. Business.—Transactions in new crop cotton continue to be abnormally small for this period of the season, but on the whole spinners have shown more interest in the offers that come to hand, and while only small quantities are involved more business has been done in Sakel than during the preceding few weeks. Forwardings have been returned as 2,286 bales Egyptian and 742 bales Sudan. Sales have been estimated as 800 bales Egyptian and 1,200 bales Sudan. Quotations of Sakel are reduced 30 to 40 points, whilst those of Pilion and Upper are increased 5 and 6 points respectively. F.G.F. Sakel to-day; 10.40d. F.G.F. Upper to-day, 8.40d. F.G.F. Pilion to-day, 8.90d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended August 21 :—

Our market has continued to decline without interruption during the week. The week's summary of price movements is as follows: Sakellaridis: November, 19.89 dollars, 2.09 dollars down; January, 20.15 dollars, 2.19 dollars down; March, 20.68 dollars, 2.12 dollars down; May, 21.10 dollars, 2.20 dollars down; Juy, 21.61 dollars. Ashmouni: August, 13.55 dollars, 1.18 dollars down; October, 13.09 dollars, 0.98 dollars down; December, 13.37 dollars, 1.00 dollars down; February, 13.77 dollars, 1.01 dollars down; April, 14.12 dollars, 1.06 dollars down; June, 14.54 dollars, 1.06 dollars down.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Sewage and Air Mains.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for the supply, construction and delivery of sealed sewage and air mains and subsidiary works. December 10.

Electrical Installation Fittings, etc.—The Egyptian State Railways, Telegraphs and Telephones, invite tenders for electric installation fittings, cement pipes, cement and earthenware tiles, summer clothing, earthenware conduits, sanitary fittings, lead seals and washers, etc.

Pump for El Tor Quarantine Station.—The Conseil Sanitaire Maritime et Quarantenaire, Egypt, invites tenders for the supply of a well pump with spares and tools. November 14. (D.O.T.)

Sanitary Service Vehicles.—The Municipality of Alexandria invites tenders for the supply of one petrol driven road tractor, and one combined motor sweeping, washing and spraying machine. September 16. (D.O.T.).

Water Meters.—The Minister of the Interior invites tenders for the supply of water meters to the Damanhour Municipality. October 5. (D.O.T.)

Transformers.—The Municipality of Zagazig invites tenders for the supply of four 25 K.V.A. single phase transformers. October 15. (D.O.T.)

Swing Bridge.—The Ministry of Public Works, Cairo, invites tenders for the construction of a swing bridge over the Mahmudia Canal at Zargun Syphon. September 30. (D.O.T.).

Files.—The Egyptian Ministry of War and Marine invites tenders for the supply of files. September 15. (D.O.T.)

Motor Fire Engines.—The Ministry of the Interior, Cairo, invites tenders for the supply of motor fire engines. September 20. (D.O.T.).

Structural Steel, etc.—The Egyptian State Railways, Telegraphs, and Telephones, invite tenders for structural steel for Tanta station footbridge, standard lamp fittings, supply of spares for auto and half auto Lux lamps, high tension feeder cable, and tinned sheets double.

Towels.—The Ordnance Survey Department of the Egyptian Ministry of War and Marine invites tenders for the supply of 9,836 hand towels. September 24. (D.O.T.).

TURKEY.

Installations and Equipment for Buildings.—The Ministry of Hygiene and Public Health is preparing a scheme for the equipment of the following buildings:—(1) Hospital Buildings.—Central heating, hot and cold water system, ventilation system, sanitary equipment, hospital laundry, refrigeration plant, electrical equipment, lifts, house telephone, electrical signals, kitchen equipment. (2) Installation for Inoculation and Bacteriological Laboratory.—Hot and cold water system, steam installation, electrical equipment, refrigeration plant, lifts, electrical signals, house te'ephone, gas. (3) School of Hygiene.—Central heating, hot and cold water system, steam installation, house telephone, electrical equipment, electrical signals, gas, ventilation system, sanitary equipment, refrigeration plant, repair workshop equipment. (4) Five Storey Building of Residential Flats.—Central heating, hot and cold water installation, gas, sanitary equipment, lifts. Specifications can be obtained from the Ministry of Hygiene and Public Health, Ankara. October 15.

Wire.—The Department of Posts, Telegraphs, and Telephones in Ankara invites tenders for the supply of galvanised and bronze wire. September 14. (D.O.T.)

Telegraph Wire.—The Department of Posts, Telegraphs, and Telephones invites tenders for the supply of telegraph wire. September 16 (D.O.T.).

Manganese Dioxide, etc.—The Turkish Department of Posts, Telegraphs and Telephones invites tenders for the supply of manganese dioxide and graphite. September 15. (D.O.T.)

YUGOSLAVIA.

Oil Driven Road Tractor.—H. M. Consul at Sarayevo reports that a local firm is desirous of receiving from British manufacturers quotations for the supply of a small naphtha tractor fitted with solid rubber tyres for hauling trailers. (D.O.T.).

"SHELL" SUBMARINE PIPES IN PALESTINE.

The installation of the storage reservoirs, for oil, at Haifa, which are being erected by the "Shell Company of Palestine," are now nearing completion, it is reported in the last issue of the *Palestine Commercial Bulletin*. On the morning of August 11 two submarine pipes that will connect tankers at sea and the reservoirs in the storage area were towed in by a large "Shell" tanker. Of the two pipes one is 6 inches in diameter, for the conveyance of petrol, and the other one of 10 inches in diameter for the conveyance of crude oils. The section of the pipeline in the sea is about 750 metres in length, and reaches a depth of 6 fathoms, and hence will be in a position to unload any sea-going tanker. By agreement with the Shell Company, these pipes will also be used by the Vacuum Oil Company, who are likely to meet half of the expenditure incurred in their installation. The Vacuum Oil Company is also erecting storage reservoirs in the oil area of Haifa.

It is understood that the submarine pipes will be used temporarily until the completion of the Haifa Harbour, when oil tankers will be able to unload their cargo in the special oil zone of the Harbour, and through overland pipeline direct into the reservoirs of the various oil companies. These pipes are the second of their kind in the country, though much larger than the small pipe laid down by the United Caucasian Oil Company, Ltd., in 1927. The submarine pipe of the latter company is only 350 metres long and 3½ inches in diameter; the first tanker steamer, carrying 300 tons of oil, arrived at Haifa on January 24, 1927, and off-loaded in the same day its oil into the reservoirs of the Caucasian Oil Company.

The traffic receipts of the Suez Canal for the six days to August 22 amounted to 20,000,000 francs.

Sir Charles H. Bedford has resigned his seat on the board of the Service Petroleum Company on account of pressure of other work.

It is reported that the Government of Madras is to spend £100,000 on the construction of bridges and road improvement works.

Royal Assent has just been given to an Act of Parliament empowering the Royal Exchange Assurance to undertake registration works of all sorts, and also to act as secretaries of public companies.

Notes of the Week.

A Yugoslav Landmark.

September 6 was the seventh birthday of Crown Prince Peter of Yugoslavia. The day was chosen for the impressive ceremony of presenting new colours to the regiments of the Yugoslav Army. To appreciate the full significance of the occasion it is necessary to recall the object for which the Dictatorship was established and the steps which have been taken successively to attain that object. Until January, 1929, the Kingdom of the Serbs, Croats and Slovenes was the prey of internal dissensions which kept the people divided into at least two bitterly antagonistic camps, effectually prevented the unification of the country, and condemned it to years of sterile government. To end this state of affairs King Alexander, on January 6, 1929, abolished the Constitution and parliamentary government and appointed a Cabinet, responsible to himself alone, to administer the country. The foremost aim of the new régime was to bring internal peace to the country and harmony between the different sections of the people. To this end it was resolved to eradicate all traces of the former unhappy political and national differences. All political parties were abolished, and all organisations that encouraged the people to regard themselves as Serbs, Croats, Slovenes, and so forth, instead of as Yugoslavs, were prohibited. The official designation of the State was changed to Yugoslavia, and the country was divided into nine regions which entirely eliminated the old divisions of Serbia, Croatia and the rest. After a year of peaceful progress under the new régime the idea gained currency that some relaxation of the Dictatorship in favour of a gradual return to constitutional procedure might be introduced, but the Government of General Zhivkovitch lost no time in correcting the impression by pointing out that the work of the Dictatorship was far from complete. Last Saturday's ceremony confirms his statement. In no sphere of the public life, it can well be imagined, was devotion to the past more firmly enshrined than in the Serbian Army, with its proud record and its military traditions. Its regimental flags, however, have had to be consigned to a Church, and in their place the regiments have received their new Yugoslav colours. The exchange is a logical corollary of what has gone before, but the step is none the less significant of the thoroughness with which the Dictatorship is carrying through its task.

Party Politics in Turkey.

The political struggle would seem to be effectually launched in Turkey, but the reason that prompted the President of the Republic to abandon the peaceful setting that the absence of an Opposition gives to the politics of a country is not yet clear. If it be the case that the policy hitherto pursued by the Turkish Government has been proved to have fallen far short of the inspired perfection that has been claimed for it, the Ghazi may be well advised to have the policy more particularly identified with the Prime Minister than with himself. Sooner or later criticism from within had to come; by entrusting it, as it were, to Fethi Bey's charge, the Ghazi has been able to withdraw discreetly from the political arena, leaving Ismet Pasha without the grievance that he might have had, if he had had to defend himself against popular clamour or a foeman less worthy of his steel. The Prime Minister, it must be admitted, shows no disinclination to accept the situation cheerfully. His speech at Sivas on the occasion of the opening of the railway to that town was full of fight, although it will disappoint those who would like to think that the administration of Turkey has been directed during recent years by a master intellect. Ismet Pasha refused to allow that there could have been any alternative to his policy. It was unthinkable that railways should not be constructed, and Fethi Bey, he declared, was well aware that the conditions imposed by foreigners were too onerous. Herr Müller had come to Turkey to study the financial situation, and had discovered two causes of the financial embarrassment: the expenditure on national defence and the expenditure on the railways. But as soon as the necessity for expenditure is admitted, Ismet Pasha pointed out, the charge of financial mistakes falls to the ground. Perfectly satisfied with this justification of the rake's progress, Ismet Pasha went on to elaborate the need for military preparations and to emphasise the absurdity of the attitude of foreign finance towards Turkey. He would not admit that anything was wrong anywhere in the country; even taxes were not high, he said, for "they protect the cultivators and the harvest." From the Prime Minister's speech it would appear that Turkey has a long way to go before she reaches political sanity, unless Fethi Bey has more success than seems indicated at the present moment in his frontal attack on the citadel of ignorance, inexperience and prejudice.

Digitized by Google

The Need for Criticism.

It will hardly enhance Ismet Pasha's reputation with his countrymen that he should be unable to defend his own policy against Fethi Bey's criticisms except with a direct negative. The plea that everything that the Turkish Government has hitherto done was the only course open to it cannot hold water in view of the serious difficulties in which the policy has placed Turkey to-day. The exuberant reception accorded to Fethi Bey at Smyrna suggests that the present situation weighs far more heavily on the people as a whole than the Government has realised or has cared to admit. In the opinion of Turkey's well-wishers abroad it is impossible to justify in the light of present-day conditions the placing of such a heavy burden of taxation as the Turkish people have had to bear, in order to spend nearly half the total of the annual Budget for military purposes, while only fifteen per cent. is applied to economic reconstruction. If the military expenditure was necessary, then the foreign policy that made it necessary was wrong. The Ankara Government has admitted the necessity of a temporising policy with regard to Soviet Russia, because it was not prepared for a trial of strength with such a powerful State; it would have been as easy to maintain similar relations with other countries so as to leave Turkey with no excuse for any greater expenditure on her Army than might be necessary for the maintenance of internal order. In regard to the railways there can be no justification, as Fethi Bey has pointed out, in the present state of Turkey's finances, for an excessive outlay on lines serving a military object only, while leaving economic development out of the question. The formation of Fethi Bey's party, it is to be hoped in Turkey's interest, will enable the Grand National Assembly to examine carefully all proposals entailing large expenditures, and to have all points of view represented before the country is committed to any particular policy. For the moment the enthusiasm that Fethi Bey has aroused is in danger of giving rise to excesses, and it remains to be seen whether the Ghazi may not decide that Turkey, after all, is not quite ripe for the experiment of a second political party.

A Princely Politician.

The identification of Prince Omar Toussoun with the Wafd is an interesting development in Egyptian politics. Hitherto Prince Omar, who is a cousin of King Fuad, has been inclined to play a lone hand in the public life of the country, an attitude which his exalted position entitled him to adopt. From time to time, with a shrewd appreciation of the direction in which the political wind was blowing, Prince Omar Toussoun has sought to place himself in front of the wind; but when in due course it has died down, he has found himself just where he was before, prominent by reason of his princely status and personal wealth rather than conspicuous for political power or acumen. In his opposition to Great Britain he could probably be relied upon to man single-handed the last ditch, and on the subject of the Sudan the "No, No, Never" policy has enlisted no warmer supporter. Practically all the Prince's political excursions have been taken on a Wafd ticket, but until last week he has preferred to travel without a party label. That he should now toe the Nationalist line side by side with the Wafd emphasises the democratic character of the Prince and of the political party that he has joined; his contention that there should be only one party in the State emphasises the particular interpretation that he places on democracy. In other countries the appearance in the political arena of a member of the Reigning House would be deprecated by public opinion in general, and in particular by the party with which the member identified himself, but in existing conditions in Egypt it may be of advantage to the Wafd to synchronise its new overseas policy of close friendship with Great Britain with the domestic recruiting of such an exalted anti-British stalwart. Unlike the ex-Khedive, Abbas Hilmi, who also finds Egyptian politics to-day of absorbing interest, Prince Omar Toussoun will not consider it necessary to put himself right with public opinion in Great Britain, for he will not have overlooked the fact, that, as Patron of the Wafd, his claim for further advancement, if occasion should arise, would be altogether unchallengeable.

INDIAN NOTES

The Failure of the Peace Mission.

The abortive result of the unofficial peace negotiations between Sir Tej Bahadur Sapru and Mr. M. R. Jayakar and the imprisoned Congress leaders will occasion more relief than surprise. When the published account of the discussions is examined it becomes clear not merely that a settlement was impossible, but that, in a sense, it was almost undesirable. The mission of the Liberal and Responsivist leaders was patriotically undertaken and the Government of India was justified in giving all reasonable assistance. The attitude of the Viceroy throughout the negotiations appears to have been perfectly correct. At first we admit that we were inclined to share the anxiety of the European community lest his desire to obtain the representation of the Congress at the Conference might have led Lord Irwin to make concessions on points that by common consent are vital. In the event his policy has been more successful, probably, than even the Viceroy expected. The Congress organ hits the nail on the head when it roundly declares that the negotiators have done a great disservice to their country, since they have been instrumental in revealing the true nature of Mr. Gandhi's policy and may alienate opinion, especially in America.

The Congress Demands.

That the fears of the Congress organ are by no means groundless is made abundantly plain by the impudent and unreasonable conditions which Mr. Gandhi and the two Nehrus embodied in their letter of August 15. They had been told that, if the civil disobedience movement were completely and finally called off, the ordinances promulgated to counter them would be withdrawn. They had also been assured that while there could be no general amnesty, the local Governments would be asked sympathetically to review the cases of those convicted in connexion with the civil disobedience movement of a non-violent character. The Viceroy had also intimated that, if the Congress decided to attend the Round Table Conference, it should be given adequate, though not predominant, representation. The reply of the Congress leaders was characteristic. The Viceroy was to grant a political amnesty to all prisoners, except those found guilty of violence, whether recently or in the disturbances of 1920-21. Confiscated property was to be restored; dismissed village officers were to be reinstated; and all special ordinances were to be repealed. These conditions were, moreover, described merely as "preliminaries" and were to be complied with before the composition of the Round Table Conference was even discussed. In return for these concessions, without any assurance, it will be noted, of any compensating advantage, the civil disobedience movement would be called off on certain terms which would have been more appropriately imposed by a victorious rebel army. They included the complete surrender of the existing Administration and the formation of a new national Government responsible to the Indian people and having complete control over defence as well as over economic policy. The boycott of foreign cloth and the illicit manufacture of salt were to be continued and the principle admitted that all such British claims and concessions, including the Indian public debt, as seemed, in terms of the Calcutta resolutions of January last, "unjust" should be submitted to an independent tribunal. Over and above all this the Congress leaders made it an indispensable condition of agreement that the Government should acknowledge the right of India to secede from the Empire. The wonder in the circumstances is not that the negotiations proved abortive, but rather than they should have been so long drawn out.

THE GOVERNMENT AND PALESTINE.

It is proof of the unbounded faith that reposes in human kind that the Palestine problem still has its optimists. That it contains elements which make for cynicism, and even pessimism, may be freely granted: in the East there are always situations which superficially justify the pessimist in his insatiable ways. In Palestine, in particular, it might be thought that doubt and disillusion are the regnant qualities among the peoples, the Jews fearing that their cherished aims will be denied them, the Arabs that their equally cherished ambitions will escape realisation. The "National Home," the erection of which seemed a matter but of a few years at the time of the Armistice, is apt to appear to certain Jews as either a small, unworthy shack, or else a building the contractors of which will not be allowed to fulfil their intentions for decades and, perhaps, centuries. Similarly, Arab independence in Palestine, which ardent spirits may have thought as good as won at the time of the Armistice, seems to certain Arabs, who have not yet learned that there are fuller pleasures and more complete achievement than are to be found in the oft empty boast of independence, to possess an elusive nature that may breed despair. But investigation must go deeper than the mere talk, designed for home consumption, of Arab and Jewish leader or journalist. Adjustment of views to realities is not a virtue particularly prominent in the East, where dreams are longer harboured than in the more accommodating West. Yet politics are not metaphysics, and whereas in the latter it may be possible for men to keep "still nursing the unconquerable hope, still clutching the inviolable shade," in the former the factor of irreconcilability makes progress impossible. Convictions need not be forgone, if one collaborates with the powers that be: the wise man will continue to work, if only in the hope that his view may one day be given fuller expression. Abuse and non-co-operation are the method of the nursery, and it would ill befit the intellect that must exist in the minds of many men in Palestine, if the attitude were adopted that, since the Government does not seem to be willing to play according to their rules, they will refuse to play. Surely the course of sagacity indicates the fullest co-operation with the Mandatory Power, which must now have made it abundantly plain that it is equally solicitous for the interests of both Arab and Jew in Palestine.

Gradually and with increasing conviction the attitude of the Mandatory Power towards its obligations in Palestine has been unfolded to the world. t believes that the lines of its general policy have been correct, that is, that it has a double undertaking, to the Jewish people, on the one hand, and to the non-Jewish population of Palestine on the other. That there will be no fundamental change in this policy may be taken as an axiom, though it is quite possible that, as a result of the observations of Sir John Hope Simpson (which it is hoped will be published next month) and the subsequent re-definition by the British Government of their policy in the Holy Land, certain changes in detail may be made. From one rule in particular no departure will be made: that the arrival of new immigrants into Palestine must be in strict accordance with the economic capacity of the country to absorb them. The degree of saturation that may have been reached we shall soon know, from Sir Hope Simpson's investigations. As to extra-Palestinian Jewish reaction to his Report—that is for the future to disclose. But it is out of the question that anything will be done to jeopardise the existence either of the Jewish or the Arab people in Palestine. Great Britain holds the Mandate, and is determined to work the Mandate: the faint-hearts who counsel her relinquishing of it, and the abusers who clamour for her parting with it, are hopelessly unaware of the fidelity with which the Mandatory Power is resolved to carry out its task. That that task involves the leaving of Palestine to her own devices at some future date, we take for granted; but that day will not arrive until the temper of the peoples there has considerably changed, until, that is, the various movements for Jewish or Arab domination have been purged, and until there is a certainty that the two people, who will then have realised that each is essential to the other, are living peaceably together and co-operating in every kind of practical way. Is such a prospect nothing but a mirage? To those who study the pronouncements of Jews and Arabs living outside Palestine, doubtless, a rigid affirmative seems the only possible answer. There are still thousands, possibly millions, of Jews outside Palestine who believe that a "Jewish State" in Palestine is the one and only goal of their endeavours, just as there are many Arabs outside Palestine who assert that nothing but complete independence is, or should be, the goal of the Arabs. But there are Jewish leaders, and we believe there are Arab leaders, who perceive that such policies will get nowhere—nowhere at all. On the Jewish side, it is not difficult to see that many minds are aware that a more realist interpretation of future Jewish effort is called for, that the Zionist movement, which in its earlier forms contained, naturally enough, many idealistic facets that, when the light of reality shines on them, are seen to be extraneous and harmful, must get down to bedrock, that is, to economics and the building up of a State with, and not on, the Arabs of Palestine. And on the Arab in Palestine, one may gather that realisation, if it is not general, of the fact that the Mandate is to go on, has at least been adequately impressed. In other words, there is good hope that the attitude of abuse or intransigence may in the future be transformed into one of co-operation with the Government.

It appears probable that interest will be focussed, first on the Report of Sir John Hope Simspon and on the new statement of the British Government on policy in Palestine, to be derived from it, and secondly, on the forthcoming constitutional proposals for getting the Arabs and Jews to form some sort of political unity. That the Legislative Council which may shortly be offered to Palestine will to some extent disappoint both sides is possible enough, but even so, if it is accepted and honestly worked, great good will have been done to the country. Had wisdom been more widely spread, this course might have been chosen years ago. Time, however, has been necessary to convince the peoples of Palestine that their extreme aspirations could not be fulfilled, and it may be that what has been learned slowly will have been the more thoroughly learned. Much water has flowed down the Jordan since first a Legislative Council was offered to Palestine, and the impatient might be apt to think that all of it had been wasted, to be seen no more. But as Nature transmutes all her properties, so what appeared unwisdom in the time of Sir Herbert Samuel may appear wisdom in the time of Sir John Chancellor. It is to be hoped, indeed, that whatever form these new constitutional proposals may take, they will be regarded by the inhabitants of Palestine as what in truth they are, the utmost that the Mandatory Power, in its unalterable aim of doing justice to all sections of the population, can now offer to this historic land. For it is obvious that, for better or for worse, a new era is about to begin in Palestine. The country is at a turning of the ways, and it depends on its people whether it is to march forward peacefully towards what, as is now seen, must be a limited prosperity, or whether it shall continue in the old, fruitless wrangle of respective interests.

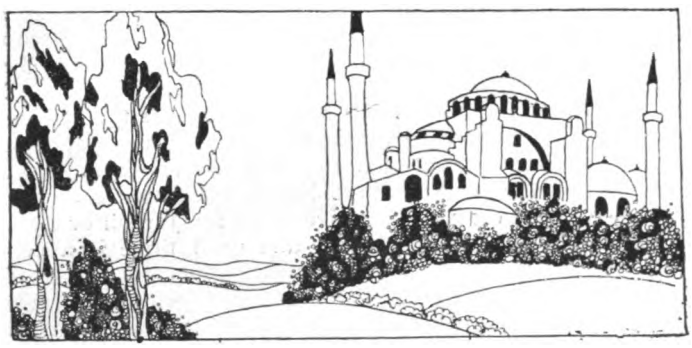
*The Near and Middle East

From Our Own Correspondents.



TURKEY.

Istanbul, August 27.

The Liberal Party.

In an interview granted yesterday to the writer by Fethi Bey, the Leader of the Opposition briefly outlined certain aspects of his financial programme which is still in course of preparation.

The Liberal Party have rented temporary offices in the banking quarter of Galata and, to judge by the clicking of many typewriters manipulated by young Turkish ladies, the correspondence of the Party must be as voluminous as the party-funds are apparently bountiful. The ante-chambers of the ex-Ambassador were packed with applicants awaiting enrolment. By their appearance, many of them were farmers and flock-masters from Anatolia, although, intermingled with the latter, one could easily distinguish a fair sprinkling of the "Esnaf" class of Istanbul, i.e., porters, lightermen, railwaymen, and dock-hands. A bevy of well-dressed women, obviously belonging to the *intelligentsia,* stood in a group apart.

Assim Bey, the Leader's Private Secretary, conversing in fluent English, immediately conducted the writer into Fethi Bey's office, where a number of Deputies and "Eshrafs" or Anatolian notables—some of them wearing the true Anatolian baggy nether garments, resembling very much exaggerated plus-fours—were seated in a semi-circle around the Leader's desk.

Fethi Bey courteously excused himself for being unable to divulge, at so early a stage, the full details of the Party's political programme, which was still under consideration between himself and the Deputies who had seceded from the ranks of the Popular Party, in order to enrol themselves under his banner. Even at this stage, however, he would go so far as to say that his criticism of and opposition to the Cabinet's activities centred mainly on the present state of Turkish State finances. He hoped to be placed in possession, at an early date, of a copy of the report drawn up by M. Rist, the French financial expert, whereupon he would be in a better position to formulate the political desiderata of his Party. The present costly railway policy of the Government—measured in terms of budgeted revenue—must be obstructed and curtailed at the earliest possible date, as casting an almost unbearable burden on the shoulders of the present generation of tax-payers, whereas it would fall to future generations to enjoy the benefits of the Cabinet's enterprise, if ever the railway system now under construction turned out to be productive, which, with respect to certain sectors at all events, was at least doubtful.

The interview came to an end by a request addressed to the writer to return in about a fortnight's time, when the Leader hoped to be in a position to enter more fully into the details of the Opposition programme.

ALBANIA.

Tirana, September 3.

The Coronation Day Anniversary.

Monday, September 1, was the second anniversary of the proclamation of the Kingdom. Celebrations began on the previous evening, and there was a display of excellent fireworks. Tirana was well beflagged and very prettily illuminated, the principal buildings, minarets, and so forth being outlined with electric lights or lanterns, and strings of coloured lights being slung across the streets. On Monday morning the King arrived in Tirana from Durrës and received at the Palace the Diplomatic Corps, the Cabinet Ministers, ecclesiastical dignatories, and a number of officials, while an aeroplane of the Adria-Aero-Lloyd Company flew low overhead, dropping leaflets bearing the words *Rroft Monarchia* (Long Live the Monarchy), *Rroft Familja mbretnore* (Long live the Royal Family), etc. The King then inspected the Guard of Honour outside the Palace, and drove away through the town back to Durrës. The ceremony was orderly and well-organised; and the Royal Band, which was on duty from 9 a.m. to 1 p.m., and played most of the time, is to be congratulated on its powers of endurance and on the excellence of its performance. On Monday night Tirana was again illuminated, there was another display of fireworks, and one gained the impression that the whole population of Tirana was in the streets.

Press Criticism.

The newspaper *Arbënia,* which was suppressed a fortnight ago owing to an attack which it made upon the attitude of some Italians in Albania and their interpretation of the Alliance, has reappeared under the name of *Relindja e Arbenis,* and the Editor has been released. After the suppression of the paper, the Government was attacked by the Deputies, who were inclined to lay the responsibility for the appearance of the article upon the Ministers, and expressed indignation that such an attack upon the Alliance should have been made. The implication is, of course, that the article was inspired by the Foreign Minister. As it follows upon the alleged criticism of the Italians in Albania (reported in THE NEAR EAST AND INDIA of June 19) by M. Fitzo to the correspondent of the *Shqiperia e Re* early in June—which the Ministers immediately repudiated—it would appear to the distant observer that either M. Fitzo is inconceivably petty (because the subject of the allegations would be beneath the notice of the average man) and amazingly indiscreet, or that the Press is being employed in one way or another by his political opponents to undermine his position; but to those who know M. Fitzo the former alternative appears to be quite out of the question. Indeed, one's impression is that members of the late Cabinet, of which M. Kostaq

***Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.**

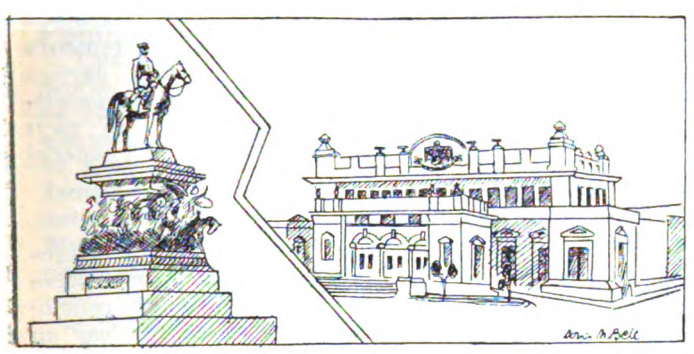
Digitized by Google

Kotta was Prime Minister, are striving to bring about a change. In view, however, of the fact that, whatever faults the present Cabinet may have, its members are honest, sober patriots, it is difficult to see how a change could be for the better—unless indeed the King contemplates the introduction of new blood to Cabinet rank, or the inclusion in the Cabinet of one or two of those well-known patriots who have sunk, of late, into obscurity.

Miscellaneous News.

On August 27 a ceremony, attended by Cabinet Ministers, the Italian Minister, and representatives of the Italian Military and British Gendarmerie Missions, took place to mark the beginning of work upon a new street named after General Telleni, and in memory of foreigners who have lost their lives while serving Albania (among whom General Telleni is the most senior). General Telleni, it will be remembered, was assassinated on Greek territory in 1923 by two Greeks, while serving on the International Boundary Commission. The identity of the assassins was not discovered until four years later; they were arrested in Bulgaria, handed over to the Greek authorities, and executed.

On August 28 the Government gave a dinner in honour of the newly appointed Italian Minister, Marchese di Soragna. An order has just been issued by the Albanian Commander-in-Chief, General Aranitasi, that all officers, whether Albanian or Italian, must wear uniform at all times except when on leave; the order seems as retrograde at it is unpopular among the Italians.—Some local unrest is reported from the Prefecture of Dibra, and General Ghilardi has been sent to investigate its causes.



BULGARIA.

Sofia, September 4.

Macedonia and Geneva.

A Macedonian delegation, consisting of M. Shaleff, of Skoplye, M. Athanassoff, of Kavadartzi, and M. Ilieff, of Veles, forwarded last January to the Secretary of the League of Nations a petition, which two months later it supplemented with a detailed exposition, upon the intolerable situation of the Bulgarians in Macedonia, whom the Yugoslavs are seeking by every means to denationalise, and upon the necessity of setting up in Macedonia the régime provided for in the Peace Treaties for the protection of ethnic and religious minorities.

This petition was submitted to a special committee, which, without pronouncing on it, contented itself, for purely formal reasons, with putting it on one side, and handed it on to the Council of the League of Nations to deal with. However, the Yugoslav Government having asked the League not to accept any petition coming from Macedonia, because this province was a Yugoslav province and because all Macedonians were good Yugoslavs —which meant that there was no point in speaking of a minority régime when no minority existed—the Committee refused to accept this thesis, and thus implicitly recognised the Bulgarian nationality of the Macedonian population.

Bulgaria and the Petition.

The decision of the Committee, tardily made known in Bulgaria, although giving but partial satisfaction to the Bulgarians, provoked throughout the country a huge movement of solidarity with the Macedonian Delegation at Geneva, and from all parts requests were sent to the Secretariat at Geneva to put the matter before the next session of the Council of the Assembly of the League of Nations. All these requests, bearing thousands of signatures, have an identical text, drawn up by the great national organisation, *Otetz Paissy*.

Macedonian Emigrants in America.

The Union of Macedonian Associations in the United States of America has sent to Geneva a long request in which, explaining the condition of living in the country of their origin and the impossibility of freeing themselves from it by legal political activity, because the Yugoslavs, with their measures for denationalisation, impel the Bulgarians to revolutionary action, the last recourse for the defence of their nationality, they demand the immediate intervention of the League of Nations to "impose the cessation of the Yugoslav policy of denationalisation in Macedonia, pursued by means of inquisition more terrible than those of the Middle Ages, and to oblige the Government of Yugoslavia to accord to its minorities the rights to which they are entitled under the Peace Treaties. This is the one way to assure peace and liberty in the Balkans." The Macedonian emigrants demand that an international investigation be set up, which could only help the settlement of the Macedonian question.

The Revolutionary Organisation.

On top of all these manifestations of sympathy and of solidarity towards the Macedonian cause at Geneva, a great impression was caused, yesterday, when we read, in the revolutionary sheet, *Svoboda ili Smert* ("Liberty or Death") an article, which was reproduced in the whole Bulgarian Press. This significant article is by the great chief of the Macedonian Revolutionary Organisation, who, on the occasion of the sixth anniversary of the tragic death of his predecessor and master, Todor Alexandroff, reviews the development of the Macedonian movement since it revived after the War in consequence of Serbian oppression in Macedonia, and justifies at length the revolutionary proceedings as the only possible course in the struggle for the preservation of the Macedonian population under Yugoslav domination. It arrives finally at this significant declaration: "Now still, as under Todor Alexandroff, we wish to emphasise the unchangeable opinion which has long been held in our ranks, namely, that if the ends pursued by the I.M.R.O. could be realised by other means, it would willingly change its method of action. But actions and guarantees are necessary, from whatever side they come, to satisfy the Macedonians. Without that, the revolutionary method will be applied independently of the fact that for one reason or another, this method might earn the disapproval of this or that person."

It is evident that by this article the Macedonian Committee means that it is for the moment willing to show patience and afterwards definitely to disarm, if the League will occupy itself seriously with the Macedonian petition.

The Bulgarian Government's Attitude.

In face of all these favourable circumstances and of the unanimity among the Bulgarian people, the attitude of the Bulgarian Delegation to the League at Geneva is awaited with impatience. It is generally believed that it

CENTRAL ASIAN SOCIETY

(in which is incorporated The Persia Society.)

Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published.

The subscription of £1 per annum entitles members to a copy of each issue of the Journal, tickets for all meetings, and the loan of books from the library.

Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W.1

cannot keep silent this time and refrain from intervening actively to help the Macedonian petition and in general to aid the Bulgarian minorities, whose protection, though assured by the Treaties, has hitherto remained a dead letter.

Belgrade, September 5.

The New Flags.

The presentation to all regiments of the Kingdom of new Yugoslav colours instead of their former flags, under which the Serbs fought for their independence and for the reunion of the Southern Slav peoples, will be carried out with special solemnity and is intended to symbolise the final surrender of all that divided the Southern Slavs in the past. The old flags will subsequently be carried to Topola, where the beautiful new Mausoleum Church of the Dynasty of the Karageorgevitches has just been finished, in which the body of the great leader Karageorge will be laid to rest under the flags, some of which date from the time of his first rising against the Turks. This new leader than the small, modest tomb where he had lain up to the present.

The day chosen for the giving of new colours to the troops is the seventh birthday of Prince Peter, eldest son of King Alexander and Queen Mary, and heir to the throne of Yugoslavia. Delegations from all Yugoslav regiments have arrived in Belgrade, as well as a considerable number of all other arms. There will be a military review and parade which will bear witness to the military strength of Yugoslavia. Over 120 airplanes are to fly simultaneously over Belgrade, and detachments of sailors and of the Naval School will also partake in the display.

A New Party?

September 6 will be a meeting day not only of the Army. According to the invitation of the Prime Minister all the 512 members of the Banat Councils, who have been recently nominated, and hitherto have never met, will come to Belgrade to attend the festivities. The order and efficiency of the Yugoslav Army, which is certainly of a high standard, will serve as model to Banat Councillors who are appointed partly from former members of the Skupshtina and have quite other traditions. This will be the first occasion for the Banat Councillars to show their allegiance to the Dictatorship. In preparation for this visit of the members of the Banat Councils, among whom are supporters of various former political parties, the Cabinet issued a statement that its members are to be regarded as a homogeneous body (and not as representatives of various parties and groups). Such a statement may be regarded as providing a basis for the forming of a single party, which would include all those who are willing to support the existing régime, and to submit themselves to the necessary party discipline. It is understood that this new party will include Croats and Slovenes as well as Serbs, and members of the former political parties as well as former non-party men; it would work, like the Italian Fascists, on national and patriotic lines. In this respect the Yugoslav Army may well serve as a model to those chosen to inaugurate the new party.

Yugoslavia and Poland.

The Yugoslav Air Force recently achieved considerable success in taking the first place at the competitions organised by the Polish Army for the military aeroplanes of Yugoslavia, Czechoslovakia, Roumania, and Poland. The Yugoslav officers took all the prizes but one, and left even the Czechoslovaks far behind.

The growing friendship between Yugoslavia and Poland was again manifested at the Warsaw Agrarian States' Conference, where, independently of the general results, Yugoslavia made with Poland an additional agreement for marketing goods from each countries in the other. Quite recently Yugoslavia (and Bulgaria) suffered serious loss owing to the difficulties that the Hungarians made at the frontier for the transport through their territory of grapes: they exacted certificates of origin and certificates that there was no phylloxera in the places from where the grapes were being exported. While all these documents were being obtained more than 500,000 dinars worth of grapes were spoilt and could not be delivered. Now Yugoslavia has made with Poland a special agreement, according to which the Poles take certain considerable consignments of Yugoslav fruit and other raw produce in exchange for the import of certain Polish manufactured goods. On the whole all the activities of Yugoslavia are at present directed on the new lines announced a short time ago by M. Marinkovitch, and will run towards the making of agreements with special facilities between the contracting parties instead of making them on the basis of the most-favoured-nation clause, as before, the concession made to each separate State being of an individual, and not of a general character.

Relations with Neighbouring States.

The negotiations of the mixed commission of Yugoslavs and Bulgarians for the Frontier Zone, which have lasted since June 14, have come to a satisfactory conclusion. These periodical meetings, organised to clear up questions connected with the frontier zone, enable permanent contact to be maintained between the two States, and certainly contribute to the improvement of their relations. The Bulgarian delegation, after the end of the sittings at Vernyatchka Benya, were taken for a trip along the picturesque Dalmatian coast, and finally visited Bled and Belgrade, where they were given the most cordial reception by the Prime Minister and other leading persons. While showing her complete good will to deal amicably with Bulgarian matters of common concern, Yugoslavia is remaining adamant on the question of the Macedonian Committee, and considers its final dissolution as an essential condition for peace in the Balkans. It must be said that the recent measures of the Bulgarian Government against this Committee—including the warrant for the arrest of Ivan Mikhailoff—are regarded with great scepticism here, and more as a means of quietening public opinion in Europe than as efficient steps to suppress the Committee. Contrary to certain statements recently circulated in the Press, Yugoslavia does *not* intend to address the League of Nations with a demand for action against the *komitajis*. But should outrages recur, the situation would be entirely changed.

Certain uneasiness is again experienced in regard to relations with Italy. At present a score of young men of Slav (Slovene) nationality, but Italian subjects, are being tried at Trieste for various outrages, which they are alleged to have committed—including the explosion of an infernal machine at the offices of the *Popolo di Trieste*, which aroused great indignation in the whole of Europe.

The Yugoslavs cannot remain indifferent to the trial of their co-nationals, and the irritation against Italy has greatly increased.

Anglo-Yugoslav Contact.

A series of concerts of old English music, given in various towns of the Dalmatian coast and also in Liubliana, Zagreb, and Belgrade by a group of artists, conducted by Mr. Arthur Fagge, afforded the Yugoslavs an opportunity of showing their enthusiasm not only for English songs, but also for the British as their former allies in the War and people who had given them relief in days of misery and expatriation. This journey—organised by Colonel Woodhouse, the tried friend of Yugoslavia—proved the genuine nature of pro-British sympathies here. Not only the public, but the Municipalities of the town visited also did their best to give the choral singers a good welcome.

At present a squadron of the British Fleet—the same that visited Roumania—is paying a visit to the Yugoslav Dalmatian ports. Such visits of the ships of the greatest of the Sea Powers are always a reassuring feature for Yugoslavia, which is still feeling weak on the water in comparison with her Adriatic neighbour. The fact that the British naval visit is made at the time of the great military displays in Belgrade must be regarded as a mere coincidence, and can in no case bear the meaning which is being ascribed to it by certain quarters at home and abroad.

EGYPT.

Cairo, September 5.

Political Currents.

This week there was a sudden flare-up in the political world, due to the report of renewed activities on the part of Makram Bey Ebeid in London, an interview on the electoral issue given by Prince Omar Toussoun, cousin of King Fuad, to *Al Ahram*, and an interview given by Ismail Sidky Pasha to the *Daily Mail*. The report of his activities produced an immediate contradiction from Makram Bey, who denied that he was carrying on any political discussions in London. His sojourn there, however, has enabled reports to be spread to the effect that the Wafd is still in the good graces of the Labour Party and will come back to office. A statement circulated by prominent Wafdists for nearly six weeks now is that: "the Wafd will be back in office in fifteen days." It is reminiscent of the promises made during the congestion of the Customs last spring by clearing agents that the goods which we were expecting would be cleared within fifteen days, a promise that was automatically renewed without result over a very long period.

The interview by Prince Omar Toussoun called forth a strong reply from Ismail Sidky Pasha. The Prince had tried to prove that one degree-elections were the only system for Egypt, that an Opposition in Parliament was not necessary, and that the one outstanding consideration, to which every other consideration should be subordinated, was the gaining of complete independence for Egypt. Sidky Pasha easily managed to dispose of the arguments of the Prince and in fact turned them very cleverly against him. At the same time very politely but none the less sternly he rebuked His Highness for intervening in political matters, pointing out that under the Constitution the members of the Royal Family were disqualified from election to either House and that consequently His Highness was speaking about matters of which he had no experience whatever.

In his interview with the *Daily Mail* Sidky Pasha declared that he had the confidence of the entire British community in Egypt. He could quite fairly have gone further and have said that he had the complete confidence not only of the British, but also of all the foreign communities, in proof whereof we have had the ready manner in which on his appeal the heads of all the foreign banks agreed to assist him in alleviating the difficult position in which the agricultural population finds itself, and the deputation from the Alexandria General Produce Association, the largest and most influential organisation of its kind in the country, which assured him of its full support.

The Cotton Problem.

The announcement that the Government is considering a scheme for restricting the cultivation of Sakellaridis so as to produce only the quantity the trade requires and thus maintain its price, and for increasing to the utmost the yield of the other varieties, is very welcome. Something certainly had to be done to make cotton cultivation once again a remunerative industry, which under present conditions it certainly is not. An increase in the yield is certainly a move in the right direction. But this should be accompanied by some regulation of the extent to which land may be kept under cotton cultivation. It is useless intensifying the growth of cotton, if the land is to be cropped so frequently as to diminish materially its strength. It is true that manuring will to a certain extent rectify this impoverishment, but then the addition in the amount of manure merely tends to increase the cost of production, which, as it is, is unduly high. Many qualified technical people are of opinion that the project which the Government is at present considering should also provide for the restriction of cotton cultivation to one third of every holding, as used to be case when cotton cultivation in Egypt gave its best results both in yield and in quality.

New Coins.

The Ministry of Finance has put into circulation new silver coins bearing the effigy of King Fuad in full gala uniform. This is the third issue of currency in the name of the present Sovereign of Egypt since his accession to the throne in October 1917. The first issue was under the Sultanate and, therefore, did not bear any effigy. In March, 1922, when Egypt gained her independence and Sultan Fuad proclaimed himself King, a second issue was minted bearing the effigy of the Sovereign in civilian dress. The difference between the new issue and the preceding one is not, however, confined to the dress, but extends to the position given to the effigy, which is now made to face to the right while hitherto the King has looked to the left. This change seems to be unique in the annals of minting, since usually this is done only when a new sovereign succeds to the throne.

Abdel Rehim Pasha Sabry.

There is widespread regret at the sudden death which occurred on August 26 of Abdel Rehim Pasha Sabry, the father-in-law of King Fuad. He was a fine representative of Egyptian aristocracy, one of the old school, courtly in manner, upright in character, wise in counsel. His familiar figure—with, in his buttonhole, one of the carnations or roses he so loved and for the production of which he was so famous—will be sorely missed.

Fire broke out in the refugee quarter in the Kephissia Road in Athens on September 1, and many wooden hutments were destroyed. The same settlement was destroyed by fire in 1928.

The Mediterranean Fleet, under the command of Admiral Sir Ernle Chatfield, left Malta on September 2 to carry out the second part of its summer programme. The Fleet will reassemble at Corfu, or other suitable anchorage, between October 22 and 29, and return to Malta on October 31.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 21.

The Martial Law Ordinance.

One could wish that the Government in India saw deeper into millstones; for there is a great deal in the saying, that fore-warned is fore-armed. Late in March, with the civil-disobedience movement already begun, with all that dynamite of revolution packed in it, the Government thought it a time to announce that the power against revolutionary organisations forged by the Bengal Criminal Law Amendment Act of 1925 was to be allowed to lapse. How soon afterwards had it to be re-enacted? How soon afterwards came Chittagong and Midnapore?

Then the other day, as I reported at the time (June 12), the Government gave this as an answer to a deputation that had urged the extension of the full reforms to the North-West Frontier Province: "When making recommendations on this subject to His Majesty's Government, the natural claims of the province will be viewed with sympathy," provoking a Press Correspondent to say: "The expression of this sentiment will hardly come as a surprise, since it is in consonance with the oft-declared attitude towards each and all of India's constitutional problems; but it is the more important at this juncture in that it is the first time . . . that the Government of India have officially made known their sympathetic intentions towards such aspirations in the Frontier province. . . ." Now we have a Martial Law Ordinance promulgated, and immediately enforced in the Peshawar district. The truth is that that "oft-declared attitude," only declared, however, many times under the present all-yielding régime, is a thing made, like marriage, in heaven. When the maker is again on earth, he finds the attitude will not do; and so he has to do the opposite thing, making the Government look a fool. The frontier is the frontier, and declaring "sympathetic intentions towards each and all of its aspirations" (those aspirations are moves in the game of having the doors open to plot with the tribesmen) is a mere playing ducks and drakes with it. Never before has India had such a hopelessly woolly-headed Government.

The Congress.

As the Congressmen are not of a law-abiding disposition, it is fortunate that they are not any better than the Government in India at seeing into millstones. If they were better, their campaign of sheer destructiveness would be a much deadlier thing. Imagine the civil-disobedience movement, conducted by a man with the insight and the cold persistence of Parnell. He, if he had once decided to use the weapon of a boycott of foreign cloth, would have kept that sword bright for years, seeing clearly, with his cold eyes, that nothing short of that would do. Our Congressmen will keep up a thing like that boycott for a month or two: then, short-sightedly seeing victory already won, will shout triumphantly, and set to make sharp another sword. It may be, this new sword, the boycott of the schools and colleges. In their enthusiasm for this new battle and victory-in-sight, they will forget all about the cloth-shops, and we shall have this kind of thing appearing in the columns of *The Leader*—"Allahabad, August 15. It is learnt that while Congressmen are concentrating their forces on picketing the educational institutions, a number of merchants from whom they had taken an undertaking for not selling foreign cloth have resumed selling it." While those shopkeepers in Allahabad were taking the chance to sell some of their stock of foreign cloth, others were organising anti-picketers in Calcutta. These men wear blue badges, and they "hunt in couples" with the picketers. Where a picketer goes, a blue-badger goes to—but to help those whom the picketer would hinder. Nobody appears to know who is behind this blue-badge movement. One wishes it success.

The Sapru-Jayakar Mission.

The report is that after the consultation at Poona, in the jail, in which Mr. Vallabhbhai Patel and Mrs. Sarojini Naidu also took part, two letters were written to the Viceroy: one by Mr. Gandhi and Pandits Motilal and Jawaharlal Nehru, the other by Sir Tej Bahadur Sapru and Mr. Jayakar. Those letters are now in the Viceroy's hands, and Mr. Jayakar is to see His Excellency in Simla to-morrow. Sir Tej Bahadur Sapru may see the Viceroy also. If peace, or at least a truce and a breathing space, is secured now, it will be because the Statutory Commission has made recommendations, and that the Pandits, having read those recommendations, see no point in their going to London. "Why," they will have asked themselves, "should we suspend a fight begun, when we know, that, after that given date, it will have to be resumed?" I wrote this on March 27, and would now repeat it: ". . . it is assumed that at the Conference the Princes and political leaders from India must confront the Prime Minister and the Secretary for State, these two having the Report in their hands: these two saying: "The Report must be both the starting point and the end of all our discussing." That would be quite wrong. The Indian leaders would have to say, and would say: "We care nothing for that Report. The Commission, whose work it is, was heavily boycotted in India. Besides that, the Chairman was a lawyer, and we cannot be bound by the legal view of Indian things. We care nothing, then, for that Report: we have come here to tell you freely what we think the Constitution should be. Pray put that Report away." The Indian leaders will say that. There is no answer to that either, but to put the Report away. Or obstinately to insist upon discussing it . . . which would be to make the Round Table Conference end with things worse than they are now. The British Cabinet must be prepared to hear what India has got to propose, relying upon being guided, not by any Report, and what it says, but by officials from India and other experienced persons, present in the Conference room or round the corner." The thing really is, to put it in another way, for the British Cabinet to be guided by the Report, but for it never to mention it by its name.

The Bengal Ministry.

This week has seen the sudden and unexpected resignation of one member of our Ministry of Three, the Hindu, Kumar Shib Shekhareswar Ray, in consequence, it is given out, of a disagreement regarding the course to follow in the matter of the Rural Primary Education Bill, or rather how rural primary education in Bengal should be financed. Commenting on the Acting Governor's letter to the retired Minister, and on the retirement itself, our *Statesman* had: "The letter is excellent. It rightly expresses the surprise that must be felt by the head of an Executive who finds himself deserted at a critical moment by one of whom he has given frank confidence and that on grounds of which he has not previously heard. Our Indian contributor elsewhere endeavours to excuse the conduct of the Kumar Sahib. To ourselves the position seems to admit of no excuse. The Minister should have resigned months ago or he should not have resigned at all."

Muslims and Adi-Hindus.

Writing on the subject of those two addresses—by Sir Abdur Rahim and Dr. Ambedkar—that were examined in the "Calcutta Letter" of last week, an Indian writer two days later had: "At any rate those forces that for long periods had been dormant or had not exerted any important effect, come into prominence, acquire new value. What is more, they become conscious of that new value: and propose to exert their new-found influence to the full on the course of events. An important group that comes under this category is the vast body of landed aristocrats who are frantically trying to shake off their false aristocratic aloofness. The facile censure that comprehensively stigmatises them all as reactionaries, *jo-hukums*

Digitized by Google

and communalists, is surely misplaced. It will have been noticed that neither the Bengal Muslims at Calcutta nor the assembly at Nagpur showed any disposition simply to pull the official diehards' chestnuts out of the fire for them. On the other hand, they did not mince matters. They put in the forefront the generally accepted goal of Indian political endeavours. The complexity of the problems is alone responsible for the varying emphasis in the two speeches. I refer to them to-day, because there is no use shutting our eyes to the fact that two intelligent exponents of minority views are still not quite sure that, however undesirable may be the present foreign domination, the majority can be trusted to do justice to their claims."

Mysore.

It may be no very clear sign of the coming time, but it certainly is one, that Sir Mirza Ismail, the Mysore State's representative at the Round Table Conference, is reported to be going to confer with the leaders of public opinion on the Indian States' attitude towards an All-India Federation. The desirability of the Mysore State being represented in the British Indian Central Legislature, the constitution and functions of the Supreme Court for India and of the Council for Greater India recommended by the Statutory Commission, and the State's claim for financial compensation from British India in any arrangement that may be arrived at, are among the major topics that are to be considered.

Meteorology and Agriculture.

There have been some interesting paragraphs in our newspapers lately regarding the application of meteorological research to India's agricultural problems. The question was recently discussed by the Advisory Board of the Imperial Council of Agricultural Research, which decided to add a new branch to the Agricultural Department for the study of (1) the effect of weather on the yield of crops; (2) the effect of particular meteorological conditions on the incidence of plant disease; (3) the effect of meteorological conditions on the quality of agricultural produce, cotton for instance. An experimental measure for five years has been worked out, and the funds—about two lakhs—have been provided.

General.

India to-day is not completely given over to strife, though it has often of late been difficult to think it is not. The railway traffic returns, though they show a falling-off compared with last year, and a still greater falling-off compared with the year before, are nonetheless big figures. The Government loan was a greater success than was expected. Plans have been worked out for an important doubling of the East Indian Railway—between Cawnpore and Tundla. One noticed recently that the Road Development Board was getting on with its task as well perhaps as it would have done in an India at peace, and those who are responsible for furthering agricultural research in India appear to have been doing equally well. Things are not as black as one has been tempted to think.

The Enigma.

But India is the enigma of enigmas, and always to read her signs aright must be beyond any correspondent's ability. While it appears true that among the people there has never been a nationalist or even party feeling strong enough to preserve the public peace from being perpetually broken by communal and personal rivalries, the people are so sunk in lethargy, that one of them may draw the following picture of themselves, and none be able to deny the substantial truth of it:—"In this sweet, slow, languid country of ours most things happen and continue to happen by their own momentum. We rarely take a hand in their direction. Life goes on, as it has gone on since this hoary world began. Like the feckless carter, who sets his bullocks on to the road, and complacently goes to sleep on his cart, unconcerned with what happens on the road, where his bullocks stray to, to what dangers and risks he exposes other traffic on the road, who sometimes wakes up, finds his bullocks on the wrong side of the road, yawns, and perhaps with his little switch makes a reluctant effort to alter their course, is wearied by the effort, and goes to sleep again—we also go on."

EUROPEAN NON-OFFICIALS AND THE ROUND TABLE CONFERENCE.

It is two years since the Council of the European Association submitted to the Statutory Commission a memorandum embodying the views of its members on the major constitutional issues. The Commission has since reported and its recommendations, largely owing to the difference of opinion on the question of law and order, appear, unfortunately to have added to the general confusion, notwithstanding the extraordinary ability and skill with which they were formulated. The text of the Association's memorandum and the official report of the oral examination of the deputation will be found in the "Selections from Memoranda and oral evidence by non-officials, Part II." which were published last week as volume XXII of the Statutory Commission's Report (H.M. Stationery Office, 16s. net) and need not be here recalled.

As briefly reported in last week's issue of THE NEAR EAST AND INDIA, the Association has now drawn up a series of resolutions which were adopted at a recent conference of delegates from the various branches and comprise the Association's mandate to its representatives at the forthcoming Round Table Conference. Apart from the fact that the European Association is the first and, indeed, the only body in India to support in extenso the Statutory Commission's findings, the Council was well-advised to frame such a statement, for the Conference is now in sight and the need for the guidance of its delegation on all the various aspects of the Indian problem which will then come up for consideration is manifest.

Of late there seems to have been a good deal of discussion among the members regarding the report of the Statutory Commission, one section boldly advocating its complete rejection. But the more moderate element has prevailed, and the first resolution accordingly reads:—

> That the meeting accepts the general principles underlying the recommendations of the Simon Commission, subject to such reservations as are necessary better to ensure a strong Government and justice for all sections of the community, and for the preservation of personal liberties, and the complete equality of trading status between British and Indian subjects of the Crown in India.

In the provincial sphere the Association presumably accepts in the main the Statutory Commission's proposal for the establishment of what is generally termed complete provincial autonomy. The following resolutions deal with this matter:—

> That law and order should not be transferred to a Minister responsible to a Legislature in any Province until the Legislature of that Province has passed a resolution in favour of such a transfer by a 75 per cent. majority.
>
> That in the reconstruction of all Legislatures adequate effective representation by separate electorates should be given to the Muslims and other minorities and the Europeans, and that provision for such adequate representation should be made by statute.
>
> That in Bengal and in the Punjab Muslims shall be granted representation by a separate electorate on the basis of the percentage of the population which the community has in these Provinces.
>
> That when the future of the franchise is considered by the Government, or by any commission which may be appointed for the purpose, the importance of the genuine, adequate representation of the rural interests should be emphasised.
>
> That Second Chambers should be established in the Governors' Provinces.

The European Association proposed in its memorandum two years ago that in respect of the Federal Legislative Assembly there should be introduced a system of indirect election by the provincial legislatures. The Simon Commission has recommended this principle, proposing that the Provincial Councils should elect by the method of proportional representation. On this subject the conference resolved as follows :—

That the method of indirect election to the Federal Assembly by the single transferable vote be approved, provided that seats are reserved for the minority communities, and the present proportion of European non-official representation is maintained; and it is further recommended that the members of the Council of State should be elected directly on a franchise not lower than the present one, provision being made for the representation of special interests, such as the Services and Indian and European commerce.

This presumably endorses the view put forward by the Association two years ago, as regards the Council of State, namely, that no change in its constitution, system of election, etc., should be made. The Simon Commission recommends that, in conformity with its general scheme, the seats in the Council should be allotted to federal units.

On the important subject of the Governor-General's Executive Council the conference adopted the following resolution :—

That the members of the Governor-General's Executive Council shall be appointed by the Governor-General to hold office for a fixed period, and that they shall not be removable by a vote of the Federal Assembly, nor in any other way responsible to it.

That the suggestion of the Simon Commission that the appointment of some of the members of the Governor-General's Executive Council may be made from among the members of the Federal Assembly and/or the Council of State be approved.

Regarding the residuary powers in the Indian Federation as ultimately formed, the conference resolved :—

That the form of Federation upon which the future Government of India should be based should leave all the residuary legislative power to the States and Provinces.

The recommendations made by the Simon Commission on the Army question were dealt with as follows :—

That the European Association should support the recommendations of the Simon Commission that the Imperial authorities, by means of the Imperial Army, should undertake and control India's defence in return for an agreed not-votable annual payment by India.

That the Imperial Indian Army shall remain part of the Imperial Army so long as any part of the Imperial Army in India consists of British officers or troops recruited by the Imperial Government, and that the control of the Imperial Army shall remain in the hands of the Viceroy, who is responsible to the Secretary of State for India and the British Parliament, whether the Army be engaged in the defence of India or in aiding the civil power.

That the suggestion of the Simon Commission that the formation of a purely Indian Military Force to be controlled and paid for by India should be undertaken and approved, and that an immediate examination of this matter by the military authorities, with particular reference to the use of the present eight units as a nucleus of such a force, would be welcomed.

The case of the Imperial Services is covered by the provisos :—

That for the sake of continuity in administration no more change than is absolutely inevitable should be made in the conditions of service or recruitment to the Imperial Services, and that every safeguard that can be devised should be adopted to secure the positions, prospects, and pensions of Europeans in the Services.

That all reasonable and necessary precautions should be taken to safeguard the position, prospects, and pensions of Indians, Anglo-Indians, and domiciled Europeans employed under conditions similar to those referred to in the previous resolution.

On the difficult question of the establishment of a Supreme Court the conference resolved :—

That, while approving of the recommendation that the High Courts should be administered by the Government of India, the Court of Final Appeal shall be the English Privy Council.

It may be noted regarding this that in the Memorandum of 1928 the Association said that "if the Indian States are included in the future constitution it might be found desirable to establish a Supreme Court to the jurisdiction of which the Indian States would become amenable."

The Association has very rightly and wisely emphasised the need for the establishment of equality of trading status as between Great Britain and India. The following resolutions on this important matter will meet with general approval :—

That a clause be included in the new Government of India Act to provide for the equality of trading status between Great Britain and India, and that this be implemented by a convention or agreement which shall protect Britain's trade with India against discrimination in favour of foreign countries.

That statutory provision should be made in the new Government of India Act for the equality of individual status as between British and Indian subjects of the Crown resident in India, for the protection of minorities, and against discrimination in legislation and administration, and for the restoration of those judicial liberties in regard to criminal law which European and British subjects enjoyed prior to 1923, and which should be equally available for Indian British subjects should a demand for them be made.

That a convention or agreement should be drawn up between India and Great Britain detailing safeguards which might be necessary against any discrimination incompatible with the general demands of European and British subjects in regard to equality of status in India.

The following resolutions concluding the series, and dealing with the immediate situation, must also commend themselves to all well-wishers of India: —

That, while appreciating the efforts that the Viceroy is making to secure participation of all parties in India in the Round-Table Conference, this meeting of the representatives of the European Association strongly supports his Excellency's avowed determination to make the complete abandonment of the civil disobedience movement a condition precedent to such participation on the part of the Congress.

That this meeting is of opinion that the Congress revolutionary movement, with its boycott of British goods and firms, cannot be stemmed by concession or conference, and considers that the Government of India should take drastic measures to combat the movement with all the resources at its command; and it is further of the opinion that the situation requires immediate action, and that any further delay in the hope of creating a favourable atmosphere for the Round-Table Conference is not only undesirable but dangerous.

That the Indian Congress, having ceased to be a political and having become a revolutionary body, should be declared an illegal organisation throughout India and suppressed by the Government, and that to this end the funds and the property of the Congress shall be sequestrated by the Government, and that the same action shall be taken by the Provincial Governments with respect to any provincial organisation certified by the Governor to be of a revolutionary nature.

That whatever the recommendations of the Round-Table Conference may be, no change in the present system of government in India shall be effected until seditious propaganda and unconstitutional agitation have been firmly dealt with and the civil disobedience movement ended.

H.H. THE MAHARAJA OF BIKANER.

The promotion of Major-General H.H. the Maharaja of Bikaner to the honoary rank of Lieutenant-General is announced in the *London Gazette*. One of the most able and enlightened members of his Order, His Highness, as THE NEAR EAST AND INDIA recently recalled, is also an exetremely distinguished soldier, who served with the British forces in China in 1901 and played a very prominent part in the Great War. He represented India at the Imperial War Conference in 1917-19, and is the head of the Indian delegation to the present session of the League of Nations, being the first Indian Prince to occupy that position.

The Maharaja, who will also be one of the Indian representatives at the forthcoming Imperial Conference and a member of the Indian States' Delegation to the Round-Table Conference, is an A.D.C. to the King-Emperor, a Knight Commander of the Orders of the Star of India and of the Indian Empire, a Knight Grand Cross of the Victorian Order, and of the Order of the British Empire, and a Knight Commander of the Bath.

The King has been pleased to approve the appointment of Mr. John Minty Baguley, Indian Civil Service, Barrister-at-Law, to be a Puisne Judge of the High Court of Judicature in Rangoon in the vacancy created by the retirement of Sir Henry Sheldon Pratt, Indian Civil Service, on July 17, 1930.

The Greek Minister left London last week for Evian and Geneva, and will be away until the end of the month.

Sir Ernest Budge had the honour of dining with the King and Queen at Balmoral Castle on September 6.

The ex-King and ex-Queen of Greece arrived last week at Torosay Castle, Island of Mull, as the guests of Mrs. Murray Guthrie, for a stay of about a fortnight.

The Turkish Ambassador and Mme. Ferid Bey left London last week for a month's stay at Trencrom Villa, Carbis Bay, Cornwall.

M. Georges Cattaui, Secretary to the Egyptian Legation in London, left London on September 7 for a month's stay at Carlsbad.

Air Marshal Sir John Higgins and Lady Higgins, who have been on a visit to Canada, returned to England on September 9.

Lady Milne, who has been on a visit in Scotland, joined Field-Marshal Sir George Milne at 29, Chester Square, on September 6.

The Maharaja of Bikanir, who arrived last week at the Carlton Hotel from India, left on September 7 for Paris on a short visit.

Lady Edward Spencer-Churchill left Southampton on September 6 for America to attend the F.I.D.A.C. Congress.

M. Constantinesco, First Secretary to the Roumanian Legation, left London last week for the Continent on leave. He will return at the beginning of October.

Sir John Simon was among a party of ten European jurists who were given honorary degrees at Columbia University, New York on September 4.

Lieutenant-Colonel Sir Stewart Symes, Commander-in-Chief at Aden, has arranged to sail on his return to Aden in the P. and O. s.s. Kaisar-i-Hind, which leaves Tilbury to-morrow (Friday).

The Hon. Sir Stanley Jackson, Governor of Bengal, and the Hon. Lady Jackson, left London on September 4 to join the P. and O. s.s. Viceroy of India at Marseilles on their way to Bombay.

The Maharaja of Jaipur, who has been staying at Glengarr, Dunoon, for the grouse shooting, returned to London on September 7 where he will stay until September 19, when he leaves for India.

A lecture, illustrated by lantern slides, dealing with his discoveries at Ur of links with Noah's Ark and Nebuchadnezzar, will be given on October 6 at 6.30 p.m. by Mr. Leonard Woolley at Caxton Hall, Westminster, under the auspices of the Worlds Evangelical Alliance.

A VENDRE EN BLOC; 2 MAISONS D'HABITATION ET VASTES LOCAUX.

A. CHERVET, Birket-el-Sab, EGYPTE.

Sir Henry and Lady Drake-Brockman arrived last week at the Hotel de l'Europe, Aix-le-Bains, from Madras.

Sir John Robert Chancellor, High Commissioner for Palestine, who has been present this week at Geneva on the British delegation in connexion with Palestine, is expected to leave London on his return to Jerusalem on September 25.

Sir John Sandeman Allen left London on September 2 with Lady Sandeman Allen for the Continent, to attend the Inter-Parliamentary Conference at Brussels. They are proceeding thence to Cracow, where Sir John Sandeman Allen will preside over an international conference dealing with Danube navigation and commerce. They expect to return to London on October 7.

OBITUARY.

DR. VLADAN GEORGEVITCH.

The death is announced from Austria, where he was living, of Dr. Vladan Georgevitch, a former Prime Minister of Serbia in the stormy days of Milan and Alexander Obrenovitch. He was born on November 21, 1844, and studied medicine in Vienna. In 1880 he was appointed physician to the Court of King Milan, and in 1888 entered politics. He was Prime Minister from 1897 to 1900, when the marriage of King Alexander Obrenovitch to Mlle. Draga Machin led to his resignation and his exile from the country. It was during his régime that an attempt was made to assassinate ex-King Milan. The Opposition was accused of being privy to the plot, and many of its leaders were imprisoned and subsequently brought to trial. Pashitch was sentenced to five years' imprisonment, but was liberated almost immediately. Dr. Georgevitch belonged to a period when the Balkan peoples were notorious for large families. His own, however, achieved some pre-eminence in this respect, as he was one of twenty-five children and he had, himself, nineteen.

A CORRECTION.

In the Albanian Letter contained in our issue of August 21, owing to a misprint regarding the regulations governing the *Enti Kombtar*, it was stated that all boys are compelled to join at the age of 19. This should have read: "All boys are compelled to join at the age of 17, and to serve until they are called up for regular military service at the age of 19—or, if for some reason exempted (i.e., from military service), until the age of 25."

At the coronation on November 2 at Addis Ababa of the Emperor of Ethiopia, the ceremony which the Duke of Gloucester will attend as head of the British Mission, there will also be Special Missions from France, Italy, and the United States. The festivities connected with the coronation are expected to last for a week. The ceremony will take place in the Cathedral of St. George, and will be conducted by the Copt Bishop of Ethiopia, head of the Ethiopian Church. The new ruler, formerly Ras Taffari, will ascend the Throne under the title of Haile Sillasse ("Power of Trinity"), King of Kings. He is a son of Ras Makonnen, who was a cousin of the Emperor Menelik.

THE WEEK AT HOME

London, Tuesday Morning.

Bromley and Mr. Baldwin.

We are all, of course, very much wiser after the Bromley by-election, in which the official Conservative candidate just got home and the nominee of Lord Rothermere polled one-third of the Conservative votes. It seems to be generally agreed that, had Lord Beaverbrook also supported the "United Empire Party" candidate, he would have won; and this is certainly instructive. For it does show that in middle-class neighbourhoods the fear of dearer food is not all-important, and that the desire for more vigorous leadership in the Conservative Party is very genuine.

Some observers have even gone so far as to assert that Bromley has sounded the death-knell of Mr. Baldwin. The phrase has the ring of finality beloved of journalists, but it must be remembered that this is the "silly season," and writers can "get away" with all sorts of remarks which have foundation only in their imaginations.

Undoubtedly, however, there is some sort of "ramp" going on for the removal of Mr. Baldwin from the leadership, and apart from the unscrupulousness among the so-called Conservatives there is considerable anxiety at the apparent lack of vigour in the ex-Prime Minister. The name of Mr. Neville Chamberlain is being very freely canvassed as that of the next leader of the party. It is felt, seemingly, that he has more strength of character and is more definite in his fiscal and political views. But it cannot be forgotten that he has shown the utmost loyalty to Mr. Baldwin; nor can one help thinking, therefore, that there is a good deal of mere gossip in this line of argument.

The most interesting development, perhaps, concerns the relationship of the two famous Press Lords with the Conservative Party, by whomsoever it be led. It is almost incredible that the Conservative Party could at the next election announce a food-tax policy—and the idea of the Referendum seems quite to have been abandoned. But unless such a policy is announced, will not my Lords Beaverbrook and Rothermere continue to put up candidates against the official Conservatives? In which case we are assured of a Labour Administration for several years more—but perhaps we are in any case.

The Trade Union Congress.

The British working man, like all other members of the British race, is prone to exaggeration at times—and some of the proposals for tapping the Exchequer which the Trade Union Congress, in conference at Nottingham, passed last week in consistent ecstasy might suggest that the common-sense for which he is noted had utterly left him. But at core he is sound—sound as a bell. It is interesting, therefore, to see how he dealt last week with the much disputed doctrine of *laissez-faire*.

The Trades Unionist takes the obviously sensible attitude of treating every tariff problem on its merits. He does not plump for general Protection, but he is no fanatical believer (*pace* Mr. Snowden) in "Manchesterism." Each case, according to this Congress, should be judged on its merits.

This is a tremendous advance, and if the T.U.C. succeeds in carrying the Labour Party with it, the continuance in office of a Labour Administration would seem to be assured. There is no room for timid compromise, with unemployment rising and ever-rising—one speaker at this Conference stated his belief that unemployment would rise to four millions. At the forthcoming Imperial Conference the Government must make up its mind to put forward bold suggestions. Whether trade in this country is stimulated by a system of reciprocal tariffs, by "bulk-purchase" of the Dominions' products, or however it be done, it is to the credit of the T.U.C. that they have shown that they, at any rate, are alive to the possibilities of the situation, and that they, for their part, believe in no Labour Minister being bound by shibboleths of any school of thought.

Road and Rail.

The rights which the Railway Companies recently obtained over road transport have soon to be picturesquely exercised. For more than fifty branch line stations on the L.N.E.R. and on the L.M.S. are to be closed when the winter service of trains comes into operation, that is, on September 22. Obviously the development of road transport services has caused such a decrease in rail traffic as to make it no longer profitable to run trains in certain districts—except for goods traffic, parcels, and live stock.

That such a change was bound to come seemed obvious soon after the War. The motor-omnibus is a much more flexible means of transport than the train; it is also much more economical. But point is given by the closing of these branch lines, which is to occur chiefly in Yorkshire, Northumberland, Leicestershire, and North Wales, to the remarks on rationalisation made at the Trades Union Congress. It is not the fault of the employees on these branch lines that they are to be closed, but closed they obviously must be. In the most perfect society what would become of the men thus dismissed?

A Loss to the Turf.

The Turf, they say, is under a cloud just now, so that Lord Derby's announcement a few days ago that he was selling many of his racehorses came as a double blow. To those whose knowledge of racing consists only of a quick study of "form" just before the Derby (and subsequent total neglect), this reduction by Lord Derby will be suffered with equanimity, but to those who really follow horses, and delight in doing so, it has caused much regret.

It is understood that Lord Derby's decision to reduce the Stanley House establishment at the end of the season is due to high taxation costs, and, of course, no one would expect that, given the need to raise revenue, such luxuries as horse-breeding would not be affected by taxation. But I notice that the *Daily Express* ingeniously attacks "the inordinate taxation of capital" by pointing out, what is quite true, that a reduction of the kind announced by Lord Derby is a real saving to the owner, but will cause considerable suffering to his employees (employees being "the ultimate victims of all confiscatory taxation")—the stable men, grooms, jockeys, tradesmen, and so on.

ALTER EGO.

GENERAL PETER ZHIVKOVITCH.

General Peter Zhivkovitch was born at Negotin in 1879, and his fellow-countrymen say that he is true to the place of his birth. Negotin is a town in the extreme east of Yugoslavia, with vineyards on the hills behind it and straight roads cutting through its marshes to the brink of the Danube. It is an important place, because the River is also the frontier, and the hills of Roumania rise beyond the level ground on the other side. The town is pleasant enough, with new institutions to prove its progress, and storks still preferring the older chimneys for their untidy nests. There is much beauty in the curving lines of river and hillside and in their clear colouring; yet the district has produced no poets nor artists. It has given birth to Nikola Pashitch, to Misha Anastasiyevitch, the patron of Serbian education and founder of Belgrade's first University; and to many famous soldiers, of whom not the least famous is Peter Zhivkovitch.

It is said that those who are born in and around Negotin are by nature strong of will, steady of purpose, and disciplined of behaviour; also, that they have the gift of judging character, leading men, and uniting the forces which they have at their disposal. In General Zhivkovitch all these characteristics are to be found, and that is why he is looked upon as "true" to Negotin—which is an opinion to be esteemed amongst simple minds.

When Peter Zhivkovitch was a young man his pulses were stirred and his passion roused—like those of the majority of his generation—by the condition of his fellow-countrymen in the south. Those were days when gallant Serbia was still looking forward to the time when all her brethren should be free, and when she devoted her energies to ridding them of the degrading yoke of the Turk. Such a crusade for liberty was bound to claim young Zhivkovitch and his friends; they studied economics and medicine and engineering, in order to prepare the financial and physical strength of their country for the coming task; and then a great many of them left their civilian studies to pass into the Military Academy, because they knew that they must be soldiers, if they were to rescue their brothers. It was not long before their valour was put to the test. When Peter Zhivkovitch left the Military Academy as a young officer, he served first in the Cavalry and afterwards in the Guards. The Balkan War, which Serbia and her Allies waged against the Ottoman Empire, gave him opportunity to show his mettle, and he fought bravely in one engagement after another, burning, no doubt, with the enthusiastic spirit which pervaded the Serbian Army at that time. For this war was inspired above all wars, it was indeed a Crusade. When the battle was waging around Prilep, Serbian soldiers stormed heights that were considered impregnable, and made attacks without orders from their commanding officers. Their answer to all reprimands was this: "Kralyevitch Marko was commanding us all the time, and he cried, Forward! Forward! Did you not see him on his great horse Sharatz?"

All too soon the Balkan War was followed by another, against Bulgaria, the former ally of Serbia. In this Peter Zhivkovitch showed the same ability and courage as before, and he returned from it with many decorations.

Those wars, however were as nothing compared with the Great War. To anyone who knows Yugoslavia, it is not difficult to trace the footsteps of that heroic army which dared to abandon Belgrade and then to return and seize it; to leave it again and retreat through the torn and bleeding country to the south; to linger and to hope—in vain; and then to face the iron walls of Albania and to climb them in that tragic journey to the sea. All this was the experience of Peter—by then Colonel—Zhivkovitch; and to him was granted a greater measure of success than to many of his race, for he took his men through Albania without loss of men or horses, and reached Corfu with full numbers and in good order. He was always popular amongst his men, for he was kind as well as strict, friendly with them in rest hours, and possessed of a definite sense of humour.

He fought again with the re-organised Serbian Army on the Salonika Front. In 1916 he was appointed first Adjutant to the King and Marshal of the Palace, and a year later in Command of the Guards. The Guards were then but a small troop, and he developed them into the large Division which exists to-day.

When the Dictatorship was proclaimed, King Alexander appointed him to be President of the Government and Minister of the Interior, and more than eighteen months have passed away since this new régime was started. It is a long time from some points of view, and in General Zhivkovitch's life this period must have passed slowly, full of anxious thought, yet not without its signs of progress and hope. Anyone who watches his face, and especially his eyes, can read there consciousness of the heavy responsibilities which he carries; but when he smiles there is a kindly light which lends him charm and suggests a warm heart.

On the last day of 1929, he and the other Ministers were invited to Dedinye, the King's new country-house outside Belgrade, where, in the presence of their Majesties, he watched the last few minutes speed away, and reviewed the work of the new Government in a speech which included these words:—

"The noble thoughts and ideas expressed in Your Majesty's Manifesto of January 6, and in the important Act of October 3 (this referred to the division of the country into nine Banovine) have bound into one strong association the whole of our nation, without discrimination of faith, race or separation in the past . . . and the result of all these changes which have been made in the interests of progress is harmonious work in the Government and a stability without which success could never be achieved."

P. H. S.

AMERICAN INSTITUTIONS IN ALBANIA.

Our Albanian Correspondent writes:—

The (American) Near East Relief Association is to take over control of the Agricultural and Girls Schools at Kavaja—founded by Dr. Erickson and a society in America—and the College which was recently built in the same neighbourhood (but never opened) by the American, Dr. Irwin. It is time, indeed, that a reliable society should intervene in regard to these institutions, which are hardly up to the standard which American philanthropic enterprises generally achieve. The Technical School at Tirana, established by the American Junior Red Cross and subsidised by the Albanian Government, and the Kennedy's School at Kortsa, are most creditable institutions.

CYPRIOTS IN EGYPT.

Our Cyprus Correspondent writes:—

Dr. D. K. Ioannides, President of the Greek Cypriot fraternity in Egypt, is visiting the Island, in order, it is understood, to express once more the hopes of Cypriots in Egypt that they may be admitted to British nationality, and the ardent desire that the Government in Cyprus may be persuaded to support their claim, which is intensified owing to late troubles in Egypt.

NEWS FROM BAHRAIN.

Our Bahrain Correspondent writes (August 18):—

The four aeroplanes which comprise King Ibn Saoud's Air Force are shortly leaving the island of Darin, and it is understood that their headquarters are to be in Jidda. [Our Jidda Correspondent has already published this report.—ED.]

H.M.S. Cyclamen paid a short visit to Bahrain early in August; at the same time one of the Southampton flying boats came down from Basrah.

There has been a slight improvement on the local pearl market, and the catch during the last month, since weather conditions have improved, is reported to be somewhat more satisfactory.

EGYPT'S ELECTORAL LAW.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I cannot follow the reasoning in the first section of the "Notes of the Week" in your issue of August 14.

You claim, in effect, that there will be nothing "unconstitutional" in a reversion to two-degree elections. There would certainly be nothing "unconstitutional" in the introduction, and the passage into law in a constitutional way of a new Franchise, or Representation of the Peoples Act. If, however, as is apparently contemplated, electoral change were carried out by ministerial degree, this would surely be "unconstitutional" by every possible definition?—I am, etc.,

C. H. GRAY.

63, Lincoln's Inn Fields, London, W.C.2.

[The meaning of the Note in question would, perhaps, have been clearer to our correspondent, if instead of the word "unconstitutional" had been used the expression, "contrary to the spirit of the Egyptian Constitution." The purport of the Note was to deprecate outside interference in a matter that was wholly the concern of Egypt, whether such interference took the form of explicit instructions or an attempt to impose exotic interpretations on words. The constitutional question would not have been raised in Egypt, if Egyptian practices and interpretations had conformed wholly with practices and interpretations in Great Britain. Egypt, or the sane, thinking part of it, has to be credited with a desire to escape from the hopeless situation created by the existence of a Party controlling a parliamentary majority that refuses to remain in office and seeks to render government by any other party impossible. Egypt's experience of constitutionalism has been summed up in the following terms by the opposing parties:—

"The Egyptian Parliament has four times in five years been suspended in one form or another, and the Egyptian peoples, goaded beyond endurance, are now defending their constitutional rights at the price of their blood." (Makram Ebeid Bey, before the Inter-Parliamentary Union Conference.)

"The present (Wafd) Government, which have assumed power supported by a parliamentary majority elected for a specific mission, have violated the Constitution, stifled the liberties of the people and have refused to entertain any respect for the Laws regulating these liberties." (Liberal-Constitutional Party's Petition to the King.)

The belief is now entertained in some quarters in Egypt that a happier state of affairs may be brought about by the introduction of the two-degree elections originally contemplated by the Constitution. The experiment may well be worth trying, as it is impossible to contemplate a more sterile situation than that resulting from the present Electoral Law. That modifications of this Law will have to be made by Decree is obvious, and all that the Note, to which our correspondent refers, set out to suggest was that constitutionally-squeamish politicians or doctrinaire constitutionalists could find some excuse for averting their eyes for a short period from the Egyptian method of interpreting Constitutionalism in the fact that the Egyptian Constitution originally contemplated the two-degree method of parliamentary elections.—ED.]

M. August Kosutitch, a former Yugoslav Cabinet Minister, has been ordered to leave the United States, the New York courts having dismissed the writ of *habeas corpus* sworn out in an attempt to prevent his deportation.

King Alexander has appointed General Matitch to be Ban of the Danube Banat *vice* M. Dirnitch, against whom there were many complaints, especially from the German and Hungarian minorities in the Voivodina. General Matitch is a Serbian soldier who distinguished himself in the Balkan War and Great War as commander of a division.

It is stated that the preliminaries for the projected railway line from Baghdad to Haifa are being arranged and that a survey will begin so soon as the cool weather sets in. It is assumed that the construction of this new railway from Iraq to the Mediterranean means that the pipeline from the Iraqi oilfields will be laid alongside.

The eleventh annual convention of the Fédération Interalliée des Anciens Combattants will be held this year in the United States, from September 15 to 25, the opening meetings being in New York and the closing ones in Washington. Delegates will represent Belgium, the United States, France, Great Britain, Italy, Poland, Roumania, Czechoslovakia, and Yugoslavia.

The death is announced of Professor V. Barthold, of Leningrad, whom Sir Denison Ross has called "the Gibbon of Turkestan." This Russian Orientalist was a great authority on Islamic history, and particularly on the history of Turkestan. Chief among his published works is "Turkestan down to the Time of the Mongol Invasion." He was the official historian of the Kara Kirghiz and the Turcoman Republics.

NEWS IN BRIEF.

Ex-King Amanullah of Afghanistan arrived at the end of last month in Venice, where he is expected to stay some time.

Some 250 delegates were present last week at the opening in Belgrade of the Congress of the Serbian Orthodox Church.

A number of English pigs have been bought to improve the standard of native breeds in Yugoslavia.

A banquet was given in Teheran last week by the Persian Foreign Ministry in honour of Memduh Shevket Bey, the resigning Turkish Ambassador.

A new railway line between Ankara and Sivas was opened on August 30 in the presence of members of the Cabinet and the President of the Turkish National Assembly.

Three new Soviet passenger and mail-carrying aeroplanes started on September 4 on their flight to the Near East. The first stage of the round flight was to Ankara.

The will of Rev. Dr. David M. Kay, St. Andrews, Professor of Hebrew and Oriental Languages in the University of St. Andrews (personal estate) has been proved at £6,061.

Delegates from Roumania, Yugoslavia, Hungary, Bulgaria, Czechoslovakia, Latvia, and Estonia were among those who attended the International Agricultural Conference which opened in Warsaw on August 28.

The instruments of ratification of the Anglo-Turkish Commercial Treaty were exchanged at Ankara on September 4 between Sir George Clerk, British Ambassador, and the Turkish Government.

King Faisal of Iraq, attended by his Aide-de-Camp and his Secretary, visited the members of the Federal Council at Berne on August 27. A luncheon was afterwards given in his Majesty's honour, which was attended by all the members of the Federal Council and by the British Minister, Mr. Claud Russell.

The Bulgarian Government has informed the Yugoslav Government that M. Voukitchevitch, whom the Yugoslav Government proposes to appoint as its Minister in Sofia, will be *persona grata* there. M. Voukitchevitch will take the place of M. Neshitch, who has been transferred to Ankara.

Following upon the commercial treaty recently signed with Great Britain, Roumania has concluded with France conventions dealing with commerce, navigation, and "establishment." These were signed in Paris on August 27, and will take the place of the Convention signed on March 6, 1907.

The second stage of the military aeroplane competition of the States of the Little Entente and Poland was won by a Czech, who covered the distance between Prague and Belgrade in 3hrs. 10m. and 2sec. Next came a Yugoslav, who covered the distance in 3hrs. and 23m. The first stage, from Warsaw to Prague, had been won by Yugoslavia in 6hrs. and 55min.

There were military celebrations in Belgrade last week-end on the occasion of the birthday on September 6 of Crown Prince Peter. New Yugoslav colours were presented to all the regiments, and 30,000 troops of all arms, including tanks and aeroplanes, took part. The Government marked the occasion by calling to Belgrade all the members of the newly appointed Banat Councils.

Colonel T. D. E. Coke, chief of the British Police Mission which has been engaged in reorganising the Greek Civil force, submitted his resignation on August 26. He took this step on account of a disagreement with M. Sideris, Minister of the Interior, in regard to the reinstatement of a high police officer in Athens who was temporarily put on the retired list.
